We left pier 17, Philadelphia, about two o'clock in the afternoon with a fair wind and the tide in our favor, and with all canvas spread we shot out into the stream and soon left the city far behind. It was raining when we left the wharf, but about four o'clock it cleared up and the sun came out, showing the scenery along the historic Delaware in its loveliest aspect. Every leaf and spear of grass and blade of corn seemed to invest itself with the superfluous moisture, and rear its head to the setting sun, in all the vigor of abundant nature. I shall not soon forget the feeling of rest that came over me as I viewed that regular landscape in the soft light of the July evening. We made fast to the dock of the Kennebec Ice and Coal Company, in Wilmington, Delaware, that evening, and early in the morning of the following day took in our cargo of ice, which, by the way, is one of the most important features of the trip. The entire hold of the vessel, except a small space directly under the forward hatchway, is filled hard up to the deck with ice, broken up as fine as possible by a machine made especially for this purpose. Great care must be exercised in stowing the ice so that neither side is "winded," that is, that there is no space left where air can remain, and prevent the ice from keeping properly, because should the ice give out the trip must prove a financial failure. We took in about twenty tons, and about noon were towed to the mouth of Wilmington Creek and cast adrift in the Delaware.

We had a splendid breeze, and though the tide was against us we hardly felt it, and sailed away with light hearts, which came very near being turned to sad ones in a few hours. The six fishing skiffs that we carried on deck were not set square on their keels, but were listed over on one side, to economize space, and lay so that the gunwale of the skiff came just flush with the top of the "waist" or rail of the schooner. In one of these skiffs, on the shady side of the vessel, John Kane, one of our most experienced sailors, had made himself comfortable and was enjoying a good nap. We were directly opposite Duck Creek Light. I had the wheel, and all of the crew had disposed themselves in various ways, some reading, some sleeping, and some making those very necessary adjuncts of a fishing trip—finger stalls—when a cry from Capt. Church, who was sitting on the "trunk" directing the course, startled me out of a sleepy reverie and caused me to put the helm hard a-port and bring the schooner up into the wind as quickly as possible. It seems Kane had taken a notion to turn over in his sleep, and had turned completely over the rail into the bay. Like McGinty, renowned in song, he had on his best suit of clothes, and also like the aforesaid hero, he must have gone to the bottom, for he did not come to the surface until he was far astern. Then came the race between man and death, the intense excitement of which is known only to sailors who have had the experience. Kane was an experienced waterman and a strong swimmer; but he was heavily dressed and the tide was running like a mill-race in an opposite direction to the course of the vessel; the wind was against the tide, causing a rough, choppy sea. The shock, too, of falling from the deck into the salt water while in sound sleep, doubtless took a good deal of his energy, and at such a time energy is strength. At all events, it was at once evident to the interested that we must act quickly or "Kane" was gone. Through the foresight of Capt. Church we were towing a skiff astern. As I stood nearest the painter I cast it loose. One of the crew leaped into the skiff, and another, who had to come from the cabin and was a little behind, jumped overboard and swam to it and climbed in. The swimmer was by this time far astern and his head was constantly sinking in the water, although we could see that he was making every effort of which he was capable. But in the skiff were two men with muscles of iron and nerves of steel, thoroughly trained for emergencies of this kind, and they won the race, though when they lifted him into the skiff he could not speak and was completely exhausted. The captain ordered him below for the remainder of the day, and put the balance of the crew inclined to take naps on deck under strict surveillance. The wind continued fair, and Sunday morning we let go our anchor under the stone pile at the Delaware Breakwater. Here we must get our bait.

The bait used for sea bass almost entirely, and which they will take in preference to any other, is a fish known as a moss banker. It is a very fat, oily fish, weighing from half a pound to a pound, and is worthless as a food fish; but is valuable for its oil to those engaged in reducing it. Wherever one of these reduction works exists bait can be had. They employ steamers built expressly for the purpose, which go out to sea and surround schools of moss bankers, which during the season are very plenti-

ful, with long seines or purse nets, and they usually come in every evening loaded down full. We fully expected to get our bait Monday evening, but the wind came up from the southwest and blew a gale for ten days, making it so rough that the banker boats could find no bait. During that time we lay at anchor under that immense pile of stone which the Government has put up in hopes of making a safe anchorage for the numerous vessels constantly passing the capes.

It is a pile of stones about 2,500ft. long, built right in the mouth of the bay near the Delaware or Cape Henlopen shore, but leaving a channel between it and the shore. The lighthouse and signal station of the Maritime Exchange is located on it, though the lighthouse was blown away in last September's gale. It is still incomplete, but has proved itself of great value to small craft. It was found, during the terrific storm which carried away the lighthouse, to be of little account, and in fact a "trap" for vessels, for many a good ship, whose hull lies high and dry on the sand now, would have stayed in deep water and perhaps rode out the storm if there had been no breakwater. They came in and anchored behind it, and it proved inadequate, and they dragged their anchors and parted cables, dashed on the breakers and furnished a chapter in the history of marine disasters almost unequalled.

We lay here ten days, the monotony of which was only broken by an occasional visit to the blackberry swamp on shore or a trip to Leves for newspapers. During the stay, however, everything was gotten in readiness for fishing. Each skiff must be fitted out with its own gear, consisting of five good tested lines, thirty fathoms in length, and a supply of extra snooded hooks and dipseys, a baler, two sharp knives for cutting bait, and last, but by no means least, a good "shark club." This is generally made from the handle of a broken oar and should be about 2ft. long, the heavier the better. When a large shark is hooked and after a long struggle brought to the gunwale of the skiff, he must be completely stunned by several hard raps on the head with this tool before it is safe to attempt to unhook him. I knew of one instance where a man tried to handle one before he was thoroughly subdued and lost the best part of his oilskin coat, and came very near losing an arm. Finally, one night about 9 o'clock, we heard the whistle of the banker boats outside the capes, which was a signal that they had been successful, and in a few minutes we, together with the crews of five other schooners which had come in during this time, were crowding and scheming to be first served. The fish are shoveled into a large tub, which, when filled is hoisted by a steam windlass and lowered down over a skiff and emptied. A skiff will hold two tubs of bait if loaded firm, and each of the six schooners took five tubs, making thirty in all, or about sixty barrels of fish taken from the deck, and it did not seem to reduce the supply very perceptibly. The bait must then be cleaned and iced. The head and all the soft part of the fish is removed by one quick stroke of a knife, leaving only the back or fleshy part. This is packed in ice and when fishing commences is cut into pieces suitable for the hook. It was midnight when we turned in. When I came on deck a little before daylight I knew by the clank of chains that could be heard in all parts of the harbor that the whole fishing fleet was getting under way, each determined to be first on "the Banks."

The southern fishing bank is a ledge of what is termed tomato bottom, about 7 miles long, situated about 30 miles due S.E. from the Breakwater, and is washed by about 15 fathoms of water. Very few pleasure parties come to this bank. Sportsmen as a rule go to the northern banks, which are about 13 miles E.N.E. from Cape May and more easily reached, and where arrangements have been made for their accommodation, and harbor can be had every night. While on the southern bank, if a vessel is caught in a storm, she must weather it out as best she may or go to sea, unless the wind is fair for the Breakwater. There are only 5 fathoms of water on the northern bank, and the fish are brought to the surface by throwing out chopped bait and caught with a short line and no lead. On the southern bank the fish are caught off the bottom, and the fisherman pulls 15 fathoms of line, 2lbs. of lead and his catch against a strong tide. The fish are much more gamy and more marketable, not having been overfed as is the case at the north. They are harder and are preserved in better condition, and less loss is met with through broken fish. As soon as it was day the Eden was under way, and about 10 o'clock that morning the order was given to "cast the pigeon" (throw the lead), which showed 15 fathoms of water and good bottom. Then came the order to "launch," and the real business of the trip began. In a few moments the six skiffs were afloat, each with its crew of two men, and were pulling away to separate and cover as much ground as possible, always keeping each other in sight, so if any skiff strikes fish thick the others can be signalled.

Any sportsman who goes out on a trip of this kind, and imagines he can keep his end up without doing some very hard work and expending considerable time and energy in learning the peculiar science of this business, will find he has made a decided mistake. The captain of the skiff fishes from the after part or stern sheets and directs all movements of the skiff and has entire charge. The mate fishes forward, and it is his business to heave the anchor and haul it up; pull the forward oar, catch a good share of the fish and sometimes stand considerable abuse. When good fishing is not found the skiff must keep changing ground, and the mate has his hands full pulling cables. Sometimes he may heave and haul up the anchor forty times in a day. Each man in the boat has his own rig throughout. It is absolutely essential that he shall stand up in the boat, no matter what the weather is. If he can't stand up he will have to learn; and he may be sure he will take the measurement of the fish box a good many times before he is master of the art and can stand up and fish his pair of lines with any sea on. It is difficult to learn, but as a person realizes that it must be accomplished if he is going to earn his share of the proceeds, pride comes to his assistance and he sets himself at it with a will, and after a few hard tumbles he has caught the combination and is all right. A person cannot stand in boots or shoes, as it requires a kind of a grip of the foot, and it would not do to go barefoot, as the sun would blister the feet and they would be bruised in stepping around in the boat, so the fishermen have adopted probably the best thing that could be found for the purpose, a very heavy woollen sock. Fully equipped, the anchor fast, the oars, shark club and other

things stowed away, he casts over his two dipseys. As soon as the lead touches bottom he draws the line up a few inches and fastens it on the opposite side of the skiff. In this way the line is kept taut, and should he be obliged to withdraw his attention for a moment it would still hook fish. Taking the stand between the two lines with one in each hand he awaits the strike, and usually he has only to wait a moment. Then he must overhaul the line with all the rapidity he is capable of, unhook his catch, bait and cast again. And as quick as the lead leaves his hand he begins hauling the other line, which, if his lines are properly rigged, should have at least one and generally two bass on. His aim now is to keep a baited hook at the bottom, so the fish will not leave the spot, and to do this he must pull line as he never did before, all the time maintaining his equilibrium in the skiff, for if he falls, or dances all over the boat to keep from going down, he will surely throw the other man, and a hard fall among a lot of fish with every fin as sharp as a needle is unpleasant. Neither will the ordinary fisherman, after having seen a dozen or so sharks around the boat, relish the idea of going overboard. The man who now can land the greatest number of fish in the least time is of the most value to the crew. This continues until it is time to go to the schooner, unless the fish move, in which case he must up anchor and move also.

One thousand pounds is a fair day's catch for one skiff. I understand 2,000lbs. has been caught by a skiff in a single day, but this is unusual, 1,400lbs. being considered a very high catch. When fish are thick two are nearly always brought up at a time. A fisherman once told me of bringing up three sea bass on a line with only two hooks. This I doubted until I myself saw two brought up on one hook. The first fish had made such a rush at the bait, that it had entered his mouth and come out of the gill at one side and been instantly seized by another fish that was securely hooked.

The crew are called at dawn, and all skiffs are immediately launched and fish until breakfast time, which is generally about 8 o'clock, when all come to the schooner at the welcome signal from the steward, which consists in running up an oilskin coat in the rigging. Out again as soon as possible; and thus it continues until the sun goes down, when, as a rule, the fish stop biting, and every one comes in hungry and thoroughly tired out. But a good substantial supper is waiting, which is quickly dispatched, and all turn in except the anchor watch, which consists of one man and is changed every hour during the night, for these banks are right in the track of large steamers and are not a safe place to lay at anchor in thick weather. A person needs only to be in the hard bunk a few moments when he is lulled to sleep by the motion of the vessel and the sounds of the sea. The programme is not altered on account of weather, unless it gets so rough that even the most experienced cannot stand up in a skiff; then all hands fish from the deck of the vessel.

When the fare is caught, which usually amounts to about 18,000lbs., anchor is immediately broke and the vessel is got under way, homeward bound. During the sail home everything is thoroughly cleaned up and put away in its place, and as soon as we reach fresh water the vessel is turned into a big laundry. Every man laundries his own clothes and gets himself in shape to make as good an appearance as possible in port. It generally takes two or three days to put out and sell the fish. As soon as the proceeds are received the expenses are paid, and of the balance the boat, or rather, the owner, receives one-third, and the remaining two-thirds is divided among the crew share and share alike. The season just passed has not been remarkably profitable, for the boats have been unfortunate through accident or poor management in their time of arrival at market. Instead of arranging so that there should not be more than one or two boats in at a time, the market has been kept in a constantly fluctuating condition of "feast or famine." As a consequence the fish, excepting in a few instances, have brought a low price, causing great loss to the men. I understand an effort will be made next season to place this matter in charge of some competent man, who will direct the arrival of the boats, and thus keep the market regular and avoid overstocking.

Finding myself much benefited by the trip, I went out again on two different occasions to the Five-fathom Banks bluefishing. When I came back to business again I was in the best of condition, having been strengthened and invigorated physically and mentally by the compulsory exercise, the salt air and exposure, and the plain and substantial living, and having been afforded a splendid opportunity of indulging in my favorite sport, with all expenses paid and a balance on the credit side. In conclusion I wish to say that I have not, in order to increase the interest of this article, indulged in any flights of imagination or introduced any fiction, but have adhered conscientiously to facts. This was an experiment with me, and I gave it a thorough test, and would cheerfully recommend the plan to those who, like myself, cannot afford a trip requiring expense and loss of time, but must seek something which will at once afford pleasure, profit and health.

GEO. D. CONGER.

WESTERN FISHING.

CHICAGO, April 12.—The fishing season will open early this year, so far as the fish are concerned. Numbers of bass have been taken already in some of the Indiana rivers. I hear of a party or two who meditate going up to Grass Lake next week. This is all wrong. The bass should be left alone until after their spawning season. Charlie Burton has got some good trout country picked out already, and thinks the first of May is about the limit of his patience. By the way, I should mention the letter sent in to *FOREST AND STREAM* by a reader, asking further information concerning Charlie Burton's glass minnow trap, of which I spoke last fall. In a week or so one of these traps will be in this city, and I shall be glad then to see and to explain it fully.

FOREST AND STREAM is invited by a railroad man well known in Chicago circles to be present next June or July at the opening of the buildings and streams of a certain new trout club located near his road in the big North Woods above here. Full particulars in our next of about that date. In the meantime, we "names no names," because the desired territory is not yet quite all secured. This is going to be quite a strong club. E. HOUGH.

TO SALMON ANGLERS.—T. J. CONROY, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—*Ad.*

FREE FISHING GOING.

THAT there is a growing interest in trout fishing and hunting goes without the saying, but its particular growth is toward centralization and control. It is probable that the good old days, when the fishermen could follow the streams at will and fish wherever he pleased, without that disagreeable sign "no fishing here," staring him in the face, is fast drawing to a close. The farmers are waking up to the value of the trout streams they own, and the tendency is to lease them to sportsmen and clubs of sportsmen. A recent letter from a gentleman in Connecticut says, that the trout fishing was never better in that State, but that the number of streams that are posted and let to private parties was never so great. The letter ventures the assertion that it will take hardly more than one year to post every stream of any value as a trout stream in that State. The fishing is excellent this spring from the fact that the effect of the restocking of a few years ago is beginning to be felt. This is waking up the farmers and the owners of woodland to the value of what has heretofore been only a tax and vexation to them. The same is true of Massachusetts, only not quite as much is being done in the way of posting and leasing streams. Still the beginning has been made in that direction, and it will not take long for the land owners to find out the value of their streams. If a sportsman or a fishing club will give a farmer \$10 or \$20 for the exclusive right to fish a brook through his land for a season, that \$10 is better for the farmer than not to post or protect his brook and allow everybody to fish and tread down his mowing and break down his fences.

Fishing and sporting clubs that own or lease lakes, streams and lands in Maine are on the increase, and the tendency is to crowd out the man with no rights there—the nomad who formerly fished as he pleased. I hear that the John Danforth camps at Parmachenee Lake have this year been leased by a party of New York sportsmen, and that John has been retained as chief guide and keeper of the property. But I hardly think that any land has been purchased or any special rights granted, for it has long been a principle of the landowners of the section of the Androscoggin Lakes not to sell an inch of land or grant to any person or club any special rights. E. S. Coe, the senior partner of the firm controlling the Coe and Pingree estates, which embrace the greater part of the lands about the Androscoggin Lakes, more familiarly known as the Rangeleys, has always been set against granting any special privileges to anybody on the company's lands. He has occasionally leased camp locations on their lands about the lakes, but he has steadily refused to sell land to anybody.

It is a fact that the best of the Rangeley lakes, the home of the trout of the world, would long ago have been controlled by clubs and private parties but for this principle of the landowners not to sell or grant special fishing or hunting privileges. Thus it is that the best trout waters in the world have been kept open to the sportsmen of the country. But the principle is the same, and monopoly of fishing and hunting rights is the order of the day. It is a fact that the work of the several fish commissioners of the New England States is likely to tell more plainly in the pockets of the owners of the borders of lakes and streams than into the general pleasure of the public. The time is coming, and that, too, quite rapidly, when, if the several States will build up and protect fishing waters and hunting grounds for the dear public, then these grounds and waters will have to be owned by the several States, for as fast as the waters become valuable to sportsmen, from the effects of restocking by the several fish and game commissions, just so fast are individuals getting control of them either through lease or purchase of the lands. SPECIAL.

AQUARIA NOTES.

Occasional Observations on the Fishes in the Aquaria of the U. S. Fish Commission.

THE SPAWNING OF YELLOW PERCH.

THE spawning of yellow perch in aquaria, within walls, deserves some addition to the brief mention accorded it in the FOREST AND STREAM of March 27, as it points to possibilities in fishculture as yet only to be conjectured. There are some at least who believe that when proper and adequate conditions are provided the same result may be attained with any of our fishes. By this it is meant to be understood that some fish are less amenable to artificial conditions than others, and require more room and more naturalness of surroundings. Some of these fish spawned in March and April, '89, and again in December, '89, and January, February and March, '90. It is very evident, therefore, taken in connection with similar occurrences, that the limits of the spawning seasons are influenced by the conditions of temperature alone. A number of attempts were made to hatch these eggs in the aquaria, but they were not very successful, only a small percentage hatching. The egg mass is in the shape of a long tube, closed at the ends and arranged in folds like the bellows of an accordion. When folded the mass is several inches long (probably eight to twelve), but when drawn out it will be three to four or more feet long.

Of the eggs transferred to the Central Station hatchery, as stated, the loss was slight, thus demonstrating that the McDonald universal hatching jar is adapted to at least some kinds of adhesive eggs as well as the non-adhesive ones. The occurrence of this spawning in the aquaria has led to quite an extensive spawning and hatching of these fish at the Central Station hatchery. The actual spawning takes place at night and has not until recently been observed.

The actions of the fish preliminary to spawning have been witnessed by Mr. Wm. Maynard, a night watchman of Central Station. His description of it is as follows: "The female remained quiet in one spot on the bottom of one of the hatchery aquarium tanks, one or more of the males hovering over and about her, with pectoral fins vibrating with intense activity. The males would at times lie close alongside of her, and at other times endeavor to force themselves under her, with the evident intention of assisting in the extrusion of the eggs. The extreme muddiness of the water and darkness at that point prevented my seeing the actual spawning. There was apparently nothing to distinguish it from the more ordinary habits of fishes."

The roe when taken from a dead fish not yet ripe is in a single compact mass, covered by a thin membrane; but

in spawning the mass separates, one side being spawned before the other. This was noticed in a specimen which had spawned one side and appeared to be unable to get rid of the other. It was stripped from her and artificially fertilized successfully. A number of the spawners are undoubtedly last year's fish; so it appears that they will spawn when one year old.

THE SPAWNING OF RAINBOW TROUT IN SALT WATER.

IN FOREST AND STREAM of Jan. 9, '90, there is a mention of trout spawning in salt water. The spawning of a female rainbow trout in a salt-water aquarium is a matter of some interest as showing that the development of the ova of trout may go on in salt as well as in fresh water. She had previously spawned a few eggs in a fresh-water aquarium, but had been some weeks in the salt water before spawning again. As there was no other fish in the aquarium but a male hybrid (lake and brook) it is hardly probable that the eggs are fertilized. The eggs are normal in appearance, except that they are lighter in color than is usual in that species. They are quite as light as a white-fish egg. The density of the water is between 1.020 and 1.021. No change of color is as yet discernible in the fish since its transfer to salt water. A number of other trout have been killed in the same aquarium by the male hybrid, which is very vicious. Since writing the above the rainbow trout in question was found dead during the night with eggs oozing from her and quite a number already spawned. Whether she died from the exhaustion of spawning or some effect of the changed conditions, or was killed by the hybrid cannot be known. The hybrid is still vigorous and feeding well.

SPAWNING OF GOLDFISH.

The spawning of the goldfish in the aquarium is so common as not to be worthy of mention if occurring at the regular season. Mr. Walter Sauerhoff, however, has had some to spawn during January in his house in a small tank. Some Japanese fantails, lately imported, and last season's fish, probably now not more than nine months old, have been on the point of spawning during the winter, the males having the distinguishing tubercles on the opercles and pectoral fins well developed; but recurring falls of temperature have retarded them, which is further evidence of the influence of temperature in controlling the spawning seasons of fishes.

WM. P. SEAL.

ANGLING NOTES.

WE have had the pleasure of interviewing Capt. F. A. Boutelle, U. S. A., and Superintendent of the Yellowstone Park, who has been East on a visit. The Captain is very enthusiastic about the Park, and speaks in glowing terms of the trout fishing there. He states that he has succeeded, with the aid of the Fish Commission, in stocking miles of barren waters with trout and landlocked salmon, and that in a very few years the fishing there will be unexcelled by any waters in the States. Owing to the entire absence of any other kind of fish and an abundant supply of food, there is no reason why the fish just introduced should not thrive and do well. In speaking of the size of flies that do best there, he says that they should be dressed on Sproat hooks not smaller than No. 6 nor larger than No. 4. The best patterns are coachman, royal-coachman, dark-coachman, professor, brown-Palmer, Abbey, Montreal, alder, Lottie, Imbrie and brown-hen.

It is curious that so many anglers who are so particular as to rods, lines and flies are not more particular about leaders and the size gut of the snells. It is useless for the fishermen to be so exacting about special patterns and size of flies without paying attention to this important matter. The snells should be at least as fine as the leaders, and if the water is clear and the trout much fished for the leaders must be long and fine and stained rather a dark mixed color. The flies should be attached to the leader in a manner that will make the least show. The best way is to have 3ft. lengths looped together. Now by shoving the loops apart the knot at the end of the snell can be inserted and the sliding loops drawn together. The loop above the knot on the fly should be cut off. The fly will be held firmly in this position, yet can easily be changed. The snells on these flies (droppers) should not be over 4 or 5in. long. If longer they are apt to twist about the leader, and of course the fish will not then touch them. Flies should not be nearer together than 24in., 36in. is better, and three flies on a leader are sufficient. The writer has been most successful with two flies 6ft. apart.

Another very important matter is the color of one's clothing. A quiet gray for both coat and hat is least apt to be seen by the fish. Trout may not hear, but they can see, and their suspicions are easily aroused. Anglers should move quietly, and in casting should avoid as much as possible the windmill motion with their arms. On a still day, when the water is as smooth as a mirror, the fish can see much better than when the surface is ruffled by a breeze, and the angler, if fishing from a boat, should sit as quiet and low as possible and avoid all sudden and unnecessary movements. There is nothing that marks the first-class angler so thoroughly as the attention he pays to these little details. How often we hear fishermen say they cannot catch anything on the still waters or when there is no breeze. If they would fish properly they would find the still reaches held the biggest trout, and when the water is smooth they can best see the fly, but they can also best notice the heavy leader and awkward cast.

RAINBOW AND LAKE TROUT IN INDIANA.—We are indebted to Mr. Geo. H. H. Moore, of the U. S. Fish Commission, for the following account of the successful introduction of rainbow and lake trout in Indiana, drawn from a letter of Mr. Lawrence D. Creel, of Angola. "A California rainbow trout weighing about 2lbs. was recently caught in Crooked Lake. The fish were placed in this lake in 1886 and were then about 6in. long. Fifteen lake trout were taken in Fox and Crooked lakes. These were deposited in 1886 and during the next two or three years. Both of these lakes are in Steuben county.

ALBINO HALIBUT.—From the Gloucester Daily Times, of Gloucester, Mass., we learn that a halibut was landed from a George's trip, April 5, which had white fins and tail, with the usual brownish-black back of this species.

NOTES FROM WORCESTER.

WORCESTER, Mass., April 10.—The question of fish propagation and the leasing of fishing privileges is becoming an all-absorbing topic of conversation among Worcester sportsmen. Several things have contributed to this end, prominent among them being the long-continued apathy of the governing board, the local sportsman's club, in regard to the interests of the members who enjoy piscatorial sports.

The entire club energy seems to be expended upon trap-shooting. At the last annual meeting a fish commission was established, and a small sum of money appropriated to be expended in looking into the matter of restocking brooks, an additional appropriation being promised to carry on the work, when some feasible scheme had been decided upon. The committee have investigated the matter at length and decided that the best results could be obtained by growing fry to yearlings and then liberating them in the brooks. The policy proposed was that farmers owning land through which brooks ran, be asked to agree not to lease or post their land for a certain number of years, and the club agree to put so many yearling trout into their waters every year. Some land owners had been approached on this line, and the idea met with almost universal favor. There is no question but such a policy, if carried out, would in a few years have a strong tendency to discourage the leasing and posting of land.

A site has also been found which seems to be eminently fitted for the rearing of young trout, and which can be secured together with a provision for the proper care and feeding of the trout, but the prospect for getting the necessary money does not look bright. A fish club, whose objects are shrouded in considerable mystery, has lately sprung into prominence among the wealthier class of fishermen, and one or more brooks near the city have been secured by them. Just what they propose to do does not appear clear, but that their scheme lacks the confidence of fishermen in general is certain, some of their own subscribers being among the number who are not satisfied with their policy.

The business of leasing and posting has heretofore been confined to a very few. One of these has seen the harm it works and drawn out. Two others are prime movers in the new enterprise.

While no one can question the right of a club or individual to buy or lease anything he chooses, when such leasing tends to shut out from the public other land or water, it is certainly working an injury to those who have not the means to lease their fishing rights. The sentiment which prompts such a generous work as the Massachusetts Fish and Game Association are doing in the matter of restocking with game seems to be an unknown quantity to these men.

The field is certainly a promising one for a little missionary work, and the fishermen who believe in open fishing for all should do something other than growl at the trap-shooters because the latter take sufficient interest in their branch of sport to attend to club meetings and see that their interests are taken care of. Good, or better fishing at least, could be made by either posting and protecting or restocking with yearling trout.

By the latter method, the majority of brooks would in a short time be open, the fishing in all of them good, and every one would be free to lay out his day's trip in any direction that might suit his fancy, selecting for his partner any congenial spirit, whether he belonged to a club or not.

Under the preserve system, as proposed by the new club, the man who puts in \$5 a year is issued a ticket entitling him to so many days fishing. The one who pays \$10 can fish twice as many times.

Every time you wish to try for a basket of trout, you take your ticket along, present it to the superintendent, who punches it. Just as they do at "Puts" when you get your lunch, and when your \$5 worth is punched out you are done for that season, unless you can buy or borrow a "fishing" from another member. Shades of Izaak, has it come to this! And what next! Only one more turn and when you wish to take a stroll away from the dusty streets for a breath of fresh air, you must need have your credentials along and report at every farmhouse to be punched before you can cross their pastures.

The trout fishing in Worcester county opened up well. April 1 saw several good strings brought in and every pleasant day since some one has braved the cold to repeat his success. Capt. D. M. Early secured the opening day prize, a beauty that made the scales smile at 2lbs. 1oz. The water is high yet and they bite very sluggishly, but a few more weeks and the sport will be good. If as good as last year, no one can complain.

HAL.

SEA TROUT FISHING.—East Orange, N. J., April 14.—*Editor Forest and Stream:* For the benefit of "M. H. F." Boston, and also for others of your many readers who would like to know of one of the best and most accessible places for sea trout fishing, I can recommend Indiantown, New Brunswick. The district covered by where the Renous and Dungan rivers enter the main southwest Miramichi, is one of the best in the Province. The fish in ordinary seasons generally reach that point about the first week in June, on their way to the headwaters. There is a good plain hotel within a few minutes' walk of the railroad station and the river. The owner and proprietor, Mr. Jardine, locally called Jurden, is an adept with the fly as well as a genial host, so that any who may find their way up there are sure of good treatment. As the fish do not remain in the neighborhood for any length of time, it is very necessary to find out beforehand when to go, and then to go at once.—BIG REEL.

PROTECTION FOR POTOMAC FISHES.—We are glad to learn that the House committee on merchant, marine and fisheries authorized a favorable report April 9, on the Stahlnecker bill, with an amendment extending the provisions of the act of March 2, 1885, to protect the fish in the Potomac River, in the District of Columbia, and to provide a spawning ground for shad and herring in the river. Virginia and Maryland should do their part toward enforcing this wise measure and share in the benefits which they must perceive as the results of protection.

611 HINTS AND HELPS FOR SPORTSMEN. A book of 240 pages. Send for table of contents. Price \$1.50, postpaid, from this office.

RANDOM CASTS.

BEFORE putting your rod together lubricate the male ferrules by rubbing them on the back of the neck (if you have no better means at hand), sufficient oil will adhere to overcome the annoyance of tight joints when taking apart after the day's sport.

Have your trout and bait rods fitted to one independent handle, one end for the fly and the other for the bait. In this way you can carry three rods in the space ordinarily required for one. Put it in your grip. When having it made see that instead of plugs, which are so easily lost, the ferrules are fitted with screw caps.

The man who tells you that trout are not worth catching after you have killed your first salmon, either wilfully mis-states the facts or does not know any better. Nothing can lessen the beauties of the trout for the true angler, and as for the claims of the black bass, it is like comparing the lily with the sunflower.

For wading a stream, when rubber is not desirable, either in the shape of boots or pants, there is nothing better than a pair of canvas pants worn over woolen underclothing. Being light and strong and easily dried, they can be used every day with comfort. Tie them loosely around the ankles and over the tops of your shoes.

By having the handle of your rod covered with cork instead of cane, twine or rubber, you will avoid blisters to the hand. You get a grip that is not liable to slip and a material that is most pleasant to the touch. It only needs to be once tried to be always appreciated.

On the shore, fog and a wind off the sea will tan the skin quicker than the sun.

Fish that feed near or in the surf come closer in shore at night. BIG REEL.

TROUTING IN THE BLUE RIDGE.

IT is but a step from the old farmhouse to the meadows below, through which runs with many a bend and turn the swift trout stream. Along the banks the feathery green willows are already in leaf, tall blackberry bushes grow rank, bending far over the stream, as if to screen the unwary trout from his enemy. The ground along the banks of the brook is thickly carpeted with wild strawberry plants, whose tender green shoots as yet give no evidence of the coming crop of berries. A brilliant azure sky above us, the sheer precipice of Whitesides, one of the tallest peaks of the Blue Ridge, looming up on our right and the trout stream at our feet. What more need the disciple of good old Izaak Walton desire?

But come, let us to work. The hook is soon baited with a tempting earthworm; now select this shady spot where the eddying brook forms a cove, such spots the speckled beauties love. A gentle dropping of the line and presently oh! joy, an almost imperceptible mincing at the bait and lo, we bend forward and descry, easily discernible in the limpid waters, a fine trout biting vigorously at the bait-covered hook. A sharp bite, a sudden jerk of the line and the luckless victim is thrown panting and beating on the grass beside us. The examination now begins. He is say 7in. long, of a delicate grayish color and his sides and back are liberally speckled with small red and golden stars. His fins are reddish and slightly fan-shaped. Altogether this is a most satisfactory specimen for a first attempt. Now make those stiffening jaws disgorge the hook and half-eaten bait. Transfer our trophy to the fish basket, or to the more commonly used forked willow twig. Rebait the hook, another dexterous fling in the same pool, a moment's suspense and another trout is gathered to his fathers. Another still tempts Providence, perhaps in the same pool; then in midwater the line is thrown; here a gentle cautious bite is felt. We jerk the line. Alas! for impatience, we will never fatten off of that trout; he was not well on the hook, and with a vigorous leap when in mid-air, he cleaves the water and disappears forever from the view of the discomfited fisherman. The next pool there is no use to test, for, look carefully and you will see a family of crayfish, whose greed will never allow the trout to approach the bait they themselves so ardently desire.

Still further up the stream we go and here the trout are plentiful: from sheltered pools, from under obstructing logs, from miniature bayous, they hasten to their death. It is no uncommon thing to catch from thirty to forty trout in a couple of hours' fishing, then back home to enjoy a fish dinner. The slimy outer skin of the trout (they have minute scales) is gotten rid of by passing them through warm ashes and then scraping with a knife and otherwise cleaning. Shortly after a buxom mountain maiden places upon the table, brown and tempting, fried trout. And here it may be said that the trout are equally good fried, broiled or boiled. They range in size from 4 or 5in. to 9, 10 and even 15in. The largest we know of was caught near Highlands, Macon county, N. C., in a pond belonging to Col. J. H. Alley, in Whitesides Cove. This fish weighed 3lbs. and was 14in. in length. The pond trout, however, though larger, are seldom as finely flavored as those caught in the brooks. The flesh of the trout frequenting swift running water is usually of the true salmon tint; those obtained in still water have generally white flesh. The deep tint of the former is attributed to superior exertions necessitated by the swiftness of the water.

Old fishermen assert that the trout bite best in the morning, provided the moon has shone in the early part of the night alone, as the trout have thus a short time to feed by moonlight and are hungry by morning and will greedily snap at the bait. Hence on the days following nights when there has been no moonlight the trout are caught in the greatest numbers. There is also a base method in vogue among the more expert native fishermen of making a noose with a line of horse hair and letting this noose float lightly down stream, the fish coming up stream entangles his head and fins in the noose and is thus caught by the dexterous tightening of the noose and jerking from the water. The foregoing account of mountain trout fishing is in pursuance of the primitive but most successful methods practiced by the country people and their occasional boarders, in that

most secluded of mountain resorts, Highlands, Macon county, N. C. and its vicinity.

To those lovers of nature and angling who find "sermons in stones, books (and trout) in the running brooks," surely nothing could be more attractive than a month's vacation in the early spring in these unfrequented byways of western North Carolina, at an altitude of from 3,600 to 4,000ft., and a distance of thirty miles from the nearest railroad, amid the grand scenery of the Blue Ridge. M. LEE MENNINGER.

WHITESIDES COVE, N. C.

AN EDITOR ANGLES.

MR. BRUCE HALDEMAN, who, with his father, has been spending the winter at Naples-on-the-Gulf, Florida, enjoying the balmy breezes and catching tarpon, writes the following letter about the fishing experiences of the Hon. Henry Watterson, editor of the *Courier-Journal*, who, it will be seen, can fish as well as he can write stirring editorials on the tariff:

"Speaking of sights upon the Naples Gulf brings to mind the interesting spectacle afforded by one of Naples' distinguished visitors last week. Hon. Henry Watterson, who spent six or eight days here in company with his wife, was meandering along the pier headed in the direction of the bathing beach, which he was evidently contemplating with pleasant anticipations. Mr. Watterson is an expert swimmer, and while here fairly reveled in the water.

"*En passant*, he observed me land a beautiful specimen of the Spanish mackerel. The sight of the fish flopping about on the dock seemed to cause his piscatorial instincts to overcome, for the moment, his surly proclivities, and he requested that he be permitted a trial with my rod.

"I handed him my rod and smilingly awaited results. In a few moments he had a strike. It was a fine sea trout, and it was landed in superb style. After baiting up, out went his line again. A short interval and another fish. This time it was a large cavalli, and, after a lively contest, it looked as if the editor was about to come off victorious. When within 2ft. of the landing, however, the finny warrior gave a last successful twist and plunged back into the salty safety. Mr. Watterson had now become thoroughly interested, and his afternoon bath passed, apparently, from his mind. Again he baited his hook and cast it forth. A short wait, another fierce tussle in the water, and a golden-tipped jack was stretched out breathing heavily upon the dock. With the flush of triumph and exertion upon his brow he cast his bait and hook once more. He trolls his line slowly along the dock. I turned and addressed a few words to Mrs. Watterson, who had joined her husband. When I next looked in the direction of the editorial angler I beheld a picturesque sight.

"Mr. Watterson was bent double, as if in profound obedience to his 'star-eyed goddess.' In reality, though, he was tugging away with might and main on his rod. His line was taut as taut could be, and my stout little bamboo had formed a semi-circle. Obviously something would have to part, the fish from his briny element, the line or pole from its integrity. I ran up to proffer my assistance. "My God," gasped he, as I approached. 'He's a whale!' "It was a sight fit for the gods. He was pulling away for dear life when I looked down over the side of the pier and saw that his hook had caught upon one of the piles of the dock, and that Mr. Watterson was trying to uproot one of the mainstays of Mr. Haldeman's handsome pier. "Hold on," said I, "your whale is anchored."

Mr. Watterson returned home soon after the cyclone swept away nearly one-half the City of Homes, but he has found time to tell all his friends of his adventures in Florida, and feels that barring his adventure with his "whale" he is quite a fisherman, and is booming Naples-on-the-Gulf to all his friends who have a piscatorial leaning. C. A. D.

LOUISVILLE, April 12.

KENTUCKY METHODS.

TWO rather remarkable fishing stories came to me the other day from the interior of the State. Both are vouched for by reliable parties and though they may seem "fishy," they are nevertheless true.

Mr. John C. Jenkins, of Bowling Green, has a farm on the banks of the Green River, several miles from town, and a part of it has been recently submerged by the high water. He was down there a day or two since and brings back a marvelous tale of catching fish with dogs.

While out on the farm, inspecting the situation as the back-water from the river had left it, he heard a vigorous barking from his dogs some distance off. Presuming they had treed a coon, he walked leisurely over and when he had reached them found both standing at the edge of a little lagoon of water, left when the river fell. They were looking into the water and barking in a manner which indicated that they had "treed" something. After watching the actions of the dogs for a few moments and gazing into the lagoon, Mr. Jenkins saw the tail of a large fish protruding from the water. The situation was explained at a glance. The dogs had "treed" a fish in the pond. He waded in and soon had the fish landed, but not until after he had been splashed from head to foot. It was a buffalo and weighed 26lbs. Down the stream some distance the dogs "treed" another, which also proved to be a buffalo, weighing 16lbs. He returned home with 42lbs. of fish and hadn't been fishing either.

This is the Gospel truth and is vouched for by Mr. Jenkins, who is a good church-going Baptist and a man who wouldn't be guilty of telling a fish yarn under any circumstances.

Another remarkable catch is that made by Mr. Austin Doyle, an amateur fisherman of Cloverport, Ky. He is not a baseball player, but is proud to admit that he has made the best catch of the season. This occurred March 31. He placed his line, containing twenty hooks, in the Ohio River, just below the mouth of Clover Creek, baiting each hook nicely with angle worms. The next morning he found a shovelfish on every hook save the last one, and strange as it may seem, there were two on it. One was hooked in the mouth and the other by one of its long fins. C. A. D.

LOUISVILLE, April 7.

SHAD IN CONNECTICUT.—The first shad of the season were taken in the second week of April.

OBSERVATIONS ON OHIO FISHES.—We have received from Dr. James A. Henshall a copy of "Some Observations on Ohio Fishes," published in the *Journal of the Cincinnati Society of Natural History*, January, 1890. In this comprehensive little volume Dr. Henshall describes the drainage systems of the State, reviews the literature of its fishes, mentions the recent explorations made by himself and Prof. Gilbert, and concludes with some interesting facts concerning the food fishes. These relate to their table qualities, size, food, spawning seasons and present degree of abundance. The whitefish, owing to fishcultural work, he finds to be increasing greatly in numbers. It spawns in November, and the eggs hatch in April. The lake trout spawns in October and the young appear in February. The lake herring (*Coregonus artedii*) has increased so as to become a nuisance; it preys extensively on the eggs of the whitefish. The brook trout exists only in Castalia Springs creek, and its welfare is looked after by a powerful angling club. The small-mouthed black bass is so abundant that it needs only protection from seining and river pollution to continue always plentiful. It spawns in southern Ohio in May and Lake Erie and its tributaries in June and July, depending on temperature. The eggs hatch in a week or two and are carefully guarded by the parent fish. The calico bass (*Pomoxys sparoides*) receives well-merited praise as a food fish. The pike-perch or wall-eyed pike is increasing in the upper Ohio, Muskingum, Scioto and other large streams, owing to the planting of fry by the Ohio Fish Commission. Dr. Henshall mentions a mud catfish taken in the Ohio, near Cincinnati, that weighed 120lbs. Two large mirror carp were caught on a trot-line in Little Miami River, with helgramite bait. The natural food of the larger and valuable fishes was found abundant in all unpolluted streams, but wherever refuse from factories, papermills, oil refineries and distilleries exists in streams, all fish life is scarce or entirely absent.

SPRING FISHING.—Lansing, Mich.—Black bass are biting nicely. Chas. Downey was the first one to put a line in the Grand River, and his success was so good it has set the other sportsmen wild, and it is nothing now but fish. The water is high, but when minnows can be had the black bass have to suffer.—K., JR.

SHORT LOBSTERS SEIZED.—Four hundred and seventy-two short lobsters were recently seized at Rockland, Maine, by a fish and game warden. They were consigned to New York. Only two of the lot were of the lawful size, 10½in. long, and some were not more than 7in.

Fishculture.

NEW YORK FISH COMMISSION.

THE eighteenth report of the Commissioners of Fisheries of the State of New York, sent to the Legislature Feb. 10, 1890, is probably the most valuable one of its series. We shall have occasion to refer to it more fully hereafter, and will merely indicate the nature of its contents. The report of the Commissioners occupies only seventeen pages, and contains their recommendations with regard to the service and a resume of the work. Then follow the reports of the superintendents of the five hatcheries, of the chief game and fish protector, the operations of the shell fish department, Professor Dean's report on the waters examined by him, tables showing the distribution of fish fry and eggs, Mr. Mather's revised account of the Adirondack fishes, amendments to the game and fish laws since the report of 1889, and a reprint of the fish and game laws of the State in full. There is so much of value in this publication that we scarcely know where to end. The researches of Professor Dean are especially interesting and important. The angler will find it worth his while to look carefully into the notes on his favorites among the game fishes.

PLANTING LOBSTERS IN GALVESTON BAY.—The U. S. Fish Commission sent 715 lobsters from Woods Holl, Mass., on March 29, in charge of Mr. J. F. Ellis, to be placed in Galveston Bay, Texas. The trip was made in ten days by steamer and on April 7 the lobsters were deposited in the bay. Through unavoidable accidents a large number of the consignment were lost during the voyage.

New Publications.

SLEEPING IN THE WOODS.

IMAINE your bed-chamber of odorous bark and your bed of pungent boughs. Your couch made under murmuring trees and within a few yards of the lazily moving water, whose motions caress rather than chafe the shore. Stretched your full length on such a couch, spread in such a place, the process of falling asleep becomes an experience. You lie and watch yourself to observe the gradual departure of your senses. Little by little you feel yourself passing away. Slowly and evenly as an ebbing tide you begin to pass into the dim and insensible realm beyond the line of feeling. At last a moment comes in which you know you are passing over the very verge of consciousness. You are aware that you are about to fall asleep. Your cheek but partially interprets the cool pressure of the night winds; your ears drowsily surrender the lingering murmur of beach and pine; your eyes droop their lids little by little; your nose slightly senses the odor of the piny air, as you mechanically draw in the chest falls as it passes as mechanically out, and then—you are asleep.

The hours pass, and still you sleep on. The body, in obedience to some occult law of force within the insensible frame, still keeps up its respirations; but you are somewhere—sleeping. At last the pine above you, in the deep hush which precedes the coming of dawn, stills its monotone, and silence weaves its airy web amid the motionless stems. The water falls asleep. The loon's head is under its spotted wing, and the owl becomes mute. The deer has left the shore and lies curved in its mossy bed. The rats no longer draw their tiny heads across the creek, and the frogs have ceased their croaking. All is quiet. In the profound quiet, and unconscious of it all, the sleeper sleeps. What sleep such sleeping is! and what a ministry is being ministered unto mind and body through the cool, pure air, pungent with gummy odors and strong with the smell of the sod and the root-laced mould of the underlying earth! (From Murray's "Lake Champlain and its Shores." DeWolfe, Fiske & Co., Boston.)

NO WONDER IT IS POPULAR.—The appointments of the famous New York and Chicago Vestibule Limited, via the New York Central and Hudson River Railroad, correspond in elegance and luxury with those of a first-class family hotel. The convenience of arriving at Grand Central Station, largest and finest passenger station in America, and the only one in the city of New York, is another advantage enjoyed exclusively by patrons of the New York Central. This great four-track trunk line is unsurpassed for safety, comfort, and the speed of its splendid trains.—Adm.

The Kennel.

FIXTURES. DOG SHOWS.

April 15 to 18.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.
April 23 to 26.—First Dog Show of the Schenectady Kennel Club, at Schenectady, N. Y. G. A. Rosa, Secretary.
May 6 to 9.—Second Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. H. W. Wilson, Superintendent.

Sept. 9 to 12.—Second Annual Dog Show of the Toledo Kennel Company, at Toledo, O. C. E. Rowland, Secretary.
Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.
Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eight Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.
Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

EASTERN FIELD TRIALS CLUB RULES.

FOLLOWING are the regulations, rules for running and instructions to judges for the Eastern field trials of 1890:

RULE 1. The management of the meetings for the annual field trials shall be intrusted to the governors of the club, and with them lies the interpretation of all rules. They shall decide upon all matters not provided for in these rules.

RULE 2. The judge or judges shall be selected by the governors, and their names shall be publicly announced as soon as possible after their selection. When a judge is prevented from attending a meeting or finishing it, the governors shall appoint a substitute.

RULE 3. For all stakes, the names, pedigrees, ages, colors and distinguishing marks of the dogs shall be detailed in writing to the secretary of the club, to be filed at time of making entry or entries. Any dog's age, marking or pedigree which shall be proved not to correspond with the entry shall be disqualified, and all such dogs' stakes or winnings shall be forfeited.

RULE 4. The forfeit money must accompany every nomination, and the balance of the entrance fee must be paid before the drawing.

RULE 5. The governors may refuse any entry they may think proper to exclude; and no person who has been found, to the satisfaction of the governors, to have misconducted himself in any manner in connection with dogs, dog shows or dog trials, or who is a defaulter for either stakes or forfeits in connection with either thereof, or for money due under an arrangement for division of winnings, or for penalties for infraction of rules, or for any payment required by a decision of the club, shall be allowed to compete in any trials that may be held under the auspices of the Eastern Field Trials Club.

RULE 6. Any objections to an entry must be made in writing addressed to the secretary of the club, and will be acted on by the governors, whose decision shall be final.

RULE 7. Immediately before the dogs are drawn at any meeting the time and place of putting down the first brace of dogs on the following morning shall be declared and posted in a conspicuous place.

RULE 8. All stakes shall be run in the order of the programme when possible. Should, however, the competitors or their representatives in the various stakes agree otherwise, the order may, with consent of the governors, be changed.

RULE 9. Dogs shall be drawn by lot, and numbered in the order drawn. Each dog shall run in the first series as a brace with the next available dog in that order. After the first series has been run through, the judges shall announce which dogs they wish to see run again, and order of running them. Discretion is given the judges to run the dogs as often and in what order they think best, until they are satisfied which are the best dogs; but they may announce the winners any time after the second series, provided the first and second prize winners shall have run together. Any dog absent during the first series for more than twenty minutes after his number is called shall be disqualified from further competition.

RULE 10. If two dogs owned or handled by the same person should come together in the first series, the second dog so owned or handled shall change places with the first dog not so owned or handled. This change shall be effected in the order of running if possible; if not possible then in the reverse order of running. If such separation is found to be impracticable, or without benefit, the running together of two such dogs may be permitted.

RULE 11. The bye-dog in any series shall run with a dog selected by the judges or alone as they may direct.

RULE 12. Each dog must be brought up in its proper turn without delay; if absent more than twenty minutes it may be disqualified, at the discretion of the judges. Subject to rule 9.

RULE 13. An owner, his handler or his deputy, may hunt a dog, but it must be one or the other; and when dogs are down an owner must not interfere with his dog if he has deputed another person to handle and hunt him. In Members' Stake every member must handle his own dog.

RULE 14. The person handling and hunting a dog may speak, whistle to and work him by hand as he may deem proper, but he shall be called to order by the judges for making any unnecessary noise, or for any disorderly conduct; and if after being cautioned he persists in such noise or disorderly conduct, they shall order the dog to be taken up and adjudged out of the stake. An opponent's dog must not be interfered with or excited. In such case an appeal should be made to the judges.

RULE 15. If an opponent's dog points game, the dog must not be drawn across him to take the point, but if not backing of his own accord he must be brought around behind the pointing dog. Dogs must be hunted together, and their handlers must walk within a reasonable distance of one another.

RULE 16. If a dog be withdrawn, with the consent of the governing committee on the ground, from a stake on the field or at any time during the holding of a trial, its owner or his deputy having authority, shall notify in writing, with his name attached, the secretary or one of the governors of the club. If the dog belongs to either or any of those officials, the notice must be handed to one of the others. No owner or handler shall be permitted to withdraw his dog or dogs from a stake on the field or at any other time during the progress of a trial, without the consent of the governing committee on the grounds; any such owner or handler withdrawing his dog or dogs, without the consent of the governing committee on the grounds, may be debarred from any future trials, or be penalized at the discretion of the club.

RULE 17. If any person openly impugns the actions or decisions of the judge or judges, or otherwise annoys them during the progress of a trial, he may be debarred from future participation in the trials, and ordered off the grounds.

RULE 18. No person other than the judge, judges or reporters will be permitted to accompany the handlers of dogs competing in any heat, except owners of such dogs running in charge of a handler or deputy, and they shall be permitted to accompany the stewards until the finish of such heat, when they shall retire until their dogs again come into competition. Two persons are prohibited from working one dog. If from any cause the handler of a running dog is disabled to such an extent that he cannot shoot, upon his request to the judge or judges, he may select some person to shoot for him, and the judges may in any case require handlers running dogs to go through minutely the evolution of shooting either a blank or shotted cartridge over any and every established point, upon being ordered to flush a bird. The handlers of dogs and two dogs shall go together as if it were a brace of dogs, and hunt said brace or braces in the trials as in ordinary shooting, so that the dogs shall be on an equality as to ground, opportunities for finding, etc. Spectators shall not be allowed nearer the handlers of dogs running than 75 yds. at the rear. The privilege is granted handlers to ask the judges for information or explanation that has a direct bearing upon any point at issue; pending such questions the dogs shall not be under judgment. Dogs afflicted with any contagious disease, or bitches in season, or unduly attracting the attention of the competing dog, will not be permitted on the grounds. Handlers shall not load their guns until a point is established.

RULE 19. Should the owner of a dog or his representative induce the owner or representative of another dog to withdraw such dog for consideration or bribe of any nature whatsoever, all prizes won by either shall be forfeited upon the facts being satisfactorily proved to the governors. If, however, either dog be withdrawn without consideration, from lameness, injuries, or from any cause clearly affecting his chance of winning, the other dog may be declared the winner, on the facts of the case being clearly proved to the satisfaction of the judge or judges.

When more than two dogs remain at the end of a stake, which is not run out, stakes shall be divided; and in case of a division between three or more dogs, of which two or more belong to the same owner, these latter shall be held to take equal shares of the total amount won by their owners, and in the division the terms of any arrangements to divide winnings must be declared to the secretary.

RULE 20. All protests, when practicable, except as heretofore provided, must be made and delivered to the secretary of the club, or in case of his absence, to the president of the club, or in case of his absence, to a member of the governing committee at or before midnight of the date of running of final heat.

TO OWNERS AND HANDLERS.

In issuing the revised rules in conformity with the spotting system, the club has these principles which it wishes to bring forward:

1. That each and every trial is simply a trial in the true sense of the word, and not a competition in which the number of points made by either dog will necessarily count in his favor. The club desires handlers competing at their trials to show their dogs to the best advantage and not hustle for points on scattered birds, assuring them that each dog will be given a thorough test, both as to his finding and pointing qualities.

2. That the judges will give greater credit to the dogs showing the best natural qualities, it being the desire of the club to have the best dogs placed to the front irrespective of the luck which is supposed to attend competitions of this nature. The judges will be requested to give more attention to a dog's natural finding qualities than has been done in the past years, and the time saved by weeding out the poorer dogs in the first series, will enable them to thoroughly test the best dogs in each stake.

3. In doing away with a scale of points expressed numerically, the club desires to inform the public, as nearly as possible, what standard the dogs competing at their trials will be judged under. The judges will be requested to place to the front dogs showing the best natural qualities, viz., intelligent ranging, desire to find birds independently, bird sense and nose, or expressed in fewer words, dogs showing the greatest ability and desire to find birds. All dogs must be thoroughly broken as a matter of course. Handlers will be given time to let a dog finish his cast before being ordered in a new direction. Under the new method of selecting the winners, it is hoped and expected that the question of luck will be entirely eliminated, and the first, second and third best dogs will be surely and accurately placed in accordance with their merits.

INSTRUCTION TO JUDGES.

The judges shall give each brace in first series at least forty-five minutes and shall order up the dogs as soon thereafter as they have determined which is the better.

Pointing fur, feather, reptile or scent of game birds, if the judges deem the same excusable, shall not be considered a false point.

The judges shall give a dog ample opportunity to discover whether he is on a true point.

No assistance shall be given by the handler to enable a dog to discover whether he is on a false point.

The judges are requested to avoid as far as possible holding a dog so long on a point for the purpose of securing a back or otherwise, as to enable the birds to run. Dogs should be brought up to back only when opportunity offers, without interfering with the pointing dog, and a dog drawing on or pointing game shall be afforded ample opportunity to locate the game, it being left to the discretion of the judges to direct the opposing dog to be held in check.

Should a dog be held an unreasonable time upon a point he should not be penalized for a resultant fault.

The number of times a dog points, backs, etc., shall not necessarily give him the preference, but the judges shall consider the quality of the performance rather than the frequency of the occurrence.

In order to prevent handlers rushing or unduly exciting the dogs, discretion is given the judges to try each dog of a brace separately on single birds, the competing dog being kept at heel.

Backing.—The judges are requested to give no credit for backing unless it appears to be voluntary.

Ranging.—The judges are requested to give greater credit to the dog that maintains the most killing range throughout, viz., wide or close, as the necessity of the case requires.

Obedience and disposition.—The judges are requested to give greater credit to the dog that works promptly, without noise or severity, and is obedient, prompt, cheerful and easily handled.

Bird sense.—The judges are requested to give greater credit to a dog that shows the greatest bird sense. Bird sense is shown in a dog by his desire to hunt for birds, his selection of likely places to hunt in, his method of hunting the places, his industry in staying out at his work, and his skill in handling and pointing the birds after he finds them.

DEMERIT.

False pointing, breaking in, breaking shot, chasing.—These faults shall be gauged by the judges in their discretion. The second chase, however, loses any further opportunity of competition in the stake.

DEFINITIONS.

Breaking in.—Is where a dog through imperfect breaking, or from excitement, leaves his position when the birds rise, whether the gun is fired or not, and starts to chase, but

stops within a few feet from where he started of his own accord or by command.

Breaking shot.—Is where a dog runs in when a shot is fired with the intention of getting to the bird and does not stop promptly at command.

Chasing.—Is where a dog follows the bird, either when a gun is fired or not, to any extent to be beyond control of his handler for the time being.

Following is a list of the stakes and order of running:

MEMBERS' STAKE.

Thursday, Nov. 13, 1890.—Three prizes: First, \$100; second, \$75; third, \$50; or cups of the same value. Each member allowed one entry free, \$10 for each additional entry.

DERBY.

Monday, Nov. 17, 1890.—For all setter or pointer pups whelped on or after Jan. 1, 1889. Three purses: First prize, \$500; second, \$250; third, \$150, and breeder's cup, value \$100, to breeder of winner of Derby. Forfeit \$10 and \$20 additional to fill. Entries close May 1, 1890.

ALL-AGED SETTER AND POINTER STAKE.

Open to all-setters and pointers that have never won a first prize in an all-aged open stake at any recognized field trial in America. First prize, \$500; second, \$250; third, \$150. Forfeit \$10 and \$20 additional to fill. Entries close Oct. 1, 1890.

CHAMPION STAKE.

Open only to winners of all-aged open stakes at recognized field trials in America. Entries close Oct. 1, 1890, excepting those dogs that win after date of closing stakes, which are eligible to enter on night previous to running. Forfeit \$10 and \$15 additional to fill. The club adds \$100 to entrance money and the American Field adds a cup, value \$100. All entries must be filed at 9 P. M. on night previous to running of stake.

All correspondence addressed to Washington A. Coster, Secretary and Treasurer, Saratoga Springs, N. Y.

DOGS OF ANY DAY.

Editor Forest and Stream:

Several letters received on the subject of my comments on the Ogdensburg dog killing, suggest to me that there is a very unhealthy state of mind among dog owners as to the duty they owe the public, and the rights that the public have against dogs and their owners. I yield to no man in love of my dogs, and I know that no man's dogs love him more than mine do me, but I know that many most estimable persons detest dogs, not for any particular reason either, but just because they are dogs. That I cannot understand such a feeling in no measure lessens it, nor does it raise any presumption against the reasonableness of the possessors of such feelings. It is just one characteristic of theirs, that they have as much right to as I have to my love of dogs. They have no right to go out of their way to molest my dogs because they hate the race, I have no right to allow my dogs to annoy them because I love dogs.

Now it seems to me the bounden duty of every dog owner to take the utmost care that his dogs do not roam at large, even if they do no more than frighten or annoy others; above all, when dogs become common vagrants, poking into every will barrel in the neighborhood, killing chickens, stealing food, defiling goods exposed on the street, etc., then the owner who knows these faults of his dog, and allows them to stray abroad, becomes the same nuisance that his dog is, and I hold that the sufferer by such vagrant dogs does a duty to the public when he sues for and collects his damages from the owner of the offending dog. So with the farmer be-deviled with that plague of duncleets from the cities, rampaging over his farms without asking permission, banging away as though it was a Fourth of July celebration, is entitled to the thanks of the community when he procures the arrest and punishment of the offenders. But here is the rub to either sufferer; how is he to secure even the arrest of the offender? If it is the store-keeper whose goods are defiled, how is he to learn who owns the dog? If it is the outraged farmer, how is he to learn even the name of the trespasser? Should he attempt it, the chances are that he meets with revilings for his pains. Now, considering all this, wherein is the man wrong who shoots the dog? I wouldn't do it, I happen to love dogs, every one I come across takes to me, and I confess a weakness to the dog, be it the veriest cur who looks up at me and wags its tail, but then I know many other folks hate them as much as I love them, and when justly enraged why haven't they a right to take vengeance on the cause of their wrath? My advice, and what I strive to practice is, love your dogs, make them your friends, lavish all the care on them you can, but don't let them annoy your neighbors.

I have but one comment to make on the Ogdensburg killing; the man who gives the one-twelfth part of his annual income to the relief of the Johnstown sufferers may shoot a dog a day before I will call him a "brute."

Isn't there another great and very stupid piece of rot in the use of that phrase "a thorough sportsman?" It is used as though being very fond of sport and being an adept at it, is *prima facie* evidence of excellence of character. Now, doesn't everybody know of some of the greatest scoundrels who ever existed who "fill this bill?" I remember at an A. K. C. meeting one genius objected to Mr. Mason's qualifications as a dog judge because "he is no sportsman," implying knowledge as an attendant on going shooting! The very vilest beast I know of standing on two legs uses the term very frequently. Of course there are sportsmen who are an honor to the human race. The one man before whose gray hair I am always tempted to uncover my head is—or was—a most ardent sportsman, and broke his health down in the Kankakee marshes after wild ducks. Brother Peshall is one of my most honored friends. "Old Dominion," who has been in the dog selling business for many years, and whose firmest friends are those he sold to (as severe a test of character as can be imagined), is another, and has been a sportsman from his cradle, but good conscience alive! it is their being men from their boots up, and if they didn't know a gun from a stool or a dog from a donkey, they would be none the less honored.

We need many doses of practical common sense as to our views as to dogs. Read the article "Recent Progress in Surgery" in *Harper's Monthly* for October, 1889, and wonder how there can be such a thing as an anti-vivisectionist. Consider what a horrible fate hydrophobia is, and can you comprehend how there can be opposition to sensible plans for suppression of rabies? The results to the human race of vivisection have been so far-reaching and of such inestimable value that had they required the sacrifice of a thousand dogs a day, even in extreme suffering, the end far more than justifies the means used. Of course, such a case as the horrible tortures of dogs in Jersey City, where the object sought was only expert evidence to use in law suits, was utterly damnable, the end being utterly insignificant as compared with the torture used. So it all boils down after all to a weighing of the results, and the sooner persons interested in dogs themselves boil down to this view of their privileges the better for all.

HULTON, Pa., April 1.

W. WADE.

IRISH SETTER CLUB MEETING.—A meeting of the Irish Setter Club will be held at the rooms of the A. K. C. No. 44 Broadway, on Saturday, April 19, at 4 o'clock P. M. Business of much importance demands a full attendance of members.—MAX WENZEL, Sec'y.

DOGS OF THE DAY.

ON my return from Boston show, I took the opportunity of calling upon Secretary Vredenburg, as I had promised to do, to look at the A. K. C. As I have already said, I never had any suspicion that there was any \$1,000 loan to the A. K. C. There has never been any evidence that the treasurer is a past master as a public accountant, but no one has ever had reason either to doubt his word or his honesty. When he therefore said in so many words, that there had never been a cent contributed to the A. K. C. funds, except what had come from the regular sources of revenue, there was an end in my mind to any such idea as I had been told about the \$1,000 check. It was not to satisfy myself on this point that I took a look at the books, but to be able to give a few facts which would clear the matter up. Mr. Vredenburg handed me the cash book which had been kept by Mr. A. D. Lewis; it gave every item of receipt and expenditure. This book was balanced up to Jan. 11, with the now celebrated balance of \$1,228.28, which was alleged to have been made up of the contributed \$1,000. From this point I worked backward, noting the carried forwards on each page and roughly the difference caused by the addition of each page. In this way I came to a brought forward balance on July 12, 1889, of \$851.40, beyond which I did not take the trouble of going. Here then is the result of my investigation. The July balance appears on page 34 of the cash book and sixty-two pages further on, page 94, comes the balance of \$1,228.28. The average footing of a page was about \$60, one was as low as \$30 and there were two high ones, one of which was \$160, the other about the same. Now how was the \$1,000 paid in the A. K. C. We must either accept the cash book as correct or else say that Messrs. Vredenburg and Lewis are a couple of consummate rascals to concoct such a cash book. I accept it as correct. Then as to the hiatus between Jan. 2 and Jan. 11, which some of my readers may remember was said to have been so skillfully arranged as to enable the \$1,000 being poked into the treasury, the actual receipts between these dates were just \$122.75.

In making this statement I am not entering into any discussion as to the method of preparing and dividing the A. K. C. accounts. They are bad beyond palliation, as I have previously shown when discussing them at the time of publication. What I do say is this, that any charges that the A. K. C. had to get outside support during the year 1889, or up to Jan. 11, are simply preposterous, unless a man is willing to saddle such a charge with the additional one of the grossest deceit on the part of two of the A. K. C. employees.

I do not know how widespread may be the misunderstanding among the associate members as to their rights and privileges, but it was evident by the introduction of Dr. Foote's resolution at the associate's meeting held at Boston, and the discussion it entailed, that there is some misconception. Dr. Foote's resolution called for the dismembering of the associate memberships. This is an impossibility for the associates to accomplish. It is not a club, and the members have no such power. We are simply a group of individuals and can only disintegrate our own selves. The American Kennel Club, which created the associate membership, can alone wipe it out, and that by altering its constitution. The whole business is cut and dried for us. If we like it we come in, pay over \$5 and get therefor \$7 worth of goods. If we don't like it we needn't join, and if we want the \$7 worth we have to pay \$7 for it. Over and above this pecuniary consideration we have a right of representation on the A. K. C. executive committee at the rate of three delegates to begin with, and one additional delegate for each hundred members after the first hundred.

Dr. Perry, in his address to the associates at Boston, said we ought to instruct our delegates what to do. I don't see how we can. We elect by popular vote the men the majority believe to be competent enough to represent them and to act for the best interests of the members, collectively and individually. Each member must act for himself. If any one has a suggestion to make it is the duty of the delegate he may choose to send it to place it before the A. K. C., no matter whether that delegate is in accordance with it or not. Each member is practically what a club is to its delegate, but an associate member's delegate is not necessarily bound to support every such motion or proposition by argument.

With reference to the entry of the pointer dog Robertson at Baltimore, which appeared in the catalogue without anything but the name, Mr. J. H. Winslow gives the following explanation: "I take pleasure in informing you as well as I can how it happened. My entries were all sent from Chicago, and I had no facts and figures before me, and I simply wrote Mr. Diffenderfer, giving the names of my entries and asking him to look in the New York catalogue for further particulars. This dog Robertson was entered at the New York show in the name of J. F. Wilson, which was a mistake; but his name, breeding, etc., was correct, as you will see by referring to number 327. Mr. Diffenderfer, I suppose, looked for Robertson as belonging to J. H. Winslow, and was unable to find it." The Robertson entry was named solely because the dog won nothing, and I knew Mr. Winslow would not object to my picking it out of the many entries which were not printed according to rule.

Mr. Vredenburg said to me in New York, that he thought I should not make vague charges, for he didn't think it was his duty to be a detective and spy after law-breakers. This with reference to my having said that a club had altered its date of closing entries. I thought every one knew about it and it was with no idea of giving evasive information I did not mention the club by name. Last January, the secretary of the Collie Club published a notice in the kennel papers, that his committee had decided to alter the conditions of the stud dog stakes. The letter was dated Jan. 6 and the original entry date was Dec. 1.

The result of the voting for officers and delegates of the associate members of the A. K. C., will be somewhat of a surprise. I understand that it is as follows: Pres., Dr. J. Frank Perry; Vice-Pres., L. F. Whitman; Sec'y, A. P. Vredenburg. Delegates, Dr. Perry, Messrs. Anthony and Vredenburg. I think it is of doubtful policy to have the secretary of the A. K. C. act as secretary of the associate members. However, if Mr. Vredenburg does the amount of work Dr. Perry calls for, there will be no reason to complain. I am told that there are now over 300 members, and it is very desirable that a start should be made at once on the vote for the additional delegates, so they can be on hand for the May meeting of the executive committee.

A protest was lodged with the Rochester Kennel Club by the Woodstock Spaniel Kennels against both Newton Abbott Skipper and Bridford Lady as being ineligible for the challenge class, field spaniels, at that show. I believe he says he entered them in their proper class. If this is so, the mistake is then on the part of the Rochester K. C. However that may be, the matter has been settled, so far as the protest was concerned, by allowing it and paying the first prize to the Woodstock Kennels for Bridford Gladys.

Among recent sales are the following: The toy black and tan terrier Tipppo, by Dimple out of Queen Dot, by the Manchester Terrier Kennels, of Philadelphia, to Mrs. J. H. Bird, of New York. The basset hound Chasseur, by Farmer out of Flora, by Mr. Cornelius Stevenson to Mr. C. F. Staf-

ford, both of Philadelphia. The collie bitch Mavis, by Eclipse out of Nesta, by the undersigned to the Chestnut Hill Kennels. Mavis has been bred to The Squire.

It costs something to keep a breeding kennel at Providence, judging by the following advertisement clipped from the Providence Journal: "Every owner or keeper of a dog, of what age soever, in the city of Providence, shall annually in the month of April, cause such dog to be registered, numbered and described, from the first day of the ensuing June; and shall cause it to wear a collar round its neck distinctly marked with its owner's name and with its registered number; and shall pay to the Chief of Police for such license one dollar and fifteen cents for a male dog and five dollars and fifteen cents for a female dog." If you don't take out the license until May it costs a dollar extra, but as to what happens after May the "ad" is silent.

Mr. Peshall passed through Philadelphia last week, and Mr. Winslow and I did our best to convince him that there was no difference between a greyhound coursing a hare and a setter or pointer hunting quail. A good hour's work thrown away. We did get him to acknowledge, however, that to course a hare found in the open was not cruelty. Hence, it is not the coursing that is a cruelty, but the placing the hares in a corral where they have all the feed and water they need. If it hadn't been that in this much-governed City of Brotherly Love, with license applications pending, lights are turned out at midnight, there is no saying what might have been the result of this two-to-one engagement. Mr. Peshall gave us the discouraging information that the coursing bill had been thrown out at Albany, and says that the Society on the next occasion of any coursing, whether with terriers or greyhounds, will take hares and dogs and destroy the latter. "Ware chase."

The Stud Book made its appearance close upon the promised date. I have come across one criticism of it. "Oakview" complains that there is no index. If the well-known gentleman who uses that signature will look again he will find that it indexes itself. You turn to the breed and all the entries are in alphabetical order. My growl is that there has been no effort made to give the complete record of the dogs. This is done in the English Stud Book and should be done here. I also think it was done last year, but as I have not got a copy of the Stud Book of 1889 I am not positive. In all these things we ought to make improvements if we possibly can, and not allow adverse comparisons to be possible.

Here comes in the question. How about registering prize dogs? The A. K. C. rule now is that all prize winners are registered free. For the information of the folks at 44 Broadway I will state that the secretary of the English Kennel Club sends out to all prize dog owners blanks in which to give the full extended pedigree. That I know was the custom when I was exhibiting in England, in 1873 and 1879, and it is not likely to have been discontinued. I happen to be on the Stud Book committee, a perfect sinecure seemingly, for I have had nothing to do regarding the book since my appointment last February, so it will not be my fault if this is not done in the next Stud Book.

The case of the deaf bull-terrier Beryl at Boston is likely to bring to a determination what is to be considered total deafness, which under the rules is a case for disqualification. This idea of testing a dog by shotgun in a room, whether adjoining or not, is immaterial so long as they are communicating, is no test of deafness. It is my misfortune to be able to testify regarding the wonderful sensitiveness of other organs, when hearing is defective. Anything that causes a jar or concussion is no test at all for deafness, unless the deafness is a sudden attack and before the other faculties have gained their acute sensitiveness. Passing a finger across my forehead will awake me when calling would fail. Not that I could not hear the calling if awake, but the other faculty has been improved upon. A person treading as lightly as possible across the floor of a room will be detected without a sound being heard. But putting that subject on one side, what is total deafness as contemplated by the rule? Is it not such a degree of deafness as prevents the dog being under control? Is it not that the dog's sense of hearing shall be acute enough to enable him to respond to a call? If we are to have no limit such as that, where are we to end with our tests? Mr. Porter says the dog gave no recognition of loud noises, and the gun test was tried later on. If a gun test fails can an owner call for a cannon or a nitro-glycerine test? Mr. Porter seems at a loss to know how the A. K. C. can be reached on this subject. Of course an appeal on the Beryl protest is out of the question. The Vet. in such a case is the boss and there is no appeal from his dictum. What can be done is to ask for an interpretation of the rule. Mr. Porter can do that either by letter or through a member of the executive committee, the former for choice, as the committee man might forget.

AN OLD-FASHIONED COON HUNT.

ON the night of Nov. 11 the four Frakes boys, Bridenstein and I started out after coons. We had two hounds, Frakes' Bugs and my Flora. We had bad luck until late in the night and the boys grumbled, but I told them not to get discouraged until we stopped hunting, for we would surely get one, and my prophesy came true.

At last the dogs struck a trail on a fence and Bugs soon lost it entirely, but Flora had better luck and went on and treed the coons alone, up a big stub. They went inside of the tree. Then the fun began. We threw off our coats and went in for a good piece of work chopping down the tree. When it fell the coons thought it safer to remain inside, so they stayed there. Then we did have fun; any one that ever hunted coons must well know that. The next thing was to get them out. We finally cut a hole big enough for a dog to get in. I looked in and the first thing I saw was six eyes. There were three coons.

I let Flora in through the hole that we had cut, and one of the Frakes got a pole and punched in at the other end of the hollow. Presently Flora came out with a 12-pound coon and killed it. Back she went after another one, and F. began punching again. She caught it and pulled it part way out, but lost her hold, and back it went. That one was the old one, and such a time as we had to kill her! All of the boys had clubs to keep the coons from going up other trees. After we had got her out I would get the dogs off, and then say, "Hit her on the head," which they always missed and struck her on the back, which would only roll the fat over a little. Once she got on a tree and one of the boys struck at her with his fist, but missed the coon and hit the tree. He said it hurt, and it looked so to me. Well, it was first man, then dog and then coon on top, until it was killed; all were hallooing, barking and squalling together. The third coon did not make much fun; but we got all three of them. They are quite plenty here this fall. F. C. S.

VICKSBURG, Mich.

THE AMERICAN FOX-TERRIER CLUB.—At the annual meeting of the American Fox-Terrier Club, held in Boston, April 1, 1890, the following gentlemen were elected officers for the ensuing year: August Belmont, Jr., President; John E. Thayer, Vice-President; H. P. Frothingham, Secretary-Treasurer; Governors, August Belmont, Jr., John E. Thayer, L. M. Rutherford, Jr., W. Rutherford, H. P. Frothingham, Clarence Rathbone, Edward Kelly, F. K. Hitchcock, Fred Hoey.—H. P. FROTHINGHAM, Sec'y.

SPAYING.

Editor Forest and Stream:

Doctor Fritts has the honor of furnishing us with the most dogmatic if not the most amusing of articles on spaying, and it is to be hoped the majority of his numerous experiments have been made on the yaller dog and not on the good ones. He is correct in saying that the operation is safe in competent hands under antiseptic methods.

I cannot see why the removal of any natural and healthy organ from an animal is not an unnatural operation. If it were a natural one nature would probably remove it without our assistance.

Heretofore it has been an accepted fact that the removal of the essential organs of generation of either sex was followed by an increase of fat, and an increased tenderness of the muscles. Tenderness may not be synonymous with weakness, but still it may. If the above is not correct what adequate explanation have we of the time-honored custom of spaying sows and castrating chickens.

Has your correspondent put his spayed bitches through months of field work with others that were not spayed, or kept them in idleness with unsprayed bitches, on the same amount of food, and carefully compared their condition in regard to fat? If not, his experiments are not complete.

We are not treating of isolated cases. Some selected bitches will probably be good after considerable abuse, having unusual natural abilities. I lately lost an intimate friend, who was one of the best shots and all-around sportsmen in this State. At the age of thirty he lost his right arm near the shoulder joint. Would it be proper, using him as an example, for me to advise young men who have an ambition to excel in field sports, to begin their preparations by removing the right arm?

Has it occurred to the doctor that the surroundings of the stallion in our civilization are almost as unnatural as that of the gelding, his use tending to develop his sexual tendencies to an unnatural extent. I had occasion to live for eleven years where stallions were exclusively used, and it has never been my fortune to see such horses since. If castrating a horse is of such inestimable value, outside of the unpleasantness connected with his sexual instincts, why is it that we have not had spayed mares for generations?

The effect on the mental qualities can but be taken up under the head of women, as the doctor brings her into the question. In the first place it was not the intention of the pioneers in this operation that it should be done on healthy ovaries. Still, many an unfortunate woman can testify in sorrow that it has been done. The number of unsexed women increased very fast, and the conservative members of the profession soon began to view with some alarm the future of these women, and if the doctor keeps as well posted on medical as he does on sporting literature, he is certainly aware that the pendulum has long since swung the other way, because as time passed so large a percentage of these unfortunates became the victims of various mental derangements, from insanity down. It is naturally impossible for an unsexed animal, man, woman, or beast, to be a perfect one. If any one wants to spay his bitch, she is in his power, and if he gets a good dog, he has probably lost a phenomenal one. BREAM.

GEORGIA.

Editor Forest and Stream:

You need not bother about the subject of spaying bitches, for full 90 per cent. of the experienced huntsmen of the country are with you, and I believe you may safely count on 99 per cent. of the fox hunters. I make no objection to the pain incident to the operation, as that may be slight; and I am not sufficiently up in psychology to know what effect gelding produces on the brain. But right here I take leave to say I have never read of nor heard of a cunuch who was great either in the field of thought or on the field of battle, or any other field of action. It is a fact known to every one, who takes the trouble to note what he sees, that spayed bitches and altered dogs, after a few years, are too ready to take on flesh, and always becomes dull and lazy and logy. They lose spirit and dash; animation and ambition are most essential qualities to every hunting dog. The reason given for castrating horses is the very reason for not castrating dogs; the object in the former case being to reduce the stallion's surplus energy and courage, of which a dog cannot have too much. I am aware a few geldings have distinguished themselves on the turf, but they are sluggish, every one, and require tremendous punishment every time with whip and spur. Besides, at the supreme moment they often lack pluck or endurance, whichever it may be, and by flunking throw away the race. Added to this, it goes without saying among horsemen that stallions are more intelligent than geldings. STONEWALL.

MINNEAPOLIS, Minn., April 3.

BUFFALO DOG SHOW.

[Special to Forest and Stream.]

BUFFALO, April 15.—The Buffalo Dog Show opened today. Owing to an accident on the railroad a number of dogs did not arrive and the judging was postponed until tomorrow in some of the classes. The weather is fine and the attendance has been fair. The bull bitch Dimple and the bull-terrier bitch Millstream were found dead in their box when they arrived, having been smothered on the way. The show appears to be well managed and is running smoothly. A number of good dogs are present, and a few new ones, that are also good, have been brought out. Judging is not nearly complete and the list of awards will not be given until next week.

CENTRAL FIELD TRIALS.

NEW YORK, April 14.—Editor Forest and Stream: We would consider it a favor if you will kindly make known the fact that Messrs. J. M. Tracy, John Davidson and N. Wallace will judge all the stakes at our coming field trials. Our All-Aged Stakes will not close until Oct. 15, and the Free-for-All Nov. 1. In the All-Aged Stake pointers and setters will be run separately, as the cash prizes will be the same as last year, viz.: \$250 to first, \$150 to second, and \$100 to third, with \$200 additional to the absolute winner of the All-Aged Stake. The Free-for-All Stake will be \$1,000 to the winner of first, and this year we will add \$100 to the last dog beaten by the winner of first.

CENTRAL FIELD TRIAL CLUB, C. H. ODELL, Sec.-Treas.

LOS ANGELES DOG SHOW.—We have received the premium list of the second annual dog show of the Southern California Kennel Club, to be held at Los Angeles, Cal., May 6 to 9. Eighty-eight classes are provided for and the regular prizes will be diplomas. In addition, the club will give a cup each for the best sporting and non-sporting dog. Winners of first in all classes, when brought from a distance of 200 miles and over, will receive in addition to diploma their entry fee. Several valuable specials are offered and many more are promised. Mr. H. W. Wilson is the superintendent. Mr. H. H. Briggs, of the Breeder and Sportsman, will judge all classes. Entries close May 1. The address of the secretary is E. K. Benchley, Los Angeles, Cal.

DOG POISONING.—A correspondent at Los Angeles, Cal., writes: "There has been considerable dog poisoning here of late, and the Southern California Kennel Club has offered a reward of \$250 for the conviction of the guilty parties."

ORILLIA, Ont., April 3.—The Orillia Off-Hand Rifle Club competed for the Wood & Delany prizes, distance 100 and 200 yds., 5in. bullseye at the 100 and 8in. at the 200. Scores: W W Wood.....92 W Hammond.....80 M Robinson.....84 A Harney.....88 F J Delany.....84 T Millichamp.....81 C Fortier.....87 G B Whiten.....88 H Bingham.....76 F Rogood.....74 C Wood.....77 Wm Paine.....74 J D Fortier.....88

ONTARIO RIFLEMEN.—The present standing of the various clubs belonging to the Off-Hand Rifle Association of Ontario is as follows, out of 53 matches shot Orillia has won 47, Bradford 46, Scarborough 41, Aurora 35, King City 32, Newtonbrook 28, Midland 27, Point Edward 20, Strathroy 11, Byng Inlet 10, Alliston 8, Tottenham 6, Bolton Village 1.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

April 19.—Tolley's Trap-Shooting Contest. Grand all-day shoot; opening new grounds, at Catskill, N. Y. Geo. F. Tolley, Sec'y.
April 24-25.—Sweepstake Tournament of the Muncie Gun Club, at Muncie, Ind.
April 30-May 2.—A. S. A. A. Tournament, Columbus, O.
May 7-9.—A. S. A. A. Tournament, Lafayette, Ind.
May 14-16.—A. S. A. A. Tournament, St. Louis, Mo.
May 21-23.—A. S. A. A. Tournament, Kansas City, Mo.
May 28-30.—A. S. A. A. Tournament, Minneapolis, Minn.
Aug. 18-23.—Third Annual Keystone Tournament, at Corry, Pa.

THE U. S. TEAM TARGETS.

WHEN the U. S. Cartridge Co. teams reached New York city they were invited to use the FOREST AND STREAM testing screen at Claremont in making a few sample shots out of the guns which had been making such notable records from one end of the country to the other. The members of the team who were present on that horrible shooting day at Claremont each fired such shots as he thought adapted to show the merits of his arm at the sheets and penetration pads. There was no regular or formal test such as we make when we wish to try the full measure of a gun's merits and to make a detailed report upon it. Rather, the marksmen put their weapons on record with a few haphazard shots, and they were indeed very haphazard in the sharp wind which blew with keen force from the screen directly up to the faces of the men. W. S. Perry's Parker gun was fired by S. A. Tucker, and W. E. Perry, who was absent, after having fired both his Smith and Parker guns at Boston, while H. B. Whitney fired both at the range and also at his home at Phelps, N. Y. Stice promised to make a target or two after his arrival at home in Omaha. These have not yet come to hand.

H. B. WHITNEY'S SMITH GUN, 449 PELLETS.

H. B. Whitney, with a Smith 10-gauge, on the range fired 3 shots from the left barrel with patterns of 363, 255 and 335, and penetration records of 10, 12 and 9 sheets. Subsequently came the sheets sent by mail as fired with Tatham's No. 8 soft at 40 yds., and these show 449 pellets for the sheet marked left barrel and 421 for that marked right barrel. Two Whitney cartridges when opened showed 3 P. E. wads and a card over the powder and a card over the shot; 561 and 537 were the counts of pellets and 624 and 600, respectively, the weights of the grains, while 108 grs. of fine black powder were turned out from each case. In these two targets no penetration record was taken.

At Boston Mr. W. E. Perry fired a few shots, assisted by E. Hough, our chronicler with the teams. He fired both his Parker and Smith guns, as used by him at various times on the journey. It was a bright clear day with a cross wind, but the patterns were from struck circles. The three shots showed counts of 534, 535 and 535 pellets, with uniform weight in each case of 569 grs., and with powder charge of 113 and 114 grs. The charge was with 3 B. E. wads and no card over the coarse black powder used and a card over the shot. The first three shots were from the Parker, the right barrel showing pattern of 397 and 589 pellets, and the left of 366 pellets, no penetration pads being available. The Smith gun was fired with the same cartridges, and two right barrel shots gave patterns of 413 and 382 pellets, while one from the left barrel had 410 pellets in the circle. The final shot of the series to be recorded was from this same Smith gun, the target has the inscription "34 grs., 10-gauge, wood powder, 14oz. chilled 8 shot," and has a pattern of 391 pellets.

To assist our readers to an appreciation of these patterns we give cuts of the targets made by the Whitney (Smith) gun, having 449 pellets, of the W. E. Perry (Parker) gun with 397 shot marks, and of the R. O. Heikes (Lefever) gun with 355 pellets. From this whole exhibit may be gained a very fair idea of the excellent quality of arms used by these team men in their work over the country, but it must be borne in mind that these were expert guns in the hands of experts, and that the better the gun, so far as close pattern is concerned, the more shy should be the dufer. E. Steinheuser dropped only 2 birds each, Blake and Van Wyckoff continuing on, miss and out. The latter missed on the fifth round, and Blake won first prize and the new medal with 12 straight. The beautiful and ornamental leather medal which the club purchased lately, and which is as large as a good-sized dinner plate, was presented to the club by the president, Mr. H. J. Bookman, who won it fairly on 5 misses out of 9. Three sweepstakes followed the regular event, good scores being made in all.

Club shoot for medal and extra prizes, modified Hurlingham rules, club handicap:
W Levens.....5 E J Steinheuser.....7 J Fench.....6
W Levens.....5 E J Steinheuser.....7 J Fench.....6
E Steinheuser.....4 W Charlack.....5 J Van Wyckoff.....7
E Helgans.....4 J Blake.....7 J Bennett.....6
H Andrews.....5 R Phister.....5 Col Selover.....6
H Bookman.....3 J Savage.....5 H Erichs.....5
J Haller.....3 M Bonden.....3 J Bramwell.....4
First sweepstakes at 3 birds each, tie miss and out, 25 yds. rise, 12 entries; Phister and Van Wyckoff div. first; Andrews, Selover, Bramwell, Steinheuser, Savage, second; Fench and Erichs third. Second sweepstakes, 5 entries, 10 bluebirds each, two best men to win, tie miss and out; Van Wyckoff 10, Helgans 9, Bennett 8, Fench 8, Col. Selover 7.

Third sweepstakes, same conditions: Van Wyckoff 10, Bennett 8, Helgans 8, Fench 8, Col. Selover 5. Ties for second prize, Fench 3, Helgans 2, Bennett 1. Referee, H. J. Bookman; scorer, Prof. Dettloff.

April 9.—A remarkably long and close race decided the winner in to-day's shoot of the Fountain Gun Club on Blattmacher's shooting ground at Woodlawn, L. I. The three crack shots of the club, C. W. Jones, Dr. Shields and E. Purdy, brought down 7 birds each, while four men were tied for second on 6 out of 7. The handsome extra prizes which have been offered by some members of the club were a sufficient incentive to put the shooters on their mettle. Not a bird was missed up to the third round, and the next three rounds did not change the result. On the thirty-fourth the trash came at last; Dr. Shields missed and left Jones and Purdy to continue the battle. The result was quickly reached, Purdy missing his thirty-fifth bird, while Jones killed, winning at last with the handsome score of 35 straight. Of the four shooters who killed 6, Dr. Schwartz and Snapper Garrison were the winners. In a sweepstake at 3 birds, then miss and out, Garrison outshot Jones and Purdy and took first money. Dr. Shields won second prize and Blankley third.

April 10.—The fine weather of to-day brought out an unusually large number of members from the Unknown Gun Club of Brooklyn, on the occasion of their monthly club shoot at old Dextron Park, L. I. The official Long Island rules, gun below the elbow and one barrel only, were strictly enforced, and this accounts mostly for the comparatively low scores. Besides the club

at and not of the circle struck about the central bullseye fired at. The cartridge used in the W. S. Perry gun was the same as that in the Cahoon and Budd guns.

Harvey McMurchy, with his Smith 12, was the last to use the cartridges from the box out of which Budd and Cahoon had taken their shells. He used it in the right barrel, which gave 332 in the pattern and 12 sheets in the penetration. In his left barrel he used his regular black powder charge, having by analysis a count of 621 pellets, weighing 564 grains, a powder weight of 94 grains. The shells were Climax, with a thin card over the shot, and 2 B. E. wads with a card over the powder.

Rolla O. Helkes, with his Lefever 12, fired 4 shots, 3 from the left barrel and 1 from the right. The right gave a pattern of 240 and a penetration of 10 sheets, while the left barrel charges were 290, 295 and 355 in pattern with 8, 11 and 8 sheets penetration respectively. The charges used were of black powder in Climax shells, having 2 B. E. wads and a card over the powder. Second cartridge analyzed showed 651 and 638 pellets, weighing 605 and 619 grs., with 91 grs. of powder in each case.

W. H. Wolsencroft was cartily one of the team at Claremont to shoot a four barrel. His Greener showed a pattern of 321 from the left and 290 from the right barrel, with 16 and 17 sheets pattern penetration respectively. None of the cartridges used by the Philadelphia expert were taken for analysis, so it is impossible to judge of the real merits of these patterns.

H. B. WHITNEY'S SMITH GUN, 449 PELLETS.

H. B. Whitney, with a Smith 10-gauge, on the range fired 3 shots from the left barrel with patterns of 363, 255 and 335, and penetration records of 10, 12 and 9 sheets. Subsequently came the sheets sent by mail as fired with Tatham's No. 8 soft at 40 yds., and these show 449 pellets for the sheet marked left barrel and 421 for that marked right barrel. Two Whitney cartridges when opened showed 3 P. E. wads and a card over the powder and a card over the shot; 561 and 537 were the counts of pellets and 624 and 600, respectively, the weights of the grains, while 108 grs. of fine black powder were turned out from each case. In these two targets no penetration record was taken.

At Boston Mr. W. E. Perry fired a few shots, assisted by E. Hough, our chronicler with the teams. He fired both his Parker and Smith guns, as used by him at various times on the journey. It was a bright clear day with a cross wind, but the patterns were from struck circles. The three shots showed counts of 534, 535 and 535 pellets, with uniform weight in each case of 569 grs., and with powder charge of 113 and 114 grs. The charge was with 3 B. E. wads and no card over the coarse black powder used and a card over the shot. The first three shots were from the Parker, the right barrel showing pattern of 397 and 589 pellets, and the left of 366 pellets, no penetration pads being available. The Smith gun was fired with the same cartridges, and two right barrel shots gave patterns of 413 and 382 pellets, while one from the left barrel had 410 pellets in the circle. The final shot of the series to be recorded was from this same Smith gun, the target has the inscription "34 grs., 10-gauge, wood powder, 14oz. chilled 8 shot," and has a pattern of 391 pellets.

To assist our readers to an appreciation of these patterns we give cuts of the targets made by the Whitney (Smith) gun, having 449 pellets, of the W. E. Perry (Parker) gun with 397 shot marks, and of the R. O. Heikes (Lefever) gun with 355 pellets. From this whole exhibit may be gained a very fair idea of the excellent quality of arms used by these team men in their work over the country, but it must be borne in mind that these were expert guns in the hands of experts, and that the better the gun, so far as close pattern is concerned, the more shy should be the dufer. E. Steinheuser dropped only 2 birds each, Blake and Van Wyckoff continuing on, miss and out. The latter missed on the fifth round, and Blake won first prize and the new medal with 12 straight. The beautiful and ornamental leather medal which the club purchased lately, and which is as large as a good-sized dinner plate, was presented to the club by the president, Mr. H. J. Bookman, who won it fairly on 5 misses out of 9. Three sweepstakes followed the regular event, good scores being made in all.

April 9.—A remarkably long and close race decided the winner in to-day's shoot of the Fountain Gun Club on Blattmacher's shooting ground at Woodlawn, L. I. The three crack shots of the club, C. W. Jones, Dr. Shields and E. Purdy, brought down 7 birds each, while four men were tied for second on 6 out of 7. The handsome extra prizes which have been offered by some members of the club were a sufficient incentive to put the shooters on their mettle. Not a bird was missed up to the third round, and the next three rounds did not change the result. On the thirty-fourth the trash came at last; Dr. Shields missed and left Jones and Purdy to continue the battle. The result was quickly reached, Purdy missing his thirty-fifth bird, while Jones killed, winning at last with the handsome score of 35 straight. Of the four shooters who killed 6, Dr. Schwartz and Snapper Garrison were the winners. In a sweepstake at 3 birds, then miss and out, Garrison outshot Jones and Purdy and took first money. Dr. Shields won second prize and Blankley third.

April 10.—The fine weather of to-day brought out an unusually large number of members from the Unknown Gun Club of Brooklyn, on the occasion of their monthly club shoot at old Dextron Park, L. I. The official Long Island rules, gun below the elbow and one barrel only, were strictly enforced, and this accounts mostly for the comparatively low scores. Besides the club

badge, three good money prizes had been put up. J. Vroomer or "The Man from Jersey," as his clubmates facetiously call him, showed the younger members how to kill birds, for his score was the only one without the fatal 0. Hyde, Van Staden, H. Knebel, Sr., Plate and C. Jumbo, Jr., killed 6 each and div. second. J. Ring won third by outshooting five competitors in the shoot-off of the tie. The score:

Raukin.....4	Akhurst.....5	D Snipe.....4
Cabill.....4	Ring.....5	Hass.....5
Hyde.....6	Mousse.....5	Ellerhorst.....3
Brown.....4	Vroomer.....7	H Knebel, Jr.....3
Van Staden.....6	Pfohlmann.....4	Gillmann.....3
Doyle.....3	Schultz.....3	Simmons.....4
Bohlin.....7	H Knebel, Sr.....3	Hopkins.....4
Deetjen.....4	Plate.....6	

April 11.—The Phenix Gun Club, of Brooklyn, is one of the most unique organizations of its kind on Long Island. And the rules of the club are entirely different from those adopted by any other body of marksmen. They held their second meeting of the year at Miller's park, on the Jamaica plank road, L. I., to-day, and although each of the nine participants (the club is limited to ten members) shot at 15 birds there was no reward either in the shape of a medal or of money prizes. To effect this seeming idiosyncrasy the shooters had nothing to pay either for the birds or for the sumptuous dinner provided by Mrs. Miller, to which the tired marksmen did full justice. The dues collected during the last four weeks were sufficient to cover all expenses. Another queer feature of the shoot was that no betting was allowed either on the general result or on single birds; the members of course were well enough posted, but the rash outsider who tried to make the meeting more interesting by ranking by betting was excluded with a sudden and very unwelcome rebuke from President Freleigh. Uncle Billy Hughes, who is also a veteran in the Jersey City Heights Gun Club, carried off the honors in the club shoot with 14 killed out of 15, a performance all the more remarkable, as the gun had to be held below the elbow until the bird was on the wing. After the regular meeting team shooting at bluebirds was the order of the day. B. Botz and Dr. M. Brown showed sides. The first shoot, at 5 bluebirds each man, was a tie with 21 out of a possible 80 for both sides. On the shoot off, at 3 bluebirds each, Botz's side won with 13 to 12 out of 18.

KANSAS CITY GUN CLUBS.

THE 16-GAUGE CLUB.

KANSAS CITY claims to have the only organized gun club in the United States that confines its shoots strictly to the use of the 16-gauge gun. The original intention was to have only 16 members and to shoot at 16 birds each contest. The popularity of this club brought so many applications from members of other clubs that the constitution was changed to admit of 25 members. This club made the debut before the American Shooting Association that brought about the changes in the live-bird boundary and the proper handicap for the 16 and 20-bore guns. The last shoot was held on April 1, the day being fine and the birds fair. Just 16 members reported, and their scores are below the average made on former occasions. The score:

J K Guinotte.....2030012212220-10	J K Stark.....0030000000100-2
B Porter.....21211102221122-14	D Underwood 10 1022010112-11

THE FORESTER GUN CLUB.

Last summer this club was organized, and for the most part the members were not as experienced as those composing the older clubs. They have improved very much in their shooting, and the shoot held to-day will show that they now hold their own with any club in Kansas City both in numbers and straight scores. Mr. Eades won the first medal by shooting out the others who tied on 10. It was necessary for him to kill 9 straight, as Mr. Alderson grased 8 before stopping. Mr. Alderson was using a Parker gun made for Mr. Riley, and is much pleased with its shooting qualities. The score:

A V White.....1120110202-7	C F Holmes.....1100111111-8
F S Groves.....2200111121-8	F K Hoover.....1222121111-10

C J Schmeizer.....0120211220-7	

BLUE VALLEY GUN CLUB.

This club is composed of members who live in the suburb commonly known as Sheffield. They use targets only, have a large membership, but at their meeting held Wednesday there were but few members present. Frank West and Sam White tied on 18 out of 20, and on the shoot off White won. The score:

F West.....111111110110111-18	A Porter.....1000001101111010-12
L Scott.....1101011110101111-16	S White.....1101101111111111-18
N Jassett.....0000111110100011-10	

SOUTH SIDE GUN CLUB.

This club meets on the south side of the city, and with the Blue Valley Gun Club compose the only clubs of the city that do not shoot at Elliott's Park. Targets (bluebirds) are used exclusively. Mr. Doran and E. Carroll tied on 13. Doran won on the shoot off: M Murphy.....11011011111011-13 F Carroll.....11011011111011-13 M Doran.....11011011111011-13 F P Hanks.....00100001001010-5 H Ragan.....110110111101001-11 A E Ashbrook.....110101011001-8 L Kritzer.....0111110110101010-11 J H Knoche.....1101101010101011-11

CANADIAN TRAP NOTES.

TORONTO, April 7.—The annual shoot of the Toronto Gun Club, captained by the president and vice-president, Messrs. Geo. Briggs and J. Price, respectively, was decided at the Woodbine this afternoon. The terms were 15 men aside at 10 birds each, and the match was won by the president's team by 13 birds, following being the full scores, at 10 sparrows, 5 traps, 18 yds. rise.

President's Side.
G H Briggs.....1111111111-10 J Price.....0001000011-3

The first shoot for the Briggs cup, presented by the president of the club for competition, came off at the same place and time. Messrs. Charles, Pearsall and Van Black tied at 23 out of a possible 25 birds, but in the shoot off Van Black won. The other competitors retiring, was won by the president's team by 13 birds, at their rooms on King street, east, and sat down to a splendid supper. At the head of the table was placed the Briggs challenge cup, a really magnificent trophy, standing with pedestal about 30 in. high. During the evening the president's cup and the Ventry medal were accepted by Ald. Small on behalf of Mr. Van Black, who was unavoidably absent. The gathering marked one of the most enjoyable events in the history of the Toronto Gun Club.

Toronto, April 4.—Stark's Eastern Gun Club held its first shoot at live pigeons on Good Friday afternoon. The teams were captained by Messrs. Chas. Ayres and Frank Paterson, 8 men a side, 7 birds each, 25 yds. rise. The prizes were a gold medal, given by Mr. Ayres, and several other valuable articles. The lucky man turned up in Mr. Geo. Platt, who won the medal by killing 14 straight birds:
Team No. 1.
C Ayres.....7 G Henry.....6 J Blong.....7
H Page.....6 Sid Smith.....3 A E Dixon.....6-46
W Brown.....7 H Hoffman.....4
Team No. 2.
F Paterson.....6 T Herriek.....6 W B Poulton.....3
T Chambers.....6 G Hatt.....7 W Burton.....4-43
G Renard.....6
The live-bird shooting tournament to-day at the Woodbine started in the morning with pleasant weather, but shortly after noon, before the larger part of the shooters had arrived, rain set in and prevented the completion of the tournament. The last

two and the principal events did not come off. In the ladies' match, which was completed in the rain, the following were the winners: D. Chapman first, Bennett second, LeRoy third.

MONTREAL, April 8.—The Montreal Gun Club held a shoot at their grounds this afternoon. The weather, although of the most propitious character, did not deter a number of enthusiastic sportsmen from journeying out to Verdun to participate in the afternoon's sport. Following is a summary: First sweep at 10 birds: R. James first, R. Walpole second, W. H. Candish third. Second sweep at 10 birds: R. James first, R. Walpole second, F. Emont third. Club match, 20 birds: J. Smith first, R. Walpole second, R. James third, F. Lacroix fourth.

F. GODERICH, April 4.—To-day a friendly shoot at standard targets took place at Clinton between a team from Goderich and a team from Clinton, under Toronto Gun Club rules. On account of a very strong cross-wind the shooting was not as good as it would have been under more favorable circumstances. The scores were as follows, 12 birds per man:

Goderich Team.	Clinton Team.
E. R. Watson.....9	Hovey.....9
R. P. Wilkinson.....9	W. Greg.....9
J. Grant.....8	McMurray.....8
F. Pretty.....8	F. Hinkley.....8
E. Gregg.....8	W. Foster.....8
J. Nisbett.....7	Dr. Blackall.....6
W. Rutson.....4-32	Johnson.....4-51

In shooting off ties for sweepstakes at 5 birds, Watson won.

MONTREAL, April 5.—The old Ottawa Club has at last, as it were, woke up to practice for the Queen's Birthday shoot, and marked on their board Wednesdays for their meetings. W. L. Cameron is field captain. Dr. McPhee has again been elected as president. For to-day is club gathering, the day, though a bright sun, the game was strong and cold. First in order was a sweep, 15 Perlas each, and the Juniors having three traps for their practice, gave time for a second one for the Seniors. Score out of 15 birds:

A. H. Throp.....13	W. J. Johnston.....11	Dr. A. Martin.....8
Alex Stewart.....12	J. Stewart.....9	J. Deslaurier.....7
Geo. White.....12	Ed. White.....8	Steve White.....6

Second sweep, 15 each:

W. J. Johnston.....13	Geo. White.....11	J. Deslaurier.....10
R. G. Dalton.....12	A. H. Throp.....11	Ed. White.....9
Dr. A. Martin.....11	Steve White.....10	J. P. Nutting.....9

The wind up was as follows:

J. St. D. Lemoine.....10	J. P. Nutting.....8	W. McMahon.....7
H. P. Lane.....8	C. L. Panet.....7	Oliver Martin.....5

SEAFOORTH, Ont., April 7.—The long spoken of gun club was successfully organized at the Queen's Hotel to-night, when the following officers were elected: President, E. C. Coleman; Vice-President, A. J. Bright; Secretary, T. Stephens, Jr.; Treasurer, Ed. Hinkley; Committee—T. Stephens, E. Hinkley and Jas. Anderson. The club is now in good standing, and will soon be prepared to receive challenges from outside clubs.

TORONTO, April 9.—A match took place this afternoon near Woodbine Park, between B. Adair and J. G. Briggs, for \$100 a side, at 50 sparrows, and was won by the former, who killed 44 to Briggs' 33. Mr. Walter Thomson acted as referee.

The Toronto Gun Club held their regular weekly shoot at blue-locks this afternoon at Woodbine, with the following results at 20 birds: Sawdon, Sr., 16; McDowell, 16; Rice's first score 15, second 13, Henry's first score 15, second 15, Feisted 11.

April 10.—The West Toronto Junction Gun Club held their shoot for the silver cup to-day, with a very strong wind, which accounts for the poor scores at 25 birds per man: T. Boswell 18, H. George 17, Wm. McEwain 16, D. C. Walton, D. Blea and F. Anderson 18 each, B. Williams 9, Clinton 8.

DUNELLEN, N. J., April 8.—Notwithstanding the lowering clouds and continual downpour a goodly number of sportsmen were on the grounds at Dunellen, N. J., to-day, to participate in the semi-monthly shoot of the Middlesex Gun Club. The events upon the programme were all shot off, and the entries were large. Among the shooters from a distance were such cracks as Tom Wolstencroft, Dick Irwin, J. Frank Kleintz, of Philadelphia, and Robert O. Heikes, of Western Point, Dayton, Ohio. The forenoon was spent in "crockery" sweepstakes. After lunch the live-bird shooting began, and great interest was manifested. The birds furnished by Manager Charles Smith were an exceptionally strong lot, and coupled with the bad light and unfavorable condition of the weather large scores could hardly be expected. The event of the day was a live-bird sweepstake at 12 birds, the prize being a silver cup, valued at \$100. The American Association rules to govern. Eighteen shooters faced the score, and some brilliant shooting was done. Jacob Pentz officiated as referee and scorer, and N. Aggar ran the traps. The scores:

Event No. 1, 5 pair blue-locks: Miller, Wolstencroft and Aggar divided first with 55; Irwin, Heikes, Tee Kay and Sigler tied on 4 for second, which was won by Irwin on the shoot-off.

Event No. 2, 10 blue-locks: Heikes and Aggar divided first with 10 straight, Miller won second with 9, Raymond and Aggar divided third on 8.

Event No. 3, same conditions: Heikes and Tee Kay each broke 10 and divided first, Miller and Wolstencroft split second with 9, Aggar took third alone with 8.

Event No. 4, 15 blue-locks: Heikes first with 15, Miller and Aggar second with 14, Tee Kay and Wolstencroft third with 12.

Event No. 5, 10 blue-locks: Wolstencroft and Aggar first with 10, Tee Kay and Miller second with 9, Heikes third with 8.

Event No. 6, 4 live birds, \$3 entrance, American Shooting Association rules to govern: Heikes, Sigler, Castle, Jersey and Miller divided first; second money was shot miss-and-out in the next sweepstake, and Heikes and Wolstencroft, Riggett, Hedden and Castle, each killing 7; Lindsey and Capt. Jones divided third, and Tee Kay won fourth all by himself.

Event No. 7, 7 live birds, \$5 entry: Wolstencroft, Heikes, Sigler, Castle, Riggett, Hedden and Kleintz tied for first with 7 each. On the shoot-off Wolstencroft, Riggett and Hedden killed 8 each, shooting the others out and divided the purse. Jersey, Jones and Raymond tied on 6 for second money and divided. Irwin, Lindsey and Zigler divided third with 5 kills to their credit; and Charlie Smith took fourth.

Event No. 8, 12 live birds, \$10 entrance: Heikes and Jersey killed 12 straight and split up the first money. Second was divided by Sigler, Hedden, Jones, C. Smith, Raymond and Zigler with 11 each. Third money went to Wolstencroft, Miller, Kleintz, S. G. Heikes and Teddy with 10 each. Irwin and Lindsey were the only ones to get 9, and took fourth. Riggett and Canon with 8 and Castles with 7 were shot out.

PHILADELPHIA, 7.—A challenge shoot took place this afternoon between William Wolstencroft, R. O. Heikes and A. James, on the grounds of the North End Gun Club, at Frankfort. The shoot was at 100 blue-locks from 5 traps, at 28yds. rise. Heikes came off victorious, succeeding in breaking 94 Huanimite targets. Wolstencroft broke 83, James dropped out early in the forenoon, and was shot out of the sweepstake at the regular range. Both shoots were participated in by about thirty contestants. J. Wolstencroft and J. Summers divided first, Captain Pack and A. James second, J. Crewson and A. Peffer third money in the first sweep; J. Wolstencroft got first, A. James and Captain Pack divided second and A. Summers and J. Jacobs divided third money in second shoot.

April 10.—An interesting match took place at Sixtieth and Spruce streets this afternoon between members of the Shamrock Gun Club. The first match was between J. Wilson and George Weikel for silver medal. These two members have been rivals ever since the club was organized. The result was a victory for Wilson, who broke 27 out of a possible 30. The next was a match between two teams headed by Wilson and Weikel, and was a test of the men for places on the team to represent the club in shoots with other clubs. Wilson's team scored 60 and Weikel's team 56.

April 10.—Champion William Wolstencroft, of the Eastern team of trap-shooters, visited the Philadelphia Sportsman's Club this afternoon, while the members were engaged in their regular monthly class shoot, on their grounds at Fenwood. The champion was induced to take them a qualification shoot for the winners of the different classes, at 25 blue-locks per man. First Class—Wolstencroft 25, Harrison 20, Gibbs 20. Second Class—Glass 15, Kyd 15, Sheppard 12, French 14, McKinney 10. Third Class—H. J. Smith 12, Loder 12, Brallier 12, J. L. Brown 16. Fourth Class—Pleasanton 6.

GEDDES, N. Y., April 8.—Team match between members of Geddes Gun Club, at 30 blue-locks, 18yds., A. S. A. rules:

Funkhous.....0101001011000	E. Klock.....0000111110000
Snaphus.....10001111000-15	1000001010001-13

0010111010010-11-44	01101010100101-7-46

JACKSONVILLE, Ill., April 8.—The following scores were made at a practice shoot here to-day, 3 traps:

"Cameo".....11111111100111111111-22
Hansell.....01011011011111111111-18

The targets used were the black "star" targets of Belleville, Ill.—H. H. HARRIS.

NEWARK, N. J., April 10.—Three hundred enthusiastic sportsmen assembled at Erb's Shooting Park, Newark, to-day, to witness the match between the most interesting contests that have taken place in this vicinity for years. The day was a superb one for shooting, and the birds furnished were a good average lot for this season of the year. The Pennsylvania men were clearly outclassed, but the score put up by the Newark shooters was a phenomenal one, and it is doubtful if any ten men in the country could have beaten them. The match was shot under modified Hurlingham rules, and as the English men were not familiar with them, they being accustomed to shooting under old "gun-below-the-elbow" rules, they were heavily handicapped. The shooting began promptly at 12 o'clock. The conditions were 10 men a side, 10-gauge gun, to stand at 30yds. rise. The Lehigh Club were short one man, and as the Newark men offered no objection, Mr. J. Netter shot two scores. After the match ended sweepstakes were shot until darkness put a stop to the sport. The Fourth Ward Gun Club, Newark, took charge of the visitors for the evening, and the men from the Keystone State expressed themselves as well pleased with their visit. Mr. W. R. Hunt, of the South Side Gun Club, acted as judge for the Newark Club, and Mr. D. S. Ulmer for the Lehigh Club. F. H. Keller acted as referee and Jacob Pentz as scorer. The scores:

Newark Gun Club—First Squad	Lehigh Gun Club, of Allentown, Pa.—First Squad.
J. E. Netter (30).....2121222112-10	J. E. Netter (30).....110111112-9
M. Lindsey (30).....2121222112-10	P. C. Blank (28).....110111123-7
J. Brantnall (30).....1001211111-8	C. Kramlick (28).....200101011-7
S. Castle (28).....111111211-10	M. Ochs (28).....120000200-3
C. Heath (28).....111111210-9-45	B. Huffert (28).....220012010-6-32

Second Squad:

R. Clark (28).....212122211-10	Second Squad.
P. R. Hadden (30).....212122211-9	J. E. Netter (28).....211121210-10

	F. Benning (28).....001121212-7-40

94

Sweepstakes No. 1, live birds, \$3 entrance: Heath, Riggett and Castle div. first, Hedden, Brantnall and Lindsey second.

Event No. 2, same conditions: Leddy, Brantnall, Hedden and Maessli div. first, Castle and Hedden second.

Event No. 3, same conditions, 23 entries: Riggett, Wheaton, S. Castle, Leddy, Reinhardt and J. Castle tied on 4. On shoot-off Riggett and Reinhardt div. first; 11 tied on 3 for second, and the shoot-off was most exciting. Collins took the money, Heath, Leddy, Jones, Castle, J. Smith, and Gehring won fourth, killing 8, after an exciting contest with Leek.

MINNEAPOLIS, Minn., April 3.—Of all the days selected for the badge shoot, Thursday seems to be a hoodoo. The first shoot of the week previous was held in a snow storm, and this week during a rain storm, but in spite of the weather the turn-out was good and the scores of a good average. Following are the scores to-day. Senior and junior badge shoot, 15 singles and 5 pairs:

Marshall.....10101111001100	10 10 10 10 10-17
Lawrence.....101010011001	10 00 00 10 11-13
Harrison.....101111111111	10 11 01 10 11-23
Stokes.....011110111110	11 10 10 11 11-23
Knapp.....011011101110	11 11 01 01 10-14
Pratt.....011111111011	00 00 10 10 10-17
Cutter.....101011111011	10 10 10 11 11-20

The on junior badge 5 singles and 2 pairs: Fox 7, Knapp 6. Harrison wins senior badge, fox wins junior badge:

Amateur badge, 15 singles, 5 pairs:	
Regan.....01010100100101	11 00 10 00 00-10
Kennedy.....10111111001000	00 10 00 10 10-12

A. T. Rand.....01100011110110	10 10 10 10 10-14

L. H.

CHESTER, Pa., April 10.—The Thomas L. Briggs Gun Club, of Chester, and the Darby Gun Club, met this afternoon on the former's grounds at Chester, in the second shoot of a series of three shoots between the two clubs. In the first shoot the Darby boys won by 20 points. In to-day's match the Chester Club were by 11 points, making another shoot before either side can claim the victory necessary. Following is the individual score of to-day's match at 25 birds per man:

Chester Club.	Darby Club.
J. H. Ladomus.....20	H. French.....7
Chas. Rhoads.....12	C. O. Hark.....7
L. Peck.....11	J. O'Hara.....13
H. Harrison.....23	H. Hughes.....13
F. Howell.....19	R. Stittwell.....19
B. Jones.....19	H. Urian.....12
E. Rose.....10	C. Chew.....13
W. Young.....19	G. W. Urian.....17

T. L. Briggs.....144
W. P. Urian.....130
R. J. Orsels, Judges, W. Armstrong, T. Green.
During the shoot little Willie Briggs, a 9-year-old son of Thomas L. Briggs, after whom the Chester Club is named, came out on the grounds with a 22-caliber rifle and broke 23 targets out of 25 at 25yds. rise, the targets being placed on the end of a pole. In another trial, with the targets swinging from the end of the pole suspended by a string, the boy succeeded in breaking 17 out of the 25 at the same distance.

GRAND CROSSING, Ill., April 9.—South Chicago Gun Club's shoot for medal, at 25 P. B. birds:

A. W. Reeves.....17	John Watson.....17
C. G. Johnson.....16	E. K. Watson.....17
E. Reeves (medal).....19	Doc Larkin.....14
S. Willard.....16	

Shoot for medal, at 10 live pigeons, 5 ground traps, 30yds. rise, 30yds. boundary:

G. Kleinman.....7	Ike Watson.....8	J. Larkin.....10
A. W. Reeves.....6	W. Willard.....9	E. R. eves.....9
S. Willard.....6	P. Miller.....8	B. Blank.....5

April 11.—The gun club shoot, at 20 P. B. birds, for medal:

Deiter.....15	Wheeler.....14	Rock.....17
Donald.....15	Smith.....10	Eaton.....14
Burton.....13	Steck.....18	Babeuf.....10

Steck won medal on shoot-off.
Medal shoot, at 10 live pigeons, 5 ground traps, 30yds. rise, 30yds. boundary:

Ben Dicks.....9	A. D. Deiter.....9	E. M. S'eck.....6
J. E. Prince.....7	H. Eaton.....7	L. M. Hamline.....7
C. S. Burton.....8	C. R. Babeuf.....9	Pennell.....6
W. L. Shepard.....7	F. C. Donald.....8	J. J. Kleinman.....7
H. Smith.....5	P. F. Rock.....7	Wheeler.....10

Dicks won medal on shoot-off.

CLAREMONT SHOOTING ASSOCIATION, April 12.—We were favored to-day with fine weather, and the responsive turn-out was very encouraging—the amateur traps were kept going all the afternoon as well as the one devoted to the open—all shooting. Below are the open-to-all scores, 10 blue-locks, 25 cents entrance, Keystone system:

Sigler.....1 2 3 4 5 6 7 8	
Cranmer.....10 6 9 8 10 9 10 10	
Johnson.....5 9 9 6 10 7 8 7	
Tatham.....3 6 8 3 6 7 7 4	
Collins.....9 8 7 6 7 9 9 9	
Simpson.....9 5 6 5 6 5 5 5	
Hathaway.....6 8 6 7 6 5 6 4	
Linsley.....8 7 6 7 7 6 6 5	
Thompson.....1 7 6 5 8 4 6 8	
Nadal.....2 5 3 2 2 2 6 1	
Hunt.....6 8 5	

Match at 30 singles and 5 pairs, 50 cents entrance:

S.	D.	T.	S.	D.	T.
Cranmer.....22	6	28	Simpson.....22	5	27
Johnson.....19	3	28	Tatham.....14	6	20
Linsley.....22	7	29	Thompson.....15	5	20
Frost.....24	4	28	Hunt.....21	6	27
Collins.....24	4	28			

The following sweeps were shot at the traps reserved for amateurs, 10 blue-locks, 25 cents entrance:

Mack.....1 2 3 4 5 6 7 8	
Nixon.....6 7 9 5 8 6 4 8	
Richmond.....4 4 1 5 3 5 4 5	
Potter.....3 4 3 1 4 5 5 3	
Moffatt.....1 1 1 1 1 1 1 1	
Rose.....1 1 1 1 1 1 1 1	

U. S. CARTRIDGE TOUR AVERAGE.—Messrs. Parker Bros., of Meriden, Conn., call attention to the fact that on the recent tour of the Eastern and Western teams, made under the supervision of the U. S. Cartridge Co., the average was won by J. Stice, who, shooting a Parker 12-bore gun, hit 91, per cent. of the birds shot at.

MINNEAPOLIS, Minn., April 10.—The monthly sweepstakes tournament of the Minneapolis Gun Club took place to-day, was well attended, and pronounced by those present as the best tournament of its kind yet held on the grounds. Quite a number of St. Paul shooters were present, also Mr. H. W. Jones, Mr. Lee, of Altwater, Minn., and J. P. Balsam, of Hudson, Wis. Following are the scores. First event, 10 singles, \$1 entrance:

Skinner.....8	Lawrence.....6	Pratt.....8
Marshall.....10	Harrison.....7	Jones.....5
Dailey.....10	Rockey.....9	Lee.....8
Bennett.....8	Burkhard.....9	Osmer.....8
Hamline.....6	Cutter.....9	White.....8
Knapp.....8	Chantler.....7	Balsam.....6
Fox.....5	Catamaran.....8	

Dailey first money, Rocky, Burkhard and Cutter second, Skinner and Osmer third on shoot off, Harrison and Chantler fourth.

Second event, 5 singles and 3 pairs:

Lawrence.....8	Chantler.....7	Lee.....8
Dailey.....9	Catamaran.....4	Cutter.....8
Knapp.....7	Balsam.....9	White.....8
Skinner.....5	Rockey.....8	Pratt.....8
Bennett.....8	Jones.....7	Osmer.....8
Hamline.....7	Burke.....10	M. J. C.....4

Harkie first, Dailey and Balsam second, Osmer third on shoot off, Hamline fourth on shoot off.

Third event, 15 singles: Ensign first, Dailey, Rocky and Burkhard second, Pratt third, Cutter and Hamline fourth.

Fourth event, 10 singles and 3 pairs: Skinner first, Cutter and Pratt second, Osmer third, Knapp fourth.

No. 5, 15 singles, \$30 guaranteed surplus, if any, to be added to the entrance, entrance \$2, birds extra, four extra prizes:

Daly.....11	Lawrence.....13	Hove.....10
Skinner.....14	Fox.....13	Cutter.....12
Harrison.....11	Stewart.....7	Swanman.....7
Knapp.....9	D. Norige.....10	Chantler.....7
Hamlin.....9	Jones.....13	Morse.....10
Bennett.....14	Balsam.....15	Pyle.....10
Dunn.....11	Stokes.....11	Cummings.....8
Whitcomb.....6	Stokes.....11	Cummings.....8
Richter.....3	Pratt.....14	White.....12
Rand.....7	Rockey.....9	Burke.....9
Marshall.....11	Warwick.....13	Osmer.....11
Wesley.....4	W. F. Harrison.....6	

No. 6, 5 pairs: Rocky, first money, 10; Skinner, Jones and Eli second on shoot-off; White and Balsam third; Shuler and Harrison fourth.

No. 7, 10 singles: Skinner and Osmer first money, 10 each; Jones, Chantler, Burke and Marshall second; Rocky, Daly and Harrison third; Cutter fourth.

While first average, \$10, presented by the club, with a total of 70 out of 87. Skinner and Burk div. second average, \$7.50 cash, presented by the club. Bennett third average, leather cartridge case, presented by H. J. Pyle, with a score of 68. Daly and Rocky, fourth average, div. 100 V. L. D. match shells, presented by Lawrence & Smith, score 67. Cutter and Osmer, fifth average, leather gun case, presented by Kennedy Bros., score 65. After the sweepstake events members of their respective classes contested for badge and junior badge results.

Club badge shoot, 15 singles and 5 pairs:

Morrison (S).....15	C. Lawrence (S).....18	Cutter (S).....17
Knapp (J).....15	Shuler (J).....17	Morse (J).....14
Dunn (S).....15	Joylin (S).....16	Pyle (J).....17

Fourth event, 5 singles:

McClelland.....4	Stevens.....4	Caurothers.....3
Mockett.....4	Kelly.....4	Spears.....4

Won by Kelly.

FORT LEWIS, Colorado, April 5.—The Gun Club of Fort Lewis held its regular monthly shoot to-day. In order to create the excitement it was agreed to shoot a team match, three men on a side. Mr. D. Bird to captain one team and J. W. Weeks the other. The former named gentleman selected Mr. W. S. Craig and Mr. B. L. Moore from the members of the club, and J. W. Weeks took Mr. Price and Mr. Thompson, also members of the club. The latter named gentleman, however, was called away on business and could not take part in the match. As the first shot was a member of the club was selected to fill Mr. Thompson's place.

Score 80 singles and 5 pairs blue-locks per man, American Association rules, for price of birds and ammunition:

D. Bird's Team.	J. W. Weeks's Team.
D. Bird.....101111101111111111101010	10 01 01 11 10-29

JIM BILL.

THE AMERICAN SHOOTING ASSOCIATION.—The programme for the tournaments to be given by the American Shooting Association (Limited), at Columbus, O.; Lafayette, Ind.; St. Louis, Kansas City and Minneapolis, has now been ready and will be mailed with a

FRANKFORD, April 14.—We expected to shoot a match with the West Jersey Gun Club on Saturday, April 12, but the shoot was postponed on account of the heavy rain. The club house from down preparatory to rebuilding. Mr. Heikes was the guest of Mr. Wolstencroft during his stay in Frankford, and on Easter Monday he shot at 100 birds on the club grounds with Mr. Wolstencroft. It has never been the writer's fortune to see such a grand exhibition of shooting. The conditions of the race were 100 Keystones, 3 traps, 28yds. rise, both barrels. After the rain stopped falling the wind came to how a gale, and it blew so hard that the thick paper rolls that the targets come in would be blown end-over-end off the grounds, and the targets would dip and soar and zigzag, in every conceivable way. Mr. Heikes won the race by breaking 94 out of 100. Mr. Wolstencroft broke 88. Mr. Heikes used his second barrel 13 times, and Mr. Wolstencroft used his second 20 times. This is the annual shooting under the conditions that prevailed. Bore Mr. Heikes left for Ohio he deluded the club purchasing committee into buying a lot of bluecock targets and traps, and our last new member bought his gun. The writer supposes that the infant thought that the gun was so thoroughly broken in that it would stand him in good stead for lack of skill. On Saturday, April 13, the Wawasett Club of Wilmington will make a pilgrimage to our grounds at Frankford to shoot a match with us. We propose to turn the grounds into a Waterloo for them if it lies in the wind.—S.

NEW YORK STATE SHOOT.—The thirty-second annual convention of the New York State Association for the Protection of Fish and Game, will be held at Lyons, N. Y., June 9, 10, 11, 12 and 13. The committee of arrangements are: Dr. J. W. Putnam (chairman), R. J. Parshall, M. L. Forsyth, H. G. Hotchkiss, Jr., H. B. Whitney, Henry Killick, W. S. Gavitt, Sec.-Treas. Matters pertaining to the coming convention are progressing finely, and the committee now has the assurance of a grand success. Prizes have been donated in goodly numbers, and they expect to issue the largest cash and merchandise list that has been had for several years. American Association trap rules will govern in all contests except live-bird shooting and the sweepstake shooting. The sweepstake shooting will be open to all comers, and it is hoped that many outside of the State will take advantage of this and attend. It is intended to make this a strong feature at this convention. A simple and accurate method of counting is the purpose of the committee to make it pleasant for all and to furnish such conveniences as sportsmen enjoy. The grounds are good, easy of access; shooting to the north. The programmes, both of association shoots and sweepstakes, will be issued about May 10. All contemplating coming and desiring these will be furnished by applying to W. S. Gavitt, Secretary, Lyons, N. Y. The targets to be used will be kingbirds, manufactured by Messrs. Cruttenberg & Card, of Cazenovia.

SAN FRANCISCO, April 5.—The Bluecock Shooting Club held its first shoot of the season at Bird's Point this afternoon. There was not a large attendance as the weather was anything but inviting. It was a most successful shoot, however. On account of the rainy weather, the March shoot had been postponed and the event to-day embraced both the March and April shoots. Owing to the lateness of the hour there was no money sweep, such as usually follows monthly matches. The sport commenced at 2 o'clock and continued until nearly 5. The shooting for each month was at 100 birds, 15yds. rise for the March, 10yds. and 12 for 12-bore gun, for doubles the rise is 14yds. for 10-bore and 12 for smaller bore guns. H. H. Briggs acted as referee. The score was as follows of the March shoot:

A. F. Adams	16	L. Abbott	8	W. E. Mayhew	15
W. J. Fox	14	M. H. Caldwell	17	C. F. Stone	10
E. A. Eddy	11	S. E. Knowles	19	R. E. Bell	13
F. G. Sanborn	14				

April shoot:

Adams	12	Abbott	7	Mayhew	17
Fox	14	Caldwell	20	Stone	10
Eddy	19	Knowles	17	Pell	12
Sanborn	13				

FREEDHOLD, N. J., April 10.—The Freedhold Gunning Club closed its first year this afternoon with a shoot on its grounds a short distance east of the town. The club has an active membership of about forty, and has held shoots twice a month during the year. Millard F. Conover ranks as high man. He won the first medal for traps and the second for live birds, and he now the owner of both. J. Maggee and C. C. Snyder tied for the third medal for live birds by winning it three times. The three men will shoot off, but the chances are decidedly in favor of Mr. Conover. The club has purchased three fine gold scarf pins for prizes this year. They are all of the four-leaved clover pattern. One is studded with diamonds, one with rubies, and the third with pearls. The first shoot of the year brought D. Buck, 15, to the front with a record of 8 out of 10. J. W. Danzer and G. W. Campbell tied for second place with 7 each. They shot off and Mr. Campbell won. P. V. Thompson, Millard F. Conover, C. L. Shephard, C. C. Snyder, E. Hart Havens, Frank W. Conover, R. Hulse Cooper and L. D. Norton tied for third place. The shoot off was won by Thompson, who made a score of 8. The club will enter a team in the Monmouth county team shoot at Long Branch in July.

MASPETH, N. Y., April 8.—First average shoot of club year commencing to-day. Two classes, A and B. Prizes, 3yds. and 10yds. for each class, 4yds. for each prize, \$15, \$10, \$7 and \$5. Match at 7 live pigeons, 5 King's patent ground trap, handicap 22 to 30yds. rise, 30yds. boundary, no back bound, club rules:

Manning	11111111	7	Duryea	1101111	6
D. Schroeder	1011100	4	Helmken	0111010	4
Siems	1110101	5	Grau	101100	4
Blanch	1111110	6	Bohmke	1111010	5
C. Meyer	100110	5	Eberhardt	101110	5
Lyons	110011	5	C. Meyer, Jr.	111110	6

After the regular shoot eight of the members entered in a sweepstakes shoot miss and out, which was hotly contested by Dr. Schroeder and C. Meyer, Jr., the latter winning by killing his fourteenth bird.

BERGEN POINT, N. J., April 12.—A series of six matches at clay-pigeons on the grounds of the New Jersey Athletic Club furnished considerable sport this afternoon for the gunning contingent of the organization and a fair-sized crowd of spectators. The first event on the programme was the third match for the several club badges. Each competitor had four birds, the score being as follows: Major J. M. Taylor 14, Richard Sundermann 17, DeWitt C. Smith 9, Geo. S. Vinden 9, Chas. A. Pope 14, Ed. L. Vredenburg 15, H. M. Popham 8, R. S. Paret 10, Howard Cook 11. The second match was at 10 birds each; Major J. M. Taylor captured first prize with 9, DeWitt C. Smith second, Paret, Sundermann, Cook and Vredenburg tied for third and Sundermann won fourth was secured by Popham. A match with similar conditions was the third event; Major J. M. Taylor again won first prize, Sundermann second, Virden third, Smith and Pope divided the fourth event was a walking match at 10 birds: First was won by Vredenburg, Virden second, Major Taylor third on shoot off. Vredenburg won first in the fifth event, a match at 5 pairs each; Taylor second, Sundermann third. In the last event, a match at 20 birds each, Taylor was again a first prize winner with 12. Vredenburg captured second.

RIVERSIDE, N. J., April 11.—One hundred and fifty gunners were present at Riverside this afternoon to witness the live-pigeon shooting match between A. James, a crack shot of the North End Gun Club, of Frankford, and J. Sivard, of the Philadelphia Sportsman's Club. The shoot was a most exciting one from the time the first bird was liberated until the close of the match. Hurlingham guns governed the contest. Wm. Wolstencroft acted as referee, J. H. Gibbs as judge for Sivard and George Elmer as judge for James. The score of the shooters follows, the figure 2 indicating when the second barrel was used:

A. James	1012211121212101232012	22
J. Sivard	111221111022101010201	20

EATONTOWN, N. J., April 12.—The regular weekly clay-bird shoot of the Oceanville Gun Club took place yesterday afternoon. The first event was the club shoot at 10 bluecocks and the score was as follows: W. J. Cook 9, A. T. Metzger and J. C. Laird 8, W. A. Becraft, Geo. L. Gibbs and G. White 7, A. B. Stout 6. A number of sweepstake matches followed, which were won by Geo. L. Gibbs and J. C. Laird.

ATLANTIC CITY, N. J., April 10.—The monthly shoot of the Atlantic Gun Club for the gold and silver medals took place on the club's grounds this afternoon. The score resulted as follows, 15 singles and 10 doubles: C. Minard 21, R. C. Griscom 17, Thos. Wilson 17, S. Lillig 17, A. C. Griscom 16, Dr. Raith 10, Wm. Hayday 15, Geo. Thompson 13, C. Minard and R. C. Griscom, according to the rules of the club, were not entitled to the medals, as they had not broken their previous records. Wilson and Lillig shot off for first place, in which Wilson won, receiving the gold medal, the silver medal going to Lillig.

TOWANDA, Pa., April 11.—At the regular weekly shoot of the Towanda Rod and Gun Club the following scores were made from two traps, known angles, 16yds. rise for 25 singles and 14yds. for 10 doubles: Walter 18, Montanye 22, Dittich 23, Turner 14, Eitenbury 21.—D.

MASPETH, N. Y., April 9.—Regular monthly shoot of the Manhattan Gun Club of New York:

M. Lichtenberger	111111	7	Aug. Eberhardt	110111	6
J. Bayer	1011000	6	P. J. Lambrecht	110111	5
Geo. Fahrenkopf	1000100	2	Jos. Breitkopf	010001	2

Classified shoot, \$1 entrance:

Lichtenberger	111110	5	Lambrecht	111100	4
Bayer	010100	2	Breitkopf	11111	6

AUBURN, N. Y.—On April 23 the Auburn Gun Club will hold an all-day open tournament, rapid-firing system, on its grounds.

PORTLAND, Ore., March 30.—At an exhibition shoot here today at live pigeons Capt. Bogardus only killed 22 out of 30. He and his sons have been here for a couple of weeks, but go on tomorrow to Montana.

HOLMESBURG, Pa., April 7.—Several members of the Holmesburg Gun Club had a shoot to-day at 22 birds each: Enoch 14, McMaster 12, Griffiths 9, Johnson 6, Fleming 6.

CAZENOVIA, N. Y., April 8.—You were at Albany last year and saw the 18yds. plunge trap bird shoot for Dean Richmond trophy. Is it not about time the Empire State done away with this style and adopt ground traps and 30yds. rise?—C.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

FIXTURES.

CANOE SAILS.

THE present time is emphatically an era of experiment in all branches of pleasure sailing, and at no period of their history have so many important advances been made both in yachting and in canoeing as in the past five years. In both sports most radical changes have taken place in models and methods; the heavy lead keel of the modern yacht is paralleled by the sliding seat of the canoe, each adding to the power, though in widely different ways, and so far at least as speed is concerned, great advances have been made in every direction. In the position of the two sports to-day, however, a very curious contrast is noticeable. In yachting the question of rig may be considered as finally settled, at least for an indefinite time; the modern cutter rig has driven out all others—the sloop, the lugger, the schooner, the yawl—and while a number of details are still far from perfect, it is not probable that for many years to come we shall see any radical departure from the sail plans of the present American and British fleets. In model, however, the case is entirely different, and the question is still open between the centerboard and keel, with odds in favor of the one or the other according to the size of the boat; between the varying proportions of beam and depth, exemplified best in the wide range covered by the 40ft. class, from Laris to Minerva. The tendency of the present time is toward the keel boat of moderate dimensions and power is very strongly marked; but no one can say which of the many types represented in the lively strife now in progress will prove the survivor, or whether all will give place to something as yet unknown.

In canoeing the exact reverse of these conditions is found; for three seasons past there have been comparatively few advances in model, and while there are to-day many very radical changes, the general standard has been greatly raised, the best of these are practically no better than the leading boats of 1887 and '88, such as Fly and Notus. As far as model is concerned, the result of the racing last year and the year previous seems to show that within the very wide range comprised between Fly and Eclipse, there is little to choose in point of speed, and that with equal rigs and sailings the boats will be found to be about equal. The result is that in canoeing, the boats all being of the same general dimensions, 16;30 and 3 to 5in. draft, all niceties and refinements of model are of comparatively little importance, so long as the boat is not really unfair or the displacement very badly balanced. The sliding seat makes the power and stability of the boat of little importance, a deficiency in this direction is more than made up by a little extra power, and the power of the lines in a boat of six beams, must of necessity be fine and easy; and the fore and aft trim is easily controlled by the position of the crew, no need to cut off the lead keel or to take it off entirely and recast it. The main factors in the modern racing canoe would appear to be the skill and agility of the man, his ability to do half a dozen things at once; the sliding seat, a big centerboard and the sails.

On the last point, however, the canoeists are agreed; there is as much diversity among canoe rigs as among yacht models, and the next improvements in canoe sailing must be looked for in this direction. Such a state of affairs is conducive to great advances in both sports; the yachtsman of to-day can be sure of having just as good a rig as his fellows, and the good or bad performance of his boat, under good handling, may be largely attributed to model and details of hull rather than rig. The racing canoeist, on the other hand, can build or buy a boat that is no whit inferior to the crack racers, but for the rest he must depend mainly on his rig. The use of battens on canoe sails has been universal here for the last 10 years, the idea being taken from the English, and by them from the Chinese. The improvement in batten sails, especially in the direction first pointed out by Mr. Bailey in the "Peacock" has been so great that the superiority of the battens was unquestioned by canoeists. A couple of years ago, however, Mr. Gilbert H. Wilson, the well known yacht sail-maker, became interested in the canoe rigs, and on a close study of them he, in conversation with some canoeists, condemned the battens entirely as destroying the proper sit of the sail and greatly impairing its efficiency. His statement that a better sail could be made without battens, and that the three leading canoeists of the time, the canoe Vagabond, of the New York C. C., and for two seasons Mr. Stevens has experimented with them, a number of sails having been made for him by Mr. F. M. Wilson, of Port Jefferson, a brother of Mr. Gilbert H. Wilson. At our request Mr. Stevens has prepared the following notes embodying the results of a long experience with canoe sails of all kinds, beginning with the English battened sail, and ending with the sliding seat sail in racing, in which speed is the sole object; and while the same principles are involved in designing a cruising rig, there are other essentials to be considered in such a case.

Since the only reason for putting sail on any boat is to propel her at some desirable speed, it follows that the sole object of the racing canoeist in designing a sail plan is to obtain that one which is the most effective, or in other words, that will give the most power to the boat in the least amount of sail.

In designing a suit of sails we have to consider first, area; second, form; third, distribution; fourth, material. Area.—The area will be determined by the supposed stability of the boat, but is usually arrived at by comparison with other boats. At present most racing men use from 100 to 125ft., with a steady upward tendency, as methods are developed enabling greater areas to be carried. The reason for this is that the sliding seat has so increased the power of the boat on the wind that it is now generally accepted that the only limit to sail spread is the amount which can be carried to leeward.

Form.—The form of sail has been undergoing a steady change for many years, and all in the direction of the greatest efficiency to windward, since experience has shown that to be the most important quality in racing. At present the three leading forms of sail in use are the standing battened, of Eclipse and Canuck; the hoisting battened of Fly, and hoisting unbattened of Vagabond. The question of whether or not sails should hoist has practically ceased to be of importance, for after the success of Notus, Fly, and the other Lowell boats, it may safely be accepted as a fact that there is practically no difference in speed between the two. The standing sail is the simpler to rig, but not so safe as the hoisting. The question of rigging is undoubtedly held more to the favor in which the standing sail has been held in the

past than anything else, and there is no doubt that it will be less popular as canoeists learn the art of rigging neatly and well.

Since it is accepted that the limit of sail is that which can be carried to leeward, and, further, since such limit is practically fixed by the amount which can be safely jibed, it becomes important to discover in what form we can get the greatest area with the least danger during this delicate operation. Numerous experiments show that to get this safely in the greatest degree we must keep the center of effort as near the mast as possible, and must not have any sail aft of a straight line, struck from a point on a line with the mast equal to the greatest height of sail, to the clew; the dotted lines in the drawings. Such a sail is the "leg of mutton," which can be jibed in almost any weather in which it can be carried. In other forms as the sail is brought aft of the straight line it will be found that the spinnaker, which projects part outside this line when brought amidship in jibing, and sends it over with such an impetus as to be dangerous in strong breezes.

For windward work, since more sail can then be carried with the sliding seat than to leeward, a low center of effort, while desirable, has ceased to be essential. It remains, therefore, to consider simply the most effective form on this point of sailing, irrespective of other qualities, especially as such form has proved itself to be the best for racing. An examination of photographs is one of the best guides in deciding this form, and is more easily managed at this time of year than studies on the water. Very careful watching of all the different varieties of sails, commencing with the balance lugs and Mohicans, having yards running entirely without support a long way aft, has shown that the peak in such cases, instead of being curved, would be a straight line, and that the sails sagged out to leeward, retarded the boat, and invariably caused a tendency on the part of the sailor to flatten his sheet to such an extent to overcome the trouble as to make matters worse, and drive the boat's head off her course. Both these sails were discarded in favor of others with shorter yards, but with the same length of battens as formerly, producing thereby a sail with an irregular line of leeward curve, which would be a straight line, and not nominally straight. The immediate result was that the battens instead of the yard, sagged out to leeward, although not to so great an extent as formerly, and in just so much was the sail an improvement.

It was at this stage of affairs that the standing battened sail appeared, and was again an improvement. The leech, while irregular in line, in that it was not a straight line, so that an angle, and produced a nearer approach to a true curve, but the sails still sagged to leeward. The leg of mutton with the straight leech was next tried, and was found to give a flatter surface aft with nothing to sag to leeward. The battens were still retained for reefing and to keep the sail flat.

At this point attention was drawn to the fact that all the best yacht sails were made with a technical bag, technically known as "draft," near the mast. Experience on the part of the boats used proven conclusively that sails so built were faster than those which were flat. The experience of yachtsmen and sail makers, as well as experiments on the action of currents of air on curved surfaces like sails, proved that to realize the greatest possible benefit from the force of the wind the sails should not be flat, but should have a parabola curve, with the greatest curvature near the mast or aft, as shown in the section. The change, therefore, of a yacht's sails, instead of being made flat, out of straight breadths of cloth, are given a curved shape, like a segment of a balloon, though with far less curvature. This is done mainly by varying the breadth of the seam or lap, called "broad seaming."

To apply this principle to canoe sails necessitated the complete abandoning of battens, and the longer use in yachting, as with the additional the pure leg of mutton form was so rarely necessary as not to be worth considering, and this more especially since the sliding seat had greatly increased the range through which a given area of sail could be carried on a boat. It was decided, therefore, to try the experiment on Vagabond, and the result proved most satisfactory, since she was found to be much faster than before.

Since it would appear that the greatest area can be most easily jibed in the form of a leg of mutton, and that it is therefore the best sail to leeward, while also it is the best to windward, the natural conclusion is that it is the best for all-round racing.

Distribution.—Having arrived at a conclusion as to the area and form, it is necessary to consider the manner in which the sail shall be carried on the boat. The most important point to be considered has been a low center of effort, but it has been shown in treating of form that while this is still very desirable, it is no longer essential and may occupy a secondary position if necessary. The result of a series of experiments in 1888 was to show that it was essential to get the best, especially to windward, out of the boat, that the respective centers of effort of the two sails should be as close together as possible. To get this the greatest change, therefore, of sail it is necessary to enlarge the area of the after of the two sails, the one generally known as the mizen, and it is only a question now of how large this can safely be made. In the spring of 1889 an extreme test of this theory was attempted on Vagabond by giving her a jib and leg of mutton mainsail rig; but this had to be abandoned as too awkward to handle. Later in the year it was decided to get the best center of effort as possible on the boat with the ordinary arrangement of canoe sails by increasing the mizen, which had steadily grown from 15ft., for which she was originally designed, to 45ft., and stepping it in the after end of the cockpit, as close to the seat of the canoeist as it was possible to get it. At the same time a 55ft. mainsail was substituted for the 65ft. sail previously used. Just before this she had carried the 65ft. and 33, or 100ft. all told. The change, therefore, did not alter the area, but simply reduced the distance between the centers of effort and made it 8ft. 9in. instead of 9ft. 6in. Under this rig the boat did very much better than before to windward, and so far as could be judged, did not lose on any other point of sailing. The only objection to this arrangement was the size of the mizen, but this never caused any trouble; and while the sails were carried in the manner of the mizen, the center of effort was not found in the least degree inconvenient. On the other hand, the larger the mizen, provided the sails balance, the greater the tendency to weatherliness, especially in rough water; and the smaller the mainsail the less the tendency for the boat's head to be knocked off when sailing on the wind. The question has arisen whether it is not possible to get still better results by making the after sail the larger of the two, and the change, therefore, is to be tried this summer on a new boat it will be watched with a great deal of interest.

It must also be remembered that, in a canoe, where shrouds cannot very well be used, the higher the sail the greater the difficulty of getting the spars to stand, except at the expense of great weight. It was for this reason, and also on account of the small area of the mizen, that the leg of mutton was never become popular. The important points to consider in distributing the sail on the boat are therefore:

First—Low hoist to keep down weight of spars and height of center of effort.

Second—Large mizen to get the distance between centers of effort as small as possible.

The low hoist is best obtained by making both sails of the same height and the booms as long as possible; on an ordinary canoe a main boom of 9ft. 10in. with a leg-o-mutton sail can easily be carried, and a mizen of 7ft. 6in. or 8ft. It must, however, be remembered that the centers of effort must be brought as close as possible, and to achieve this it is desirable to get the mizen mast as far forward as possible. If this is done the length of main boom will be decided by the distance between the masts, and not by what can be safely handled. On a boat of 16ft., with 100ft. of sail, a good arrangement would be to step the mizen mast at about 10ft. from the bow, with a boom of 7ft. 6in., hoist 12ft. and an area of 45ft. The mainsail of 55ft. would have the same hoist, 12ft., and a boom of 9ft. On such a rig the center of effort of each sail would only be 4ft. above the cockpit, and the distance between the centers of effort would be 10ft. 6in. The leg-o-mutton would be overcome.

Material.—The material for sails must be close textured, to prevent the wind from passing through it; strong, to insure the sail retaining its proper shape, and light in weight. It is also desirable that the surface should be smooth as possible to reduce the friction and permit the free passage of the wind. For years the practice has been to use a light cotton, but last year the experiment was tried of substituting linen. It was found in 100ft. to be 10 to 15 per cent lighter than cotton, while it was stronger, and stretched so much, and was of closer texture. In use the cotton swells up rather more under the influence of damp air, while linen keeps better because less liable to mildew. The cost of a linen sail is very little more than of a cotton one.

There is one other and very important advantage in linen. It is more susceptible to light airs and is far more lively in every way than cotton, and will recover and fill and spill the wind much quicker.

In regard to stretch, Mr. F. M. Wilson says: "Beside lightness, what is of still more importance is that linen is more susceptible to light airs and is far more lively than cotton, and will recover and fill and spill the wind much more quickly. There is less stretch to linen on lines a b and c d, than to cotton, but more on lines e c and c b, Fig. 1."

Soil.—In sail making or cutting has nothing to do with the subject of designing, with canoeists it must to a certain

Horizontal Section of Sail with Draft.

extent affect the form of sail, and for this reason it is referred to here. A flat battened sail is, comparatively speaking, an easy one to make, because it can always, by means of the battens, be stretched wherever necessary and made to sit. A battensless sail, especially with draft, is, however, a very different thing, and it is doubtful whether any amateur could produce one which would be at all suitable for racing purposes in good company. The canoeist is, therefore, advised to continue using battens unless his sail-maker thoroughly understands his business. In making sails, allowance must be made for the stretch of material, which will vary with its weight and character. Linen and cotton are so dissimilar in their nature that the cloth have to be cut in an entirely different manner. A smoother and better surface would be obtained if bights were omitted, but without them draft could not be given nor a proper form obtained for the sail when fully stretched.

The draft is given to the sail by cutting the material on the forward part of the sail rather wider, a short distance up each cloth, than either above or below, and slowly flattening out the surface as it approaches the peak and the leech. Both the upper and after portions of the sail must be absolutely flat, otherwise in the one case the sail will not draw, and in the other will not let the wind pass over it rapidly and easily, and at the same time get the full share of work out of it. It is now considered very essential that the leech should not be reinforced, more than necessary to prevent tearing, because otherwise it will not stretch with the adjoining cloth and will cause a bag, and so hold the wind and retard the boat.

There is very little stretch across the middle body of the sail, but a great deal on the hoist and along the boom. If the sail were originally cut with a straight leech, the result would be that when stretched it would have a hollow as shown by line c, Fig. 1. To overcome this, the middle portion of the sail is made of its fully required size, while the head and foot are cut smaller. The sail when finished appears to have a rounded leech as in line a, but in sailing the draft takes up the extra width until the stretching is complete, when the leech should be perfectly straight, as line b.

The luff is better cut straight, without round at the head, and should be strengthened to stand the strain put upon it by the tack. Until recently the practice has been to round the head more or less to allow lighter spars to be used, the theory being that the strain of the bent stick kept the leech taut. Whilst this was found correct so far as it went, it overlooked the fact that the side pressure on the stick was very great and with the sliding seat is now greater. If the stick were made stiff enough to overcome this pressure and stand up to its work, it was at once too stiff to bend to the shape of sail. The rounded head has therefore been abandoned and the small amount now put in by the sail-maker usually stretches out in a short while. Great care must be exercised in hauling out the sail not to put any strain on it, but only to take up the slack.

Spars—These should be so well proportioned that they will always stand up to the duty required of them without bending, otherwise the sit of the sail will be spoiled, and speed sacrificed. It is better to use smaller sails with suitable spars than larger ones with light spars, because greater power will be obtained. By careful designing a great deal of weight can be saved in spars. To do this best a record should be kept of all designs, with the length and thickness all the way along. By comparing the different plans with experience in use, the proper strength with minimum weight can be obtained. Hollow spars are used on the Lowell boats, but the probability is that the expense will prevent their general adoption. When used, canoeists should remember that a hollow spar, to be equally as strong as a solid one, must be greater in diameter. In a solid mast the full thickness should be carried well up and then only tapered slowly. The upper end of the yard, and the after end of the boom should be quite stout to keep a taut leech; any bend in either will do a great deal of harm.

In conclusion, all canoeists should be urged to watch carefully the action of sails in all kind of wind and weather, with the influence exerted by them on the boat. In this way improvements will continue to be made as in the past. At present, the more any one studies the more he learns how little he knows on the subject.

A very interesting lecture on yacht sails, by Mr. Gilbert H. Wilson, was published in the FOREST AND STREAM of April 4, 1889.

NEW BEDFORD C. C.—The annual meeting of the New Bedford C. C. was held on April 2, when the following officers were elected: Capt., Wm. A. De Costa; Mate, Wm. Frost; Sec., Treas., John S. Wright; Sailing Master, Asa T. Thomson. It was decided to build a club house, to be located on Fish Island, probably on the east side. The house will be 16x17 ft. in area, one story, and will accommodate twelve canoes. It will be ready in May. A great deal of local interest is being manifested in canoeing. The club now numbers seventeen men with fourteen canoes. It will continue to rent the floating house used the past three years.

A. C. A. MEET—TRANSPORTATION.—The steamer Manhasett, mentioned last week, runs between New London and Sag Harbor. We will publish the times of departure as soon as the summer time table is announced.

1,500 MILES IN AN ADIRONDACK BOAT.

PART XVI.

HUDSON RIVER, Oct. 22, Wednesday.—I was up at 5:30, before light. The rosy dawning was very beautiful on the river from my window, with the dark range of mountains in the background. Before the day fairly began I thought the Matteawan Mountains were a dark cloud, so high were they. Breakfast over the start was made at 6:40, with an ebb tide and the wind ahead, blowing a gale from the south, as usual. Were it not for this opposition, which I have endured since leaving Albany, to-morrow would see me nearing New York. I had a most uncomfortable row, and not without danger, as the waves were very high. Taking the middle of the river, with 1½ miles of water on each side, I pulled carefully but steadily for the narrows below. The wind has a clear sweep on the water for 9 or 10 miles on Newburgh Bay, and it frequently bore me back in spite of every effort: the oars being on several occasions knocked out of my hands.

There is an island in the middle of the Hudson just north of the narrows, and at one time I attempted to gain this, being of the opinion that my boat, with its open well, could not live much longer in such a sea. [Canoeists who attended the Newburgh spring meets of 1884-5 will remember Pollaple Island.—ED.] The wind, blowing through an opening in the mountains like a hurricane, came in most violent gusts. Several schooners were beating down against it, and they made a fine sight, with close-reefed sails, throwing the water from their bows at every plunge. It was hard labor, but I finally passed the Narrows, where the Hudson contracts to one-third of its normal size, with Breakneck Mountain on one side of the entrance and Storm King on the other, guarding the passage into the Highlands. The scenery became exceedingly fine, the foliage on the lofty mountains being very brilliant, while great rocky cliffs and precipices overhung the river.

At 10 o'clock I made West Point landing, ten miles below Newburgh, and emptying the water out of my boat, sat down to sew up my clothes, which were in an unseemly condition, and did not, by reason of their gaping holes, permit me to enter the haunts of men. Arriving at Newburgh in the dark, and leaving before day-break, such discrepancies were not noticed; now, however, the stern proprieties of civilization peremptorily demanded reform before appearing in public. After the operation things were not so handsome as they were before, but a great deal stronger.

Leaving my boat on the slip under the guard of some cannon, 32-pounders, I marched up to the West Point Hotel, situated 200 ft. above the water, which belongs to the Government, inspecting the various fortifications on the way, and growing more and more extensive views. After registering at the hotel I walked all over the fine grounds, looked at the cavalry stables, examined the monuments, guns, earthworks, etc., and finally witnessed the cavalry drill at 11 o'clock. I saw, moreover, the old earthworks, thrown up in 1776, the building and the pretty cottages of the professors. I dined at 1 P. M. and joined my boat at 2:30, the tide being now against me, which, together with the furious wind, made progress so slow that the temptation presented itself to put back and stay all night. Later a hard shower came up, and some hard squalls from the southwest that made the water fairly fly. I stood this for some time, trying to gain the west shore, but the wind was so powerful that it was quite impossible.

Finally, while in the middle of the river, there came from a gap in the mountains half a mile distant a sudden and terrific blast of wind, and I had barely time to put the boat about, so as to face the gale, when in quicker time than it takes to write it, I was blown ashore, being powerless to pull a stroke or even to hold my oars in the air. Reaching the rock-bound shore, I jumped out, turned the boat over and made for a small house hard by to escape the drenching pour that followed. Fortunately the wind had not caught me broadside on or I should certainly have been upset. The water was flattened down almost smooth, while the wind blew fine spray up from its surface, and the air was white from the whizzing elements. The locality was quite isolated, there being only a small chemical mill and a few tenement houses for the laborers about it. The people in whose abode I took refuge could not keep me all night, but referred me to a wretched little laborer's boarding house, and my heart sank on entering the vile hovel, filled with smells and smoke. Seeing my disgust, the good woman of the house went to a dank little deserted shanty near by, and fitting up a room and bed there gave me the key. Locking myself in, I read and wrote until 9 P. M. Only 14 miles made to day, and I fretted much over my hard luck—and sore finger.

Hudson River, Thursday, Oct. 23.—Had breakfast at 6, then walking down the railroad track to my boat got off at 7 in a strong northwest wind. I passed Dunderberg Mountain, Anthony's Nose and several other notable mountains, the scenery on all sides being magnificent. The river wound about among these peaks considerably. While going through the bay opposite Peekskill, 5 miles, the windy tempest was against me, but I had the tide. The river is several miles wide at this point. I made for Stony Point, where the river turns due south again, and saw the ruins of Forts Clinton and Montgomery; almost every point along the river has some historic interest associated with it. Haverstraw Bay begins at Stony Point, resembling a large lake, 5 miles across in its widest part.

Opposite Sing Sing, Tappan Zee, or Tappan Bay, commences. Here the tide left me and it was a hard pull of five miles to Tarrytown, on the east bank, where an iron lighthouse, half a mile from the shore, marks the entrance. I kept in the middle of the river throughout, and saw a large number of sailing vessels of all sorts and sizes. During the early part of the day the wind blew from the northwest, finally coming from the west, and thus blowing across the river and making a bad sea, while the drifting of the boat made much calculation necessary to shape a direct course. Rowing straight ahead, the boat would make a mile of leeway in every hour.

The various sloops and schooners were tacking about in a lively manner, and it was interesting to note the comparative progress my craft made on a direct course, while they fetched up here and there. Many invitations to "hitch on" came from the skippers, but I declined. Several of the vessels had been seen previously in Newburgh Bay, where the wind was directly against them, and doubtless they could not get through the Narrows between the Highlands during the night, there being so little room to tack in. Their crews evidently recognized me as an old companion.

Making Tarrytown at 11, through a heavy sea, I went to the Perry House, a small but neat inn, to get dinner. There are 5,000 people here, and it is a pretty place. After dinner I walked to Sleepy Hollow and saw the old Dutch church there, built in 1699, of which the Rev. Mr. Holland is pastor. I also visited the beautiful cemetery close by, where Washington Irving is buried. I crossed Pocantico Creek on the bridge over which the Headless Hessian pursued Ichabod Crane, and saw old John Van Tassel, sexton, at the church yard. He firmly believes in "spooks," and even the neighbors declare that they often hear the old bell on the church steeple ring at night, though the cause of its vibration is shrouded in mystery. There were some ancient graves around, on one of which was a curious epitaph, evidently that of a sailor:

"Tho' boisterous winds and Neptune's waves
Have tossed me to and fro;
By God's decree, you plainly see,
I'm harbored here below."

The day being clear and fine, Sleepy Hollow and its vicinity looked very attractive and beautiful; perhaps no other place is quite so full of legends as this spot.

Old Mrs. Perry, at the inn, strove to entertain me by talking bicycle for a while, until I assured her that I had not been on one for over a year. She then remarked that my "lights" (knickerbockers) had made her think that I was traveling in that way. Though she made a mistake of a common kind, it being an ordinary fallacy, I am becoming quite tired of having people gossip on nothing but bicycle, sporting news, and questioning me accordingly. The best advice for me to let the matter talk themselves out on it, and afterward, just as the cross-examining begins, to quietly state that "I do not know, not having seen one for a year at least." This generally has the desired effect, and silence quickly ensues.

Returning to the little town, I got off at 3:30 again. My morning's run was 19 miles; but now the auspices were not so favorable, as the wind was up and blowing across the wide bay, kicking up a nasty chop sea, made doubly so on striking the east shore and rebounding. The waves were very high, and I foresaw that great care was necessary to navigate with a loaded boat and an open well. As I discovered after an unlucky draft, the water in Tappan Bay is brackish, in fact almost salty, and unfit to drink; but as this is a sign of my near approach to New York, it was hailed with joy. I saw, shortly after leaving Tarrytown, two large flocks of ducks and a couple of fish eagles industriously earning their living.

Upon starting, I had endeavored to cross the "Zee" in the teeth of the wind, in order to get under the lee of the west shore, but one mile out I was compelled to turn back and make for the nearest port to bail out, having been nearly capsized. Henceforth, by dint of careful management, I reached the Palisades, 5 miles below, and there broke the force of the gale, as the river narrowed considerably, this being the end of Tappan Bay. It was hard work, however, and required systematic maneuvering to succeed, though I kept inside of the chop caused by the waves rebounding from the east shore. The water was exceedingly rough here, but its direct onslaught was broken by the return wave, and though the boat was pitched about in great fashion, I soon found that she did not take water.

The boundary of the State of New Jersey begins on the west side at the Palisades. Tappan Zee is a noted place for gales and rough water, and to-day it fully preserved its reputation. I consider that for some time my danger was serious, as the water jumped over the decks into the boat freely, and rowing was out of the question. Only a stroke could be taken here and there, as the waves, all the while, were sailing over the boat. I had gone down in ten minutes, notwithstanding my utmost exertions. Rowing had to be done in the trough of the sea, and frequent bailing was imperative, as the boisterous waves blew all over me. This was anything but pleasant, the weather becoming cold and the gale chilling me to the marrow; and during the remainder of the day I was in a state of side excruciating misery.

I passed Irvington, Piermont and Dobbs Ferry, and saw many fine residences on the east side; while on the west the dark Palisades, looming up from 300 to 500 ft. above the water, made the evening prematurely early, though they gave me a splendid view until dark. Some of the estates along the bank are royal in size, and among the prettiest are those of Washington Irving and Bierstadt, the latter being between the town of Hastings, 12 miles further, and Yonkers, which one can plainly see from the river. The Palisades extend 15 miles to Fort Lee, where we arrived after dark, with Fort Washington directly across the river on the east side. After these were passed I saw the lights of Spuyten Duyvil and Riverdale below, on the same side; and further down came Pleasantville, whose lights looked very pretty over the water. The night air was exceedingly cold, and a blanket afforded great comfort, as I was still wet through. Before long the captain of the sloop appeared, having seen my light, and gave me a hearty invitation to go down into his warm cabin and have a chat. He remarked that mine was a pretty chummy job, evidently thinking me pretty tough to stand it; but I told him that I not only had to stand it but was also very wet.

Supper was despatched rather hastily, and before long I was forging ahead, keeping a sharp lookout for vessels as I entered the most crowded part of the Hudson River abreast New York. I reached Hoboken, 29 miles from Tarrytown, at 8:30, and finding a boat house in between the wharves put up the boat there, and walked to the Park Hotel a block away. The Park is a German house, and everybody here appears to belong to that nationality. He boken has, according to mine host, 31,999 people, and I remarked to him that if they were all Germans there was quite a settlement of them. He did not appear to enjoy this remark, nevertheless it was gratifying to know that, though a transient inhabitant, I made a population of over 32,000.

In the afternoon I saw some fine steamers plying up the river, and just after reaching New York Bay came under the stern of a large schooner, whose crew at once recognized me, having distanced them two days before, and yesterday seeing them again. The third time we met was when they passed me to-day, so now I bade them a final adieu, receiving in return a hearty cheer. Just before reaching Hoboken I observed a remarkably large shooting star, the tail of which remained for some time after the extinction of the meteor itself. There was considerable going on in the steamboat way in the wide river, but my light proved ample protection, though a few frights were had, and what appeared to be narrow escapes. I am firmly of the opinion that it would be most foolhardy to cruise about here at night without one. For the last ten miles I have been against me, and blew quite hard. The sides, however, by close hugging the shore, have saved me to-day just seven miles outside of my rowing, but the powerful wind against me about balances this account. I was very tired to-night, having been underway since 5:30 A. M., and rowing just 48 miles.

M. B.

PHILADELPHIA, Pa.

ACADEMY C. C., ROCHESTER, N. Y.—This organization was organized on the last Friday in September, 1889. It adopted a constitution substantially like that of the Rochester C. C., but all of its members are students at the Rochester Free Academy. At the first meeting ten persons signed the roll. The club selected for its first set of officers the following gentlemen: Capt., F. Clark Brown, '91; Mate, Wm. D. Robinson, '91; Purser, Howard S. Baker, '92; Meas., Frank M. Vosburgh, '91. The club elects officers semi-annually, and the list of incumbents for the next six months is as follows: Capt., Frank M. Vosburgh, '91; Mate, Albert C. Bell, '91; Purser, Howard S. Baker, '92; Meas., Edward L. Saunders, '91. The club at present has no house, but at the last meeting a committee was appointed to thoroughly look into the matter, and all indications are for a house the coming season. During the past winter meetings have been held on alternate Thursday evenings, the time being profitably spent in discussing all questions of interest to young canoe clubs.

TRANSPORTATION TO A. C. A. MEET.

THE Atlantic Division has undertaken a good work in sending out the following circular to all its members. There are numbers of canoeists in each division who should but do not belong to the Association, and the time has come for active missionary work in this direction. The A. C. A. does not need them nearly as badly as they need it, but at the same time they can only be brought to a realizing sense of what they miss in not joining by some active work on the part of the officers, and we are glad to see that the Atlantic Division is the first to inaugurate it. A similar effort was planned last year, but an unforeseen occurrence made it impossible. The matter of transportation is a most important one, and if the officers are willing to undertake the heavy and thankless task of providing suitable means, the least that members can do is to lend their hearty support. The plan is to charter a steamer which shall make the circuit of New York, probably starting from Yonkers and calling at Staten Island and Bay Ridge, collecting canoes and duffie, the return trip to be made in the same way. The circular reads as follows:

YONKERS, N. Y., April 9.—Dear Sir:—The executive committee of the Atlantic Division being desirous of securing the largest possible representation at the A. C. A. meet this year (to be held at Jessup's Neck, near Shelter Island, L. I., Aug. 8 to 23) have resolved to do all in their power to provide the means by which members may be relieved of any feeling of uncertainty as to the sure and careful transportation of canoes from New York to Jessup's Neck and return. It is proposed to collect the canoes and duffie from different clubs in the division in such a way that it will be an easy matter for every man to send his canoe and be assured of its prompt return, and avoiding transfers through New York city. The executive committee will be glad to undertake this at an expense not to exceed the cost of sending in any other way, but must have the cooperation and assistance of every member in the division.

You are requested to reply promptly to the purser, inclosing a remittance of \$2.50, or to sign and return the slip attached; also, to aid in securing prompt replies from all you know. The carrying out of this plan will depend entirely upon the encouragement received from the members of this division, and which the answers received before May 15 shall determine, when a circular will be issued giving full particulars. Our division is the largest in the A. C. A., but that should not satisfy us; we have use for good members, and every canoeist can derive much benefit from an A. C. A. membership. There are many (club members as well as unattached) who are not doing so, and it is the duty of every member to make a personal effort to secure at least one good member; and club officers are specially urged to present the matter to their associates. An application blank is inclosed herewith, and more will be provided upon application to the purser or any member of the executive committee.

M. V. BROOKAW, Vice-Com. I. V. DORLAND, Rear Com.
W. R. HAVLAND, Purser, Yonkers, N. Y.
DR. F. W. KITCHEN, DR. H. LA MORTE.

A. C. A. REGATTA PROGRAMME, 1890.

RECORD EVENTS.

1. Paddling, $\frac{1}{2}$ mile straightaway.
2. Paddling and sailing combined, $\frac{1}{2}$ mile alternately, 3 miles.
3. Sailing, $\frac{1}{2}$ mile, no limit to rig or ballast.

OTHER EVENTS.

- *4. Trophy paddling, 1 mile straightaway. Time limit 3 hours; total $\frac{1}{2}$ mile.
5. Tandem paddling, $\frac{1}{2}$ mile.
7. Sailing, "Pecowick Cup," $\frac{1}{2}$ mile, no limit to rig or ballast. Winner of sailing trophy race barred.
8. Sailing "Club," to windward and return, 2 miles. Time limit 2 hours. First three members of any one club to count. (To be the first sailing race called.)
9. Paddling large canoes, with crews of not less than ten men each, $\frac{1}{2}$ mile.
10. Paddling upset. No special appliances allowed. At signal every canoe must be turned completely over, righted and with crew inside paddled across the finish line. Distance 200 yds.
11. Sailing upset maneuvering race. No special appliances allowed. Canoes must carry two sails. No limit to rig or ballast; $\frac{1}{2}$ mile. At signal throw paddle overboard astern and then recover. Second signal, canoe must be heeled over until top of foremast touches the water, then righted and sailed across the finish line.
12. Hurry scurry race, run, swim, paddle.
13. Gymnastics, etc.
14. Paddling, "club four," in any canoe, $\frac{1}{2}$ mile.
15. Sailing cruising race, 6 miles. In this race canoes must have a well not less than 18 inches wide for a length of 4 ft., with a netting space of at least 6 ft., of which 5 ft. must be clear. There must be no projecting centerboard when housed, and no sliding seat or standing sails. Start to be made with sails down, and sails must be lowered on deck once during the race.

NOTE.—All sailing races will be started to windward and finished at regular home buoy irrespective of distance. The novice race open only to members who never sailed a canoe before Sept. 1, 1889, and awarded on the result of the first round of race No. 3. All paddling races will be straight away.

*There is now an amendment on its way to the executive committee requesting the repeal of the present restrictions governing the paddling trophy, and that the entries be not limited to only eight, but unlimited, etc.

CENTRAL DIVISION REGATTA.

BEGINNING Tuesday, 9:30 A. M., July 8, on Lake Chautauqua, New York. All sailing races on the mile and a half triangle, unless otherwise ordered by the regatta committee.

- No. 1. Sailing race; free for all canoes; 3 miles.
- No. 2. Sailing; classes A and B; 3 miles.
- No. 3. Sailing; novice, $\frac{1}{2}$ mile. To be decided by first round in event No. 2.
- No. 4. Sailing; all classes; 3 miles; 75 ft. sail area limit.
- No. 5. Sailing; for the Jabberwock Cup; 6 miles. (See conditions.)
- No. 6. Sailing and paddling combined; $\frac{1}{2}$ mile. Sail first half mile, paddle second, sail third.
- No. 7. Sailing capsize and maneuvering. No special appliances; two sails; $\frac{1}{2}$ mile. First signal, throw paddle to leeward and recover. Second signal, canoe must be tipped till top of foremast touches water. Finish under sail.
- No. 8. Sailing consolation; open to all canoes not having won a prize; 1 mile to leeward or windward and return.
- No. 9. Paddling; open and decked canoes Class II; $\frac{1}{2}$ mile.
- No. 10. Paddling; open and decked canoes Class III; $\frac{1}{2}$ mile.
- No. 11. Paddling upset; 200 yds. No special appliances. At signal, canoe to be turned completely over, and finish with crew inside.
- No. 12. Illuminated parade and fireworks.

C. F. Holdship, chairman; Wm. R. Huntington, T. H. Stryker, regatta committee.

The Jabberwock Cup.—Conditions: Six miles, classes A and B, no limit to ballast or rig; to be sailed for each year by members of the Central Division, either at the division or general meet. At least five canoes must start. Time allowed for race, two and a half hours. The cup to become the property of the member winning it twice. It must be returned by the holder to the purser, prior to the succeeding meet. Presented by Vice-Com. George A. Warder.

A CANOE AND SKIFF RACE.

THE Pointe Claire Boat Club, an organization that includes within itself a canoe crew, upon the lists of which are the names of Montreal, has decided to hold a regatta, to be held at A. C. A. men, upon Aug. 2, which is the "middle Saturday" of the Northern Division's Two Mountain Meet. The principal event of this regatta is to be a race for class B canoes, in which it is hoped that all the crack canoe sailors in Canada, at least, will take part, for it is to be tried under peculiarly interesting conditions.

During the past few years, skiff racing has been a very popular pastime on the St. Lawrence, and a fleet of 21 and 22 ft. two man canoes, have been built up. Last year, having won the championship of Lake St. Louis in her, Mr. W. J. Wallace took the Yukwa up to Brockville and beat the fastest two boats that Prescott and Gananoque could turn out. No race was sailed with a Clayton boat, but the championship of the river was claimed for that place, and as things now stands, all the skiff men are ready and more than ready for a great international race. This race the Pointe Claire people are going to give as a part of their "Meet" regatta, and already entries from Prescott, Gananoque and Brockville have been assured. The canoes and skiffs will be sent over the same course, and if possible a time allowance, fair to each, will be given, so as to permit of a thorough test

of the relative speed of a 16 ft. and of a 22 ft. canoe. The regatta is intended of course to be a pleasant thing in itself and also to add an attraction to the coming Northern Division Meet.

NEW CANOES.—The fleet of the New York C. C. has received two additions this spring from the shop of Thos. McWhirter, West Brighton, Staten Island. One of these, for Com. B. H. Nadal, is a copy of the Lowell canoe, Elisha, but reduced a little in depth. She is 16x29 $\frac{1}{2}$, with small well and a large board in the middle. The masts are stepped well forward, as is now the fashion. The other canoe, for Mr. W. W. Howard, is from a design by W. P. Stephens, but with some slight modification in the keel by the owner. Unlike either the Lowell or Ruggles boats, she is between the two, having a V floor carried well fore and aft, with a strongly marked bilge, the purpose being to obtain as stiff and powerful a boat as possible, but with an easy form. As the design was made primarily for a fast cruiser rather than for racing alone some ballast will be required for racing. This boat, 16x30, has been built, however, solely for speed, being fitted with a well of the footbath pattern, a 4 ft. centerboard dividing it into two parts. The mizenmast is near the center of the boat, and she will be tried with a mainsail of about 55 ft. and a mizen some 10 ft. larger. The Butler steering gear is used, and both boats will carry deck seats. They are built of clear cedar with hackmatack stem and stern and mahogany decks, the ribband-carvel method of the Lowell canoes being followed, giving a smooth skin. The workmanship is excellent, and Mr. MacWhirter has turned out two very creditable craft in every respect.

THE IRRAWADDI C. C.—This club held its annual meeting on April 10 and decided the following officers: Commodore, M. J. Parker; Vice-Com., M. Bunker See; and Treas., Louis E. Knoke; Executive Committee.—The Commodore with E. S. Hammett and Edgar E. Snyder. The club is now in splendid condition, financially, the last note having been paid off this month. During the past year the club house has been renovated and put in first-class order. Plans for further improvements are being discussed, but nothing definite has been agreed upon. Last year a river carnival was given under the auspices of the club, and it was one of the most magnificent spectacles ever seen on the river at this place. An effort is now being made to repeat it this summer, with every prospect of success. The club decided to take a long cruise this summer, probably in July. The Maquoketa River has been chosen as the objective point, and then a few weeks will be spent in fishing.

Pachting.

FIXTURES.

QUEEN CITY Y. C. OF TORONTO.—This club held its second annual meeting on April 8. There was a large attendance of members, and from the various reports read the club proved to be in very good standing. Upward of 30 new members have already joined this season, the roll call now being about 100, with every prospect of being greatly increased before the sailing season opens. Several members are going in for new craft, and it is expected that the club will have some fast boats. The following officers were elected: Com., Jas. Allan; Vice-Com., F. Whitehead; Capt., W. Ward; Sec., Louis Imandt; 14 Wood street; Treas., W. Munson; Messrs. G. Martin.

THE GREAT SCOT.

UNDER the above title a facetious correspondent of the Toronto Mail drops into poetry in the following strain:

Alas! for Boston's vaunting pride,
For wondrous Yankee skill,
To think of Burgess' rapid slide
Down glory's slippery hill.
Though Volunteer the Thistle beat,
The land where thistles grow
Sent Fife-designed Minerva fleet,
To lay great Burgess low.
Past Nymph, Verena, Tomahawk,
Designed by Burgess' skill,
Minerva glides as past a rock,
And beats them all to nil.
Let Englishmen on Fife now call,
To build a "ninety yacht."
The Volunteer she'll soon overhaul,
While Yankees cry, "Great Scot!"

INTERNATIONAL RACING.

THE letter from the committee of the New York Y. C. to Lord Dunraven was made public on Monday, and reads as follows: New York, April 3, 1890.—My Lord: Your letter of March 11, 1890, was received shortly before the date of the second general meeting of the New York Y. C. It was read at that meeting in due order of business, and, as will without doubt be remembered to a committee with power. This course was taken that you might be assured of the appreciation by the club of your desire to contest for the America Cup with Valkyrie.

By reference to the correspondence which passed last year between the New York Y. C., the Royal Yacht Squadron and your self, and more particularly to the letter of J. D. Smith, chairman, under date July 15, 1889, you will have been advised that the challenge of last year could not be considered by the New York Y. C., as merely postponed, and that, therefore, a new challenge on your behalf by a recognized yacht club is a necessary formality. If this can be arranged—and, of course, it is indispensable—we think it probable that the New York Y. C. would be glad to waive the condition of ten months' notice, and to make a match with Valkyrie this season, with the best boat they may have, on the same terms as were agreed upon last year.

In reply to the inquiry you make as to whether the Cup "can be held subject to challenge under Volunteer-Thistle conditions," if by "conditions" you refer to the terms of the match, I am requested to point out that under what is termed the "mutual agreement" clause, the club holding and the club challenging for the Cup can make any arrangement as to the conditions of the match that may be satisfactory to both parties; and further, that all the recent matches for the cup have been arranged for under the "mutual agreement" clause, notably those between Genesta and Puritan, Galatea and Mayflower, Thistle and Volunteer, as also that with Valkyrie.

But on the other hand, if by the word "conditions" you mean to include not only the terms of the match, but also the terms of the deed of gift in existence at the time of the Thistle and Volunteer contests, the committee wish me to state that the New York Y. C. neither can nor will depart from the position taken by them last year, viz., that the Cup, if won by the club challenging, must be held under and subject to the full terms of the deed of gift, under which the New York Y. C. now holds it, viz., that of Oct. 24, 1887. While the committee desire me to convey their regret that in place of expressing general dissatisfaction with the present deed of gift the Royal Y. S. should not last year have given particulars of their objections to that document, which as yet have never been definitely stated.

Hoping that we may have the pleasure of seeing you over here this season with Valkyrie, I remain, my Lord, yours sincerely,
J. R. YUSE, Chairman.

To the Right Honorable, the Earl of Dunraven, V. P., 27 Norfolk Street, Park Lane, London, W.

The reply is a clear and satisfactory statement of the New York Y. C.'s present position; a position which, however wrong it may be, the club is now committed to, and will hold until it is either confirmed permanently in it by the complaisance of British yachtmen, or challenged and the new deed of gift is put into effect. It is plain from its public opinion on both sides of the water, backed by a clear and intelligent statement of the faults of the new deed. The club in its reply reiterates its demand for a recognition of the new deed as the first requisite for a challenge. It states clearly what is evidently the case, that in addition to this recognition of the new deed, an entirely new challenge would be needed from Lord Dunraven, the fact of negotiation of the new deed being so far as the Royal Yacht Squadron challenge is concerned. It also points out that if the Cup should be won abroad, the new holders, instead of availing themselves of the many advantages secured to them by the new deed, would be at liberty to waive them all, and to offer perfectly fair terms to an American challenger.

Finally, in the event of compliance with the two prime conditions of fresh challenge and a recognition of the legality of new deed, and the manner in which it was concocted, the club is willing to waive the ten months' notice and to allow Valkyrie to sail "with the best boat they may have," in one word, Volunteer.

There is nothing especially new or surprising in all of this, but the most important point in the letter is the final clause, which touches the weak side of the other side. In the past years that have passed since the new deed was promulgated with such a flourish of legal trumpets, and in spite of the general denunciation which greeted it abroad, neither the Yacht Racing Association, the Royal Yacht Squadron, nor any other British club has stated clearly and distinctly the objections to it. The time for such a statement was on the first publication of the deed in 1887, or again last year, at the challenge of the R. Y. S. in behalf of Valkyrie was withdrawn.

While the subject is one that concerns every American club as deeply as it does the British, it happens from the circumstances of the case that the latter alone can make objections now. The main fault of the deed is, that every one of its many and voluminous clauses is in favor of the club holding the Cup, it has the challenger completely on its side. From the point of view of the American yachtsmen, this is entirely satisfactory now, and will continue to be so as long as the Cup is held here. If, however, in spite of the care with which the nautical-legal lights of the New York Y. C. have tied up the Cup, it should accidentally be won from them; then the Eastern, the Larchmont, the Seawanhaka, the Atlantic clubs would be in the position of the Royal Yacht Squadron and the Royal Clyde Club. It is plain that none of these clubs can or will formulate objections to the deed, deeply as they are interested as possible challengers if international racing is allowed to run its free and natural course; from foreign clubs only, and the R. Y. S. in particular, must objections be looked for. From the first day that the new deed was allowed to see the light after being signed and ratified in the darkness and secrecy of a committee room, we have been conscious that it could not stand in the face of fair and impartial criticism and well organized opposition. Although it had behind it at first the popular cry and the support of the majority of American yachtsmen, flushed with three victories, and ready to accept as infallible any action of the successful defenders of the Cup, there has been a marked change in the two seasons that have passed without new challenges, and many now admit not only that the change in the deed was hasty and ill-considered, but that material concessions must be made by the New York Y. C. before more challenges can be expected.

The heartiest indorsement of the new deed has yet received has been the open declaration of Lord Dunraven that he was not competent to discuss the question of its fairness, while at the same time he disregarded utterly the principles at issue and persisted in his challenge. Should he now, or any other reckless challenger in the future, find a club so foolish as to stand sponsor for a challenge under the new deed, the New York Y. C. will be in position to do exactly as it pleases in all that pertains to the America's Cup for all future time.

In its issue of April 5 the Field comments as follows on the "mutual agreement" clause alluded to in the letter of the New York Y. C. of July 15, 1889: "It is plain from its public opinion the view that, however objectionable the terms of the new deed are, they are rendered nugatory or inoperative by the proviso that all the terms for a match may be made outside the deed altogether by 'mutual consent.' We do not see that this proviso in any way alters the objections to the new deed, or renders them susceptible of easy explanation. The terms were put into the deed to be acted upon if the holder of the cup considered it expedient to do so, and the challenger is given no right to vary the terms, and he can only have a variation of them made as a concession by the club holding the cup. This gives the club an enormous advantage in making terms 'satisfactory to both by mutual consent.' The challenger, to escape from the onerous terms of the new deed, is to place himself in the humiliating position of asking concessions. This ought not to be. The terms of the deed ought to be

clear, simple, and fair to both challenger and challenged, and should give the challenged party no advantage or power of control whatever. We think that is the opinion of the members of all British yacht clubs. In connection with the opinion of British clubs, it should be stated that the following telegram was sent from New York on March 29, and published in the *Herald*: "Lord Dunraven should get some other yacht club to accept the paternity of his challenge." This assumes that Lord Dunraven himself has no objection to the new deed; but according to the statements contained in his letters to the New York Y. C., this is entirely an error, and we should judge him to be entirely in accord with the Royal Yacht Squadron. But supposing Lord Dunraven had no objection to the new deed, we do not think, if he searched all the clubs in the kingdom, that he would find one to back his challenge if accepting the new deed were tacked on the end of it. The only way to remove the deadlock is for the New York Y. C. to revert to the original and only legal deed of gift, and attach to it such bye-laws as experience has shown would be fair and sportsmanlike."

This touches the root of the matter, the ordinary open regattas of every yacht club are based on the principle that every yacht has an equal chance with her competitors, otherwise there would be no entries; and yet in the case of the greatest of international contests, the challenger has not a single right worth considering, but must ask favors of the holder in order to have any race at all. In their letter the committee point out that the three last contests for the Cup were sailed under conditions mutually agreed on; they might also have included every race since 1870; all the terms of each, in 71, 72, '81 and down to date were settled by "mutual agreement"—the challenger agreed to the terms of the New York Y. C. or he would have had no more show than Cambria had in 1870, one yacht against a fleet. The owners of Galatea, Genesta and Thistle "agreed" to the inside course not because they wished to, but because they could not possibly help it. That they did not also "agree" to sail against the fleet or against a yacht picked on the morning of the race was merely because public opinion had changed since the dark ages of the early Cup races. It is very probable that in the future challengers may be offered still more liberal terms to "agree" to; but as long as the present deed stands, such terms, if accorded at all, will be a sort of alms, not as rights which cannot be denied.

As to Lord Dunraven's objections to the deed, we cannot agree with the *Fleet*. His letter of May 24 shows him to be indifferent to the whole matter, and we are not aware that he has ever expressed any objection of his own. Mr. Peabody has received answers from Lord Dunraven and Mr. Paul Ralli, and neither will probably cross in answer to the 70ft. challenge.

THAT NARROW IREX.—Nothing has been heard in confirmation of Captain Clarke's story alluded to last week, and it looks now as though the Boston *Globe's* wonderful 3½ beam centerboard cutter would sail down the silent reaches of history as a worthy competitor of the fake Thistle which the Boston *Herald* launched so boldly in December, 1888, and which was exposed by the *FOREST AND STREAM*.

CORINTHIAN MOSQUITO FLEET.—A regular meeting will be held on April 21 at the Sturtevant House, New York, Messrs. L. A. Clark, Oswald Sanderson and Richard M. Olcott, of New York, and R. P. Wakeham, of Southport, Conn., have been proposed for membership.

NEW YAWL.—E. S. Williams, of City Point, has finished the Congo launch and will begin a yawl from his own designs to be 21ft. l.w.l., 9ft. beam and 5ft. draft, with 6,000lbs on keel.

EASTERN Y. C.—The following dates have been arranged for the races of the coming season: July 10, annual regatta; July 12, squadron cruise to the eastward; Sept. 10, special regatta, open to the 40 and 45ft. classes. The club house at Marblehead will open May 29.

THE ST. LAWRENCE Y. C.

THE second annual meeting of the St. Lawrence Y. C. was held in the club rooms of the Montreal Amateur Athletic Association in that city on the evening of April 5, the commodore, Mr. George H. Duggan, in the chair. The secretary's report showed that the membership of the club had increased by a third during the year, that during the racing season eleven sailing races had been given, for which there were sixty-six entries, and two steam yacht races had taken place with in all fourteen entries. The treasurer's report showed a satisfactory balance on the right side of the account. The committee of management reported in favor of the following amendments to the by-laws and sailing regulations:

"Each yacht starting in a race must carry at least one Government standard life belt or equivalent life-saving apparatus for each man allowed. Any yacht not complying with the above will be disqualified by the sailing committee."

"The number of the general committee shall be increased by two members."

Although the first amendment was in some quarters considered somewhat severe in terms, it was carried by the necessary two-thirds majority.

The matter of providing permanent quarters for the club was then taken up, and after it had been thoroughly discussed a strong sub-committee was appointed to look up a site, and if possible arrange for carrying out a project which the general prosperity of the club renders feasible and which would insure its future. It was also decided to give a time allowance in the skiff classes, and after a good deal of discussion the length plus beam rule, used during the season of 1888, was adopted. It was also decided to create the office of honorary commodore, and to refer to a committee the matter of designing a club uniform. The election of officers resulted as follows: Com., G. H. Duggan; Vice-Com., Alex. Morris; Rear Com., H. J. Beaman; sec., D. A. Poe; Treas., A. G. Walsh; Measurers, J. F. Gibbons and W. J. Wallace; Committee, Messrs. E. Greene, A. E. Nash, J. H. Garth, D. Robertson, J. Paton, C. H. Levin, J. Simmons and Dr. Andres.

The St. Lawrence Y. C. has now upon its list sixty-two yachts and skiffs, and although all the boats are small, there are enough in all the classes to make the racing all that it should be. Shifting ballast was abolished at the close of last season, and the effect for good upon the fleet of this change in the rules is already apparent. No additions have been made to the first class, but in the second class not only the champions of '88 and '89 will be to the fore in much improved trim, but a new compromise from the drafting board of Mr. Jarvis, of Hamilton, will be added to it, and the Breeze, a Cuthbert boat of some draft, will be put into fighting trim. The third class will be a very interesting one, as Mr. G. H. Duggan is having a very nice-looking 21-footer built for it on his own lines, and the Petrel, a boat with a record, will be brought out again. There are to be at least two additions to the first class skiffs, Mr. W. J. Wallace replacing the champion of last year, the Yukwa, with a new 21-footer from Sauvé, of Brockville, and Mr. Ducharme, one of the oldest of Montreal yachtsmen, has had a very nice skiff built for him in a local shop. In all probability the club will again make Pointe Claire its headquarters for 1890, and an attempt is to be made to hold several squadron cruises during the season.

MARINE AND FIELD CLUB.—Officers 1890: Com., W. D. Dickey, sloop Mad Cap; Vice-Com., Frederick B. Fiske, sloop Fannie; Rear Com., George E. Brighton, sloop Penguin; Sec., Benjamin R. Mesrolo, sloop Pastime; Meas., Charles W. Deshon. Regatta Committee—Howard Earle, Chairman; W. B. Dickey, William S. Elliott, F. B. Fiske, and James F. Malett. The annual regatta will be held on July 26. Com. Dickey has just purchased the sloop Mad Cap from Mr. A. C. Clarkson.

KILL VON KULL Y. C.—Officers, 1890: Com. Charles Ingalls, Jr.; Vice-Com., Frank Foggins; Sec., J. DeLyrie; Treas., A. R. Welch; H. E. Buel.

AN OFFICIAL DECISION.—If any doubt still exists over the long-disputed question of what is a sloop and what is a cutter, it is set at rest by the lucid definitions and picturesque illustrations given in the List of Merchant Vessels of the United States, for 1889, just issued by the Bureau of Navigation, Washington. According to this authority, "The sloop is a vessel with only one mast, and a bowsprit carrying a fore-and-aft mainsail and jib, which, being set on the forestay, is called the foresail. The sloop is one of the oldest style of vessel known to the trade of this country, and is (with some local variations in the cut of sails) a rig that is more or less employed in the commerce of the entire globe. Diagram No. 12 shows the sloop rig." The cutter is defined with equal clearness and accuracy: "A small sloop-rigged vessel, sharp built, with a straight bowsprit running out parallel to the deck, and having large sails. She carries a fore-and-aft mainsail, stay foresail, flying jib and topsail. Large cutters, 400 to 500 tons, have been constructed for naval use and made to carry yards, with every sail that can be set on one mast, even to skysails, moon-rakers, star-gazers, etc. The modern cutter yacht generally carries a flying gafftopsail. The name cutter applies as much to the sharp build of the vessel's hull as to the particular rig. Diagram No. 13 affords a view of the cutter." After learning that a sloop carries her mainsail on the bowsprit, one is prepared for almost any surprise, but an additional shock is in store on turning to Diagrams Nos. 12 and 13, evidently copies from the old woodcuts in the primers and geographies of fifty years ago. It is evident that missionary work of some kind is needed, and it is to be hoped that the compilers of the book were present at Mr. Burgess's recent lecture.

ATLANTIC Y. C. CRUISE.—It is proposed to begin the Atlantic Y. C. cruise on July 24 with rendezvous about New Rochelle or Larchmont, making Greenport by Sunday, July 27, with a race there on Monday, thence to Newport and New Bedford, disbanding finally at Newport.

"YACHTS AND YACHTING."—On April 3 Mr. Burgess delivered a lecture on this subject before a large audience at the National Museum, Washington.

KATHLEEN.—Mr. Gardiner has designed a new mainsheet traveler for Kathleen, longer than the old one, the ends overhanging the rail on each side.

MILICENTE.—This name has been given to the Burgess 45-footer designed for C. D. Owens last season, and since sold to A. B. Turner.

Answers to Correspondents.

THE GREATEST Trap for Throwing Artificial Targets EVER INVENTED

Is at last ready for the market. The trap winds up with a wrench and can be wound up to throw any distance from 15 to 65yds. The angles are more easily adjusted than any other trap. By revolving the trap one notch it will vary the flight of the target 6ft. in 50yds., and can revolve it as many notches as desired with one motion. There is nothing that can get out of order or break, as there is no jar when sprung. The arm starts slowly and gathers speed as it travels, and with our positive delivery of target if a perfect one is used will not break one target in a thousand on delivery. This cut shows the new and improved Keystone target and trap for 1890, and a trial is all that is necessary to convince one of their superiority over all others.

try supplying sails made of Union Silk.

Yachts and Canoes for Sale.

FOR SALE.

Fast Cruising Yacht

XARA

Cutter rigged. Length over all, 48 feet. Water-
line, 40 feet. Draught, 8 feet 4 inches. Beam, 13
feet 2 inches. 14 1/2 tons of lead in keel. No
inside ballast. Stateroom aft, with two berths
and set basin. Cabin and stateroom well finished
in cherry and upholstered with best hair. Ample
headroom for a tall man in stateroom, cabin and
forecastle. Xara was designed by Edward Bur-
gess and built by Lawley in 1888. Lawley was
given plenty of time to build her, so that the work
was in no way hurried or slighted. She is as
thoroughly built as a boat can be. She will be
delivered, either in Boston or New York.
For further information, address

J. MEANS,
Box 5,234. BOSTON, Mass.

board catboat, full rig, size about 15 or 16ft.
by 5 1/2 or 6ft. beam. Address with full particulars
W. H. F., Box 490, Columbia, Lancaster county,
Pa.

For Sale.

FOR SALE.

One of the Most Desirable Tracts of Land
in the State of Maryland.

Pesutia and Plumb Point Farms, joining and
located as one farm, containing about six hun-
dred (600) acres, four hundred and fifty (450) of
which are tillable and in the highest state of
cultivation and sufficiently rolling to be desirable
for the breeding of timber and pasture; near one-half
of tillage land is now sown in grass, balance,
if desired, can be gotten in grass in one year.
This land is located within 30 minutes drive of
Aberdeen, Md., a station upon the Philadelphia,
Wilmington & Baltimore Railroad, the main line
from New York to Philadelphia and Baltimore—
one hundred and sixty-six (166) miles from New
York; sixty-six (66) miles from Philadelphia and thirty
(30) from Baltimore. It is also located at the head
of the Chesapeake Bay, and at the Susquehanna
Flats, the great feeding grounds for Wild Duck.
It has about two (2) miles of shore, which embrace
many desirable points for Duck Shooting, Fish-
ing, etc., the improvements consisting of two
large Farm Mansions and all necessary outbuild-
ings for first class farms, which are in good re-
pair. The land is also under good fence, and is
especially suited for a first-class Stock Farm, be-
ing almost equal in point of grazing to the Blue
Grass regions of Kentucky. Churches, schools,
and stores convenient. A portion of the purchase
money can remain upon mortgage if desired.
Correspondence from intending purchasers so-
licited. Address

C. W. BAKER, Aberdeen, Md.
apl10,2t

FOR SALE—To a Club

Or Sanitarium. A tract in Wilmurt, Herkimer county,
N. Y., 1,200 to 1,300 acres of land and water, in the edge
of the Adirondack forest. There are four lakes, the
beautiful and well-known "Hickley Lake," Atwood,
Spectacle and Pine Lake. All the lakes could be con-
nected. There is a regularly built cottage for family of
8, barn, and boat house at Hickley Lake, and very ex-
cellent and commodious farm building at Wilmurt Cor-
ners, which could be used at once for a club. There are
hundreds of acres of forest, and a water-power and saw
mill (opposite "Wilkinson's") which would be reserved
if desired, but buyers would need it, for convenience in
getting boards for cottages, etc. Hickley Lake is esti-
mated to contain 100 acres, Margit tregurtha and lovely.
While apparently isolated, the forest on one side extend-
ing indefinitely, it is really only a few rods from the cot-
tage to the highway, less than a mile from the post-
office, where there is a daily mail by a stage which runs
from Prospect Station, on Rome, W. & O. R. R., to More-
houseville, Hamilton Co. The Four-Mile Creek crosses
the tract and the W. Canada bounds about 2 miles of it,
both considered as good fishing streams as any in that
region. All the water is soft and pure. The tract covers
both sides of the outlet of the lakes, which empties into
the W. Canada. There is no other location to be com-
pared with this on this side of the Adirondacks for
beauty, accessibility or convenience either for a club or
sanitarium. It is well located for a fish hatchery in
every respect. As it is only about 15 miles from Prospect
it is practicable to leave Utica on the early morning
train and reach the lakes, by a pleasant country road,
before dinner, or to leave there in the P. M. and take the
late train to Utica. This property, while far
enough in the woods for every practicable purpose of
quiet, pure air, fishing and hunting, is within easy reach
of a daily mail and stage, and a doctor if needed. At-
wood Lake lies partly in sight of the road. Hickley
Lake is less than 1/2 mile from Wilmurt Corners. At-
wood and Spectacle lakes lie near together, separated by
a ridge. Cottages built on the ridge would command a
lovely view, and a number of overlooks of both lakes.
The ridge could be cut, uniting the lakes, if desired.
There is no other spot in the Adirondacks which com-
bines more advantages, beauty and variety of scenery,
the continuity of lakes, accessibility with apparent
seclusion, purest and softest water, facilities for fishing
and hunting, etc. Parties wishing to buy will please
address S. HELEN HICKLEY, Gang Mills, Herkimer
Co., N. Y.

LIVE WHITE HARES (Lepus Americanus),
captured and properly boxed and delivered
to express in Bethel, Me., in good condition on
receipt of orders and remittances at \$3 per pair.
Refer to Hon. H. O. Stanley, Dixfield, Me., Fish
and Game Commissioner, J. G. RICH, Bethel,
Me.

When a sportsman finds anything which adds to his
pleasure, without increasing his labor, he wants all his
brother hunters and anglers to know of it and share
with him the newly discovered "helper."

WHAT WE CLAIM FOR
The Automatic Reel.

FIRST.—It will wind up the line a hundred times
as fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the
angler chooses.
THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other
reel.
FIFTH.—It will prevent tugs, lines and snells
from being broken by large fish.
SIXTH.—It enables the angler, and makes it
desirable, to use lighter tackle.

These claims have been substantiated by the
most skillful fishermen in America and Europe.

The reel is manipulated en-
tirely by the hand that holds
the rod.

GURDON TRUMBULL'S
Names and Portraits of Birds

Which Interest Gunners; with descriptions in
language understood of the people.

Practically speaking, this is the first popular
volume of ornithology ever issued from the press;
a work which goes far to demonstrate that sci-
entific accuracy may be as easily maintained in
English as in Greek or Latin. Follows the
game birds all over the continent and gives a
catalogue of all the local names in popular use.
Illustrated with admirable portraits from the
pencil of Mr. Edwin Shepard of the Academy of
Natural Sciences, Philadelphia, which, with the
clear descriptions in the text, will enable any
man who can read to identify the contents of his
game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of
books of which the need is felt in every depart-
ment of natural history.—Troy Press.

The book should find its way to a choice place
in every sportsman's library.—Chicago Inter-
Ocean.

I would much rather know what this book tells
me, the various names by which the people call
a bird, than the Latin, Greek or Hebrew name
which science gave him for the sake of catalogu-
ing him. * * * It is more value to me to have
a description of a bird in plain English which I
understand than in scientific language which I
do not understand.—W., in Journal of Commerce.

ANSWERS TO CORRESPONDENTS.

TO THE HOUSE OF REPRESENTATIVES.

BY a bill about to be reported by the Public Lands Committee a great wrong is threatened which you can prevent.

Eighteen years ago Congress established and set aside for ever the Yellowstone National Park as a pleasuring ground for the whole people. Up to the present time its boundaries have never been exactly determined, and it has been without a law. During each of the last four sessions of Congress, bills have been passed by the Senate, defining the limits of the Park and providing laws for its care and preservation, the last of which is now about to be reported by the Public Lands Committee.

This bill, which was carefully framed with the help of those most familiar with the needs of the Park, looks solely to the present and future usefulness of this lovely spot. It is drawn in the interest of the Park, and so of the public. The Public Lands Committee have so amended the bill that a right of way is granted to the Montana Mineral Railway to lay its tracks through the National Park. The vote on this matter in the committee was very close, the railroad people gaining their point by a majority of only one.

This amendment is contrary to the whole spirit of the bill. It is special legislation of the worst kind. As passed by the Senate, the bill is drawn in the interest of the whole people and solely for the general good. It grants no exclusive privilege to any individual or set of individuals. It should not have an amendment tacked on it in committee which grants such privileges.

The corporation to which it is proposed to give this franchise does not expect to build any railway. It is striving to obtain from Congress a right which it can dispose of to other corporations. Relying on your supposed ignorance of the subject, it desires to obtain from you at no cost, other than the fees paid to its agents in Washington, a franchise which is worth a great sum of money. This amendment is a daring effort on the part of speculators to use Congress to fill their pockets.

By cutting off a narrow strip on the northeast corner of the Park, a railway can be built wholly outside the reservation, and such a road would give to Cooke City

the outlet which it desires. But the speculators do not care about this. They know that if this strip were cut off, the Northern Pacific R. R. would be free to build to Cooke. What they want is something that they can sell; a franchise which will give them an absolute monopoly of the freight traffic from Cooke City, and of tourist travel in the Park.

No railway should be allowed in the National Park, and under no circumstances should a right such as is asked for here be given to any corporation in an amendment tacked on a bill which is professedly drawn to benefit the whole people. If the requirements of commerce shall at any time demand the building of a railway through the National Park, the road will be built, and the pleasure ground of the people will not be allowed to stand in the way of the country's development, but when that time comes, those who wish to obtain such a franchise should ask of Congress the privilege they desire fairly and squarely on the merits of their proposition. They should not try to smuggle it through as a rider to a good bill.

To grant a right of way to a railway to run through the National Park is to destroy it. Should such a right be granted to one road, a similar right cannot be denied to another. There will be a race between corporations to reach points of interest in the Park, the reservation will be gridironed with tracks, disastrous fires will destroy the pine forests which clothe the mountain sides, springs will dry up, and great reservoirs, like the Yellowstone Lake, will no longer supply waters to fill the mighty rivers which now irrigate the plains of Montana, Dakota, Idaho, Oregon and Washington.

Last Saturday, in the House, was devoted to eulogies of the late S. S. Cox, who was an ardent advocate of the integrity of the National Park. Three years ago his eloquence defeated, by a vote of 169 to 70, a bill granting a franchise to a railway to run through the National Park. If the dead statesman could speak to-day, all his great influence and all his superb eloquence would be used to defeat the amendment which has been added to the Park bill by the Public Lands Committee. We ask each member of the House to give his vote to kill this amendment, which is a mere grab, and to pass the Park bill as it came from the Senate.

SNAP SHOTS.

A FRIEND curious in figures sends us the following estimate of the natural increase of one pair of ruffed grouse in a period of ten years, supposing their number to be decreased only from purely natural causes. There is in this much food for thought for the student of game protection and much argument for occasional close seasons extending over a term of years. Our friend supposes we had started in the year 1880 with one pair of grouse. The table, he thinks, would then stand about as follows:

1880 (1 pair).....	2	1884.....	162	1888.....	15,000
1881.....	6	1885.....	486	1889.....	50,000
1882.....	18	1886.....	1,500	1890.....	150,000
1883.....	54	1887.....	4,500		

In support of the approximate justice of the above computation, may be cited the extreme success of the late close season of three years on prairie chickens in Illinois, and the wonderful increase of the Chinese pheasants which were protected for five years on the Pacific coast. If by any artificial cataclysm all guns could be destroyed or silenced for ten years, this country would swarm with game from one end to the other.

During the past season we heard a great many surmises as to where the birds have gone. Gunners in the West, especially near Chicago, could not understand what had become of the ducks. It seemed very mysterious. Last week they had a large flight of ducks in Illinois and Indiana and other Western States, and our Chicago correspondent sends in the scores of ten or a dozen shooters, of which he learned during a few moments spent in a gun store. Roughly totting these up, we find that they amount to between 1,000 and 1,100 birds killed by a few men, who probably did not represent one-hundredth part of the gunners in the field. Perhaps 100,000 ducks were killed during this week or two. Of course this is the loosest kind of guessing, but we may feel sure that the number was large. These were spring birds, too. It is more than probable that the annual destruction of water fowl has for some years far exceeded the annual increase, and if this is the case the decrease in the number of the birds will go on in a rapidly increasing ratio. It will be

the old story of the wild pigeon and the buffalo over again. Men will shoot, and when the birds are all gone the business of the manufacturers of clay-pigeons will greatly prosper. In view of the news which we are constantly printing, however, it does seem a little absurd that gunners should express such prodigious astonishment at the disappearance of the fowl.

As already stated, the bill providing an appropriation of \$92,000 for a National Zoological Park was amended by the House Committee on Appropriations by the insertion of a provision that one-half of this sum should be paid by the District of Columbia. The ground taken by the House is, that the District will be greatly benefited by the establishment of this park, and that therefore it ought to pay one-half the expense. The Senate, however, does not agree with this view of the matter, holding that the institution is a National one which is for the benefit of the whole country, and that it helps the people of the District of Columbia only incidentally, as do the National Museum, the Botanical Gardens and other public institutions. The Senate declines to concur with the House amendment and a conference has been called for. Whatever the outcome may be, the delay in furnishing this appropriation is an unfortunate one, for it is very desirable that work on the National Zoological Park should be begun at the earliest moment possible.

Persons interested in the Adirondacks will read with interest the article in another column, which we copy from a New York contemporary devoted to the lumber trade. If New York State could and would go into the lumber trade, pass the necessary laws and spend a little money to preserve and cultivate the forests of the North Woods, its investment would be profitable in more ways than one. But until more interest is taken in the subject by the public and more intelligent men are sent to represent the people at Albany, there is little hope that anything practical will be done. The publication of this article and others, however, cannot fail to advance the work of forest protection.

A report from E. S. Wilson, civilian scout in the Yellowstone National Park, informs us that during a trip made recently to Yellowstone Lake a number of buffalo were seen. In one band on the head of Alum Creek there were seventy-six buffalo. These were in excellent condition and seemed remarkably tame. Other buffalo were seen near the lake, but they were wilder, and it was impossible to get a count on them.

DESTROYING CONNECTICUT SHAD.

SWIFTLY and surely the pounds in Long Island Sound, at the mouth of the Connecticut River, are destroying the fishery of that stream, once famous for its shad. The continued efforts of the State Commission and that of the United States, to restock the depleted waters and aid the ascent of the shad to its spawning grounds, have been unavailing against the greed of the pound owners, whose miles of netting intercept the spring migration and do not allow enough fish to enter the river to keep up its productiveness. It is even charged that no close time is observed, and now, to make matters worse, the pound men have broken down the legal barriers of their own creation by obtaining permits from a majority of the Board of Commissioners to use nets of fine mesh for the ostensible capture of alewives until May 12. There was serious objection within the Commission to this destructive measure, but it proved unavailing, and the wise and faithful public servant who raised the protest resigned a service in which, it is said, he could no longer maintain his self-respect.

No argument is necessary to show that the Connecticut yields less than one-twentieth as many shad now as it did before the introduction of pounds into the Sound. Everybody except the pound owners and those in authority, who sympathize with them because of their personal interest in the fishery, knows why shad are disappearing from the river.

We venture to assert, that if the catch of "whops" or "alewives" were carefully examined, it would be found to include a great many young shad. In fact we have frequently seen a similar combination on both sides of the continent, and we hope that the Connecticut Association of Farmers and Sportsmen will extend their praiseworthy vigilance to this field of inquiry. Get at the truth, meet influence with influence, and by all other legitimate means restore and protect the Connecticut shad.

The Sportsman Tourist.

OLLA PODRIDA.

IN the wide range of subjects discussed in the articles which appear each week in *FOREST AND STREAM* a large fund of information and much pleasure and profit is assured to its readers. And to us who love the woods and wilds, the mountain stream and meadow brook, the lake and pond, the sylvan glades and groves and hillsides high, who erstwhile have had our piscatorial outings and adventures of the chase, it comes as a renewal of the past and a hope for the future. And if in dreams we return to these diversions, and for a time are lost to matter-of-fact every-day life, who shall say that it is in vain that these recreations have been ours. Have we not, in looking "from nature up to nature's God," made better preparations for the time when we shall pass over to the "happy hunting grounds," and when the final summons comes are we not more fully prepared to say, as did the Leatherstocking, "Here?"

As the years glide by and our hopes and aspirations become more circumscribed, and we look in vain for the Mecca we have sought, our love for the pastimes of bygone days increases, and we return to them with renewed zest and enjoyment. Toil and hardship are not remembered as we awake from the exhaustion of the preceding day, imbued with new life and vigor and as anxious for the field or stream as if it was all new to us, and our regard increases for those engaged in kindred pursuits. I meet them often. Strangers in name but brothers in feeling—a fellow feeling that "makes us wondrous kind." We intuitively recognize that we are of kin, if not of kin, and lack not for thoughts to exchange or words to express our good will and fellowship. We may differ in opinion, but strive for what is best; are lenient to failings and commendatory of that which is good.

It has not been in my day until this year that we have had fishing in open water nearly all the season. I have been able to dig worms in my garden, with the exception of a few days, all winter.

Two of the craft and myself were up at the reservoirs in the Bolton hills in January. The dog was with us, for he does not consider any party quite the thing unless he makes one of the number. We found the water very high, and a gale blowing, which made rather rough boating during the forenoon; but it subsided and was very pleasant through the afternoon, and a warm sun gladdened us the remainder of the day. Our catch of fish was not large, but we were more than repaid for the trip by the phenomenon which we witnessed. The middle and lower reservoirs cover what was once an extensive cedar swamp, and the shores are lined with portions of the stumps and roots of trees, some very large, of every conceivable and fantastic shape imaginable, washed up and worn smooth by the action of the water. These reservoirs are dotted with a number of small islands covered with a growth of cedar, maple and other wood and cranberry bushes, and are partly floating; that is, there is water under them, and through one of them in the middle reservoir holes have been cut, and good fishing is had in from fifteen to twenty feet of water. Two of these islands on the lower reservoir, one near the center and the other further down, by reason of the high water had broken from their moorings and floated to near the lower end and grounded in deep water and become fast. I have walked over and fished from most of them, and have no knowledge of any such movement previous to this. We built a fire on the one which had the largest growth, and were well protected from the boisterous wind of the forenoon.

I have never seen finer fish—especially the yellow perch—than those taken during the month of January, at which time we consider perch and pickerel at their best, but I doubt if it is best to take either fish from the first of December until after the spawning season had passed unless they are very plenty, as I observed that in January the spawn was well advanced.

I noticed in *FOREST AND STREAM* of March 27 that the United States Fish Commission were distributing landlocked salmon eggs to the Commissioners of several States, but Connecticut was not mentioned. I trust something more will be done in this State to increase this fish with us. The winanish or landlocked salmon was introduced into a number of lakes and ponds in this State some years since, but very few are taken. In conversation a few days ago with a gentleman who is well acquainted with the fishing waters of the State, he said he had come to the conclusion that they are a difficult fish to propagate, and my opinion is that they don't multiply fast. I have noticed items from different localities that have led me to think others have found it so. We certainly have fine clear streams and lakes, and there is no apparent reason why this fish should not thrive in these waters. Take for instance the Scantic and Farmington rivers, which empty into the Connecticut, Snipsic Lake and Square Pond in Tolland county, the several streams and lakes in Litchfield and other counties, than which there are no more pure or better waters on the earth, and why is it we cannot have the winanish in plenty?

Various articles have appeared in *FOREST AND STREAM* on the subject of domesticating the partridge. I have tried that myself but not with success. Some years since in driving over an unfrequented road I came to a sandy spot where there was a depression in the road of several feet. At this point a partridge was in the sand with her brood. The old bird and most of the young escaped up the bank into the brush, but the sand was loose and the young birds slipped, and I succeeded in capturing three, which were carried home, where a hen was just off the nest with a brood of chickens. A suitable coop was made and the young birds put with the hen and chickens. The hen took as much care of them as with her own, but they were continually searching for a place to get out. Finally one died and then another, the last one living about two weeks. I have not endeavored to keep one since, although I found one in my corn house several winters ago, and a lively bird it was. My experience has taught me they thrive best if left alone. There are some left in this part of the country notwithstanding the large number killed by the pot-hunters, and occasionally some quail are seen. What we want is more stringent laws; then the birds will increase. We want laws that will benefit the poor as well as the rich.

Massachusetts and Rhode Island sportsmen are doing

good work in stocking those States with game, and we of Connecticut should not be left behind. I have thought of putting out a few Chinese pheasants. I understand they do well in Oregon, and I can see no reason why they should not do well here.

It has been my fortune to hunt wild hogs once in this good old commonwealth. Some years ago several hogs escaped from a drove and got into a large tract of heavy timber and swamp land. In the fall they became troublesome, coming out at night and destroying large quantities of corn, which was in the shock. Parties were organized to hunt them, but the hogs were too cunning for the hunters, and the depredations continued. The locality frequented by the hogs was about three and one-half miles from where I resided at the time. Early one crisp, frosty morning late in the fall, George, a colored man who was brought up on the farm, the large dog and myself started in search of the hogs. We had heavy double-barreled shotguns loaded with large charges of powder and buckshot. When about one mile from the timber where the hogs were supposed to be, the farmers were getting out around their premises, and to our inquiries in regard to the hogs, said we should lose our time hunting them, that people in that district had built huts and watched for them at night, but without success. We, however, continued on into the timber, and, after getting well in, hitched the horse and took the dog in toward the swamp.

In less than half an hour the dog was on the track, and then the fun commenced. The underbrush covered the ground and was difficult to penetrate, and we could see in only a short distance, but could hear the animals crashing through the brush. Creeping through the low underbrush, after two hours we reached a wet piece of ground, and could hear not far off the hogs breaking their way among the bushes. Soon a large white hog came into view in a small open place a few rods distant. He stopped a short time with head up, and George let go one barrel without dropping him, and he was soon in the brush again. In the meantime an acquaintance, who had come into the timber some distance to the north, had shot a black and white one. George and I became separated. I followed the dog down the swamp as fast as the dense growth would permit, and soon could hear the dog. Plunging under low-hanging limbs and bushes, I came to a place clear of trees and small growth, but grown up to tall, coarse grass, ripe and yellow. Here the hog was at bay. I spoke to the dog, and he sprang forward and caught the hog by the ear, and then commenced a tussle between the dog and hog. I could not shoot for fear of hurting the dog, but at last I saw my opportunity, and gave him one barrel back of the shoulder, which brought him down. Tige held by the ear until George came up, then we bled him and drew the carcass out of the swamp. We got our horse and wagon as near as the nature of the ground would admit, loaded the meat and went home. We had one hundred and sixty pounds of dressed pork, which I shared with my neighbors who wanted to taste wild hog.

While on one of my many hunts the past season, during which I covered a large territory in a wild part of the country, a long distance from any habitation, I crossed a piece of woodland on low ground, on the far side of which, just as the land rose to the open, a small clear stream rippled over its pebbly bed. The spot was not familiar, and as I came out of the timber and crossed the stream, I noticed a short distance from its banks on the higher land, four rough stone posts connected by rude rods of iron, inclosing a space of about 10ft. square. The spot is not much more than a wilderness now, and at the time this inclosure was made, must have been a very wild part of the country. I was at a loss to understand the purpose for which the inclosure was made, but going over the land beyond, a depression appeared, where, in years long gone, there had evidently been some kind of a building. Only here and there remains a stone to mark the foundation of what was once the home, as I have since learned, of the man whose body has long since mouldered to dust beneath the sod within the inclosure. No evidences of a grave are visible and the surroundings were so peculiar, that I made inquiry at the nearest house for information, but, although the people were old residents, I could not gratify my curiosity, and it is but lately that I heard the history, as far as known, of Abraham Witherington, a famous hunter and fisherman in his day and generation; generous to a fault, always ready to lend a helping hand, a man in whom it is said there was no guile.

Here he lived for forty years, and his hands inclosed the land that became his resting place, when at four score-and-two years he laid life's burden down. As I have since looked on the spot the lines of the poet came forcibly to mind. A white birch shades the inclosure, and a short distance to the south are the remains of a great white oak:

"Where is the grave of Sir Arthur Orellan;

Where may the grave of that good knight be?

By the marge of a brook on the slope of Helvellyn,
Under the boughs of a young birch tree.

The oak that in summer was pleasant to hear,

That rustled in autumn, all withered and sear,

That whistled and groaned thro' the winter alone,
He hath gone! and a birch in his place is grown."

How little we know of the hopes, joys, aspirations and disappointments of others. They go their way, and at last are laid at rest, and a whole history of marvellous happenings is buried with them, and the meagre knowledge we gain is all that is known of their life's battle. So it was with this man; little is known of him previous to his residence here. For those many years his home was in a small house a short distance east of the inclosure, and he cultivated a few adjoining acres; this with hunting and fishing occupied his time. It is said that when about twenty-eight years of age he became deeply attached to an Indian maiden, a member of a tribe then quite numerous in the eastern part of the State. He was a great favorite with most of the tribe, particularly with this girl's father and brother. Abraham had hunted much with the Indians, and was looked on with as much favor as any of the tribe by all with the exception of one, a young Indian who had made advances to the maiden. Being of a sullen, morose and treacherous disposition, he was regarded kindly by but few and was a bitter enemy of Abraham, not only on account of the favor shown him by the girl, but because Abraham had been the more successful hunter, and at one of the trials of skill in the use

of the rifle had shown himself the better marksman. On the evening of this day Abraham and the girl were standing near a large tree in conversation, when the report of a gun disturbed the quiet of the evening and the ball struck the tree near which they stood. Although nothing certain was known about it, the shot was thought to have been fired by this Indian.

The hunter and the girl married shortly after this and went to his home a few miles distant, where he cultivated a small farm. Six months after the marriage Wilmington left home early in the morning in pursuit of game, leaving his young wife in health and happiness, and returned in the evening to find her a corpse. A great wound on the head told the fearful tale. Friends found the husband almost a maniac, but after the simple funeral rites an unnatural calmness came over the man. Although he was kind and affable to all, there seemed in him a fixed purpose that did not sleep. The Indian suitor was suspected of the crime, but he had disappeared and was not seen again, but rumor said that a bullet from the hunter's rifle found and sent him to answer for his evil deed.

JONATHAN.

MANCHESTER GREEN, Conn.

FLORIDA FISHING.

SAN CARLOS HOTEL, St. James City, Pine Island, Fla.—I had been nearly two weeks at the Ponce de Leon Hotel, St. Augustine, Fla., enjoying the luxuries of that famous hostelry, which in point of architectural beauty, delicacy of finish, richness and luxuriousness of furnishing and completeness of its entire equipment, excepting perhaps its cuisine, has no superior as a winter home, when I decided to make a trip to the waters of Charlotte Harbor and try my hand at the varied sea fish with which its waters abound.

To reach this point you have a journey of more than 300 miles by road and steamer, and pass through or near some of the attractive places of Florida. I met in the course of this last stage of the railway journey the superintendent of the road, who, in addition to giving much information respecting the country passed over, also had an interesting story to tell concerning the Indian chief, Tallahassee, who is at the head of the remnant of Seminole Indians that are still to be found in Florida. It seems that, while the line was being constructed, Tallahassee, accompanied by his wives and some of his male followers, often visited the work and watched with evident interest its progress. After its completion the superintendent, who had acquired the confidence of the chief, persuaded him to take a ride, which he reluctantly consented to do. When the train was fully under way the superintendent sent word to the engine driver to go ahead with full speed. Tallahassee at once entered in the spirit of it, and uttering a war cry, began swinging his arm violently in a circle, as if in imitation of the rapidly revolving wheels. At the end of the journey he expressed his great delight and pleasure for the fast ride he had taken, and voluntarily promised the superintendent a handsome otter skin; and although five months elapsed before he redeemed this promise, yet it was faithfully kept, and a very handsome skin it proved to be.

Our railway journey terminated at Punta Gorda, which was reached about 10 P. M. We passed the night here and greatly enjoyed the comforts of the Punta Gorda Hotel, an excellently appointed house and admirably well kept. The last stage of this journey was made by steamer, and the sail of about fifty miles through the waters of Charlotte Harbor and past the numerous keys with which it is dotted, was very enjoyable.

St. James, at the southern end of Pine Island, is well situated as respects the various fishing grounds, and, being comparatively near the inlet, through which the waters of the Caloosahatchee River flow, the sea fish are especially abundant in its neighborhood. I find here at least seventy-five sportsmen, several of whom, with their families, have made it their headquarters during a good share of the winter. But I must hasten on and tell you of my adventures in fishing. The first work was to secure an experienced boatman, one familiar with the waters and the best fishing places. As I did not aspire to kill a tarpon, this was not difficult, and although the man I engaged promised that he would take me where I'd be sure to get one, I resisted his offer and started out equipped only for taking smaller fish. Fly-fishing is practical in these waters, and the sea-trout, redfish (also called channel bass), cavalli (jackfish) and ravallia all take the fly, but it was rather early in the season for this mode of fishing, and as I did not hear that any one was using the fly, I followed the example of others and took the more sure, although less skillful method of bait-fishing. This was chiefly by trolling, the bait used being the belly of the mullet, the fisherman cutting the bait in such a shape as to resemble a small fish. This is quite an art, and upon it depends in a large degree one's success. You either row or sail to the fishing ground, the best points being an hour or more distant from the hotel.

And now I do not think I can do better than give you extracts from my note book, in which I recorded each day's work.

Friday, March 7.—Left the hotel a little after 7 A. M., and was rowed by my guide and boatman, Samuel Pierce. First fish taken was a redfish (channel bass); he was a good-sized fellow and gave good sport. As the jaws of this fish are strong and tough, one does not fear that the hook will break away, and hence you can take your time in killing him, and with light tackle he gives splendid sport. If a heavy fish the boatman usually assists you by gaffing him when he is brought within reach. My next fish was a sea trout. He seizes the bait with vigor, and for a little while struggles manfully to get away; but the fight is not for long, and he is soon hauled in. As they have a very delicate mouth, many that are hooked get away. He is a handsome fellow when first taken from the water, and resembles somewhat the weakfish of the North. They run from one to six or seven pounds. I believe he takes the fly better than almost any of the sea fish I've heard of in these waters; the fly should be sunk a little way beneath the surface of the water by attaching a small shot to the leader. These fish were followed by more trout and redfish, and then the boatman took me to a grouper hole, where we anchored and fished in quite deep water, using stronger hooks than those required for bass or trout. This is a strong and compact fish, and looks not unlike a large codfish. I killed five in the course of an hour, the heaviest weighing over ten pounds. This fish frequents the rocky ledges, and his first attempt after being hooked is to make for his hole, and

it is your aim to keep him away from it. Once there it is very difficult to move him, and your effort often results in your losing both your hook and line. I lost some two or three hooks in the course of this hour's fishing. This fish appeared to be prized over many others in these waters as a table fish, and the caterer of the hotel was on hand to take all I had; its flesh is very firm and flaky and the flavor good. The following was the day's catch: Five grouper, five sea trout, three redfish (channel bass); total weight 57lbs.

Saturday, March 8.—The catch of to-day was respectable in numbers, but none of them were very heavy: it was as follows: 6 redfish, 9 sea trout, 2 cavalli or jackfish, 1 ravalia or snook; total weight, 42lbs.

The cavalli, though small, fight bravely and give much sport; he is a very handsome fish, and presented a beautiful appearance when his shiny sides were reflected by the sunlight; as the fisherman was taking out the hook it gave utterance to a croaking sound, resembling that made by the sea toadfish of our Northern waters. Some of these fish, I was told, run up to 10lbs., but I did not take any of that weight. This fish is sometimes called the horse-eyed cavalli from its large eyes. The ravalia proved a very gamy fish, although the specimen I captured was of moderate size. A marked feature of it was the very well defined dark line that runs the length of each side. The heaviest redfish of to-day weighed 5½lbs.

Sunday, March 9.—The wind came in from the north yesterday afternoon, giving us what is called in this section a "norther," and causing a sudden fall in temperature, rendering overcoats very desirable, and no one could sit on the piazza, as is our habit; fires, too, were necessary in the sitting-room and small hall, and the hopes of the tarpon fishermen were suddenly lowered by this depression in the temperature, as the cold spell would be likely to drive their favorite fish out of the bay and into deeper and warmer water. As many have been waiting since early in January for a strike, there is good ground for this depressed feeling. The number of tarpon taken in these waters since the opening of the season, say last of December, has been about 18, none since the 24th of February.

Monday, March 10.—This morning we took another direction, and in place of fishing in the Matichett, which is usually regarded as the best bass ground and lies north-easterly from the hotel, we took a northwesterly direction and tried what my guide called the Keyachina—I spell it as he pronounced it—but with very moderate success. The waters had been rendered muddy by the blow of the day before, and hence the bait was not readily seen. We found a few trout along the shores of some of the keys, and landing on one of the very tiniest of these pretty islands, found several nests of the blue heron; from one we took three fresh eggs of a delicate blue color and about as large as a good-sized hen's egg; from another nest we took two half grown blue herons; they fought bravely, but were at last captured and became the prize of the boatman, who is bringing them up. We lunched from our boat and under the shade of the red mangrove trees, which grew just on the edge of a very pretty key. The mangrove trees form the chief wood of most of the keys, and the manner in which these shoots take root is peculiar: Long arms, as it were, reaching out from branches that overhang the water, and cropping in a curved form fasten themselves, or are seized upon by masses of oysters and thus form the beginning of new roots; it is only the red mangrove that fastens itself in this way. But a little way back from the water's edge you have the black mangrove. The wood of both these trees is very hard and durable, and makes excellent fuel. The catch of to-day is very small: Seven sea trout, one Spanish mackerel; total weight 14lbs.; heaviest trout, 4lbs.

Tuesday, March 11.—Had a late start this morning, many things conspiring to that end. However, we did get away at last, and after some perseverance struck quite a number of trout and bass near Point Blanco, so that by lunch time we had secured a respectable number of good-sized fish, the trout running heavier than any yet taken. After luncheon we tried the grouper hole and took out two good-sized fellows, and lost two or three others from their taking to their holes. Following is the list of fish taken, with their total weight: 2 groupers, 4 redfish (channel bass), 14 sea trout, 2 cavalli and 1 ravalia, total weight 64lbs.; heaviest grouper 9lbs., redfish 4lbs. and sea trout 4lbs.

Wednesday, March 12.—I was again among the late starters and did not get away before 9 A.M. The tarpon fishermen were, however, off at a very early hour, having been stimulated by one that was caught the day previous, Mr. Fisher, of Pennsylvania, being the lucky man. As this was the first tarpon taken in about two weeks, the captor was quite a lion for that evening, but I can testify to his having borne his honors most modestly. The event, however, created a sensation and much speculation as to the prospects for the morrow, in truth the atmosphere about the San Carlos seemed almost blue with fish talk. This flurry was added to by the arrival of new guests, all of whom were on the alert for the smallest item concerning the capture of the silver king. As for myself I decided to stick to my first love, the smaller fish, and as usual started out with tackle for that class only. The sailing skiff that we should have had yesterday was ready with new ropes this morning, and the wind being favorable we sailed over to San Ybel Island and fished about the numerous creeks that enter it from the east, having exceedingly good sport as well as good luck. The catch of to-day was as follows: 12 redfish, weight 72lbs.; 13 sea trout and 2 jackfish, 37lbs.; total weight 109lbs.; heaviest bass 9lbs.

This was my best day's work, as also the most agreeable one from the fact that the greater share of the catch were redfish, and here I wish to add a word of praise for this gamy and most presentable fish, which retains in a remarkable degree its shape as also the handsome bronze color of its upper scales, and the milk white of the under parts, so that I landed my twelve handsome ones on the platform, after almost an entire day in the sun, with a feeling of no little pride. This fish can be recognized from the fact that it always has at least one black and irregularly shaped mark near the flukes, and sometimes more; one large specimen that I caught to-day had ten of these spots on one side and five on the opposite. He was an anomaly even to my boatman, who had fished many years in the waters without having seen a similar one.

We lunched to-day from our boat and under the

friendly shade of the red mangroves, the branches of which extended over the water. There were schools of mullet all about us, and the porpoises were having a glorious time among them, and in their rushes after their prey, dashed the water about and churned it into foaming whiteness; in one or two instances I saw them by the aid of their snout and head throw the mullet at least 15ft. in the air and catch the fish in their open mouth as it descended. This may sound to the northern fisherman very much like a "fish story," but it can be verified by hosts of fishermen from this section.

Thursday, March 13.—Our start was earlier this morning than the day before, chiefly that I might see the two tarpon that had been brought in the night before: for I wished to examine them pretty thoroughly before they had gotten into the hands of Captain Smith, who is skillful in preparing them for the taxidermist. They were not very heavy fish, but were handsome specimens, and were taken respectively by Messrs. Deforest and Middleton. It was the latter's first fish. He told me it took one and a half hours to kill it, and that the strain was so great that he was compelled to ask his companion to relieve him, his arm becoming almost paralyzed from holding the rod. Water had to be poured upon the reel to keep it from heating, and the brake of cowhide, that was used to check the running out of the line, was partially cut through. These items will give one some idea of the strain that the fisherman is subject to that captures one of these splendid and gamy fellows with rod and reel.

I fished to-day along the keys to the northwest of St. James and had fairly good success. Total weight of catch, 51lbs.; heaviest redfish, 16½lbs. But the great event was the few moments I was fast to a tarpon, he having seized the bait while I was trolling. The line went out with lightning speed, and in my attempts to check the reel I had my thumbs blistered. He made but a single leap in the air, and when he came down the strain upon the line was so great that it broke some distance above the hook. I fancied at first that I had a very large-sized bass, but as both the guide and I saw the fish there can be no doubt of its being a tarpon. I believe it is unusual for this fish to take the bait while trolling.

James G. Deforest, of New York city, was one of the fortunate ones yesterday, and was rewarded, after fishing for three seasons in these waters, by taking a handsomely shaped specimen weighing a little more than 100lbs. He was timed by a friend fishing in an adjoining "tarpon hole," who reports that the fish was killed in 28 minutes. It was turned over to Captain Smith, who prepares most of the specimens taken hereabouts, although he does not set them up, and I've no doubt in time it will adorn the hall of Mr. D.'s country home at Babylon, Long Island.

Friday, March 14.—To-day I followed the advice of some friends, going some eight miles away from the hotel in a northeasterly direction, and along the borders of Bright's Key, near the "Eight Mile Rookery," where I had excellent sport, but not a great deal of time, as the distance was great, and the wind light, so that I consumed a good deal of time going and returning; but I regard this as about the best bass fishing point in this vicinity, although there are some places where with favorable weather you can take heavy fish. Mr. Moore, of Minnesota, told me he had taken at a point nearer the hotel, and in the course of an afternoon's fishing, twenty-eight redfish, whose combined weight was 200lbs. This was the best catch that I heard of. The catch of to-day was thirteen redfish and seven sea trout; total weight 82lbs.; heaviest redfish 12lbs.

This completes the record of my seven days' fishing about Pine Island, during which time I took in all 419lbs. of edible fish, which is the best catch I have ever made with rod and reel.

Natural History.

BIRDS OF GULL ISLAND, N. Y.

[Read before the Linnean Society of New York, March 21, 1890.]

[Continued from Page 247.]

8. (120)* *Phalacrocorax dilophus*—Double crested Cormorant.—Two cormorants were seen. The first one flew quite near to the lighthouse on the 12th inst., and one was seen again about the same place on the 15th. It was undoubtedly a "pensioner" that had been compelled to remain so far south during the summer months by reason of wounds received in the spring. The use of the word "pensioner" is a localism, meaning any bird that is compelled to remain on Long Island out of season because of wounds which prevented migration.

9. (202) *Nycticorax nycticorax nevius*—Black-crowned Night Heron.—On the 8th one was seen near the island. At daylight on the 15th three were seen standing in one of the pools on the island where they had probably been fishing all night. The nearest roost from which they could have come was on Gardiner's Island, which was some four miles distant.

10. (263) *Actitis macularia*—Spotted Sandpiper.—These sandpipers were seen daily on both the islands. They bred on Great Gull and commonly came to feed about the shores of the smaller island. Mr. Field's note book reported their arrival at the islands April 24, when one was seen; and two days later a pair were seen. By May 7 they had become common. On June 21 he saw two broods of young only a few hours old on Great Gull. On July 13 we found a brood of young not able to fly, and another brood able to fly but a short distance.

11. (364) *Pandion haliaetus carolinensis*—American Osprey.—One was seen on the 8th. On the 12th one undertook to fly over Great Gull Island, and caused great excitement among the colony of terns. They fairly mobbed the osprey and drove him from the locality. On Little Gull the Government has removed the rocks on the west side of the island, making a basin in which to keep small boats. At high water the depth is not more than 3ft., yet from this shoal pool an osprey took a fish while we were standing near the base of the light tower only a few yards away.

12. (367) *Asio accipitrinus*—Short-eared Owl.—On the 16th, while on Great Gull, we noticed that something more attractive to the terns than ourselves was occupying their attention, as they hardly noticed us. Their persist-

ent attention finally caused their visitor to fly, but it was only for a short distance, when it had to drop to the grass again, when it was again flushed, this time by Mr. Field; it was secured. Great Gull Island would be a paradise for any mouse-loving owl or hawk, if it were not for the terns, who certainly act as if they were the sole owners of the domain.

13. (428) *Trochilus colubris*—Ruby-throated Hummingbird.—On the 12th instant, while we were on the Sound, about half a mile from Little Gull, a hummingbird flew over our boat bound west. The Connecticut shore was at least seven and a half miles north of us and Fisher's Island about three miles east of where the bird was seen. Later in the day, when Mr. Chapman was lying in the shade of some bushes on Great Gull, a ♀ or young ♂ hummer lit just over his head. It was probably the same bird that we saw in the earlier part of the day.

14. (444) *Tyrannus tyrannus*—Kingbird.—During the morning of the 15th inst. an adult ♂ of this species fluttered against the kitchen window of the light keeper's house. It did not seem inclined to leave the island when we appeared outside the door, but flew to the roof, when it was secured.

15. (467) *Empidonax minimus*—Least Flycatcher.—On the 12th I flushed from the swampy spot on Great Gull Island a pair of birds, which I secured and which proved to be an adult male and female of this species. They, together with the preceding record, were undoubtedly migrating birds, thus affording a scintilla of evidence that the flycatchers are among the earliest returning migrants, and also that the adult birds precede the young.

16. (498) *Agelaius phoeniceus*—Red-winged Blackbird.—A pair of these birds had bred in the swamp referred to in the preceding note, and at the time of our first visit were still on the island with their offspring. Part of the family were secured, when the balance deserted the locality. During the night of the 12th one stopped at the light and remained part of the following day, when it continued its southward journey.

17. (581) *Melospiza fasciata*—Song Sparrow.—Quite a number of these sparrows bred on Great Gull Island. Considering the area of the island they could be considered common.

18. (613) *Chelidon erythrogaster*—Barn Swallow.—Was only seen on one occasion, the 9th inst., when quite a flight of them took place.

19. (614) *Tachycineta bicolor*—Tree Swallow.—These swallows were migrating with the preceding species on July 9. Both species were migrating westward over the chain of islands toward Long Island proper. On the 11th a few were noted, but none after that date.

20. (616) *Clivicola riparia*—Bank Swallow.—There was quite a numerous colony of these swallows breeding in a high bank on the south side of Great Gull Island. They were about through with their domestic duties for the year, as many holes were found to have been used this season, but were then deserted. Two sets of eggs were found on July 12, but had such very large embryos in them that they could not be saved. The hard easterly storm of the 15th inst. seemed to start the larger part of the colony on its migratory way, for on the following day, when we visited the island, but very few were seen.

While we were at the lighthouse the weather on two occasions became foggy; on the 11th for a short time during the day and night and on the 13th, about 9 P. M., it shut down very thickly. There being no migration going on we did not have an opportunity of observing the action of the birds about the light. We did, however, see a pair of terns fly around the lantern a number of times, but they showed no inclination to approach near enough to it to harm themselves. It was a very beautiful sight to see them flying in the strong rays of the light, the combination of the light and fog giving them a silvery appearance. On three nights birds were heard "chipping" while passing over, but none were seen, nor did any strike the light tower.

Just at sundown on the 14th a domesticated pigeon of some variety passed the light bound west. It looked like a bluerock, although it might have been a carrier.

Attention is called to the following facts as showing that the southward wave of migration for the season of 1889 had just commenced to roll on its way:

First—Hearing birds passing over the light on three nights.

Second—The westward (which on Long Island is equivalent to southward in other localities) flight of the ruby-throated hummingbird, kingbird, least flycatchers, the red-winged blackbird which stopped at the lighthouse on the 13th, the barn and tree swallows.

Third—The departure of most of the colony of bank swallows after the storm of the 15th of July.

The number of species seen during the nine days spent at the islands was only twenty. This seems but a small number, it is true, but it must be taken into consideration that our field was very limited and the season not the best in which to make observations. The trip was made, as before stated, for a specific purpose, which in part failed, therefore our notes are not as interesting or as extended as we had hoped to have made them. The birds seen may be divided as follows:

Summer residents, breeding.—Common tern, roseate tern, spotted sandpiper, red-winged blackbird, song sparrow, bank swallow.

Migrants.—Short-eared owl (?), ruby-throated hummingbird, kingbird, least flycatcher, red-winged blackbird, barn swallow, tree swallow.

Stragglers (from other localities in search of food, or by stress of circumstances).—Jaegers (two species probably), American herring gull, Bonaparte's gull, black tern, double-crested cormorant, black-crowned night heron, American osprey.

Our trip was an exceedingly pleasant one, for which we were in a large degree indebted to the kindness of the light keeper, Mr. Chas. B. Field, and his wife, to whom our thanks are due.

WM. DUTCHER.

AN EARLY BIRD.—Indian Rock, April 12.—*Editor Forest and Stream:* A blue heron put in an appearance here the 8th inst. His prospect for food must be slim. Only one stream is clear of ice, and that is running water. His only chance is at the outlet of Kennebec Lake, ten or twelve miles north of this place. There are 2ft. of ice on the lakes, and it is rather cool for April. I think the fishing season will not open as early as last season.—C. T. RICHARDSON.

* The numbers in () are those of the A. O. U. Check List.

FROM EASTERN MASSACHUSETTS.

THE past winter has been the most remarkable one as to bird migrations in eastern Massachusetts that has ever been recorded, and many valuable notes have come under our notice. The first one worthy of mention was the taking of a masked duck (*N. dominicus*) at Malden, Mass., Aug. 28, 1889. This is a bird common in Central America and the West Indies, but has been noted but twice previously in the United States—once in Wisconsin and again on Lake Champlain. The bird was a male in full plumage, and the color, a cinnamon brown, covers almost the entire body. The circumstances under which it was taken suggests how many rare and strange birds are killed each year by gunners all over the country, and if every man who killed a strange bird would get it into the hands of somebody well posted in ornithology there would be fifty valuable records made where one is made to-day. This duck swam round in a little mud hole of less than an acre in extent and surrounded on three sides by houses, for over a week. At last a little chap of nine years, who had never fired a gun before, after constant pleading to be allowed to try, gained his father's consent, and firing his first shot, fortunately killed the bird. As it was his first, and quite handsome, the father concluded to have it set up, and so the bird was preserved. But how much oftener it must happen the other way, for as the father said, if he had killed it himself he would have picked and eaten it. The bird is now in the collection of Chas. B. Cory of this city.

The next good note was that of a turkey buzzard, taken at Essex, Mass., Nov. 16, which is now among the collections of the East India Marine Hall, Salem.

In October snowy owls commenced to arrive, and appeared in greater numbers than for several years past, about half a dozen coming under our notice from this immediate vicinity. As usual the flight lasted but little over a month, and by Christmas they had apparently disappeared; a late straggler, however, was brought in on Feb. 24.

Along the coast of Maine great gray owls seem to have been more abundant than ever previously recorded. Only one, however, came under our notice as taken in this State, and that was killed on Deer Island, Boston Harbor, on Feb. 4.

How erroneous the common notion is that the southern migration in winter of extreme northern birds is caused by excessive cold weather in their native haunts. Take snowy owls for instance; whenever there is a noticeably unusual movement of these birds it always occurs before winter has really set in, and generally in October. The past winter has been one of the mildest known, and yet never before, as far as records show, have we had such a surprising visitation of northern species. In our opinion changes in temperature have an exceedingly slight effect in causing these unusual movements of birds. Severe storms, however, undoubtedly exert quite an influence, but this principally along the coast, where birds have but little shelter, and when once driven off shore find it difficult to return, and either get lost in the ocean or wandering aimlessly about finally fetch up on some foreign shore.

Without doubt the food supply is the main controlling force in these unusual migrations and can be held almost entirely responsible for them. That the masked duck of so far north was probably owing to its getting mixed up with a flock of teal that were wintering in the south, and forgetting, or perhaps better say being weak in, its native instinct, it wandered north with the teal when they started for their summer home, and had very likely been wandering all over the Northern States until it finally met a captor. During January and February and as late as April 1, when I saw two large flocks, red crossbills were quite common. Of course this was no unusual occurrence, as hardly a winter passes that they do not visit us in greater or less abundance. But the white-winged crossbills were also here, and in apparently as great abundance as the red, although they seemed to desert us by March 1. They are quite a rare bird in these parts and it may be years before we shall see them in any numbers again. A strange thing was that, crossbills being so abundant, pine grosbeaks did not show up in equal numbers, for their food is quite similar, as far as we know, and we often have them here when hardly any other northern birds visit us. A few were here early in the season, but, as far as the writer's observations went, they left entirely as soon as the crossbills came. The lesser redpolls were here in abundance all winter, and we heard of two mealy redpolls that were taken near by.

The most notable occurrence of the season, however, was the remarkable flight of evening grosbeaks which took place. The first to come to our notice were the three birds noted by Mr. Brewster in the FOREST AND STREAM of Feb. 27. The next were three fine males taken at Ayer Junction, Mass., on Feb. 20. They were killed from a flock of about seventy-five that had been hanging about the center of the town for a number of days. The little chap who killed these called the flock down on to the ground in his yard like sparrows by throwing canary seed for them to eat, and getting within 15 ft. of the flock killed the three with his spring gun, shooting a few pellets of B shot.

On Feb. 25 a correspondent, F. W. Deering, of Topsfield, Mass., killed two males that were feeding alone beneath some maple trees, and he also mentioned a friend of his killing two others out of a flock of eight, about two weeks previously.

On March 10 a male and female, killed at Reading, Mass., that morning, were brought in; they were alone and were feeding upon maple seeds. Upon our writing at once to the party who sent them in to be on the watch for more, we received another pair from him the next day, killed at the same place and under the same circumstances.

On March 15 a female taken at Melrose was brought in, and it was the last specimen of its species that we have heard of from this vicinity. Our friend Arthur Smith recently mounted one that was killed in West Newton, Mass., during February, and besides the above specimens that were captured, we have reliable accounts from at least a half dozen more that were seen by careful observers. Considering that it is a bird which would be easily overlooked, and coming as they did at a season of the year when comparatively few gunners are about, it is probably no exaggeration to say that eastern Massachusetts must have been visited by thousands of individuals. Besides the above we have received a nice male

and female taken by a correspondent at Heath, Ulster county, N. Y., who writes that he has taken nine others and seen quite a number besides. The stomachs of all the birds we dissected contained maple seeds, excepting of course the three that were being baited with canary seed.

We might also note two black squirrels taken at Melrose, Mass., one on Oct. 14 last and the other just a month later. They were killed by different parties in the same woods, and the day the last one was killed a third was seen. In is the first occurrence of the black squirrel in these parts that we have heard of.

On Dec. 10 last an Acadian owl was brought in, picked up dead in the woods at Parkley, Va. Quite a Southern record, but not a surprising one, however, if it had happened in the western and mountainous part of the State.

We also have the note of a hawk owl taken at Sandwich, Mass., on March 25 last, and a solitary killdeer plover was seen and killed at the same place on April 1. And for a bird which strikes us as being a rare spring migrant in these parts, we mention an American coot, taken at the same place on March 29, and another of the same species taken there on April 2.

While sitting here on April 11, writing these notes, a scutate brought in an American coot that was killed at Scituate yesterday, and right after it came a friend to tell me of one killed at Crescent Beach this morning.

BOSTON, MASS.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 16, May 30.
FOLSON 10 and 12, Sept. 26.	REMINGTON 12, Dec. 5, Feb. 6.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 28.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENE 10, Sept. 12, Sept. 19.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WHITNEY SAFETY 12, March 6.
LEFEVER 12, March 13.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

CHICAGO AND THE WEST.

CHICAGO, Ill., April 17.—Probably half or two-thirds of the ducks killed by Chicago shooters are killed in Indiana. The duck law shut down in that State with a heartless snap two days ago, and left more ducks in sight than has been the case here for years and years. The club shooters all comment in wonder at the enormous flight of this spring. The lakes and marshes have fairly swarmed with birds. Fox Lake, of northern Illinois, has had "thousands and thousands and thousands of ducks," to quote one shooter, although as usual they have been hard to work. On Fox Lake, Lake Nippersink and Pistagua Lake the lowest estimate places the number of local birds at 40,000 to 50,000. Mr. W. N. Low, just back from Cumberland Marsh, on the Kankakee in Indiana, states that on the 15th he saw a bank of ducks rise from that marsh which surpassed anything he ever saw. The cloud of birds was dense and black, and seemed over a mile in length. Mr. Low thought it resembled a flock of wild pigeons in the old days of their plenty. Reports of a similar nature come from the Illinois River, and indeed on every hand we hear news which is most encouraging to the shooters of this region, who had begun to wonder if the birds had not left this route for good. It seems that plenty of water was all that was needed. It is thought that the prevalent overflows will prove of great benefit by way of increasing feed on the marshes.

Billy Mussey is just in from Mak-saw-ba way, with a small but select collection of wildfowl. Billy had a lot of shells which an expert had loaded with 4½ drams of a certain nitro powder. On four separate and distinct occasions during this one hunt, these shells exploded, both barrels at the same time. This demoralized Billy, and likewise put a head on him. The last time the accident occurred both Billy and his pusher came very near going out of the boat into the middle of the Kankakee River. So much for loads and loading.

At Mak-saw-ba Dr. Burchner has just returned with a bag of sixty mallards and pintails, after a four or five days' hunt. Much larger bags of bluebills and other small ducks could have been made on that marsh. Wm. Haskell bagged twenty birds last Saturday on that marsh, and H. C. Hoyt has been averaging about twelve daily down there. From the latter fact it may be seen that the shooting is mighty good.

On the Illinois River, down near Hennepin, Eddie Steck a week ago bagged 198 ducks in three days, his largest day being 96. Mr. MacFarland, on Hennepin Club grounds, has been shooting about three weeks. His top bag was 114 large ducks, and he has averaged about forty a day. Hennepin shooting has been booming.

On Cumberland Marsh Charlie Gammon has been making bags of forty, fifty and sixty daily. That was earlier; Mr. Gammon has lately been very seriously ill. On the last day or so of the season Mr. W. N. Low bagged thirty ducks and three geese on Cumberland, not working very hard. He says that it would be easy to get a lot of geese down there. Mr. Geo. T. Farmer was averaging about sixteen a day when last heard from. Mr. Loveday and his son had seventy-five birds hung up on Cumberland Lodge balcony. Mr. John Gray wanted snipe and didn't hunt ducks, but went out and killed ten just before he started home. Cedar Lake, near the Monon road, was noted by the above gentlemen as they passed to be full of bluebills.

At Diana Club, Water Valley, on the Kankakee, Henry Ehlers killed 125 ducks on the day of the Louisville cyclone. The wind arose so high in the afternoon that the birds could not be gathered. On the following morning he picked up 83.

At Fox Lake Al Knox bagged 42 ducks last Monday, and Charlie Wilcox got 70 in three days. At Lake George, in the sandhill country, Gib. Harris bagged 55 last Saturday, and Johnnie Steil 36; Ben Dicks bagged 38 in two days at Mak-saw-ba lately.

From the above data, hurriedly picked up in a few moments, it may be seen that the claims of this region as a duck resort are by no means groundless this spring.

The snipe got in this spring about three weeks ago and then disappeared upon the advent of the late diabolical

compound of winter and raw wind. Mak-saw-ba reports a few snipe, but wild. Cumberland has but very few. The Little Calumet, near Lake Station, has been searched in vain for the most part, and the boys of Grand Calumet Heights Club say they aren't in it. To-morrow Mr. Alex. T. Loyd, Mr. R. A. Turtle, Mr. Reuben Donnelly and the writer will run down to Water Valley or Selby, on the Kankakee, for a try after snipe, but the outlook is mighty poor, although it may warm up a little by that time and bring the birds in.

Everybody is feeling pretty good out here.

E. HOUGH.

THE BOY GETS HIS GUN.

Editor Forest and Stream:

In my recent notes from a lumber camp I am made to say the deer have been thinned out, and the Michigan game laws have something to do with it. That is either a mistake on my part or a misprint. What I intended to say was this: In 1885 there were shipped from Metropolitan station over 500 deer, and in 1889 less than 50. There are two reasons for this difference: First—The deer are not as plentiful as in 1885. Second—More stringent game laws in regard to killing and shipping have been enacted since 1885. The article reads as though the Michigan game laws had been instrumental in thinning out the deer. On the contrary, the game laws act as a check on illegal killing, in season and out of season.

I have been quite interested in the article "Shall the Boy have a Gun?" I have a boy 14 years old last January. About a year ago he commenced to tease me for a gun, but his mother objected so strongly that I kept putting him off until he was older. I bought him a pony, of which he has full care and control, but that did not satisfy his desire for a gun. On Saturdays, when there is no school, he will tramp the woods all day without his dinner, setting snares for rabbits, often in company with older boys that have guns. Often he rides his pony up to camp, six miles, and is crazy to take my gun and hunt.

Last December I fixed him up with my gun and belt and told him to go out and kill a deer. He went down the road, about eighty rods from camp, saw two deer standing in the road looking at him, not over ten rods off. He fired the rifle at them, and while the deer ran one way he ran into camp to tell me he had shot at a deer. I went back with him, but found no deer.

Those articles in FOREST AND STREAM decided the matter, and last week I ordered a double-barrel 12 gauge shotgun for him, and gave it to him on certain conditions. I am to keep it at camp and give him lessons in shooting and handling it from week to week on Saturdays until he gets to know how to handle a gun safely. He shall not go out hunting with four or five boys younger than himself, that go along just for company and for the sake of following a gun. I wish to teach him to go alone. Finally, he shall not shoot partridges out of season, or small birds, etc., just for the sake of slaughter. I never kill anything that I can not make use of.

My boy has developed a taste for hunting stories, and reads the FOREST AND STREAM with much interest.

METROPOLITAN, Mich., April 10.

B. B.

Editor Forest and Stream:

I was much interested in the communication in a recent issue of your paper from a mother on "Shall the Boy have a Gun?" and felt in hearty sympathy with it. My oldest boy (eleven and a half) now has his first gun and has shown he can handle it. In view of what is said by your correspondent "H. L." on this same subject in a recent issue I write to ask whether your attention has been called to the very admirable set of rules for boys' shooting given on pages 123, 124 and 125 of "The Boy's Book of Sports" ("Marvin and his Boy Hunters"). This is the best boy's book I have ever seen, the instructions on shooting are most admirable and deftly mingled with adventures in the field and on the stream that boys, old and young, are delighted and benefited by it.

My boy's copy was given to him on Christmas Day, 1888. He received his gun this year, and when he first went into the field I found, to my surprise and amusement, that he had the rules by heart, and that he had read and re-read his book so often that as far as lessons of caution could be impressed by reading he had learned his lesson.

It has occurred to me that "H. L." and others of my fellow readers of FOREST AND STREAM may be glad to learn of this book. I am certain it will always be found invaluable in teaching a boy how to handle his first gun.

There is only one rule in the lot that Harry and I cannot subscribe to, and that is Mr. Marvin's doctrine against hammerless guns for boys. Surely they are the safest guns, and if used at all, should be used from the beginning and not after the gunner has become accustomed to hammers.

H. S. D.

PHILADELPHIA, Pa.

Editor Forest and Stream:

Spring has come. The trout are rising on the creek. Robins, blackbirds, bluebirds and ground birds are singing, while the kingfisher is making an awful "racket" down by the creek, and the pheasants are drumming their merriest tune. I am a boy, and I would like to add my mite on the question "Shall the Boy have a Gun?" I have not seen any boy's opinion of it. I have carried a rifle for three years, and as yet have not heard of an accident. I have killed over twenty woodchucks and two hundred red squirrels and chipmunks. I dare say that a boy never has a better time than when he goes hunting for the first time. I have several friends who are using a gun for the second year, and they are as careful as a man could be when handling a gun.

WOODCHUCK.

NORTHWOOD, N. Y., April 14.

A REPRESENTATIVE AMERICAN INSTITUTION.—The New York Central & Hudson River Railroad is to-day recognized by the traveling public, and also quite generally by its competitors, as being in many respects the representative Trunk Line leading from the Atlantic seaboard. The merit of this distinction rests largely upon unsurpassed natural advantages, supplemented by a liberal and progressive policy. It is the aim of the Central's management to provide for the patrons of this line the best service attainable, and to this end all the resources of this great company are intelligently directed. A splendid railroad, admirable train service, and magnificent equipment, are features which place the New York Central in the foremost rank among the railroads of the United States.—*Adv.*

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

AN OUTING.

ONE afternoon in October, "one of those autumn days that cannot die," I went with my gun for an outing. I longed to be in the woods, to breathe the aroma of the pines, the cedars and the junipers, and to enjoy the sight and the smell of the dying autumn leaves; to be again among the mosses and the ferns, that are associated with all that is beautiful and romantic in scenery. I had no expectation of getting much game, yet a brace of ruffed grouse would certainly make the stroll more pleasant.

On the way I met an old gentleman, who asked, "Are you out for a hunt?"

"I have come for an outing," I replied.

"Your outing," said he, "you will get, but no birds. I have been about here for a month, and, although I have seen plenty of hunters, I have yet to see the first partridge out of that woods."

I entered the forest and prepared for shooting. Standing under the immense pines I raised my right hand and breathed a wish for success. Now for the grouse. Soon after I got on an old grass-covered road that ran through the wood to the low ground adjacent. I had gone but a short distance when a grouse arose. He was fully 50 yds. away; he was wild indeed. I did not fire at him, but marked his line of flight, and following after I went down the road to the "flats" and walked along the base of the hill, when up sprang the grouse not more than 30 ft. away. With the roar of my gun the whirr of his wings ceased and a feather was seen floating in the air. The bird lay on the sidewalk among the brown leaves.

I went back up the road to the place where the grouse started, and among a clump of evergreen shrubs I nearly stepped on another. He took me entirely by surprise and escaped. I followed his line of flight, but failing to raise him I went back to the evergreens and took his line again. This time he rose about 25 yds. away, and covering him I fired and was delighted to hear something fall. On going up there was the bird.

I had now a brace so I gave over for the day, as it was near nightfall. As I passed to the station there was the old man in about the same place.

"What success?" said he.

Taking the birds out of the game bag I placed them in his hand. Holding them in his left he raised his right hand, as I had done under the pines, and looked upward in astonishment.

Those grouse created quite an excitement among the people in the depot. I have never since that day hunted over that ground, or even been on it.

SCHENECTADY, N. Y.

A TREATY RIGHT.

SEEING the article from Golden City signed "R. W. A." concerning the vast amount of game destroyed by so-called sportsmen and non-residents in direct defiance of the game laws of this Territory, I have decided although not a subscriber now to your valuable paper, to call your attention to the work of these people, and ask your valuable assistance in putting a stop to it. I don't think the residents or the non-residents do half the damage the Shoshone Indians do.

Last fall I and my two comrades were eye witnesses to the slaughter of more than one band of elk, where everything from a bull to a three months old calf was killed, not for the meat, as some say, but for the hides. These Indians do not even tan these hides before selling. They find a ready market for them green over on the Green River slope, the buyers shipping them with the utmost impunity. Within a radius of eight miles of our camp these several outfits of Indians killed 1,500 to 2,000 elk. In fact the very air was tainted with the smell of decomposing elk, blacktail deer and antelope. These Indians are personally known to me, and when I would remonstrate with them about killing so much game, they would laugh at me for my pains. We (three men) could not force thirty or forty Indians to stop, so we had to give it up. Should we call the attention of the officers of the law to this outrage, as has been done time and time again, you would only be answered for your pains to bring the Indians in and they would be punished. Can a poor man, no matter what his feelings are, do this?

The Commissioner of Indian Affairs, together with the agent, have been notified to interfere with these Indians and stop them in their destruction, and still the slaughter goes on in all months of the year, no matter whether it is calving season or not. Any one who gives this their attention can well see the elk will be as the buffalo in a few years. The head or sub-chiefs of these Indians referred to are as follows; viz: Ta-boon-se, Bishop, Moon-ha-vy (Lies down on his horse), Pe-ah-ri-bo (Big white man), Pe-shit-se (Stinking), Cut Nose, and some others whose names I cannot call to mind now, but these were the ringleaders upon this occasion. These Indians were not satisfied with the damage they did to the game, but before leaving set fire to the mountains in many places to "make grass good next time," as they said.

These Indians have an increase now in their beef issue, which is issued to them every Saturday, of 150,000 lbs. Add that to the old issue of 320,000 lbs., and you see they have a million pounds of beef a year to 1,800 or 2,000 Indians. This gives them about an average of a pound and a quarter of beef to the man, woman and child, every day. They have a liberal amount of flour and other subsistence issued at the same time (Saturday), and have a moderate amount of game on their reservation, but prefer to hunt off of it, it seems.

Could not the FOREST AND STREAM stretch a point and use their influence with the Indian officers in this matter? They would receive the eternal blessing of numerous good people in this section of the country should they nip their paddle in this affair. Put a stop to the Indians leaving the reservation whenever they see fit, and in my humble opinion the time will not be far off when we can find a way to "choke off" the market and other purchasers. I am informed that the Indians cannot leave the reservation without a pass from the agents. They to it, all the same, and the agent is aware of it. But they are not brought back and are allowed to continue their destructive work.

WHO-IN-AH-KA.

WYOMING.

[If our correspondent will examine back files of the FOREST AND STREAM he will find that all this matter has been thoroughly gone over. It appears that by their ready-made with the U. S. Government in 1868, these Indians were granted a perpetual right to hunt upon un-

occupied lands of the United States, and the opinion is expressed that this right cannot be taken from them now. They might be induced to sell, however. It will be seen, therefore, that the parties responsible for this destruction of game are not the Indians, but those who framed this treaty. We are firmly of the opinion that if the settlers of western Wyoming will work hard to have the new game law enforced—especially to stop the traffic in hides—they can very largely reduce the slaughter of game that now takes place. Much might be done by judicious handling to keep the Indians from unnecessary killing.]

BELLEVILLE, Ont., April 15.—Although yachting is virtually dead here—to experience soon, I hope, a glorious resurrection—field sports and angling are on the boom. The Forest and Stream Club, which was named in honor of your admirable journal, did such excellent work last season in the protection of fish and game, that its popularity is remarkable. The membership is about 160, and will shortly reach well up toward 200, which, in a place of about 10,000 inhabitants, is evidence that the people are on the side of the law, and disposed to patronize manly sport. The club met recently and re-elected the popular and efficient officers of last year, namely: H. Corby, M. P., President; W. H. Biggar and H. K. Smith, Vice-Presidents; E. G. Porter, Secretary-Treasurer; Directors: R. S. Bell, Chairman; G. Twining, G. L. Thompson, W. P. Clarke, R. A. Davis, Wm. Armand and J. Burrioux. The plan is to give representation in the directorate to the trap-shooting, rifle and angling interests. We have two game inspectors and two fishery officers on the lookout, so poachers had better beware. The movement is spreading in the county. Mudoc village has formed a club, Marmara will do likewise, and the indications are good elsewhere. Within a year it will be difficult for poachers to slaughter game or fish out of season in this district. The wild geese are here in numbers on their journey northward, but only three have fallen before the guns of local marksmen. Mr. Harry Pretty got two and Mr. John Gilbert bagged the other. The migratory ducks have also been quite numerous.—R. S. B.

A GAME COUNTRY.—Point Pleasant, La., April 3.—*Editor Forest and Stream:* I must write and let you know how I enjoy reading your paper. I have been a hunter ever since I was large enough to handle a gun, and though I am now on the shady side of 40, I still follow the chase. We have plenty of game yet, but it is not so plentiful as of yore. The overflows in 1882 and 1884 destroyed the deer by the thousands. Our party consists of four. We commenced to hunt on Oct. 10 for deer, bear, etc., and up to Dec. 16 we had killed 25 bear, 22 deer and 3 panther. Cats we did not count. We hunted from two to three days each week when the weather was favorable. We seldom hunt partridges until the months of January, February and March, our close season commencing April 1 and ending Oct. 1. This season the birds were not very plentiful, as so many of them were destroyed by eating the cotton worms after they had been poisoned by the general use of paris green. I fear if we are forced to continue to use paris green, we will soon destroy the birds. I notice that most of the hunting in your country is done on foot. With us we hunt entirely on horseback, only getting down when the dogs come to a stand. We must have more birds than you or get around faster after them, as we average twenty birds or more to the gun each hunt. Our game fishing is not good, but for other kinds can't be beaten.—HUNTER.

IOWA SHOOTING.—Scranton, Iowa, April 10.—The season for wildfowl shooting has about closed with us. Probably owing to the scarcity of water, not very many good bags were made this spring. Shooting on the prairie and in the cornfields was almost a failure. However, lake and river shooting was very good, but only lasted a few days. Snipe are beginning to arrive, but as it is still very dry with us we do not expect a very big flight. Prairie chickens are quite plentiful, and with a good breeding season we will undoubtedly have good sport in the stubblefields this coming fall. Quail are unusually numerous. Although this being a prairie country, owing, I think, to the recent mild winters, quail have multiplied wonderfully. At almost every hedge fence (and they are numerous) flocks of from a dozen to 25 or 40 could be seen most any day during the past winter. Very few have been shot during the last few years. Sportsmen in general do not take an interest in them around here, as they are generally after larger game. A big crop of young birds is expected. Already Bob White can be heard in the quiet of the evening, which is rather early, I think.—E. E. F.

PROTECTION IN ILLINOIS.—The Charleston (Ill.) Fish Protective Association met April 2 at 8 P. M., and was called to order by the president, Isaac Winter. Otto Weiss secretary. Mr. Ed. Chilton was elected treasurer to fill the vacancy caused by the death of David Calvert. The Association offer \$100 reward for the conviction of any person or persons using seines, nets and traps to catch fish, or shooting, spearing and snaring. They will have a fish and game warden here soon to look after the violators of the law. The hoodlums have threatened any person with death that dare punish them.—J. B. D. (Charleston, Ill., April 15).

POOR SHOOTING HERE.—Charleston, Ill., April 15.—*Editor Forest and Stream:* The hunters have had very bad luck here this spring killing water fowl. There were only two bags of any note that I heard of. Ed. Chilton killed three geese about March 20, and Thomas Knoch killed seven ducks and one brant on the 28th and also killed six ducks on the 31st on the prairie about three miles north of here. He was at the same place on both dates. Hunting water fowl is about played out here, the ponds are about all drained.—J. B. D.

NEW HAMPSHIRE SHOOTING.—Portsmouth, N. H.—Snipe began their spring flight here during the first week in April, and some fair bags have been made. On the 11th four gunners were on the grounds and killed ten birds. Black ducks are very plentiful on the local marshes, and many have been brought in by local sportsmen. Woodcock are nesting in greater numbers than for several years, and good shooting is anticipated next fall.—PISCATAQUA.

FROM THE FLOODED SOUTH.—New Orleans, April 17.—*Editor Forest and Stream:* The backwater from the Nita crevasse (60 miles above in St. James parish) is playing sad havoc with game in St. James, Ascension and Livingston parishes. Deer are reported plentiful in that section, but this state of affairs only tends to diminish their numbers. Large and small game are seeking shelter on the tracks of the Illinois Central Railroad, and some deer have been killed by the trains. Pot-hunters have also been at work. A friend of mine, lately from the Amite River, reports that several deer have been killed by sailors of schooners engaged in the lumber trade on that river. He also reports that a man killed five deer on a shaving pile in the swamps, where they had taken refuge from the encroaching waters. All these deer were killed after the closing of the season. Our game should have better protection, or we will soon see the last of it if this slaughter is kept up much longer.—G. P. F.

REMARKABLE FLIGHT OF DUCKS.—Lansing, Mich., April 16.—*Editor Forest and Stream:* The storm of Sunday the 13th brought the ducks into the city and surrounding lakes and ponds in such numbers as never has been seen here. They were so thick in the pond that they might have been killed with clubs and air guns, and all who could get a gun went to the lakes after fowl. Whitehead Smith, Larnard and another hunter killed nearly three hundred in two days. Chas. Davis killed nineteen in a small pond back of the reform school. They were mostly bluebills and blackjacks, as they call them. All the sportsmen are nearly crazy, and it is nothing but hunt now for them. The friends of the successful hunters were made happy by coming in for a share of the spoils, and now as the ducks have taken wing the fish will have to take it, and they are biting very well at the present time.—KILMER.

SPRING SHOOTING NEAR ST. LOUIS.—St. Louis, Mo., April 18.—A number of warm showers during the past week have been the means of furnishing excellent snipe shooting in these parts. Messrs. William Hettel and E. E. Mohrstadt spent two days, the fore part of the week, at the Dameron Club's grounds, in Pike county, this State, and bagged all told 126 birds. They were in most choice condition as to fatness. Several other large bags are reported as having been made, but the writer could not ascertain the names of the parties making them. Bluewing are now also here and quite a number have found their way into the sportsmen's bags. From reports to hand from points south of here, there are plenty of snipe to come up and the prospects in store for the lovers of the gun are very favorable for good sport until the end of this month.—UNSER FRITZ.

PROTECTION IN CALIFORNIA.—We are informed that Mr. Thomas Tunstead, one of the California Deputy Game Commissioners, has recently been engaged in seizing bales of deer hides, which have been arriving in San Francisco by steamer and schooner from San Diego and other southern California ports. If this traffic in hides can be put an end to by Mr. Tunstead's good work, the destruction of deer in that State will be greatly diminished. The San Diego Fish and Game Protective Association offers the reward of \$25 to any person who shall cause the arrest and conviction of any one guilty of violating the game and fish laws. Similar action taken by clubs all over the State would no doubt have a most beneficial effect.

A SHOT TO CROW ABOUT.—New York, April 14.—Last Friday morning about six o'clock, while looking out of my bedroom window from the farmhouse where I live in Westchester county, I saw two crows fly and alight in a cherry tree about one hundred and twenty-five yards from the house. I took down my .38 Remington to try a shot at one of them. I did not have a very good sight on account of having to look through some other trees, so I drew a fine sight on Mr. Crow and Mr. Crow dropped. I went out to gather him in, but instead of one I picked up two. The other crow flew in line with the one I fired at and the ball went through both. I think that was very good for a New York tenderfoot, don't you?—E. A. S.

A WELL-BEARDED TURKEY.—Beeville, Tex., April 15.—*Editor Forest and Stream:* I have heard of many strange freaks of nature, but none so strange as the following: About five years ago Mr. J. C. Beasley, of this place, while out turkey hunting, killed a very large gobbler, and found that it had six well developed beards equally distributed and spaced across its breast, all being of equal length. Mr. B. kept them for a time and they were seen by many experienced hunters, who pronounced it something unheard of. I have seen several double beards.—T. J. S.

THE SEATUCK CLUB.—A certificate of incorporation has been granted to the Seatuck Club, giving this association the right to maintain a club house and grounds at Eastport, Suffolk county, L. I., and elsewhere, for hunting and sporting purposes, to stock the grounds with game, and to perform other acts incident to such a corporation. The trustees of the club are: Thomas W. Lowell, John S. Spencer, Albert E. Hochfield, Edwin M. Baker, Henry G. Preston, Chas. A. Gilbert, Arthur W. Perego, Daniel B. Horton and William T. Hayward.

IOWA NOTES.—Davenport, Ia., April 18.—*Editor Forest and Stream:* The directors of the Forester Gun Club are having plans and specifications drawn for a new club house, to be erected at the park this spring. It is the intention to have the building completed before the State tournament, which will be held here in June. There is considerable discussion among sportsmen here regarding the shooting of ducks at this season, the general opinion being that there should be some means adopted to stop it.—W. M. P.

A HORSE'S FOOT.—The *Journal* of the U. S. Cavalry Association for last September contains under the above title an extremely interesting paper by Lieutenant Chas. D. Parkhurst, whose interesting contributions on rifle shooting and yachting are remembered by many of our readers.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

THE ADIRONDACKS.

WE are glad to note the increased interest in the very important question of the best way to preserve the valuable forests of the Adirondacks as a park for the use and profit of the people of this State.

We wish to bring out a little more clearly views and ideas which have already been suggested by persons who have studied this subject.

The area now owned by the State amounts to only 800,000 acres, and, unfortunately, these lands are scattered all through the North Woods. They were never picked out with any idea of forming any special park. They simply came to the State in little lots here and there by tax sales, but every year the State loses a little of what they have held by contested claims, or by some flaw in their title. There is danger of quite a large body of the State lands being lost in this way, unless some steps are soon taken to prevent it.

No one will for a moment contest the assertion, that not only this State, but the whole country, needs the Adirondacks as a great health resort and practical sanitarium.

The idea used to be current that the North Woods were useful principally in cases of lung troubles. In addition, however, to this feature, many of the best medical men of the country have found that the life in these woods was particularly beneficial in all cases of nervous complaints, which are growing so fearfully common in our country, owing to our high-pressure way of living.

If this is the case now, it will certainly grow more and more so each year.

The fact is that there is no district in the whole United States just like the Adirondacks; that is, that combines the advantages of a special climate with forest and lake in such a way as to produce the splendid results, in the way of cures, that are known to so many.

If then by carelessness, or by inattention, or from fear of running up against the greatly dreaded bog of politics, we allow these woods to be destroyed, there is no way that the calamity can be remedied.

The lumbermen operating in these woods claim that they do very little damage, but we only need to call attention to other sections of the country, where lumbering operations have been going on, to show that great destruction really comes from the method of lumbering adopted by some persons.

For instance, there are sections in Pennsylvania, where fifteen years ago there were most magnificent forests; to-day these same sections are almost entirely denuded of trees and present a most desolate aspect.

In one little town, White Haven, Luzerne county, Pa., there were fifteen years ago at least twenty large saw-mills in active operation, obtaining their logs from the country around them; to-day in White Haven only one mill remains, and that will saw its last stock this year.

A few years ago there was a beautiful forest of about 60,000 acres, mostly in Monroe county, Pa., around the Pocono Mountain. To-day but 3,000 acres of this plot are left that are worth anything for lumbering.

It was hoped that the second growth coming up in this section would be vast, but on account of constant fires, this growth has never amounted to anything.

We could recount hundreds of cases like the above, to show how fast the timber of the country is being cut off, but our space will not permit it.

The special danger in allowing lumbermen to go in and cut indiscriminately is that of fire. It is not enough to have to watch the summer campers, but the lumbermen are much worse; and when a fire gets under good headway, it does an immense amount of damage.

Sufficient stress has not been laid upon the advantages, in a financial way, that would accrue to the State if it owned the majority of these woods in one grand park.

Any amount of statistics could be given, to show what has been done in Germany by their Department of Forestry. An annual revenue from this source is collected by the Prussian Government of over \$5,000,000. Of course it has taken years to build up their most capital system, and their territory devoted to timber culture would be larger than ours; but in proportion, what has been done there can be accomplished here, if we only go to work at it in the right way.

We could easily arrange to engage two or three men who had had years of careful training under the German Forestry Department, and by giving them good men to work under them, we could soon organize a force that would control and watch over the whole North Woods.

If then the State, by an issue of bonds, bearing a low rate of interest, $\frac{3}{4}$ to 4 per cent., should purchase a large portion of the Adirondacks district, it would take but a short time, under these trained German foresters, to make the project a paying one for the State.

In all sections of these woods there are certain trees that need cutting each year, to better preserve the life and health of other trees near them. All this subject, of course, is perfectly understood by these foresters.

Without allowing any other sawmills to be built, a sufficient number of those already in operation could be kept to saw up the trees necessary to be cut.

It has been found that a good many of the pine-trees in the Adirondacks should have been cut years ago, as they show signs of a dry rot in parts of them when cut down.

The sawmills would gladly pay the State a stumpage of \$3 per thousand feet on pine and of \$2 per thousand on spruce.

As it would be necessary to cut each year quite a number of trees, to take care properly of the forest, it can easily be proved that enough revenue would come in to the State not only to pay its interest on its forest bonds, but also to establish a fund to pay them off.

No one who has not watched these foresters at work has any idea of how much it is necessary for them to do.

There are dead trees to be removed, windfalls to be cleared up, decayed underbrush to be collected and burnt, trees to be planted, others selected for cutting down, timber thieves to be watched, campers to be kept under proper control, fires to be put out, assistants to be trained, reports made out, and so on to the end of a long chapter.

It goes without saying, that these foresters would make the woods so much more valuable to the State that the expenses of their department would be but a small item.

The law to expend \$25,000 in purchasing land for the State, at the rate of \$1.50 per acre, is good as far as it goes, but it is very unfair to give the general public the impression that the State is going to be able to purchase all the timber lands it wants at such a low figure.

When stumpage in the Adirondacks is held so firmly at from \$1.50 to \$2 per thousand feet for spruce, and when the average acre of virgin forest contains about 3,000 to 6,000 ft. of spruce, suitable for saw logs, it is impossible to expect lumbermen, who have purchased these lands for their own use, to hand them over to the State for \$1.50 per acre, when they can realize from \$6 to \$12 per acre by selling the stumpage.

It would be an utterly unjust, unfair, and certainly not legal, for the State to say to lumbermen who had mills and fixed plants in operation: "You must wipe out your mills, and stand a total loss in them, and we will give you \$1.50 per acre for lands that have cost you from \$3 to \$5 per acre."

If, on the other hand, the State should arrange some fair compromise, as to the price of the land, with the added understanding that the mills should be a total loss, but that the State would sell the mill owners such trees as they found necessary to cut, then it would not be hard to come to some satisfactory settlement.

One word as to the railroads. The roads running into the mountains have been greatly condemned, and for some reasons very unjustly so.

They have done some injury, but not anything like what has been talked.

Under the system we have mentioned the foresters would allow no cutting of hardwoods for making charcoal. It is this practice that has caused so much destruction in some sections.

The Forest Commissioners and the State authorities seem to forget entirely the "greatest good of the greatest number." The people who wish to go to the woods are not "entirely" made up of the rich class, who are able to hire expensive guides and their boats; their two or three guides at \$4 per day each, their handsome boats, and other expenses in proportion.

The large body of people who would like to go to the woods (but have in many cases been prevented on account of the high scale of expenses prevailing there) want to get there in the cheapest and quickest way, and need facilities for getting around without having to hire expensive guides and their boats.

We hope to see the two Adirondack roads connect at Long Lake. When this is done many hours will be saved in the trip from New York. Persons leaving New York at 7 P. M. will be at Paul Smith's at 8 A. M. the next morning, and thousands of people will enjoy the woods that have hitherto been prevented from coming by the long, tedious and expensive trip.

These roads, too, will be needed to carry the logs to the mills that the State will wish to sell, and to carry to market the manufactured lumber, and to bring in the thousand and one supplies the people in the woods need.

As it is now, the freight and carrying charges in the small boats on these supplies often amount to two or three times what the goods cost in the first place in New York. So when some hot-headed people talk of tearing up the present roads, they simply show that they have no practical knowledge of the life in the woods and its needs.

Another very important point should be mentioned, where these roads do great good, and this is in the safety and gently bringing in invalids in where there is some chance of saving their lives.

In the old days that some of us so well remember, the poor invalids, hardly able to be out of bed at all, were bounced over rough roads in hard riding coaches and made to walk over carries, from one lake to another, with the evident result in many cases of killing them on the spot, before they had any chance to be helped by the pure Adirondack air.

Compare this old system with the new one of bringing people into the woods in comfortable palace cars, and tell us whether the railroads should be entirely condemned.

Although we have been speaking mainly of the preservation of the woods for purposes of health and rest and sport, still, of course, all the plans we have mentioned carry with them the idea of keeping up the forests, as a help to the water supply needed for the Hudson and other rivers. What helps one idea does the same for the other.

They tell us that nothing can be done toward carrying out our plans because of "politics."

Perhaps this is so, but if it is so, it is a sad thing that these beautiful woods should be lost, because enough public spirit cannot be aroused to overcome this demon of politics.

New York city, alas! has as little true public spirit as any place in the world, and we fear it is the same with the State; but notwithstanding these obstacles, it ought to be possible to excite enough interest all through the State to bring this whole matter so forcibly before the proper authorities that they would feel obliged to yield to public opinion.—The New York Lumber Trade Journal.

Sea and River Fishing.

AQUARIA NOTES.

Occasional Observations on the Fishes in the Aquaria of the U. S. Fish Commission.

BREEDING HABITS OF THE UNIONIDÆ.

TWO species of the fresh-water mussel (*Unio*), which cannot be positively identified in their present half-buried position, are nearly ready to throw off or allow the escape of the young. They present an unusual and beautiful appearance with their lobed egg sacks protruding from between two sets of curious tentacles which are probably only developed at this period. The two sketches herewith presented were kindly furnished by Mr. S. F. Denton, artist of the U. S. Fish Com., from two beautiful color sketches which he has made for the Commission. It will be seen that while the shells are outwardly very much alike, the peculiar development of the mantle is very different in each. The difference in color is also very great. In the one with the small tentacles the color of the mantle is white tipped with pale yellow,

FRESH-WATER MUSSEL, THROWING OFF THE YOUNG.

with the egg sack a pale slate color. In the other the mantle is salmon color, from pale to quite deep tints, while the egg sack is purple. It is hoped that these sketches may prove useful to some conchologist. These characters should be a positive means of identification. It appears that the family is at present very much mixed, and it is difficult to get any information concerning them. The authorities say of the generative habit that the eggs are fertilized in the fall of the year and are carried by the female throughout the winter undergoing development to the swimming stage. About March they are thrown off or make their escape and enter into the swimming stage in which they are armed with some little hooks by means of which they fasten to fish or aquatic animals, where they undergo still further development, finally dropping off and sinking to the bottom as the fully developed mussel, but still very small.

INTERNAL PARASITE COMMON AMONG FISHES.

Upon opening a striped bass (*Roccus lineatus*) to endeavor to discover the cause of its death, thirteen worms, measuring from 5 to 10 in. in length, were taken from its visceral cavity. In each of two other specimens a smaller number were found. It is a long, thin worm, about the thickness of a pin, with pointed extremities of whitish color. At times some of the striped bass, which are still living in the aquarium, will have one or more of these worms hanging to a length of several inches out of the vent and anal orifice. In one case there were two from the vent and four from the anus. This appears to occur only when the fish has a lack of food or does not feed normally, and the intestine is empty. This appears to be the same worm which infests fish generally in both salt and fresh water and which is so frequently mentioned in that connection by anglers and others. The writer has found it protruding from the walls of living fish so widely separated as the pike and the sucker, having

evidently bored through from the visceral cavity. The worm was the same in all these cases is only supposed from its external appearance, the writer having neither the time for nor the means of identification a hand.

Apparently the same worm is found in numbers in the intestines or visceral cavity of the common killifish (*Fundulus heteroclitus*), and probably in all of them, in numbers during July and August. As this fish forms a large portion of the food of the food fishes, this worm is no doubt largely distributed among fishes in this way.

As those noticed by the writer were found in the visceral cavity of the striped bass, instead of in the intestines, they must bore through the walls of the intestine to find their way out of the vent and anal orifice, unless, indeed, in some of them they are in both intestine and visceral cavity.

A yellow perch recently opened by Mr. Alex. Jones, an observing attendant of Central Station hatchery, was found to have one of these worms coiled up within its fleshy walls outside the ribs—encysted, as it were. As previously stated, these worms do not appear to trouble the fish until the intestines are empty; but concerning those in the visceral cavity, it is hard to understand what connection there is between the two facts, unless with their sharp, wiry-pointed heads they intrude themselves through the walls of the intestine for their food.

WASHINGTON, April 12.

WM. P. SEAL.

MAINE PROSPECTS.

THE ice is getting thin on the Maine lakes and ponds, and the latest reports indicate that the opening of the waters will be early. Not earlier than last year, for this is hardly possible, but earlier than the average. A recent letter from Moosehead expresses the opinion that the lake will be clear of ice by the 15th of May—possibly the 1st. Reports from the Rangeley waters indicate that the ice is thinner than last year, even, when the ice we out on the 29th of April, twelve or thirteen days earlier than the average. But other reports speak of cold weather in that section, with hard freezes every night for a week. On the whole the ice is likely to start from the Rangeley earlier than usual this year. The Sebago waters, in the State, are about ready to clear of ice, even if the ice has not already started, and the landlocked salmon fishermen are on the watch. Indeed, one party of Portland fishermen came very near starting one day last week, and a false impression that the ice had moved from the north and was half way down the lake.

The first salmon of the season has been landed at Bangor, but this one has not yet been followed by the good run that the sportsmen are hoping for, though the fish are tried every day. The Boston sportsmen who properly try for the salmon at Bangor are anxiously waiting for the telegraph to announce that the salmon are rising freely. Somehow there is not much confidence among the sportsmen concerning the run of salmon at Bangor this spring. The fear is that already the extensive pulp mills on the river above—with its many branches beginning to be lined with pulp mills—are about to shut their deadly work upon the salmon of the Penobscot. The chemicals that are discharged into these streams are believed to be death-dealing to the salmon. Last year was particularly noted that the ascending salmon invariably crossed over to the other shore, where it was possible to avoid the deadly chemicals, and that frequently they were found dead. The great majority of the many pulp mills on that river and its tributaries are a work of a couple of years, and it will be remembered that last year was the first when the great run of salmon at Bangor began to fall off. In fact, the run of last year was practically a failure. Now, this lack of a run this year may be due to other causes; but the theory of the best posted, and who have given the subject the most thought, coupled with a good deal of experience, is that the salmon are either being killed by the pulp mill chemicals or they are so disgusted with the foulness of waters of the river they are wont to ascend that they turned aside into other streams, or else they do not let the salt water at all. This theory may not be the correct one, but the results of this season will be anxiously watched. It may be that excessive netting, which is permitted at Bucksport and at other points on the river below Bangor, is a great reason why the salmon do not ascend the river. Already a good many salmon have been taken by these fishermen below Bangor and sent into the Boston market.

Perhaps it is a misfortune to grow old, but it is also great pleasure to feel that one has true friends, and that their friendship becomes more strongly cemented as years roll around. This is especially true of those friends with whom we have hunted, camped and fished, till we feel that they are near to us from the brotherhood of the woods and the streams. Such is the feeling that prompts the writing of these lines. The writer had good fortune to have a birthday the other day—a birthday numbered with quite a respectable numeral, with cipher on the right of it. At his home there was waiting for him in the evening an elegant split-bamboo trout rod, engraved with the date "April 19, '90. To—From O. H. S." Just beside it there also reposed a mounted compass of the best make, and also engraved "April 19, '90. To—From G. T. F." Both readers of the FOREST AND STREAM, and may they to fish many years longer is the devout wish of

SPECIAL

BANGOR SALMON.—The first salmon of the season taken at Bangor, April 14, by Mr. E. A. Buck. It taken just below the waterworks dam, and was a fish, weighing 12 lbs. The fish was purchased by Mr. Lynch and Gallagher. The fishing has thus opened about the same time as last year, and there appears to be no reason why it should not be as good this season as last. The salmon angling at Bangor presents many attractions, and seems to grow more popular from year to year.

TO SALMON ANGLERS.—T. J. Conroy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.

The catalogue of Messrs. Chas. Plath & Son, of 130 Canal st. is not, as was erroneously stated in a recent issue of FOREST AND STREAM, devoted mainly to tackle for salt-water fishing. On the contrary, while this firm sells all that is needed by the salt-water angler, their trade with the West constitutes a large portion of their business, and they are prepared to supply anything that a fresh-water angler may require.—Ad.

THE TAUTOG.

THE thick-lipped tautog, with his many aliases of blackfish, smooth blackfish, chub, Moll, Will George, oyster fish, etc., is now dividing honors with the flounder in the salt-water anglers' esteem. New York has carried off the palm for big tautog, having sent to the Centennial Exposition in 1876 an example about 3ft. long, weighing 24 lbs.; but Cape Ann comes in a good second with occasional individuals of 12 to 14 lbs. The species is known from New Brunswick to Nova Scotia, and is abundant in rocky tideways, around wrecks and piles, and under steep meadow banks from Massachusetts to Virginia.

The fishing season begins in April and continues sometimes into December. Mr. Willard Nye informed us that he has taken small ones in the winter with an eel spear in Acushnet River. He states also that tautog are caught up the salt water estuaries and at the head of Buzzard's Bay before they are taken at the mouth of the bay. The fish is not migratory and hibernates in winter, going into the mud usually in November or December. Here it is subject occasionally to freezing. The records tell of hundreds of tons coming to the surface in the course of a single season. A pond at Menemsha Bight, Martha's Vineyard, was a scene of such destruction after an anchor frost some years ago. Having no use for a digestive tract while slumbering in the mud, the tautog hermetically seals the vent until the warm spring days recall its activity.

The spawning season begins in Narragansett Bay toward the end of April, in Buzzard's Bay about the middle of June. The eggs are deposited among the rocks in depths of six to eight feet or more. The young grow slowly and exhibit a pleasing variety of colors; some are emerald green, others brown or red, still others mottled with a mixture of these colors and pale blotches. Tautog kept in a pond at Wood's Holl, Mass., for six years reached a maximum weight of 24 lbs.

The species has strong jaws and stout teeth in a moderately small mouth, which is adapted to crushing small mollusks and crustaceans. Crabs, barnacles, clams and obsters are especial favorites of this fish, and if there is one crab he likes better than another it is the fiddler. Ground baiting for tautog is a common practice. Clams and crabs are broken up and thrown into spots suitable for the haunts of the fish, and excellent sport is secured by this means.

Early in the spring the lips of the tautog are said to be tender, and then soft clam is a taking bait. In Great Egg Harbor Bay we have used hard clams with good results, but fiddlers proved more attractive; indeed, while attempting to catch sheephead with this bait, we were frequently annoyed by the free biting of the tautog. Mr. Nye prefers lobster for use in waters near New Bedford. In some localities sand worms are an effective bait.

As for the influence of the tide, that varies with the locality and no fixed rule can be stated; in some places the flood is best and in others the ebb is preferred. It is found that dull weather with easterly wind is injurious to the fishing, and thunder is believed to put an end to the biting. We think a good deal depends, also, on the mood of the fish. There are times when he prefers above everything else to lie flat on his side in a rock crevice and keep as nearly quiet as a fish can in its unstable habitat. At such times he will roll his heavy eyes around and move his lips as if in answer to some question of yours. In the aquarium he will even allow you to scratch his back gently with a stick and seem to enjoy it immensely. How could you expect a tautog to bite when he is indulging in a reverie so pleasing? If you can wait until he is awake and hungry you will find him a bold, free biter and a strong fighter. You will need strong and not large hooks; weakfish hooks will not answer well for tautog, although we have used them occasionally; the mouth of the tautog is small, as before remarked, and the jaws and teeth are strong. The hook should be kept nearly a foot from the bottom. For fishing in shallow water use a finer line than in deep water, the finer the better. All salt-water fish are less shy in deep water than in the shallows.

The tautog is a superior table fish, its flesh being white and firm and not over-supplied with small bones. The skin is tough and the scales are hard and may be removed more readily after dipping the fish in vinegar. Some persons take off the skin entirely.

Other fatalities besides freezing sometimes destroy the tautog; one of these is a kind of fungus. At New Bedford, Mass., hundreds of pounds of these fish were covered with fungus and had to be thrown away. Mr. Bassett lost 800 lbs. at one time from this cause.

Editor Forest and Stream:

Not many miles away from the busy, hurrying town, more busy and noisier than ever on this fair April day, a creek goes winding to the sea with many tortuous curves and turns. Now its water speed silently and clear over a sandy, sunlit shallow, where all the minute life of the sea goes on as in a case of glass. Anon it turns dark and secret, and underneath some overhanging bank where weeds grow thick and dank it swirls and eddies over a deep, quiet pool. Over it all shines and laughs the beautiful sky, where white clouds dreamily sail on a waveless sea of blue. A mile to the south glints a sandbar, white as snow, and encircled by gulls, the restless, screaming seafolk that have gathered here seeking the bounty that Nature spreads before them when the tides have stolen away and the moist salt shores lie bare. Beyond it all the sea, calm and dreamy and still, mirroring on its breast the wind-bound fishing smacks on the horizon.

Only rarely does a day like this shine on the earth in this rainy month of April: but when it does break from the dun, dark skies, as a smile that plays over a gloomy face, all the world breaks into laughter and song. Then, into the heart of nature's children steal thoughts of brook and sea; wood and glen beckon them from afar, and the crowded, dull streets become too narrow. Out and away it draws the votary of rod and gun, the lover of air, sun-shine and unbounded skies, into the freshness and glory of a newly awakened world to listen and dream amid the whispering of wind and waves.

Along this reeded bank, every foot brings forth new beauties and wonders, for all creatures that have lain dormant while winter reigned are awakened and inquisitively staring and inspecting the world. Here a crab, green as the weeds he lives in, curiously thrusts out his long-stemmed eyes and threatening nippers, then vanishes with laughable suddenness, as he scents some

THE TAUTOG OR BLACKFISH.

frightful doom. Next to him, in seeming peace, dwells another of his family, but clad in rust-red armor, while below plays a school of minnows, startling the transparent, goggle-eyed shrimp that hang on the bank like glass, while an eel swiftly shoots along the bottom, leaving but a vague idea of a black, winding body. Further on, a city rises on the bank, its streets alive with tiny, mottled warriors, in armor that seems made of finest pink-tinted china, running this way and that in mazy bewildering confusion, each holding high above his head a mighty claw as weapon and shield. A sudden sound, and down they plunge into their subterranean homes, and the town has vanished from the earth. Soon, when the hot summer days lie breathless and windless on the sea, we may envy them their cool shady retreats.

At present we must tear a few from their abode, for the crustacea-loving tautog whom we seek to day finds them toothsome, though sometimes fatal and disappointing when they hide a sharp-barbed hook. Having gathered a quantity and deposited them in a receptacle, whence they cannot escape by climbing, and where they at once begin the performance which some imaginative Izaak termed "fiddling" (whence their name), we will hie to our pool by the bank, within sight of the sandbar that ever opposes its barren front to the menace of the sea. Down there in the cool dark water the bottom is broken and covered with shells and coral growth, to which each year's storm adds something, while the sapping tide, busy at the overhanging bank, ever breaks more and more of it down. There crab and worm live and hide, and there the great black, unwieldy fish gather in the spring after their voyage from distant waters. Hungry and unappeasable they come in great hordes and gather wherever shellfish cling. In deep channels, where old wrecks lie drowned, the glory of their flowing pennants and belling sails exchanged for festoons and vines of scarlet and purple-flashing seaweed, while their broken masts flicker ghostlike and dim through the depths, around old docks and broken spiles, or along steep banks like this where we are now, they congregate and feed.

No glorious, leaping fighters are they, that leave the waves and jump through the air when hooked, nor do they dart from side to side, like the trout or weakfish. Who would capture these bulldogs of the sea must have powerful tackle to restrain and check the headlong rush downward that is sure to follow when they are hooked. Down, down they go to seek the rocks or sharp, shell-covered wreckage that will cut the line like knives, crunching meanwhile at the hook, which is sure to yield to their savage jaws unless made of good hard steel and of generous thickness. Many, ah many are the stories that have sprung from the hook bitten in two, and many an imaginary 25-pounder has been lost. Use a heavy lead and no leaders. They are not shy, being bottom feeders, and do not feel that fear of a line that the princes of the blood show. Bait with the light-colored fiddlers, the black are generally worthless, and let the point of the hook barely protrude near the belly. This is almost always a killing bait, but clam is generally perfectly successful. Don't be too generous with the latter, and use only enough to cover the hook well, as then when the nibble is felt you are reasonably sure that the hook is where it should be, in the tautog's mouth, and a strike will be rewarded by the plunge that is so welcome. Now will come the test of tackle and skill, and if the fish is a good large one, some sport may be reasonably expected.

Before my mind's eye I behold the sight that met me last year, when an English gentleman of Brooklyn, an ardent angler, though he does now and then catch inanimate articles from the bottom, sat in Jamaica Bay, and with a light hook played and landed fish after fish. The bending and springing of the rod, the singing of the reel, as the victim made some last mighty effort, and with straining muscles and fins, plunged headforemost toward the bottom, together with the excited and pleased face of the sportsman, made a not easily forgotten picture. Such a man goes back to his work in town, as he does to his pencil and brush, refreshed and strengthened. The noise of the streets with all its discord of wheels and steam are softened to him, and the little lesser ills of life trouble him not, for in his soul is the sounding and splashing of sea and tide, and the whispering of the winds and waves and the peace and calmness of quiet, still sea meadows.

J. W. M.

NEW YORK, April 9.

WM. MILLS & SON'S CATALOGUE.—The catalogue just issued by this firm is a profusely illustrated volume of 120 pages. It opens with a humorous letter of advice to anglers from the pen of Henry Guy Carleton, and then at once plunges into the serious work of showing anglers what there is to be had for fishing in waters everywhere. An interesting feature of this book—for it really is a book—is the handsome color work on pp. 1-8, illustrating medals, reels, labels, etc. The whole catalogue is creditable to the energy and enterprise of this well-known firm. Price 25 cents.—*Adv.*

RANDOM CASTS.

A USEFUL addition to the angler's outfit is a piece of ordinary Calcutta bamboo of about 6in. in length, cut from between the joints. In case of a break in your rod all you need now do is to split it into the proper widths and wind the pieces tightly around the break. Besides being very strong and comparatively elastic it is much superior in shape to anything the ordinary mortal can make when in the woods or elsewhere.

The salmon, which at great trouble and expense you send to your friends, is not the fish you so much enjoy on the river. It has lost most of its fine flavor and all of its beautiful silver sheen and color by being packed in ice. Except for the idea of the thing, a codfish, just killed, is far superior.

In wading rough and rapid streams I have found that lumbermen's calks on my wading shoes are much superior to the ordinary hob nails. Offering less surface they find the holes and cracks in the rocks and stones much more easily, thus giving a securer foothold.

When striped bass are playing near the surface of the water and occasionally leave it they rarely notice a still bait. Try the metal squid, and you will frequently have good sport. And this applies still more forcibly when they are chasing schools of small fish.

Silk worm gut, if kept wrapped in oiled paper and away from the light, loses very little either in color or strength from one season to another.

It is not bad luck to lose a large fish on poor tackle, it is stupidity, pure and simple.

A good bass reel may be made from brass just as well as of German silver and rubber. For the former you simply pay for the needful material and the workmanship, and if your pocketbook does not easily permit of it, then why invest in finery of the latter sort.

BIG REEL.

WHY SALMON TAKE FLIES.

DISCUSSIONS are going on all the time in regard to the reasons for the salmon taking the fly. All the books printed for several centuries almost universally assert they take it in sport, play with it. It is astonishing how little is known of the habits of a fish seen daily by thousands during the weeks and months it is running up the fresh-water rivers. If any one will sit on a rock and cast a fly, and bring a salmon to his feet, he will see that he takes it in anger, that his eye will be like a coal of fire, and a tiger ready to strike his prey will not indicate mere fury. His appearance is precisely that of a rattlesnake in the act of defending himself. His gills, and eyes alike, a burning red. I have often brought one to my feet, so that my Indian could gaff him, before he struck the fly, and have seen this exhibition of anger again and again, and so intense that he never noticed me or my rod till the fly pricked him. The knowledge of this fact will account for many peculiarities about fly-fishing. Any one not skillful enough to entice a fish to his feet can easily verify this by watching a salmon while his companion casts a fly at him, and see the indifference he may show to it for a time, and finally be provoked into making a rush at it in a state of absolute frenzy. This is why they so often come short of the fly, but when they are excited and angry it will take a smart angler to get his fly away.

SAVANNAH, GA.

FLY-FISHER.

[Our experience with salmon would not have suggested the theory advanced by "Fly-Fisher," and yet there is always something new to be learned about this royal game fish. We have seen salmon in many streams taking lures of various kind, and whether flies, salmon eggs, herring, lantern or whatever may have proved successful, it appeared to us that the salmon took it for the sole purpose of obtaining food. We have reason to know that salmon not yet ready to spawn will sometimes take fish and other animals in rivers. Doubtless this happens oftener than we suppose. In approaching a salmon or a school of salmon we have always observed a disposition to escape, fear of moving objects appearing to be their ruling emotion. For this reason we suspect that hunger induces the fish to seize a lure or a bait when danger is not apprehended.]

DYNAMITE AGAIN.—Bolivar, N. Y., April 19.—*Editor Forest and Stream:* Another dynamite fiend came to grief this P. M. Lew Loveless, a lively stable proprietor, and George Robinson, a boiler maker of this place, were shooting fish with dynamite, when Loveless, who was preparing the shot, met with an accident by the loss of his right hand and wrist.—J. E. C.

WHITEFISH TAKE THE HOOK.

THE capture during the last two months in Otsego Lake, through the ice, with hook and line of at least 1,000 Otsego bass (*Coregonus albus*) is an experience so extraordinary that I propose in this paper to give a circumstantial account of it. In order, however, to make it orderly and symmetrical, some preliminary statements previously published in part, must here be made:

As the Otsego bass has rarely been taken except with the seine or gill-net, and as all netting of every description has been lately prohibited by our Board of Supervisors, it becomes a question of grave moment whether this very delicious fish can be taken freely with hook and line, and we have, therefore, undertaken to investigate it thoroughly. The following opinions of the most intelligent and experienced anglers and fishculturists of the United States, must, we are confident, be read with lively interest, especially as they all agree, in direct opposition to the popular belief, that the *Coregonus albus* can be certainly and freely taken with hook and line.

Seth Green says: "The Otsego bass (*Coregonus albus*) can be taken with small minnows or red angle worms. I think if your tackle is very fine and you do not twitch when they bite, they will swallow the bait. Put five or ten hooks (O'Shaughnessy 8s, forged) on fine snell, and loop them five feet apart, with small sinker at the end. Bait some with small minnows (one inch or so in length) and some with worms. Cast out as far as you can from the boat, and let it lie half or three-quarters of an hour on the bottom, feeling now and then to see if you have one on. The best way is to let them hook themselves. The angle worm, if used for bait, should be strung on the hook with both ends left dangling. When I had the whitefish bites in your lake, I had a salmon trout rig on the same line, and when I felt the bite, made the same hard stroke that I would for the salmon trout and tore the hook out. A light stroke must be made and the fish handled very carefully."

Charles Carpenter, Kelley's Island, Ohio, says: "Many years ago when whitefish were much more abundant than now in the lake, seeing large schools of them, I tried various baits and succeeded in catching a few with cockroaches drawn rapidly through the water. Many more were taken by the hook sticking in their gills or sides outside of the mouth. Some further account of this experiment will be found in the first Ohio Commissioners' Report, pages 33-4."

The lamented Dr. Theodatus Garlick says: "I was once storm-bound at Copper Harbor, Lake Superior, and tried bottom fishing at night, baiting with small pieces of fresh beef, and caught several large whitefish. A friend of mine, seeing me take these fish on board, soon rigged a line with baited hook, and he caught several also. We were fishing from a steamer, with hand lines, in water about 25ft. deep."

"I cut the bait quite small, and handled the fish very carefully, lifting them on board with a landing net. I also caught a few with rod and fly at the Sault Ste. Marie, in the rapidly running water at and about the locks of the canal company there. But I think in deep water the fly would be of no use. I have no doubt you could take the Otsego bass or whitefish in your lake as I took them at Copper Harbor. I would use several kinds of bait, putting on my line several small hooks and letting it lie on the bottom. These fish bite very gently, with no dash, like the trout or other game fish. You will barely feel a slight movement of the line in your fingers. Then with a light strike you bring them slowly to the surface, and take them out with a landing net. I presume they will take a bait as well in the day time as at night. I wish I could see the so-called Otsego bass. That fish has always been a mystery to me. Of course, it is not a bass. It is strange how long a name will stick to a fish, no matter how improper it may be. You will never get a hybrid from that fish and the black bass, but you may with the whitefish."

Hon. Emery D. Potter, State Fish Commissioner of Ohio, and one of the most successful practical anglers in this country, says: "I have seen a great many whitefish taken at Sault Ste. Marie of Lake Superior with a hook baited with a June or soldier fly. I saw a man take eleven in one hour in that way just before sunset. The fishing was done in a deep, still pool, adjoining the rapids, the bait resting on the bottom, where the whitefish invariably feed. On opening I have found the stomach crammed full of these flies and their larvae."

"When taken from their spawning grounds in November there is no organic matter perceptible in their stomachs: nothing but perhaps a teaspoonful of a yellowish gastric liquid. It is very certain that at no time do they consume a very large quantity of food, but what they do eat is of the most nutritious kind, for they are always fat and plump."

"The crustaceans found in greatest abundance in the deep waters of the great Western lakes are their principal food. The cyclops are the most numerous, and I presume they are found in equal numbers in Otsego Lake. They are microscopic entomostracans, and it is estimated that a cubic inch will contain over ten million of them. There has also been found in their stomachs a small shelly mollusk that abounds in deep lake waters. The ordinary shrimp is too large a bait, and in my opinion would prove a failure."

"The soldier fly, the June fly, or a small cockroach would be my bait for all *Coregoni*. If they got anything larger in their mouths it would be an accident. With these I would fish in the deepest waters, with my bait on or within 4 to 6 in. of the bottom. A friend told me that he had taken them near Kelly's Island, in Lake Erie, with a small cockroach, but with no other bait. They are gregarious fish, going in herds like the buffalo on the prairies, inhabiting the deep, cold water in summer and in cold weather approaching the shore, where the water is colder than in the deeper parts of the lake. Do not try to take the Otsego bass with a grub, snail, crab or shrimp, for you will certainly lose your labor."

"The one taken with a shiner in your (Otsego) lake (a splendid specimen weighing 7lbs.) must have been afflicted with a terrible disease of the brain or stomach. I would have been afraid to eat him. At the Sault Ste. Marie I have often seen these fish brought in by the half-breeds, who said they took them with the 'soger fly.' It is a very common thing, known to boys, who are said to take a great many in that way in water from 20 to 30ft. deep. It was here, too, that sitting on the bank near by with a friend, we saw a man haul them in, baiting with a June fly. This June or soldier fly is very soft and deli-

cate, and may be compressed into a small compass, being almost as delicate as when in the larvæ, on which the whitefish feeds. The common house fly might do, but it would be a pity to exterminate him for the sake of a few fish."

Dr. E. Sterling, Cleveland, Ohio, says, "Once when fishing for brook trout in the Sault Ste. Marie I hooked a large whitefish under the chin. He got away, but before I lost him I just made up my mind that I had lost the gamiest fish that I ever had on a hook. They talk about fly-fishing for shad on the Connecticut—bosh! The time will come when fishing for the *Coregonus albus* of the upper lakes will be the greatest sport of them all. For whitefish use a very small hook. Bait it with wheat-flour dough mixed half with cotton or flax to make it adhere to the hook. Then go where the whitefish are feeding and you will catch a boatload, for there never was a fish that ate but what will bite."

So much by way of introduction.

The fishing for Otsego bass in our lake has all been done within a quarter of a mile of the village in water from ten to forty feet deep. The fishermen's huts, some fifteen or twenty in all, and about six feet square, are darkened so as to enable the occupants to see more clearly into the water below.

The tackle used is extremely light, the hooks, which are quite small and two or three in number, being attached about a foot apart to the main line with a bit of ordinary gut. The baits in vogue are of many sorts—bread crumbs, bits of beef or angleworm, the common house fly, small cockroaches or other bugs, and pellets of wheat flour mixed with cotton or flax, but chiefly, most successfully and most unaccountably, a tiny bright shiner, either living or dead, or a small portion of it.

Two lines are generally used, one with the bait lying on the bottom and the other with the baits kept moving in plain sight near the surface, where the fish are distinctly seen. And, singularly enough, it is in this last way that probably nine-tenths of all the catches have been made.

Like the brook trout, the Otsego bass is exceedingly muscular and moves with great celerity. Looking down over the shoulder of one of the fishermen, I saw myself in less than fifteen minutes, at least 15 fish of from 1 to 3lbs. each, darting sportively back and forth about the bait, when suddenly, as in a wanton mood, one would seize it. The next moment he was lying on the bottom of the shanty.

The fish average about 1lb. each, occasionally reaching 3, but being tender-mouthed and very hard fighters, the larger ones tear out and escape after being hooked.

In this exciting sport (for the Otsego bass is not only one of the gamiest, but the most delicious of all freshwater fish) success seems to depend very much upon a certain "knack" or "sleight of hand," as in casting the fly for *fontinalis*. In the same hut, for example, one of its occupants took in two hours twenty-two fish, as against the other's four. In another case, two young men, well known to me, and sitting in the same boat, actually captured before 3 o'clock P. M., seventy-four fish, weighing some 60lbs.—one of them taking twenty only, against the other's fifty-four. Various other catches of from five, ten or fifteen, to forty and fifty odd fish are reliably reported, and one clever lad is said to have taken a hundred and two in a single day. Being considered a great delicacy, they command readily twenty and twenty-five cents per pound. But as the lake is literally filled with the fish, and the supply of silver minnows upon which they seem chiefly to subsist, absolutely inexhaustible, these rates must soon be greatly reduced.

In view of the above facts it cannot be denied that our people have made a grand discovery—that Otsego Lake has taken an entirely new departure, with good hope of becoming, in the immediate future, one of the most remarkable and attractive fishing grounds in the whole country.

Upon the toothsome qualities of the Otsego bass, already so celebrated, it would seem hardly worth while to dilate, but allow me to quote from an old friend—a connoisseur—to whom a few of these fish were lately sent. He says, "To the best of my knowledge and belief I have never tasted so delicate and delicious a mess of fish as we had yesterday since I had the pleasure of eating Otsego bass with you at Coopertown (long years ago). I have carefully considered the question whether they were really better than the best Spanish mackerel, and have concluded that they were a little better. This is the highest praise that I can give them, for of all fish in the sea the Spanish mackerel is, I think, the best."

In closing this paper it may be safely stated: First—That the *Coregonus albus* is not, as generally supposed, an exclusively bottom feeder, but quite the contrary. Within a day or two, however, and since the ice left the lake, some fine specimens have been taken on the bottom, with angleworms, in 60ft. of water.

Second—That these fish bite equally well by day or night.

Third—That it is a good plan to bait the buoy with either live shiners or dead fish finely minced.

Fourth—That the bass devour other fish besides the lake shiner. In one case, well authenticated, ten or twelve tiny rock bass were found in the maw wholly undigested.

Fifth—That Judge Potter's theory of "lunacy" is either utterly exploded, or else our lake is more lumbered up with "lunatics" than the county poorhouse ever was in days gone by. Worst of all, the people themselves are "crazy" to eat up the "lunatics." We are not indeed without hope that the Judge himself may one day or other swallow some of them, and that without even making a wry face.

Sixth—That the extermination of the common house fly, a calamity the bare possibility of which he so lugubriously deplores, may perhaps be averted by means of extensive "artificial propagation" of that dainty little insect in the Toledo hatchery.

ELIHU PHINNEY.

COOPERTOWN, N. Y.

[We have not changed the name of the Otsego Lake bass, or whitefish, in Mr. Phinney's interesting communication because it is quoted so frequently as *Coregonus albus*. The current name in the books of to-day of course is *Coregonus clupeaformis*.]

FOREST AND STREAM, Box 2,332, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

ANGLING NOTES.

SEVERAL striped bass have been taken during the past week on hook and line. One was caught in the Hudson River weighing 10lbs., and Mr. Edwin Burfield, trolling near Robbins Reef, killed one that weighed 45lbs. So it may be said that the striped bass season is fairly open.

Commodore Gregory writes from Quebec that they still have sleighing there, and the ice in the lakes has not yet broken up. He thinks that it will be some weeks before anglers will be able to cast a fly with any chance of success.

From St. Stephen, N. B., we hear that salmon have appeared in the St. Croix River, though none have yet been killed with rod and line. A lad found one the other day stranded in a hole at low tide and carried off his 13lbs. prize in great glee. It is reported, however, that the first salmon of the season has been killed at Bangor, Me.

Notwithstanding the work going on at Massepequa Pond and the stream above, about 200 trout were killed there on the opening day. It is wonderful how difficult it is to exterminate trout by fair fishing, the fish seem to hold their own under the most adverse circumstances, and if given half a chance, increase rapidly.

The writer once spent a whole season at Ralston, Pa., on the beautiful Lycoming, which rippled right past the door, and along which ran a railroad. Notwithstanding the fact that this stream was fished every day by scores of fishermen from Philadelphia, Williamsport and Elmira, and by dozens of the guests of the two hotels, to say nothing of being well poached by the miners, the supply of trout never seemed to fail; the fishing on the last day of the season seemed to be just as good as on the first. This was probably due somewhat to the supply from the smaller brooks which emptied into the main stream. In those days the upper part of these side streams were rarely fished, and they were alive with small trout. As these increased in size they would descend to the deeper waters of the main stream. Within the last few years the bark peelers have invaded these beautiful hills. Sawmills have sprung up on the side streams, and the beauties of the Lycoming Valley have been destroyed forever. So let no man be deluded into visiting Ralston for trout, for the fishing is no more.

The question is often asked, "Where can I go to get some first-class trout fishing?" This is very hard to answer with any certainty. Even those who have time and money at their disposal find it difficult to discover, without going a long distance. The surest fishing is to be had at such clubs as the South Side Sportsmen's, Tuxedo, Blooming Grove, Adirondack, Laurentian, Megantic and others. Here the trout hog has no chance. Killing fish to feed the pigs or bury in the ground is unknown, and the angler is sure of good quarters and good sport. It is an unfortunate fact, but it is so, and unless those who are interested in fishing in public waters and those who live near by or on these streams enforce the 6-inch law and frown on indiscriminate killing, it will remain a hard, cold fact, that it does not pay to waste one's time and money to visit free streams.

CALIFORNIA CATFISH CATCHERS.

Editor Forest and Stream:

At a banquet given the National Grange in this city recently, the Governor of Michigan, in response to a toast, after saying all the good things he could think of in behalf of his own State; boasting of her climate, mineral resources and fish, wound up by saying that they could tell the biggest fish stories in Michigan of any State in the Union.

Now it is evident that the honorable Governor of the Wolverine State has but a limited acquaintance with California sportsmen, for had he known some of our Sacramento county sportsmen he would never have made that statement. Sacramento sportsmen beat the world, and we defy any county in these United States, as well as the entire State of Michigan, to produce those who dare compete with them. Why, among our county officials alone, to say nothing of ordinary mortals, may be found some of the leading sportsmen of the entire American continent. Their thrilling accounts of adventures by mountain and stream could not fail to convince the most skeptical of their superior accomplishments. Of course, like all true lovers of field sports, the majority of them are noted for their extreme modesty in referring to their own experiences, yet, manlike, each individual is ever ready to relate some other fellow's exploits.

The writer recently had the good fortune to spend a few days in the society of one of the before mentioned gentlemen, who chancing to be of a communicative turn, related some amusing incidents, which I trust may be of interest to readers of FOREST AND STREAM.

A member of our county board of education has been universally accorded the championship in the angling line. Every summer, with his family, he repairs to the beautiful mountain streams of the Sierras, where he spends a couple of months angling for speckled trout, and he invariably returns heavily laden with adventure. Some of the little shiners captured by this gentleman last August are said to have weighed 4lbs., more or less. The largest catfish ever taken from the waters of the Sacramento, Mokelumne and Cosumnes rivers are also said to have been brought forth upon the hook of this experienced angler.

Not long since with a party of friends he was taking a little recreation along the banks of the Mokelumne; he had taken up a good location upon a pretty little green tussock and was patiently awaiting a bite, when one of his companions approached with the intention of looking up a friendly log upon which to stand in order to throw his hook further into the stream. Our official being noted for his extreme politeness in connection with his other accomplishments, immediately stepped upon a neighboring tussock and courteously surrendered his former firm footing to his friend. Now, it chanced that this latter tuft was somewhat deceptive in appearance and proved a very shaky foundation, and just as he planted his feet upon its summit an immense catfish swallowed his hook, gave a vigorous yank and started for San Francisco. This event coming at this inopportune moment, proved too much for our friend's equilibrium, yet with the strength of a Hercules he hung to his

rod and was landed bodily several feet further into the stream than he had any intention of going. Standing in water up to his elbows he turned and cast a helpless beseeching glance upon his friend who had been the innocent cause of his misfortune, when that gentleman coolly remarked, "That's right, W., I believe there is better fishing on the other side of the river." Seeing no prospect of assistance from that quarter, he lustily called for help, when another gentleman of the party extended a rod to him, and after no small amount of tugging his 185lbs. avoirdupois was safely landed upon *terra firma*, but not so the fish; it had taken rod, line and hook and departed. While our champion lay upon the ground and one of his companions was pulling away at his gum boots, he chanced to look in the direction of his friend standing upon the trusty tussock, and noting a smile upon his face he growled, "Laugh if you want to, you'd laugh if a man were drowning."

Another time this gentleman, in company with some friends, was angling for catfish in the same river, when bites were few and far between, and despair had taken possession of the entire party, when some one proposed that two of them should take the boat and try their luck further down stream, while the remaining two should await their return. Patiently they waited, with never a bite, until at last some heathen Chinese came rowing down stream with a load of beautiful cats which they had caught with a seine. This was a streak of luck for our tired fishermen, and they at once entered into negotiations with the Celestials for the entire outfit, at the same time cautioning them not to mention the transaction to the gentlemen in the boat down stream should they chance to meet them. "O, no, me no tell," responded John, as he rowed away. This immense catch was soon stowed away in sacks and secreted, with the exception of two of the very largest, which were cruelly placed upon the hungry hooks and launched in the stream. Presently the exploring party were seen approaching, and our brave fishermen began tugging for dear life to land their big fish; but their fun was all spoiled when the returning party exclaimed, "O, yes, we understand all about it; we saw John down there, and when we wanted to buy some fish, he said, 'Me no got any fishes; your partner up there he buy plenty fishes.'"

Now our champion being of a slightly nervous temperament, was somewhat excited by this new disappointment and he gave his catfish a mighty jerk thinking to land him without further dallying, as the fun was all over; but to add to his day's misfortune, his victim objected to being captured the second time and he made his escape, carrying hook and line with him. The chagrin of our hero was unlimited, his language very emphatic and his face slightly flushed; but the Celestials were far away down stream and no lives were lost. The remaining members of the party took a more philosophical view of the matter and putting their learned heads together, like politicians as election draws near, the fish were put into four sacks with the biggest on top, and the party started homeward. Chancing to meet some friends on the way, they generously gave them a few mammoth catfish and at the same time relating glowing accounts of the finest day's sport on record; and as they had taken the precaution to cruelly perforate the jaw of each victim with some pointed instrument, the deception was a success; a stampede was created among the angling fraternity generally, and one of the leading dealers in sporting goods in Sacramento did a land office business in heavy-weight fishing tackle for many days thereafter.

SACRAMENTO, CAL.

MARION.

BRITISH FISHERIES.

Editor Forest and Stream:

I have been a constant reader of your paper for some years, and, as a consequence, have become a devoted disciple of the art. I write more particularly now in answer to an article that appeared March 6, 1890, under the heading of "Random Casts." The writer in that article urges the necessity of protecting our fish against unlawful and unfair fishing; he points to the old country—we presume he means Great Britain—as an example of the effects of this kind of fishing, where he states that the shores are bare of fine food fish; also, that the Englishman is compelled to eat skates and sea robins for want of something better. I do not know on what he bases his statement—I can only conjecture. That the contrary of all this exists, I think can be proved; also, that the old country is fully alive to her interests and quite able to protect them.

The coasts of Great Britain, including the adjacent islands and North Sea, have for centuries furnished vast supplies of fine food fish. What the conditions would have been to-day had the same policy been pursued that obtains in this country—the wholesale slaughter of food fish and other game in season and out of season—it would not be difficult to conjecture. I will now quote from reliable statistics as to the quantity of fish brought in to some of the English markets; time and space would not permit of my going over the ground fully.

We will take Billingsgate fish market in the city of London, which has been devoted to the sale of fish alone for 200 years. The daily average is from 400 to 500 tons, from the lordly salmon down to the sprat. The bulk of these fish come from the east coast and North Sea. During the herring season the daily average supply in the above market is 500 tons. In the season of 1888 from 500 to 700 tons of herring per day were shipped to the Billingsgate market alone. More than a quarter million tons of this fish are landed on the coasts of Great Britain, representing a money value of \$6,000,000. The Scotch fisheries are said to be the greatest in the world, employing 12,000 boats and 100,000 people. The chief kinds of fish are salmon, haddock, herring and ling. The quantity of haddock shipped to Billingsgate for curing is so large that the authorities have constructed a separate market for the handling of the same.

I have not mentioned the Irish fisheries, which are very extensive, and only need capital to further develop them. I mentioned Billingsgate as being the oldest and leading market in this particular line; but, as many of your readers will know, it does not represent the entire country. Every large town possesses a fish market, and many of them two or more, where the fish are disposed of to the fishmongers, who supply the public. The city of Liverpool has built a second market to meet the increased demands of the trade; her supplies are drawn from Scotland and Ireland chiefly. Every variety of fish

in season can be purchased in all these markets at very moderate prices. Shellfish I have not mentioned. I do not wish to trespass further on your valuable space. I have endeavored to prove that the fisheries of Great Britain are not quite exhausted, as your correspondent "Big Reel" would have us believe.

T. H. J.

HARRISBURG, PA.

THE OPENING AT BIG SPRINGS.—Harrisburg, Pa., April 18.—*Editor Forest and Stream:* Will you grant me space in your valuable journal to tell your readers what was done at Big Springs, a noted trout stream in Cumberland county, Pa. The 15th opened cold and raw, not the kind of day one would select for fly-fishing. About thirty lovers of the gentle art left Harrisburg before the break of day for Newville, which is situated close to the stream. Among the party were some who have won fame as noted fishermen, some whose fame is somewhat doubtful, others again who have gone to try their prentice hand. It was somewhat surprising to find the ground fully occupied by a small army of natives, men and boys, from every hamlet and village for miles around, all very industriously occupied in fishing after the primitive fashion, with worm and pole. The contingent from Harrisburg labored hard, and while many grumbled over their bad luck, few, if any, came home with empty creels. The average trout was very small. A few specimens of the rainbow trout were caught. The killing fly appeared to be the black-gnat.—T. H. J.

LARGE YELLOW PERCH.—Manchester Green, Conn.—*Editor Forest and Stream:* In drawing the water from one of the reservoirs in the town of Manchester a few days since, a large number of fish were taken, among which were 113 yellow perch weighing from 1 to 2½ lbs., and two that weighed 4 lbs. each. Few large perch were taken with hook and line, but any quantity of small perch could be got at any time in the summer. Last season I caught eight good-sized perch in this reservoir; the largest weighed 1½ lbs. The fish grew very fast in this water; the feeding grounds seemed adapted for the growth of large fish. At the rate of posting of streams increases in this State, fishing for the many will soon be prohibited, and it will only be the man with the long pocket book who will be enabled to enjoy this pastime. Our fish commissioners should not put fish in any stream, pond or lake that is not free to the people of the State in the open season, for as matters are now tending we shall have a privileged class, more arbitrary and exacting in every respect than those in Europe.—JONATHAN.

CONNECTICUT LAW BREAKERS.—President A. C. Collins, of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, has recently sent detectives to Bantam Lake, in the towns of Litchfield and Morris, to look after violators of the fish laws. The detectives captured Dexter Derby, Charles Curtis, Russell Curtis and some others, of Litchfield, in the act of hauling seines over seventy rods in length, during the night, in Bantam Lake. The poachers had taken bushels of black bass, pickerel and bullheads. Of course the nets were seized and will be forfeited, and the men will pay heavy fines for their illegal and wholesale destruction of food fish. Perhaps it is not too much to hope that this unpleasant encounter with determined officers of the law may lead them to forsake poaching and begin honest fishing. If not, the Connecticut Association will undoubtedly repeat the necessary lesson of obedience to wholesome laws.

CHARLESTON, ILL., April 15.—Will Jeffries and Frank Parker were at the Embarras River, April 13, for a day's recreation and angling. They caught some nice fish during the day. Policeman Will Jeffries caught the largest black bass, 2½ lbs. The second one weighed 1½ lbs. Mr. Parker's black bass weighed 2½ lbs., 1½ lbs. and 1 lb. He caught some smaller fish of different kinds. Freeman Biggs caught 18 lbs. of fish in the Embarras River on the 8th inst.; the two largest catfish weighed 1½ lbs. each. Conrad Scheytte caught some fine ones, and also John Miller. I did not learn the kinds and weights.—J. B. D.

TROUT FISHING IN NEW HAMPSHIRE.—Portsmouth, N. H., April 12.—The trout fishing along the adjacent coast here will be unusually early this year. Already snow and ice are gone, and trout are reported jumping at early millers. The season begins May 1, and local anglers are waiting eagerly for the day to come. Brooks that debouch into tide waters are two weeks earlier than those of the interior, and will be visited first.—PISCATAQUA.

FLOODED FISHING GROUNDS.—The lake and river fishes are suffering greatly from the overflow, the waters are running freely into Lake Maurepas, and from there backing up into the Amite and Tickfaw rivers, two of the best black bass streams of southern Louisiana. The outlook is very gloomy for the angler this season, as these streams are now filled with the muddy waters of the Mississippi.—G. P. F.

THERE is a stream of summer visitors to the lakes and shores of Maine, which has been increasing with such remarkable rapidity within the last ten years as to render Maine in a certain sense, a summer resort throughout its entire length and breadth. There is no State in the Union having so large a lake area as this extreme Northwestern corner of New England; including as it does the famous Moosehead and Rangeley lakes and Penobscot River—the latter far-famed for its salmon fishing—while Lake Sebago and a vast number of smaller ponds and brooks are being stocked continually with the most gamy trout, black bass, pickerel and perch to be found in the country. The spring trout service is at present in effect, while on June 30 the summer arrangements will be inaugurated, when express trains will be put on for all points.—*Adv.*

Fishculture.

THE SHAD.—In the Washington station of the U. S. Fish Commission are about 6,000,000 shad eggs taken by the gill-nets and the Fish Commission seines at Fort Washington, on the Potomac. The water in the hatchery has been so cold that the period of incubation was eight to ten days, and the fry are weak. When the temperature of the water reaches 60 deg., and the hatching period is reduced to four days, the young fish will be strong and vigorous. The run of shad in the Potomac up to the present time has been much above that of last year. In the Delaware the yield is enormous. A catch of 75,000 was made in a single day. This, according to Mr. H. C. Ford, is the greatest haul ever taken.

SUCCESSFUL TROUT CULTURE.

M. R. MILTON P. PERCE thinks that trout culture is a failure. When this section of country was settled by white men, thirty years ago, most of the mountain streams were abundantly stocked with the several varieties of the black-spotted or Western brook trout. In course of time the streams near to the larger settlements became seriously depleted. That was particularly the case with the South Platte River, Bear Creek and other streams within 50 miles of Denver. The fishing became so uncertain that old-time fishermen gave up these streams entirely.

In 1876 a State government was organized, and soon after a State fish hatchery was established, a fish commissioner appointed and trout culture was begun on a small scale. The yearly expenditure for the commissioner's salary and all other expenses has since ranged from \$1,500 to \$2,500. Hatching has been confined almost entirely to the spawn of Eastern trout, because it was the easiest and cheapest to be had. In the last ten years the young fry have been quite extensively distributed throughout the State, but the planting has nowhere been abundant because of the limited supply. The hatchery being near Denver, the distribution was naturally first and most plentiful in the exhausted streams near by. The result is that they have become again among the best in the State. And there is no doubt about the artificial planting being the cause of the improvement, because at least four-fifths of the fish now caught are the Eastern brook trout. There was not one in the State before they were planted here, so there can be no possibility of mistake about it. A friend who fished a day in Bear Creek, about twenty miles from Denver, last season, told me he took 64 trout and 60 of them were of the Eastern variety and 4 were natives. This is about the way the catches run in that stream as well as in the Platte and other of its branches, for several years past. Clear Creek was exhausted of native trout; planting has restored very fair fishing in its upper waters. Mining and milling prevent any trout living in its main stream.

Thirty years ago a large and beautiful branch of the South Platte was found to have no fish in it because of an inaccessible fall near its mouth. A neighboring fisherman carried a few trout above the falls and liberated them. It soon became a good trout stream, and for many years past has equalled any upon the eastern slope of the mountains.

Echo Lake, near timber line in Clear Creek basin, was barren of fish because they could not reach it. It was stocked with Eastern trout from the State hatchery. In twenty months trout were taken therefrom that weighed from 2 to 2½ lbs.

A little lake near the head of Muddy River, in Middle Park, that had inflowing water but no visible outlet, had a few native trout placed in it a few years ago by a fisherman who took them with hook and line from a neighboring stream and carried them in a basket to the lake. Now it is abundantly populated, and two years ago I heard of 6 and 7 lb. trout being taken from it.

Our northern neighbor, Wyoming, had no trout in its southern portion—in any of the waters of North Platte River. Trout culture and trout planting have converted hundreds of miles of those same waters into good trout streams.

The Kennel.

FIXTURES.

DOG SHOWS.

April 23 to 26.—First Dog Show of the Schenectady Kennel Club, at Schenectady, N. Y. G. A. Rosa, Secretary.

May 6 to 9.—Second Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. H. W. Wilson, Superintendent.

June 3 to 6.—The Cincinnati Kennel Club's Fourth Annual Show, at Cincinnati, O. Geo. H. Hill, Superintendent.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 9 to 12.—Second Annual Dog Show of the Toledo Kennel Company, at Toledo, O. C. E. Rowland, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratogo Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brumby, Secretary, Marietta, Ga.

NATIONAL GREYHOUND CLUB.

THE following circular has been sent to greyhound fanciers, and it is hoped that all lovers of the breed will respond to the invitation:

NEW YORK, April 17.—An informal meeting was held by the undersigned, and it was decided to organize a specialty club, to be known as the National Greyhound Club. A meeting will be held at the Metropolitan Hotel, New York, Monday, May 5, at 8 P. M., for the purpose of adopting a constitution and electing officers. The object of the club shall be the improvement of the breed of greyhounds in America. It is contemplated making the dues small, in order that all who are interested in the breed may become members and have a voice in the management of the club. You are respectfully and earnestly requested to attend this meeting, either in person or by proxy.

N. Q. POPE, 241 Park place, Brooklyn.

J. H. WATSON, 79 Downing street, Brooklyn.

L. C. WHITON, 115 Broadway, New York.

C. L. GRIFFITH, 82 Front street, New York.

H. W. HUNTINGTON, 148 South Eighth street, Brooklyn.

WHOLESALE DOG POISONING.—Schenectady Station, April 16.—*Editor Forest and Stream:* The city of Schenectady for the past two months has been an ill-fated place for dogs. Not less than fifty dogs have been poisoned, including many valuable ones, and the cowardly wretch who is doing this work has so far avoided detection. He no doubt drops his poisonous baits in the street at night, and the first dog that comes along is a victim. A few weeks ago several gentlemen who have lost their dogs in this manner held a meeting and subscribed a reward of \$400, which will be given to the person who will detect this villain in his work. The last victim was a very valuable Irish setter belonging to Miss Jackson, of Washington avenue. If this vile wretch is ever caught at his villainous work, dog owners will see that he gets all the punishment the law allows.—LOPIS.

BUFFALO DOG SHOW.

THE first annual dog show of the Buffalo Kennel Club was held at Buffalo last week. The weather was not that could be desired, and although the attendance was not what it should have been on the first two days, on Thursday and Friday the building was at times uncomfortably crowded, and we have no doubt that the club has a handsome balance on the right side of the books. The show was held in the rink of the Caledonian Curling Club, a roomy, well-ventilated building, not well located to catch the public, and it is also envied by unattractive surroundings. The entries numbered 387, making Buffalo next on the list in point of numbers after New York, Boston and Chicago. This is a very good showing when we consider that it was at the tail end of the list and that the prize money was less than at any of the others. The early closing of the entries no doubt lost the club quite a number, as many who intended to show there supposed that the date would be well into April, instead of which it was March 25. In many of the classes the winners are well known, and the quality was good, as a reference to the prize list will show. There were some new faces, however, that succeeded in getting into the money and quite a number that won cards.

The show was benched and fed by Spratts in their usual efficient manner. Tallman was superintendent and matters ran smoothly. The managers worked hard, and everything was done by them to insure the comfort of the dogs, and their hospitality to the visitors will long be remembered. The champagne lunches so lavishly showered upon the exhibitors and members of the press, while most excellent in their way, were not nearly so highly prized by the visitors as was the spirit of good fellowship manifested by the members of the club toward every one, and we venture to say that every exhibitor at Buffalo this year will lend hearty support to the club at its future shows. Judging began in fair season on Tuesday, but as several dogs were absent owing to delay caused by an accident on the railroad, a number of classes were left over until the next day, and it was nearly night on Wednesday before the judging was finished. Mr. John Davidson judged pointers, English, Irish and Gordon setters, foxhounds and beagles, and Mr. C. H. Mason the remaining classes. It is needless to say that the judging was well done, and but little fault could be found with the awards.

MASTIFFS.

Mr. Sears had it all his own way in the challenge classes, his pair, Sears' Monarch and Countess of Dunsmore, being the only entries. The dogs did not arrive until the evening of the first day, owing to an accident on the railroad, and the judging of these classes was postponed until the next day. Monarch was looking well, and, notwithstanding his lameness from an injured toe nail, he won his ribbon and also secured the prize for the best legs and feet. In the open dog class, first went to Moele, a nice dog with a good head and plenty of bone. He is a trifle short in body, flat in ribs and too straight behind. Munting Minor, second, has not grown massive, and is rather shelly and light in bone. Zulu, vhc., is too boundy in head. His eyes are too light and he lacks substance. The two bitches shown were not good ones. Merion, the winner, lacks character, and the same may be said of Beaver, placed second, and in addition she is very faulty behind the shoulders. The puppies were not a promising lot. First was withheld and second given to Shelburne Crauk, 8 months old. He may improve, but we doubt if he ever gets into the money again in a fairly good class.

ST. BERNARDS.

Mr. Sears also had the rough challenge St. Bernard classes at his mercy, and won with Plinlimmon, Jr., and Lady Wellington. Hesper was absent. In the open dog class the fight was between Penokee and Tristan G., and after a careful examination Mr. Mason divided first honors between them. Tristan has the better head, but is a trifle short in body and looked tucked up in flank, and his tail is badly carried. Penokee is weak in head, but his body is of good length and his tail is well carried. Bruce, vhc., were it not for his bad eyes and sour expression, we imagine would have made a very good race with the others. The winner in the bitch class, Lady Valentine, is of good size, but not massive enough. She is also too narrow through the head and is lacking in coat. There was nothing else in the class good enough to get into the money, and second was withheld. Lady Isabel, vhc., is weak in head, has a curly coat and is not quite straight in front. Mountain Queen, the winning puppy, is quite promising. She is of good size with plenty of length, and stands well on her legs. She resembles her sire, Burns, and if she goes all right she will do to show again. There was nothing else in the class, at least of the older ones, that showed much promise of future greatness. There were three little fellows, that were given each an h.c. card, that may develop into winners, but they were too young to judge.

In the challenge class for smooth-coated dogs Hector had no trouble in defeating his only competitor, Victor Joseph. Hector was in good form except that he was a trifle thin. In the bitch class the small but typical Thisbe was alone. She was in bad condition, and in consequence was beaten for the special for the best American-bred bitch by Alpine Queen. In the open dog class the incomparable Watch towered above his competitors so far that there was no comparison between them. That the judge thought well of him there is no room for doubt, for he placed him over Hector for the special, and we all knew Mr. Mason's opinion of the latter. Dud, winner of second, is a nice son of Hector and Tromba, much resembling his sire, especially in color and coat. Chang, Jr., vhc., is a noble-looking animal, off in muzzle, and with not quite enough spring to his ribs. Cato, Jr., hc., is a big one, with legs much better than average. He is not massive enough in skull and lacks breadth of muzzle. Alpine Queen, looking well, was the only one to put in an appearance in the bitch class. Gem of Conto-cook, the winner in the puppy class, is quite a good specimen. Her coat will probably be too long for this class next year. Lady Bedivere, placed second, is also a good specimen, with a fair body and excellent legs. Were her head as good as the remaining portion she would do.

NEWFOUNDLANDS.

Aside from the well known winners in the class for Newfoundlanders there was nothing worthy of mention.

GREAT DANES.

The only great Dane shown is a cripple behind and the prize was very properly withheld.

DEERHOUNDS.

Mr. Thayer, as usual, had it all his own way with his string in the deerhound classes. There was only one other entry besides his, Jack, a fair specimen that was vhc. in the open dog class.

GREYHOUNDS.

Balkis and Memnon met in challenge class for greyhound dogs. Memnon was looking well for his twelve years, but his mouth is gone, and his quarters are shrunken, and it seems a pity to see the once grand dog forced, through infirmity, to suffer defeat even by so good a dog as is Balkis. Harmony, looking fairly well, was alone in the bitch class. In the open dog class first went to Conspirator, greatly improved since we saw him at New York. There has been a lot of rubbish written about this dog, and we presume that more will follow. That he is a really good one nobody can deny, but that he is a world-beater we cannot admit. His head is not first-class, being too short, and not right below the eyes; his ribs are not properly sprung, his loin lacks both depth and width, and the formation from hip to hook is not

just right. At other points he is better than the average and will always be a winner in about second class company. The well-known Hazelhurst came next, with Glenboig vhc. Miss Rare was an easy winner in the bitch class. Spider, placed second, was described in our Toronto report. Fannie M., vhc., is one of Uncle Dick's "selling platers," passably fair to look at, but she can't stand a close inspection.

POINTERS.

In the heavy weight challenge class for dogs Graphic was the only one to show up. He was looking well and captured the blue as well as the two specials, beating some good ones and among them Revel III. A few years ago the same judge placed Beaufort over Graphic and Revel III. over Beaufort. We told him that this was all wrong so far as Revel was concerned, and we are pleased to know that he is now convinced that we were right. Revel III. was alone in the bitch class, the only other entry, Stella B. having been transferred to the light weight class. Duke of Vernon, looking better than when we last saw him, had no trouble in disposing of his competitors in the open class. Graphic, in capital condition, came next, with Tempest reserve, and Lord Graphic, looking well, vhc. Hornell Sam, hc., is down in the catalogue as by Jimmie, but whether this is the Jimmie or not we did not learn. Sam has a fairly good head, a nice square muzzle, good loin quarters, legs and feet; he is a bit heavy in shoulders, not straight enough in front and too straight behind. This comprised the class, Sancho being absent.

King of Kent, in bad condition, was alone in the light-weight challenge dog class. His campaign has pulled him down and he needs rest and meat. In the bitch class, Sally Brass II. won over Stella B. The latter is better than Sally in head, muzzle and forelegs, while Sally beats her in shoulders and quarters, and has much the best of it in symmetry and style. In the open dog class, first went to Forest King, looking very well, in fact he looked too lusty for the class. Launcelot second, Naso Peshall reserve, Ben of Kippen vhc. and Hickory Staunch hc., are all well known. Rake Bravo, c., would have undoubtedly been higher up, as he had a good head and muzzle and very fair legs and feet, but he was wretchedly poor and received all he deserved. Bragg, unnoticed, would undoubtedly have received a card, but an abscess on the side of his head spoiled his chance. The other entries in the class, Jerry Brava, Pommerly See and Tribulation were absent. Fan N., looking well, was an easy winner in the bitch class. Nella B., also looking well, was placed second. Haidee, reserve, is fairly good in body, loin, legs and feet; she is faulty in head, not square in muzzle and too wide in front. Flirt, vhc., has a fair head and chest, good loin and passable legs and feet. She is a trifle leggy and has a rropy tail. Bloom, hc., is too light and weedy. Miss Freedom, the remaining entry, was absent. Only one puppy was shown, rather a pretty and quite promising bitch.

ENGLISH SETTERS.

The English setter classes were not well filled. We were informed that number of intended entries in these as well as some of the other classes were neglected until it was too late. The challenge classes were not represented. In the open dog class, Sir Tattion was an easy winner. Although still in bad condition, he was looking better than when we last saw him. Second went to Shot, quite a good-looking dog, except that he is not clean cut under the eyes, is too straight behind, and was shown too fat. Dan R., vhc., we only saw in the ring; he looked worth his card. Pete, c., is a big one, well made, but too coarse throughout. Robin Adair and Revardy were absent. Chautauqua Belle added another win to her list in the bitch class. Countess Daisy, placed second, is a new face and a good one. She is of good color, has a nice head that is beautifully carried on a long and well-turned neck; her chest, loin, quarters, legs and feet are fairly good, and she has no serious faults. Her coat was not in good condition and she did not show well. When she is properly educated for the show ring and in good form, it will take a good one to beat her. Blink Bonnie, looking well, captured the vhc. card. Delle Gladstone, hc., is rather coarse and lacking in quality. She has a fair head, spoiled by bad eyes; her chest, loin, quarters, legs and feet are above average; she stands well in front, but is a trifle too straight behind. The puppies were all young. Hazel Kirk, the winner, is rather promising. The others we did not fancy.

IRISH SETTERS.

Elcho, Jr., had no trouble in disposing of Dick Swiveller in the challenge dog class for Irish setters. Both were looking well, Dick we never saw in so good condition. He has evidently had plenty of exercise, and his muscle has developed considerably, but he is no match for the beautiful son of old Elcho and Noreen, who will now retire on his laurels. He has arrived at the "three score" of a dog's life, and although looking about as well as he ever did, it is fitting that he should give way to younger blood. We hope, however, that for the benefit of lovers of the breed he will still make his appearance at many future shows. Laura B., not at her best, was alone in the bitch class. In the open dog class first went to Henmore Shamrock, the winner of second at Boston. Joe F., the next on the list, is quite a taking-looking dog, his worst fault being in his front legs, which are not straight. Ned, vhc., is also pretty, and has a good head. He is weak in thighs and straight behind. Sarsfield, hc., occupied the same position at Boston. Dan, c., is not a show dog. He is rather coarse, has a light eye and is off in color. Ruby Glenmore, shown a bit thin, had an easy win in the bitch class. Jennie, placed second, is rather a nice bitch, with a good head and capital legs and feet. Her chest and shoulders are fair. She is a trifle coarse and might be better in quarters. Nino, reserve, was looking well. Little Nell, vhc., was also in good condition, except that she is off in color. The puppies were a better lot than we often see. The winner is very pretty and promising. She was claimed at the catalogue price by Dr. D. McLean, of Detroit, Mich.

GORDON SETTERS.

Little Boy scored his last win in the challenge class. He will now be retired. In the bitch class the well known Rose was alone. The open dog class was about the worst we have ever seen in the judge's ring; in fact they were so very bad that the judge got rattled and appeared as though he thought that he was about to make a mistake, which he certainly succeeded in doing by placing Dixon, a fourth-rater, over the third-rater, King Item. Dixon has a good tail that is well carried and that is about all that can be said in his favor. His head is ill-shaped, his shoulders are tied up, he is cat-hammed, bad and straight in hindlegs, wrong in feet and lacking in character and symmetry. King Item, second, was in his proper place in this company, and first should have been withheld. There were only two in the bitch class. Queen Ann, placed first, was shown too fat. She appears to be quite a fair bitch, with a very sweet head, well-bent stifles and good legs and feet. She might be better just behind the shoulders, and her superabundance of flesh gave her the appearance of being too cloddy in build. Second went to the well known Countess Roxie. The winning puppy has a fairly good head and is rather promising.

SPANIELS.

There was a good showing of spaniels, nearly all of them well known. Newton Abbot Don had a walk over in the challenge class for field spaniels. Newton Abbot Darkie being absent. In the open class for black dogs, first went to a new-comer, Samson. He is a bit coarse and too leggy for the prevailing fashion, but he is fairly well made and looks a workman. When he is filled out his appearance will be improved. He has a capital set of legs and feet, and won

Mr. Mason's special for these very useful appendages. Baron and Newton Abbot Carlo were absent, and there was nothing else in the class except Bosco, and the judge thought him just about good enough for the two letters. The bitch class was better, the order being Lady Abbot, Ace of Spades and Miss Bend 'Or, all well known. Lassie was absent. The "Liver" class brought out Newton Abbot Skipper, Napoleon and Bridford Lady, placed in the order written. In the "any other color" class, Adonis was almost alone and his win was a very easy one. He was looking his best, as were all of Mr. Bush's dogs. In the challenge class for cocker dogs, Jersey had no trouble in beating Brantford Red Jacket. He was looking well, and captured the \$100 cup of the Spaniel Club. Miss Ohio II. was alone in the bitch class. She and Jersey won the brace special. In the open class for black dogs the order was Rabbi, King of Obos and Black Duke. The latter did not show up at all well in the ring and we imagine that it was for this reason that he was pegged back. In the bitch class Mr. Bush had it all his own way with Novel, Bessie W. and Fashion. They were shown in beautiful condition. Sensation secured the reserve card and La La vhc. The latter did not arrive until after the class was judged and the winners were brought into the ring again, but she did not succeed in wresting the honors from any of them. The "any other color" dog class contained only the well-known Hornell Dick. He was looking well and deserved his ribbon. The bitch class was a good one and the competition is keen. This class was also rejugged, as La Tosca, detained by the accident on the railroad, was not present. She was knocked about considerably and injured somewhat, but not seriously. The slate as finally made up was La Tosca first, Mollie second, Lady of Learning reserve and King Pharo's Sister vhc.; all are well known. Three Clumbers were shown. Bromine had the challenge class to herself, and in the open class Lass of Beauty had no trouble in securing first from Nancy Belle. The Irish water spaniels are all well known.

COLLIES.

The collies were not out in force, and the absence of the entries from the Chestnut Hill Kennels left the challenge classes without a representative. In the open dog class Sir Walter Scott was far ahead of the class and easily secured first. He is a capital dog, a trifle off in ear and a bit soft and open in coat. Bruce, placed second, is on the coarse side; his ears are not right and he is tied up in his shoulders and consequently does not move well. There was nothing else in the class worthy special mention. In the bitch class Bonnie's Baby won easily; she was looking as sweet as ever, although she was a trifle out of coat. Cressie's Mint came next; her bad ears spoil her otherwise good looks. Jennie Lind is also all wrong in ears and the same may be said of the remainder of the class. No puppies were shown.

HOUNDS.

There were no entries in the foxhound classes. In the basnet hound class the well known Bertrand won over Chasseur. The latter is good in head, but is quite too shallow and light throughout. Black Prinz, the only one noticed in the class for dachshunde, is a fair-looking specimen, much too light in skin, and he knuckles over badly on his right foreleg. The beagles were an excellent lot. All the winners are well known. In the challenge dog class Royal Krueger, looking better than we remember to have seen him, was placed over Little Duke, who shows age and has fallen away in quarters. Lou had no trouble in winning in the bitch class over Myrtle, who shows her eight years. In the open dog class, Racer, Jr. scored another win, with a nice brace owned by the Van Buren Kennels second and reserve. The same kennel won first in bitches with Florence, and they also showed, for exhibition only, a very taking looking pack of a dozen that were a good, even, sorry lot. Whisper, second in the bitch class, we fear is going wrong in front.

BULLDOGS.

Harper scored his first win in the challenge class without competition. There was no entry in the bitch class. In the open dog class, Monarch VI. and Oswego were the only ones to show up and they were respectively first and second. The more we see of Oswego the better we like him. His worst fault is the way he stands on his legs. In the bitch class, first went to Naiad, that was second to Dimple at Boston. The latter was unfortunately smothered in her box on her way to the show, and Naiad came very near meeting the same fate on her way home, but fortunately Mr. Dole looked in her box at Albany and discovered her condition; and although she was nearly lifeless he succeeded in bringing her round, and at last accounts she was doing well. Lena Langtry, placed second, was the only other entry in the class to show up. She is a moderate specimen.

BULL-TERRIERS.

Jubilee, the only entry in the challenge dog class, was absent. Royal Rose was alone in the bitch class, Marguerite being absent. In the open dog class, Diamond King was first. He was second to Beryl at Boston. Harvester, placed second, was vhc. at Boston. Dufferin, vhc., had the best body, legs and feet in the class, but he is short in head and too full in cheeks, which will grow worse, we fear. He also shows a number of black flecks, that are not orthodox in a bull-terrier. Attraction, Miss Bendigo and Rose, all well known, were placed as written. Millstream, entered in this class, was in the box with the bull bitch Dimple, and was also smothered.

FOX-TERRIERS.

Raby Mixer, in grand form, beat Bacchanal in the challenge dog class. The latter is going to pieces fast. In the bitch class Richmond Dazzle fairly outclassed her only competitor, Blemton Brilliant. The open dog class was not a strong one. Blemton Volunteer, placed first, is not of so good type as Reckoner, second; in fact, the latter beats him at all points except in mouth, which is gone, and he was forced to take second place. In the bitch class Rosa Canina, looking better than we ever saw her, had an easy win. Blemton Comely, placed second, is a bit leggy and weedy, wrong in expression, and her coat is scant. Blemton Rapture, vhc., is plain in head and her ears are badly carried. Hillside Model and Meersbrook Nan, also vhc., are well known. The latter is growing wide in front and cheeky. Empress, hc., we do not like; her greyhound head is not the thing, her ears are big and her expression is bad. She is also too long between couplings. Her good front, shoulders and coat, undoubtedly won her the card. Hillside Rascal, first in dog puppies, is a good fronted dog, with plenty of bone and excellent legs and feet. He has plenty of coat, his ears are too large and not the right shape, but they are well carried. Blemton Comely was second, and Empress and Oriole Venon vhc. The latter is of better type than Empress, but was handicapped by her small size.

BLACK AND TAN TERRIERS.

Fourteen entries in these classes, one less than at New York, was a pretty good showing. Buffalo General was alone in the challenge dog class. In the bitch class, Buffalo Lass, formerly Rochelle Lass, and Meersbrook Maiden were the only competitors, the blue going to the Maiden. She also won the special for the best of the breed and Mr. Volger's special bottle of wine for the best bitch. Before leaving England Meersbrook Maiden won some twenty first prizes, defeating about every dog of note at that time on the benches. She has also done a lot of winning since she came to this country, and her owner, believing that she is in better form than when she left England, has concluded to send her over there for the purpose of competing at some of the shows, and she will sail next Saturday in care of Mr. Geo. Thomas, who visits England for a stay of about two months,

give a half teaspoonful of powdered areca nut made into a pill with lard. Six hours after giving the pill give a dose of castor oil, dessertspoonful. You had better give a 5-grain quinine pill every day for a week.

CATSKILL, N. Y., April 19.—The fifth trap shooting tournament proved a great success, and Manager Geo. F. Tolley was delighted with the fine weather, excellent attendance and the generally auspicious opening of the new shooting grounds. The arrangement of the traps, pits, trap-pulling devices and facilities for the scores were all that could be desired; the only drawback to the day's enjoyment was the raw, cutting wind that chilled the participants during the morning, but which toward the latter part of the day died out, to everybody's great relief, and the sport was continued until the ten contests outlined on the programme were shot out, and two extra sweepstakes were indulged in besides. The Catskill sportsmen were especially gratified at the liberal number of strangers present, the list including eight from Albany, five from Saratoga, one from Cohoes, and there were also representatives from Philmont, Chatham and Saugerties, and also one from Park Ridge, N. J., and a capital fellow and good shot he proved to be. The contests were shot out on the rapid firing system. Following are the leading scores which show the winners. All ties decided, except in two events as shown below:

First event, 10 kingbirds, four moneys:			
Bemis.....	9	Buck.....	8
Mattice.....	9	Hollis.....	8
Beach.....	8	Kenmore.....	7
McGinnis.....	8	Pike.....	6
Second event, 10 kingbirds, four moneys:			
Beach.....	10	McVicker.....	7
Mattice.....	10	Ellis.....	7
Pike.....	8	Kratz.....	7
Post.....	8	Hollis.....	7
McGinnis.....	8	Buck.....	6
Third event, 15 kingbirds, four moneys:			
Bemis.....	14	Mattice.....	13
McGinnis.....	14	Hollis.....	12
McVicker.....	13	Post.....	11
Hall.....	13	Buck.....	11
Fourth event, 10 kingbirds, 4 moneys:			
Beach.....	9	Mattice.....	8
Pike.....	9	Buck.....	8
Bemis.....	9	Hollis.....	7
McGinnis.....	8	McVicker.....	6
Fifth event, 20 kingbirds, 4 moneys:			
Hollis.....	18	Kratz.....	17
Pike.....	17	McVicker.....	16
Mattice.....	17	Mattice.....	16
Sixth event, 15 kingbirds, 4 moneys:			
Beach.....	13	Bemis.....	13
Mattice.....	13	Hall.....	13
Ellis.....	13	McGinnis.....	13
Seventh event, 10 kingbirds, 4 moneys:			
Mattice.....	19	Hall.....	18
Bemis.....	19	Hollis.....	17
Eighth event, 15 kingbirds, three moneys:			
Mattice.....	14	Buck.....	11
Pike.....	13	Hall.....	11
McVicker.....	11	Bemis.....	11
Tenth event, 10 kingbirds, three moneys:			
McVicker.....	9	Buck.....	8
Mattice.....	9	Pike.....	8

JERSEY CITY, N. J.,—Trap shooting both at animate and inanimate targets is still booming. The magnificent trip of the Cartridge Company's champions, and the admirable account thereof in your paper by Hough has added not a little to the impetus. Things in the gunning line are looking very healthy just now. A number of the younger shooters of the Heights recently got together and a fine new club was the result, to be called the "Jersey City Field Gun Club." Its object, practice at the traps for shooting in the field and also at the range. The club has elected as its officers, a natural position as the score, and one would take behind dog in the field or brush, gun below the elbow until the bird rises. The second barrel to count only as a half bird. The club contains fifteen members, mostly new shooters, with a few of the older shooters to give advice to the younger members. Half of the shooters take their places before the 5 traps, and each shoots his 5 birds while the other half take their positions in the field outside the 5 traps, and each shoots his 5 birds by those at the score. At the end of the shoot all birds are brought in and equally divided, thus giving all, both the amateurs and new shooters, a chance with the others. The following officers were elected for the ensuing year: Pres., D. N. Tibbles; Vice-Pres., Dr. F. A. Cummins; Treas., N. D. Taylor, Jr.; Sec'y, Geo. B. Eaton; Executive and Finance, D. N. Tibbles; Ensign, J. J. McGinnis; and Capt., B. Eaton. The club has engaged the grounds of the Jersey City Heights Gun Club for these monthly shoots for the coming year. The initial shoot of the club took place on the before-mentioned grounds on Saturday, the 19th inst. Owing to the small supply of birds only ten of the members faced the traps, 10 birds a man, 25 birds, rise, no handicap in regard to guns, as the game in the field is not supposed to lay any closer to a 12 than a 10-bore call. The birds were a fair lot, some duifers and some corkers, the get up and git and twist ones. Some good stops were made. Caswell, at his first appearance at trap-shooting, did himself credit, his first bird, killed with the second barrel was very good. Moran astonished himself as well as his friends. Van Buren started off splendidly, but got chilled when out on the skirmish line and went all to pieces on the last 3 of his second 5. Otherwise he would have been top notch. He says he will be there next time. Smith had been visiting, he said, the night before, and couldn't get them all. Dr. T. don't want a word said when he goes to the score, and a very little chaffing of the boys will throw him off. He was badgered some, and he says he has his score. The following is the score:

J. Moran.....	11111100114	73
Van Smith.....	101311101114	73
R. Dines.....	11110101347	7
J. Collins.....	01341110110	54
S. Van Buren.....	11111110000	64
G. N. Tibbles.....	10101110111	64
Dr. Cummins.....	13101110111	64
G. Caswell.....	10101110111	64
N. D. Taylor, Jr.....	0001010111	44

Geo. B. Eaton referee and scorer. As the boys killed more than half of their birds, and most of the missed ones were stopped and brought in by the skirmish line, they feel pretty well pleased at the result of their first shoot. They will try it again on the 16th of next month.—JACOB STAFF.

LONDON, Ont., April 15.—Shoot No. 19, on London Gun Club grounds. A very interesting shoot took place to-day on the club grounds; the match was for the cost of targets and expenses, and really meant a race between the well-known crack shots and champions of this city. The contestants were, Evans taking a "C" man on his and Treblecock taking Griggs a "C" man. The race was very exciting from the start, being a regular club shooting day, and the score was close all through; but Treblecock, or better known as "Redpath" at the trap, got down to his steady work and pulled his side out with considerable credit to himself, making a very favorable score. The five new Keystone traps and inductor was used, and the Keystone targets were thrown about by the boys, which made trap-shooting rather difficult. The London Gun Club expects to hold a tournament in July, open to the world, and will offer \$1,000 in gold and \$500 in prizes.

Redpath.....	38	Evans.....	30
T. K. Griggs.....	16-54	Lyman.....	19-49

Match at 30 singles: Rigby 13, Brock 9, Botman 4, Blackburn 12. April 18.—Five but with 5 traps, Keystone, 165, 5 singles: Dwyer.....011000100101.....Brook.....000100000100.....2

MT. VERNON, N. Y.—The sportsmen here have organized a gun club and duly incorporated it as the Mount Vernon Gun Club, for the purpose of "social, mutual benefit, yachting, hunting, fishing, or other lawful sporting purposes, and to prevent any unlawful hunting, or shooting, or any other act, or to aid in the suppression thereof, and for the punishment of offenders in this behalf." The club managers for this year are Leonard D. Tice, Peter Magee, William H. Mackey, Richard H. Cassebeer and Mott Ernigh.

LANSING, Mich., April 19.—At the regular weekly shoot of the Lansing Rod and Gun Club to-day at 30 singles and 5 pairs doubles, Smith came in after the first 10 had been shot. The weather was good and clear. The score was as follows: Chatterton 23, Davis 21, Hall 24, Nichols 26, Shillings 23, Wright 19, Smith 9. On the doubles, Chatterton 4, Davis 7, Hall 2, Nichols 7, Shillings 6, Wright 6, Smith 2, Totals, Chatterton 27, Davis 23, Hall 20, Nichols 33, Shillings 23, Wright 23, Smith 11.—G. M. K., Jr.

CAPT. BOGARDAUS.—The veteran shot is out with another omnibus challenge and now says: "I am ready to make a match with any ten, fifteen or twenty men in America to shoot at 100 pigeons, any rules, double or single birds, for from \$100 to \$500 a side each match; matches to be shot after close of my season with the Forepaugh show. I will shoot these matches in succession, one match each day until the series of ten, fifteen or twenty is finished."

PLEASANTVILLE, N. J., April 21.—The Pleasantville Gun Club made the following scores this afternoon at their regular shoot, each man shooting at 25 bluebirds: Elwood Adams 21, D. M. Ingersoll 17, R. M. Willis 12, Mark Sanders 13, Elmer Leeds 12, C. Hackett 9. The following score was afterward made at Capt. Mark Sanders 19 out of 25, Elwood Adams 10 out of 12, R. M. Willis 6 out of 10, Elmer Leeds 7 out of 10, D. M. Ingersoll 7 out of 10.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

FIXTURES.

MAY.	
30. Red Dragon, Spring Regatta	29-June 1. Passaic River Meet, and Trips, Cups, Newark Bay.
30. South Boston, Open.

1. Ianthe, Annual.	20. New Jersey Athletic, Bergen Point, Fall.

1,500 MILES IN AN ADIRONDACK BOAT.

PART XVII.

NEW YORK BAY AND RARITAN RIVER, Oct. 24—Friday.—Having had a hearty breakfast, I started off at 8:30, against the tide, and before long had my hands full dodging the steamers and other numerous craft plying about. There was a strong west wind and with it a cold day, ice having formed during the night on shore. I kept along the Jersey City front, rowing in a lively manner, occasionally, to escape the ferry boats. Frequently four steamers, tugs, etc. would be bearing down on me at once from different quarters, when it became very awkward to know what to do. Usually I lay on my oars while they would rush by, just grazing me, and the uncomfortably close that often my boat followed in the eddy of their wake, drawn suddenly in that direction; afterwards the little swashy waves followed, making everything extremely disagreeable. Many were the warning whistles blown for my sole edification, the only thing was to stop and wait for the vessel to steer clear. This soon became a constant source of worry and I breathed freer after Bedloe's Island was passed.

From here I made direct for New Brighton, Staten Island, where the Strait of the Kill von Kull begins. Crossing the bay from Hoboken to Staten Island is a distance of seven miles, and the wind being very strong I was shaken up considerably, the boat making much leeway. Three miles takes one through the Kill von Kull to Newark Bay and Elizabethport, a town on the other side of the bay at the entrance to Arthur Kill, or Staten Island Sound, as it is now called. On entering Newark Bay, I stopped at the Bedloe's Island, a stone hopkin built in the water, and the distance from shore, and clambering up to the stone platform by a rope ladder, had a good look at my surroundings. The lighthouse was a large granite structure, very solid in appearance.

At 1 P. M. I arrived at Elizabethport, 13 miles from Hoboken, having had the wind and waves across my course for the entire time. The place is very close to the shore and the water is very shallow. I would have done, I came a considerable distance out of my way in trying to avoid the wind and waves from the west; but got quite wet, nevertheless, and the salt water is noticeably longer in drying off one's clothes than the fresh element. While crossing New York Bay it became very rough indeed. There is no current through this Strait, it being slack water. (The writer does not know what he is saying in not striking a few tide waves in the Kill.)

Elizabethport is a short distance beyond the entrance to Arthur Kill. Observing a number of sloops unloading oysters, I embraced the golden opportunity and landed for dinner. Repairing to a little restaurant, I at once ordered a dozen "fresh" and a big stew; then some pork and beans, then a sizeable beefsteak and some potatoes, ending finally with pumpkin pie. I expressed my regrets to the friendly proprietor that human capacity forbids my sampling his clam chowder, and then left for my boat after the biggest dinner for years. The chance of getting some milk was not overlooked, and I carried off two bottles full, laying in a stock of fresh water also.

I got off at 2:30, and proceeded down the Sound, which is a curious place, at first resembling a small river, winding in and out in all directions through great grass flats, this continuing for 5 miles. The stream is narrow, and the many curves so sharp that on turning a bend the Sound ran in almost the opposite direction to that of the previous reach. Large schooners, two and three masted, were sailing through; and very much out of place they looked, causing much wonder as to how they managed the short haul, and how they could get a few feet above high water, and on them grew naught but rank grasses, the flats extending on all sides for miles, and the air being saturated with the flavor of salt.

Looking across the broad brown expanse, it was impossible to define the tortuous course of the Sound save by the sails of the sloops and schooners sailing along. Only their spars and rigging could be seen above the flats, and they presented a curious appearance sailing through a country where no water was visible. Though narrow, the channel is proportionately deep. After several miles of this, however, the place widened out, and two small towns and several chemical works and fertilizing factories were passed. These latter doubtless fill the wild barrenness of the flats more suitable for their horrid odors and noxious smells; humanly not tolerable, and in fact, very near to the water.

Occasionally I saw clumps of trees and woods, but these were scarce; otherwise not a landmark broke the monotony of the surroundings. Nature had her own peculiar beauty, however, which the varied shades of color in the changing grasses and distant clumps of trees enhanced not a little. After the first village Chelsea, navigation widened, and the Sound became more straight, one being able to see a couple of miles ahead and a mile across the water. Many small and small schooners, cruising along, picking up their shells were engaged in oystering or fishing. The oyster shells were very numerous, the men in their using tongs 12 to 18 ft. long, and scooping in the bivalves by dozens. The best are picked out and the others returned to their native element. On one of the vessels was a skipper at the wheel with a stovepipe hat on, not by any means in the best condition; and not being particular how he wore it the effect was ludicrous in the extreme, contrasting as it did with his filthy boat.

Just before reaching Perth Amboy I passed some huge coal piers, opposite which the Sound became quite wide. It is but 13 miles by my reckoning from Elizabethport to Perth Amboy; but I am told that the distance is 18 miles by water. The town is on the right hand side of the Kill, and has considerable shipping. The water is but a quarter of a mile wide, having narrowed again; but beyond the city Raritan Bay opens, whence I struck out for the mouth of the Raritan River, with a final good bye to the State of New York. Arthur Kill flows between the State of New Jersey and Staten Island, belonging to New York, and its tides at certain times run with great rapidity, though not over one mile per hour when I was in them.

The mouth of the Raritan River is marked by a long railroad bridge with a draw, and is not over a mile from the outlet of the Sound. Entering the river, I had a strong current against me, as the tide was now running out. While in the Bay, I could see the Atlantic Ocean, toward Sandy Hook; the last place where sea and sky met was on Lake Ontario. Raritan Bay has shallow water, there being but one or two deep channels in it. Several miles across, a short distance from Perth Amboy, its surface as

far as it can be seen is covered with stakes extending about 10 ft. above the surface of the water, and presenting much the appearance of a forest of dead saplings.

These placed in regular order, mark great oyster beds, each man having his lot thus marked out, but it is quite a mystery to me how they could possibly find their own deposits, there being no mark or sign on the stakes. Those having the outermost beds have to travel several miles to reach them. A remarkable sight it was to see the hundreds of boats dotted over this wide expanse, while sloops and larger vessels were tacking about and picking them up. Having asked one of the fishermen how they managed to drive in the poles down so firmly, he told me that it was only necessary to stick them down into the mud, the next morning they were so fast as not to be pulled up again. Planting the oysters is as extensive a branch of the business as afterwards fishing for them.

While about to enter the Raritan River, I met a large tow coming down. The stream wound about in every direction in rapid succession, the tow being about 1/2 mile at a certain point, increasing to 1/2 and even 1 mile at a certain point, contracting again gradually. Its banks consist of oozy mud, salt marshes stretching thence for long distances on either side, to hard ground beyond. It was a lonely place, there being no sign of life save some fish leaping out of the water here and there, and a few men on the bank building a seine across, being meanwhile up the river to drive in the poles down so firmly, he told me that it was only necessary to stick them down into the mud, the next morning they were so fast as not to be pulled up again. Planting the oysters is as extensive a branch of the business as afterwards fishing for them.

While about to enter the Raritan River, I met a large tow coming down. The stream wound about in every direction in rapid succession, the tow being about 1/2 mile at a certain point, increasing to 1/2 and even 1 mile at a certain point, contracting again gradually. Its banks consist of oozy mud, salt marshes stretching thence for long distances on either side, to hard ground beyond. It was a lonely place, there being no sign of life save some fish leaping out of the water here and there, and a few men on the bank building a seine across, being meanwhile up the river to drive in the poles down so firmly, he told me that it was only necessary to stick them down into the mud, the next morning they were so fast as not to be pulled up again. Planting the oysters is as extensive a branch of the business as afterwards fishing for them.

Night fell, and at about 6:30, at low water, I ceased rowing, and, settling myself on the floor of the boat, began to discuss supper. I had barely got comfortably under a blanket to ward off the chilling air, when a huge sidewheel steamer came wheezing along, and before I knew it, was being directly down on me as my boat happened to be in the narrow channel, which ran very close to the right bank. I quickly showed my light, not having sufficient time to get out into the river further, and this had the desired effect, the steamer suddenly veering off the instant the light was exposed; but she nevertheless passed extremely close, near enough to make me hold my breath and thank Providence for the twentieth time during my journey for a very narrow escape from annihilation. The breaking roller that followed from the steamer's quick turning aside nearly put an end to my meal, however.

Before tea was finished, another little scare came, which resulted in the upsetting of my milk pot. After the steamer was gone, and the silence was again death-like, I was startled by a most fearful and realistic groan within a few yards of my boat, apparently coming from under the muddy bank. Striving to ascertain the cause of the noise, I raised my head and expecting momentarily to find myself confronting one of Captain Kidd's victims, once murdered here, I discovered that the noise was caused by the slowly rising tide, which had turned during my repast, the air and water contending for the possession of a small hole in the mud.

By the retreating steamboat's sparks and lights I could see where the course led, and it was interesting, though rather discouraging, to notice how she wound about through the mud and marshes. The groan was my warning that the flood had begun, and I took advantage of it. Before long the river contracted to 1/2 and then 1/4 of a mile, and hard ground appeared in place of the swamps. Heavily wooded ridges on the left, and a farmhouse or two on the right, became visible; and I rowed on steadily up the dark stream, guided only by the light of my Buckeye lantern shining on the farm house, until about 4 miles beyond the first hard ground, the lights of New Brunswick shone out.

It was so pitchy dark, however, that I rowed past the entrance lock up the river to the Pennsylvania R. R. bridge; where, the river being shallow, I landed and after some trouble obtained the information that there was the second lock on the Delaware and Raritan Canal, nearly a mile above its entrance into tidewater. I then landed at the farm house, and after a mile or so, I reached the south side of the river, and I got a man to aid in carrying my boat up. Again afloat, I went through a large lock in company with a steamer and entered on a 5 mile level. After two miles of rowing on this, I found a lodging at a house near the canal at 9:30.

An old woman lived here, and it was difficult to convince her that I was, as I claimed, a gentleman, and not a tramp or some civilly disposed person. My appearance much belied my statements, for besides the general effect of my costume, a copious smearing of Raritan mud did not make me a bit more respectable. After a long argument she reluctantly gave me a bed, first narrating for my benefit several stories about robbers and firebugs. Being a very cold night, and as at that hour one could not tolerably certain that all the farm house would be closed, I placed my cause with all the eloquence at my command. During the day a head wind had prevailed, and the tides for and against had just balanced each other. From Perth Amboy to New Brunswick was a good 13 miles by my route, and now, being 3 miles beyond the latter city, I had pulled 20 miles since dinner, 42 miles during the day. The old lady could not understand why I did not stop in the town for the night, and I am afraid that she did not sleep well.

PHILADELPHIA, Pa.

WAH-WAH-TAY-SEE.

Floating on the limped water
Came the firely Wah-wah-tay-see,
Came the big canoe of Trenton;
On she came and then went onward,
Cutting sharp in beads the water
Of the placid Delaware.

THE canoeists of Trenton, N. J., were in high feather on Monday afternoon of last week, when twenty one owned and named the big war canoe Wah-wah-tay-see and sent her on her trial trip about the waters of the Delaware River Falls and up to Park Island, the resort of canoeists in this section.

It was a perfect afternoon and warm, also a quasi-holiday, and canoeists and would-be canoeists of all shapes and sizes tumbled in and had a good time. Ex-Secretary Carter manned the big paddle, but the single blades, a cornet and a 39in. tin horn completed the outfit.

The crew drank nothing stronger than Delaware River water and thus avoided any untoward mishap—though the many spectators on the bridge predicted an upset. Many trips are already being planned and gay times are expected.

The Wah-wah-tay-see is 30ft. long, 50in. beam and 22in. deep, and the Trenton Club, which first owned and paddled in the United States, is all other claims to the contrary notwithstanding. Her builder is Rogers, of the Ontario Canoe Company, who has turned out another good neat boat to keep company with the already large fleet which he has sent to Trenton.

If a crew can be raised, the boat will attend the A. C. A. Meet.

1640.

PURITAN C. C.—No, we are not "snowed under" because you have not heard from us for some time. Quite the contrary is the case, for our grass will have to be cut very soon. The winter here, as elsewhere, has been very open, and every Sunday has found some of the Puritans upon the deep in order more perfectly to commune with nature. Since February we have kept a register at the club house. If there is a canoe club within reach of this article that does not, let it immediately mend its ways. The club register is one of the greatest magnets known to attract the members to the club. Every one is desirous of having his name appear as often as possible upon its pages, hence there is usually a good attendance. During the month of February the daily average attendance was six men, in March we went one better and made it seven. Our fleet has been increased this winter by the addition of five new boats. For one Class from the water to the shore, the former measuring 16.5ft. x 33in. x 15in. making very able cruisers. The Class B boat is one of Joyner's racers, called the Imp, a tidy craft and likely to develop some speed. One of the new ones is an open canoe rigged for sailing. The club house has been made more comfortable and attractive by a library, pictures, a dark room and a shower bath for both men and canoe. The shower for canoeists is merely a pipe run from the water to the front of the house, where the salt water may be washed off of the boats and jewelry, both of which are more or less affected by the salt. More accommodations will soon be added for the fleet, as everything points to a busy season. Any canoeists wandering in the vicinity of the "Hub" are sure of a welcome by calling at 851 E. Sixth street, City Point, after 6 o'clock P. M.—JAMES W. CARTWRIGHT, Jr., Secretary P. C. C.

THE NEW DEED OF GIFT.

ONE result of the letter of the special committee of the New York Y. C., which we published last week, will be to bring up for a more thorough discussion than it has yet undergone the now famous deed of gift passed by the donors of the yacht after the victory of Thistle races. Although the prompt and vigorous protest of the FOREST AND STREAM against both the matter of the new deed and the manner of its adoption created a good deal of comment at the time, most American yachtsmen were not then disposed to question or censure any action of the men who had just carried out a most spirited and successful defense of the American Cup; they declined to consider the document on its own merits, and disposed of all troublesome questions on specific points by the sweeping conclusion that any action of Gen. Paine and the officers of the New York Y. C. could not be other than fair and above criticism. Now, however, that the practical working of the new deed has been made evident by the withdrawal of a *bona fide* challenge, that of Mr. Chas. Sweet in 1887, the general condemnation of the deed as unfair and unseemly, and by the substitution of equables and disputes in place of matches on the sea, the occasion seems a fit one for a new and more thorough examination of the document in question.

The history of the original deed of gift and its repudiation presents a number of very interesting points; the legality of any change from the spirit and letter of the original deed; the propriety of any violation of a trust which should have been sacred, even though such change were not distinctly illegal; the legality, granting that the club had the right to make changes, of the manner in which the last change was made by a few men, without being submitted freely to the votes of the 700 members of the club. Important as they are, we do not propose to discuss them now, but merely to take up the new deed itself on its merits as affecting international racing.

The first point that strikes the careful reader is that the subject is dealt with, not as the original words of the five donors dictate, but according to the very different method of procedure that has been followed from the first by the New York Y. C. The first consideration, in the original deed, is the amicable arrangement, on all terms, at no specified date, between the holder and the challenger, *falling which*, in such a case only, the six months clause comes in, to secure at least one race to the challenger. So far from inviting, or even permitting such an amicable agreement, the New York Y. C. started out wrongly in 1870 by refusing to

allow the Cup to be sailed for on any other terms than those laid down in this supplementary clause, even going further than this in placing a still more stringent interpretation on terms already severe. From that time down it has refused every overture for an agreement that was not entirely one-sided, and have exacted this same six months clause, from a mere adjunct to the main protest, to a written promise of the club's successive challenge; even when it worked manifestly to the club's disadvantage.

So far has this idea been carried that when the second deed was framed in 1882 the challenger was compelled, in order to get even a civil reply from the club, to send his challenge with not more than six nor less than seven months' notice. Although it is expressly provided in the second deed that the holder has the power to waive this six months' notice at will; in the case of the Royal Clyde challenge of Sept. 21, 1882, to mention only one instance, the same six months' clause was twisted into a subterfuge to avoid making a fair and open agreement with the challenger in October, he being forced to wait until March before sending a challenge, and then being forced to take whatever the New York Y. C. chose to give, including one race over the inside course, or else to have no chance for the Cup.

When the history of the various races is studied, and one sees how this prime idea of the donors, a mutual and amicable agreement, has been constantly kept in the background, and the supplementary six months' clause has been put in its place, it is no surprise to find that in the new deed all idea of a mutual agreement as to the vital points of size and class of yacht is entirely cast aside; and, in order to challenge, the holder is required to send a humble and, nearly a year in advance, a minute description of his yacht, and from this the club can decide how dangerous a competitor he is likely to prove, and just what "generous concessions" it can safely make to him. The challenger has no rights except to three races with a 90ft. cutter or 115ft. schooner, without time allowance, he is at the mercy of the holder from the day his name is begun, and once the holder has decided to give either back down completely or subscribe humbly to any "mutual agreement" that the holder chooses to dictate. This is the guiding principle on which the new deed is based, and as we shall see the details are thoroughly in accord with it. While some of the provisions of the deed are excellent and highly necessary, such as that concerning the rights of centerboard yachts, they are of small importance compared with the mischievous nature of other clauses, notably the 4th, 5th and 7th.

The fifth clause completely obliterates all idea of a mutual agreement as the preliminary step to a race. It insists on a surrender of all the rights of the challenger to the holder before he can be entitled to any recognition; he must come, not as an equal, having certain rights guaranteed him, but as a suitor for certain privileges. What the inalienable rights of every challenger are can easily be settled by the ordinary usage of all club regatta and private matches. A fair course is guaranteed, not obviously in favor of the home boat, the yachts are matched according to the recognized classes of the club, and the established measurement rules and allowance tables are applied to all contestants. Every man has the right to trim his boat as he pleases, to alter her in any way not conflicting with the one or two requirements of the rules, all being on a par, and no stranger is compelled to divide all the dimensions of his yacht long enough in advance to permit her to be outbuilt.

That portion of the 5th clause relating to the dimensions is probably the meanest restriction ever known in yacht racing. The demand is made on the challenger for the waterline length, the beam at two places, at the waterline and at the point of greatest breadth, and the draft of water. The plea that all these dimensions are needed to identify the yacht is so palpably false as to need no argument. Challengers are not turned out by the gross like bachelors, and bachelors, and very few men own more than two or three 90ft. racers of the same name. To any one who remembers the amount of guesswork and speculation over the dimensions, especially the draft, of the late challengers, the reason for this demand is clear; what is wanted is a knowledge of the model and power of the vessel in order to outbuild her or to determine the best type with which to oppose her. It goes as near as it possibly can to a demand for the holder's secret, and for the holder, something that every true sportsman must despise. The holder has certain important rights; he is entitled to know the rig and the class, by his rules, in which a challenger will come, leaving to him the task of devising a boat of the same class under those rules to beat her. What a challenger's yacht draws is absolutely no more the business of the holder than whether the former pays his steward and his meat bills. Given the class and rig of a yacht, it is his business to know the weight, the beam and draft, as he pleases, together with foreboard, overhang and ballast. The whole talk about outbuilding the holder, springing challenges at the last possible moment when time is too short to build, and similar yarns that have been advanced to support this objectionable demand, vanish as soon as a holder is willing to accept overtures in good season for a mutual agreement.

Under the case of the Royal Clyde Y. C., the common length of waterline or corrected length of both Volunteer and Thistle might have been settled by November, giving nearly a year instead of six months to build the former yacht. Similarly in the case of Mr. Sweet's challenge, which was so meanly treated in 1887, the entire details of the race, including all that the holder had any right to know, could have been put in black and white by the middle of October, before Messrs. Burgess, Gardner and Smith left the country, giving a year in which American designers and owners could have worked together.

There can be no doubt but that the framers of the new deed intended to do a very mean thing when they drew up this clause, but it is reasonably certain that none of them realized at the time what a very foolish thing they were doing as well. What they ask for is a detailed description of the yacht, and ask for the hundreds of a foot; not as a tailor measures cloth or a ship chandler rope, but as closely as measurements can be made on a design, or on the vessel itself. If then this paragraph be construed literally, and in accord with the whole tenor of this pretentious "deed," the designer must, at least eleven months before the race, have decided all the vital points of his yacht, and put the plan in writing, before the first of January, or the first of February, in defense of this demand it has been urged that he is at liberty to understate his dimensions, by what margin is not specified; but such a plea will not hold good. The New York Y. C. is not taking all this trouble to get approximate or fictitious dimensions; what it receives in the winter will be verified by its measure before the first race; and while it may, by way of "generous concession," set its eyes on the draft of the challenger's yacht, and if it seemed necessary, it may make as much trouble over two inches difference as was made on all sides over Thistle's waterline. The only safe construction that a challenger or his designer can put on this demand is that he must follow it to the letter, not varying from it more than the finished yacht varies from a design on the mould loft floor.

If Messrs. Watson, Pife or Richardson can do this, build a yacht to a designed waterline with the absolute certainty that she will be at her best in such trim, needing neither more nor less ballast, they will do a great deal more than Messrs. Burgess, Gardner, Smith or McVey are in the habit of doing. Examples of changes of trim, such as are absolutely prohibited in a foreign challenger after his challenge has left England, may be found in nearly every new yacht afloat in our waters; Puritan was tested with various weights before her best trim was found; Mayflower had her ballast plan materially changed, a shoe being added aft, before she could carry her sail; Volunteer was sailed at less than her designed length and draft; Marguerite, schooner, had 11 tons taken from her keel; Saracen in her second season drew more than in her first; Marquitta will be differently ballasted this year; Gorilla was tried with some variations of three or four tons; Liris and Catol were sailed at different drafts, and if it seemed necessary, ballast and in contour of keel having been found necessary; Titania had to be ballasted until she was out of the 70ft. class before she won her races; Helen was over the 40ft. limit before last season closed, and so on through the fleet; every yachtsman and designer expects to find some variation from the designed waterline, either in depth or in fore and aft trim, before a yacht is at her best; and, if one is freely permitted—save to a challenger for the America's Cup.

The final paragraph of the seventh clause is a fitting complement to the fourth clause; with it making the size of single-stick vessel which may challenge for the Cup 90ft., neither more nor less. In commenting on the new deed in 1887, we said: "It may be that some Quixotic Briton, with more valor than discretion, will rush hastily in to this challenge, and if it seemed necessary, he will do so." Such has really been the case, but there seems to be small chance of any one following Lord Dunraven with another challenge from a 70-footer, or of any one building such a useless machine as a 90ft. racing cutter, to cross for the Cup. It must be plain to all after the Valkyrie episode that the New York Y. C. will put nothing smaller than Volunteer to defend the Cup, even against a 65ft. yacht, and if such conditions, even though they are willing to build a 90-footer, to give her dimensions a year in advance, and not to vary from them in sailing, and to cross the ocean in a safe and seaworthy craft to race under a waterline length rule against any sort of 90ft. machine that can

be designed to beat them; the chances of ultimate success are hardly brilliant enough to tempt British yachtsmen.

The demand for the challenger's dimensions and the practical denial of his right to alter the trim and draft of his yacht after such dimensions are filed are certainly bad enough; but they are insignificant compared with the final words of the seventh clause, "without any time allowance whatever." The power given to the holders by these half dozen words is readily seen from Valkyrie's case. Suppose that the challengers had subscribed to the new deed, the preliminary terms had been settled and Valkyrie was in New York harbor ready to sail three races with Volunteer under the present time allowance of the New York Y. C. Even then it is perfectly possible for the New York Y. C. to insist on some condition to which the other side cannot accede, and on refusal to call at once for three outside races "without time allowance." If no other convenient pretext should appear, it would only be necessary to measure the challenger accurately, some discrepancies are certain to be found between the actual measurements of draft or beam and those given a year before in the challenge. The matter is revealed in the papers, the American heart is fired with just resentment against pithless Albion or Scotia, and the luckless challenger is at the mercy of his enemies.

Of course it has been said that the New York Y. C. is incapable of such unfair dealing, that neither the present nor future committees would consent to it; but even if this be so, there is another side to consider. Granting for the sake of argument that, after carefully securing to itself the power to do a mean and unjust deed, the New York Y. C. is too cowardly and too dishonest to do it, the clause still remains in the deed. Should the Cup by any strange chance be won from the club, the new holders may not possess the same delicate scruples, the same yearning for "generous concessions," and the same love for "mutual agreement"; it may have a long memory and a keen appreciation of the power it holds from the new deed, and may use the latter accordingly against all American challengers. No one sure to have been Sachem, Merlot in the Cup, and New York and to limit and limit all racing for it, but in the course of years the chance of the other side may turn up, and then at least American yachtsmen will be ready to give a candid opinion of the famous efforts of the committee of 1887.

The framers of the deed, their supporters in and out of the club, the daily papers and quite a body of yachtsmen at large have been led by the nose, examining the beautiful and intricate mechanism of this gun they have prepared and loaded for the purpose of keeping the America's Cup within the limits of Union and Madison Squares; but if the time ever comes when, by any diplomatic mishap, they are compelled to look in at the muzzle in search of the Cup while some live British yacht club presides over the business end of the gun—may we be there to write down truthfully our remarks.

Thankfully many who are still active in yachting will go back to the time, when of necessity the racing fleet was made up of all sizes and rigs classed together, with such time allowance for difference in size as was considered the best at the time. By slow degrees the character of yacht racing has changed to its present state of perfection, in which racing yachts are built closely to the limits of the various classes, as Sea Fox, Grayling, Sachem, Merlot in the Cup, and schooners, and Titania, Katrina, Grace and Shamrock, or the large fleet of racing forties and thirties. The result of this change is well understood by all who witnessed the close and exciting contests between the picked fleets in each class last year, and compared it with the mob of boats of all sizes that once made up the two or three classes in a big regatta. A still greater refinement of racing is now at hand, and in a very few years the racing fleet will be made up of a few boats of each class, so that no time allowance between the members of a class is called for, as is now the case in the 20, 30 and 35-ft. racing classes in England. This is the highest perfection in yacht racing, and if it adds so much to the interest and importance of ordinary club races, it is still more vital in the case of the great international contests. Let the question of class and rig be determined by the contracting parties, with no other proviso, that the class in which shall run the race will be provided, leaving challenger and holder free in the choice of model and details, and a fair race must be forthcoming.

Even then the great advantage rests with the holder; the challenger is limited to but one vessel, the holder may select from a well-filled class the winner of the season or of the trial races. It has been fully proved by every international race that has been held since the first of the New York Y. C. name any one class for the Cup races, from 61 even up to 90ft., and new keels will be laid within a month, or within a week, if the time be short. All the leading American designers have now ready more or less finished designs for Cup defenders, centerboard or keel, either 70 or 90ft., and it is within the power of the New York Y. C., by a return to the ordinary principles of fair play as practiced by all racing clubs, to set afloat under the new deed next year the finest racing fleet ever known.

That under the present deed nothing of this kind is possible has been fully demonstrated in the last two years, and is equally plain to all who read it over. The challenger places himself and his yacht unreservedly in the hands of the New York Y. C., to do with him what they will. While all concerning his craft is known to them, he is utterly ignorant of what may be placed against him, the first step to take any the least point will be to outbuild and perhaps outmatch him as well; nor can he be sure until the first race is started that he may not be compelled at the last minute to accept some absurd restriction or to forego all time allowance. Such a burlesque of fair play is a disgrace to the men who concocted it, to the club that quietly sat still and failed to protest at the abuse of the power which it had delegated, and to the yachtsmen of other clubs who have lent their indorsement to the whole.

For many years the yachtsmen of Great Britain labored under an imputation of unfairness in the retention of a measurement rule that was prohibitory to all but one type of vessel, and of a second rule which barred the centerboard yacht; but with the advance of modern ideas both of these hindrances to fair racing have been swept away, replaced by fair and equitable rules. The first step to the remedy was the freeing of the yacht that had been a standing reproach for years, the officers of the New York Y. C. were busy in the effort to pass far worse restrictions on fair racing, and to take the place just vacated by the Y. R. A. as the sponsors and apologists for rules and conditions that are condemned by all fair and unprejudiced racing men. How long the club will be able to retain this position remains to be seen; the world's opinion of the New York Y. C. shows that such actions always recoil on the heads of those who father them.

The fact that the old deed of gift was not adequate to modern requirements, that some important additions were necessary, has been admitted freely by the opponents of the new deed at home and abroad, and had they been made openly and in a fair spirit by the New York Y. C., they would have been indorsed by all other racing clubs; additional provisions are necessary need not be considered now; the main fact is that the attempt of the New York Y. C. to limit the Cup races to a class of each rig that does not exist, to force all challengers to give valuable information long in advance, with nothing in return, and no guarantee that it will not be used against them, to hamper the challenger in directions hitherto untouched by any club, and to make them beg for what is theirs by right, has been a failure in every way, and that the first step to the remedy is through the destruction of the present worthless deed of gift and the recognition of the first and only valid deed, as binding the club as strongly to-day as when the ink was fresh on it from the hands of the four dead donors.

IVERNA.

THE launch of the new Iverna cutter on April 19 marks a most important point in the history of British yachting, as the new craft is the first centerboard racer of any size built in British waters. One result of the important changes of rule made in 1887 was visible last year in the increased beam of all the new yachts, and now the repeal of rule 8, so long a reproach to British yachtsmen, has led to a trial of the centerboard in the largest and most important races, built in five years, if Thistle be excepted. The recognition of the Iverna yachts by a dozen yards, Silver Star, Samoua and Irex, gives a special importance to the new craft, and lends additional interest to the fact that she is a centerboard boat. Iverna, as the new yacht has been named, is a cutter designed by Mr. Alexander Richardson, of Liverpool, designer of the three yachts mentioned above. She has the clipper stem, slack forefoot, raking sternpost and long overhang of the modern cutter. Thistle's hull was a heavy beam of the same general type, and in addition a centerboard about 25ft. long, comparatively narrow, being housed below the floor. The dimensions previously given are probably correct, 34ft. l.w.l., 19ft. beam and 13ft. draft. Her lead keel weighs 72 tons. The yacht is of composite construction, built by Fay & Co., of Southampton, builders of Valkyrie and Yverna. Her rating will be between 115 and 120 tons. The rig is a cutter with two masts, the mainmast, deck to bounds, 55ft.; topmast 40ft.; foremast 40ft.; bowsprit 34ft.; topmast yard 44ft. There is no possibility of the new yacht being seen in American waters this year, if ever, and her dimensions indicate that she was built without regard to international racing, and solely for the home courses. Capt. Wm. O'Neil and the old crew of Irex will man her.

MARINE AND FIELD CLUB.—The annual canoe regatta of the Marine and Field Club will be sailed in Gravesend Bay, off the coast of the city, on Tuesday, 2 June. The events will consist of invitation sailing, first and second prizes; senior sailing, first and second prizes; junior sailing, first and second prizes; upset sailing, prize to winner, unclassified sailing, prize to winner. All races except the invitation race are open to canoeists, members of any organized club, or the A. C. A. Entries will close on June 2, and it is particularly requested that they be made as early as possible, in order to enable the committee to prepare a programme, showing entries, select prizes, etc. Entertainment will be given by Howard Earle (chairman), W. S. Elliott, J. F. Mallett, W. D. Dickey, Fred B. Blake.

THE ROBERTS BOILER.—Last week Mr. Roberts shipped from his works at Red Bank, N. J., two 500 H. P. boilers, which have since been placed in the Tillie at Morris Dock; also one 150 H. P. boiler for the new yacht belonging to Mr. Snellenburg, of Philadelphia. The four 200 H. P. boilers for the Radha will also be in position in the boat this week. All these boilers have been tested under hydrostatic pressure and 200 lbs. of live steam before shipping. There are also under construction and nearly ready for shipment one 800 H. P. for Congressman McMillan's yacht Idler, of Detroit; one 400 H. P. for Dr. Pierce's new yacht, now nearly finished by Wintringham; one 200 H. P. for Mr. J. Frederic Taus's sidewheel yacht at Piergrass's yard at City Island; one 175 H. P. for Mr. J. D. Rockefeller's new yacht, now being built by the Gas Engine & Power Co.; one 300 H. P. for the yacht Hinda, belonging to Mr. Allan M. Fletcher, of Alpena, Mich.; one 150 H. P. for Mr. Francis Boyd, of Milwaukee, Wis., and some twenty or thirty other boilers of smaller sizes for various purposes. Mr. Roberts has been shipping during the winter an average of about two boilers per week, and is now about twenty-two boilers behind his orders, including boilers for the Pennsylvania R. R. Co. and the U. S. Lighthouse Board. Mr. Roberts is making plans for an addition to his works to cover about 45ft. x 200ft. of ground, and hopes next season to be able to accept all the orders that may be offered. His very handsome new illustrated circular has proved a great success, as it gives much valuable information.

A NEW 20-RATER.—Mr. W. B. Macdonough, brother of the owner of the yawl Condor, has a 20-rater on the ways at Fife's, a similar craft to Dragon. Mr. Macdonough will try her in the early races on the other side and then will probably sail her across in time for the fall races here. Though she will be about 45ft. long, and not eligible for the 40ft. class, she will be able to get on some matches with the forties, in which case one much disputed question will probably be decided. The *Field* describes the new Jessica thus: "A new 20-rater for Mr. Macdonough, brother of the owner of the yawl Condor, is planked and decked, and does look a handsome and powerful vessel; with a lead keel heavy enough to steady an immense sail area, with the easiest of bilges and longest of bows, this new cutter must prove a dangerous antagonist for Dragon and the new twenties building. With teak topsides, pitch pine and American elm have been used for the bottom, and the decks of white pine have been so carefully selected that a knot is not to be detected from bow to taffrail. This cutter will be raced during the summer, but will eventually be taken across the Atlantic, her scantling being designed for the ocean voyage. Walnut and satinwood to be used for the cabins, and the hull and not eligible for the 40ft. class, she will be able to get on some matches with the forties, in which case one much disputed question will probably be decided. This cutter will be round at the early Thames matches, where she will meet Dragon and Captain Clark's new twenty."

GOSSEON.—This name has been given to the new Adams 40, and while it is not particularly beautiful it is at least better than if they had called her the Gallot or the Snoozer. All the Adams boats have names with seven letters (7), and two ciphers for luck, the first ones being Pappoose and Baboon. The Gosseon is now planked up.

PLYMOUTH Y. C.—A club has lately organized at Plymouth, Mass., under this name, the officers being: Com., N. Morton; Vice-Com., T. N. Eldridge; Sec'y, A. W. Shepherd; Treas., G. E. Benson; Executive Committee, G. D. Bartlett, W. T. Eldredge, Arthur L. Baily and Chas. Craig.

THE NAVAL RESERVE.—At the dinner of the Merchant's Club, of Boston, on April 10 the subject of the Naval Reserve was discussed. Com. Saley, Massachusetts Y. C., delivering a strong speech in its favor. Messrs. Burgess and Gardner also spoke on the subject.

FITTING OUT.—Capt. Haff has his crew at work on Volunteer, young Capt. Haff has been at work on Maraquita for a couple of weeks, and she has been hauled out for a new lead keel. Tomahawk left Lawley's last week for Newport.

A NEW YACHT FOR MONTREAL.—On April 17 Messrs. A. M. Robertson & Sons launched from their yard what is undoubtedly the finest finished craft ever turned out in Hamilton, and it is not saying too much to say the Dominion. Many who have seen her state she is a good job as the Merle, which was built by Lawley, of Boston. She is destined for Lachine, and will fly the colors of Mr. E. S. Clouston (Assistant General Manager of the Bank of Montreal) on Lake St. Louis during the coming season. Her chief dimensions are: Length over all, 38ft.; on l.w.l., 25ft. 6in.; beam, 10ft.; draft, 2ft. 6in. All her ballast is outside and consists of 4,000 lbs. of cast iron. She is fitted with galvanized iron cylinders under decks of sufficient capacity to float her should she strike a rock and sink. In appearance she is somewhat a novelty for these waters, as she has a long overhang at both ends, far greater than has yet been seen here, but this length on deck gives her a graceful sheer and takes away the bulky appearance so commonly seen in yachts with an equal free board but with short ends. She is fitted up in carefully selected white pine and cherry, and has many conveniences in the way of lockers, etc. Her cockpit is large and very comfortable. All her blocks and iron work have been imported, and her outfit is a complete and very superior one. All her iron work is galvanized, and her decks will be left bright for polishing and are filled with marine glue. Her sails were made by Soper, and do that maker great credit. They have the peculiarity of having each row of reef points of a different color, so when reefing "greenhorns" will not be liable to get first and second row mixed up. She is painted black on the top sides, with a gold leaf stern and gold leaf carved new device, with gold "C" on stern. Her bottom is polished with plumbago mixture. The whole is a beautiful smooth surface and highly polished. The craft has been christened the Chaperon, a name for which Mr. Clouston evidently had a penchant, as this is his third vessel bearing that name—*Hamilton Times*. The new yacht was designed by Mr. Jarvis, of Hamilton, for the new corrected length classification.

CHANGES OF OWNERSHIP.—Aglais, keel sloop, formerly Maud, has been purchased in Boston by E. J. Bergen, Atlantic Y. C. She left Boston on April 10 and reached Bay Ridge on April 14. Serrella, schr., has been sold to Wm. Loomis, Portia, cutter, formerly Mignonne No. 2, has been sold by Henry Stanton to S. S. Mason, Jr. She has been scraped and painted white at Wintringham's yard. Coronet, schr., advertised for sale at auction last Saturday, was sold during the week at private sale to Com. A. E. Bateman, owner of Meteor, steam yacht. Com. Bateman has sold Meteor to T. J. Montgomery. Alice, the sloop owned by C. A. Longfellow, has been sold for a fisherman after a long career as a yacht. Sylph, schr., has been purchased by H. Dobbin. Vision, steam yacht, has been sold by J. J. Alexandre to Clarence McKim. Sentinel, steam yacht, has been sold by G. L. Ronalds to F. C. Fletcher, of Providence, who has sold his steam yacht Emma to Emile Du Vivier.

SOUTH BOSTON MOSQUITO FLEET.—We were in error in describing the new skimming dish Mosquito boat as being built by C. A. Borden, as she was the work of an amateur. Mr. Borden is the builder of the new 13ft. Bessie, a Cape cat in model, which sailed her first races on Fast Day with such marked success. In the morning she beat both her own and the larger class on elapsed time, and in the afternoon, in addition to winning easily in her own class, she tied the winner in the larger class on corrected time. She promises to be a worthy successor to the other Borden flyers, White Fawn and Bessie No. 1.

MINERVA.—This crack forty has been sold to a brother of R. P. Carroll, owner of Gorilla, which makes it certain that she will be raced hard this season. Admiral Tweed still has Shona to sail in.

ALICIA.—Mr. H. M. Flagler's new steam yacht was launched at Wilmington on April 19. She is 180ft. over all, 160ft. l.w.l., 24ft. beam and 13ft. 6in. hold.

GHOST.—The new racing 20-rater Ghost, just built by Messrs. W. White & Sons, of the Veetis works, for Mr. L. M. Ames, from designs by Mr. C. P. Claytin, was successfully launched on April 8. Her principal dimensions are: Over all, 63ft. 6in.; l.w.l., 46ft. 6in.; beam, extreme, 10ft. 8in.; draft, extreme, 9ft. 8in.; free-board, least, 2ft. 6in.; tonnage, Thames measurement, 25 tons. Her sails are by Messrs. Ratsey's & Laphorn. She was hauled up on April 9 for coppering and will be ready for a trial stretch in a few days. Cook Diaper, of Ithen Ferry, is to be skipper. It will be noticed that Mr. Claytin has taken extreme dimensions of hull compared with Fife and Watson, and consequently a smaller sail plan.

ANOTHER NEWSPAPER CHALLENGE.—Challenges for the America's Cup are almost as plentiful in season as presidential candidates, the Boston *Herald* this week bringing out another "unknown." The "Brass, naval architect," who is the only element which has thus far materialized in the *Herald's* cablegram, is Mr. Herbert Wynne Fairbrass, an amateur designer who has had several yachts built, but no racers. Meanwhile Designer Reeks is yet to be heard from with the great Antipodean challenger.

KNICKERBOCKER Y. C.—Mr. W. C. Newman has sold the cutter Madge to a Mr. Phelps, who will take her up to Lake Champlain. Mr. Watson has bought Geo. H. Bourquard's sloop Lizzie. She will be enrolled in the Knickerbocker Y. C. The Yolande will go in commission this week. Commodore Rousseau, is Mr. Herbert Wynne Fairbrass, an amateur designer who has had several yachts built, but no racers. Meanwhile Designer Reeks is yet to be heard from with the great Antipodean challenger.

MIRANDA.—Some important changes are now making in Miranda's rig, her mainmast being shifted 3ft. 6in. aft, with a boom instead of a lug foot to foresail. Vice-Com. Hill will have her in commission this season.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

T. McM., Barton, Md.—Where can I obtain information on bait fishing and how to prepare baits to fish for trout in small streams? Ans. The best thing for you to do is to read some book on angling. Such are "The Modern Practical Angler," price \$1.50, or "Frank Forester's Fish and Fishing," price \$2.50, or "American Fish and How to Catch Them," price \$1. We can furnish any of these.

F. V. P., Delaware, O.—The ferrules of one of my favorite fly rods have become so much worn that they work loose in casting. The ferrules are cylindrical, without dowels. How can I tighten these old ferrules so as to make them serviceable? We find by experience that it is very difficult to obtain new ferrules that will fit old rods. Ans. There is no trouble in getting new ferrules to fit if you will pay for good hand-made ones. If not too far gone the old ones may be repaired and strengthened by being "welted" at the ends.

W. L. Y., Richmond, Ky.—1. Will a light, thin shotgun barrel shoot the same as a heavy, thick barrel of equal length, and bored exactly the same and loaded the same? 2. Will a big caliber rifle shoot as accurate as a small caliber one? 3. Are there any trout in any of the streams of Kentucky? Ans. 1. The thin barrel is more apt to spring, but otherwise it should shoot as well. 2. With proper load, yes. Smaller calibers and long bolt bullets get greater accuracy at long range, because less affected by outside influences of wind, etc. 3. Possibly some in Cumberland Mountains. None have been found to our knowledge. The black bass is so called in Kentucky.

THE BEST LINE TO THE Hunting, Fishing and Health Resorts And to all Commercial Centers of the NORTHWEST, WEST & SOUTHWEST.

The Direct Line to all Colorado Resorts, and THE ONLY LINE TO Estes Park, Colorado.

Of Estes Park—reached by a twenty-mile stage ride from Lyons, the railroad terminus—a recent contributor to *FOREST AND STREAM* has written: "Estes Park used to be a great country for big game, and deer, elk, bear and mountain sheep are still to be found there. There is any quantity of grouse or other small game. One party got five bears last season. The fishing is splendid, and trout are so abundant that they are served at the hotel tables twice a day."

For further information in regard to Estes Park, and for tickets via Burlington Route, which can also be obtained of any Ticket Agent of its own or connecting lines, address the undersigned.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

The Old Reliable and Popular Blue Rock Pigeons & Traps.

Every Target made by us is plainly stamped "BLUE ROCK PIGEON."

A worthless imitation of our justly celebrated "BLUE ROCK" is being put on the market, and if parties who receive these imitations on orders given for "BLUE ROCKS" will refuse to accept them and notify us by whom they were shipped, they will confer a great favor. We warn all dealers not to sell as "BLUE ROCKS" any of these worthless imitations.

The cut of our trap shows it to be the most compact and perfect target trap ever devised. As will be seen by the following list of carload buyers, our goods are handled by all the leading dealers in Sporting Goods, and you will find it to your interest to buy from them, as they can give you factory prices and save you delay and breakage in transportation.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, MAY 1, 1890.

VOL. XXXIV.—No. 15.
No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

A NATURAL RESERVOIR.

WITH a unanimity which is rather remarkable, the press of the larger cities, and especially of New York, has spoken out against the amendment added by the Public Lands Committee to the Yellowstone Park bill. The Boston Herald, the Chicago Times, the New York Times, Evening Post, Tribune, Herald, Sun and many other papers, have all expressed, in strong terms on the editorial page, the view held by all disinterested persons that to permit a railway to enter the Park will be to destroy the usefulness of that noble reservation. It remains to be seen whether the House of Representatives will disregard so unanimous an expression of opinion from the leading papers of the country without regard to party. We do not like to think that things are quite so bad as they are said to be by an eminent public man, who, in speaking of this matter recently, said: "The Western members are for the railroad, the Southern members, like Gallio, 'care for none of these things,' the Eastern members own stock in the railroad and the mines."

If a railroad is built through the National Park, the inevitable result will be that the forests will be destroyed by fire, the springs will fail and the rivers will go dry. The whole of the arid West is deeply interested in the question of a water supply for irrigating purposes, and it is proposed to appropriate vast sums of money to build great storage reservoirs, which are to hold the water for this purpose. The Yellowstone Park is a grand natural reservoir, which now collects and holds the drainage of many thousand square miles of territory. Moreover, it is the fountain head from which alone can be drawn a large part of the water which it is proposed to store up for the farmer's use. To admit a railway in the National Park is to break down and destroy this natural reservoir. It is of no earthly use to provide tanks in which to store water if you are going to cut the pipes which supply

those tanks; to build a reservoir if you intend to turn aside the sources of the stream which flows into it.

At all events, it is time that the Public Lands Committee and the House of Representatives go on record in this matter. The report ought to be presented without further delay, and action taken on it at the earliest moment practicable. It will be interesting to see whether in this matter, as in so many others, the well-being of the farmer is to be sacrificed to that of people who can afford to employ a lobby in Washington.

YOUNG SHAD IN RIVERS.

WE called attention last week to the destruction of shad in the Connecticut, and ventured the assertion that if the catch of alewives or "whops" were examined it would be found associated with young shad. We are now able to justify this statement through the courtesy of the U. S. Fish Commission. On the 25th inst. five little fishes were sent to the Commissioner by Mr. S. G. Worth from the U. S. station at Fort Washington, on the Potomac River, where they were captured in a seine by Mr. Harron. Mr. H. stated that about 500 of these small fish were escaping from the bunt of the seine when he captured the specimens forwarded for examination. Two of the five young individuals proved to be shad and the rest were alewives. Mr. Harron further said that it is very unusual to see such young fish in the river at this season of the year. It has been considered settled that shad do not return to the rivers until mature, with the exception of a few small bucks, or male shad. In the case just recorded, however, the larger of the two is only about four inches long. We must, therefore, revise our beliefs concerning the movements of this species and look sharply into the probable need of more stringent legislation with regard to the size of the mesh of pounds along some portions of the coast, and especially near the river mouths.

BEER AND PARTRIDGES.

THE Supreme Court of the United States last Monday rendered a decision, which appears to have a direct and important bearing on the constitutionality of a certain class of statutes relating to the sale of game. The case was that of a firm of Peoria, Ill., brewers, who had shipped a lot of beer to Keokuk, Ia., and offered it for sale there in its original sealed packages. Under the Iowa prohibitory law, the liquor was seized by the City Marshal. The brewers brought suit against him, claiming that the seizure was unconstitutional, because in violation of that provision of the Constitution of the United States, which says that Congress shall have the exclusive right to regulate commerce between the States. The local court sustained the plaintiffs; the Supreme Court of the State overruled this decision, and appeal was taken to the Supreme Court of the United States, which has just given its decision. This is that the transportation of liquors from one State into another is a matter of inter-State commerce, which Congress alone can regulate; and further that this right to transport an article of commerce into any State presupposes and carries with it the right of the consignee to sell the article there in the sealed packages in which it was transported.

It is readily seen that this decision seriously impairs the efficacy of any prohibitory statute relating to the liquor traffic. As pointed out by Justice Gray, one of the dissenting judges, this right of importation and sale gives practical immunity from all prohibitory and license laws. He says:

"If the statutes of a State, restricting or prohibiting the sale of intoxicating liquors within its territory, are to be held inoperative and void as applied to liquors sent or brought from another State and sold by the importer in what are called original packages, the consequence must be that an inhabitant of any State may, under the pretext of inter-State commerce and without license or supervision of any public authority, carry or send into and sell in any or all of the other States of the Union intoxicating liquors of whatever description, in cases or kegs, or even in single bottles or flasks, despite any legislation of those States on the subject, and although his own State should be the only one which had not enacted similar laws."

There is a strong parallel between the liquor prohibition laws and those game statutes which forbid the sale of game out of season even though it be imported from other States. In most of the States the close season is made an absolute close season for all game wherever killed. In this city, for example, game dealers are forbidden to sell ruffed grouse or partridges between Sept. 1 and Jan. 1. The law applies to all birds, whether killed in New York

or brought in from other States where they may lawfully have been killed before Sept. 1 or after Jan. 1.

If the principles laid down by the Supreme Court, with respect to the liquor traffic, apply to the game traffic as well, and no reason suggests itself to us why they should not do so, it is plainly a violation of the inter-State commerce clause, to forbid the sale of game at any season, provided it is shipped into a State and offered for sale by the consignee in the original packages. If this holds true, boxes of Connecticut partridges and Maine trout, and sacks of Minnesota venison and of quail from the West, may be sold in New York city all the year around by game commission merchants acting as agents of the consignors.

The advocates of prohibition express the opinion that the result of this Supreme Court decision will be to take the subject of inter-State liquor traffic into Congress, where it rightly belongs, as a question of inter-State commerce. If this view is correct, it may not be long until Congress shall be asked to deal with inter-State traffic in game. The remedy to be asked for, to cover this particular point of the sale of game in the close season, would be a national law forbidding the sale of game in any State during the close season for that game prescribed by the statutes of that State.

SNAP SHOTS.

REPRESENTATIVE TURNER, of Kansas, is interested in the preservation of our forests and proposes to take hold of the subject and see if some adequate legislation cannot be had from Congress. Some time ago Mr. Dunnell introduced in the House, in behalf of the American Forestry Association, a bill which provided for the appointment of a commission of three persons to investigate the forests of the United States and to report to Congress plans for a temporary administration of them. The bill, in the opinion of many persons, was entirely impractical and its passage could have accomplished nothing. Indeed, the American Forestry Association did not expect any results from it, if passed, but regarded it rather as an entering wedge, hoping that if Congress could be committed to some action on this subject, it would be easier in future to induce it to move. Mr. Turner believes that the time for action on this most important matter has now come, and favors the bill introduced by Mr. Hale in the Senate of the Fiftieth Congress. This bill, while by no means providing all that is to be desired, would, if passed, be a long step in the right direction. It is strongly backed by the American Forestry Association and deserves the cordial support of every one who is interested in matters pertaining to the care and cultivation of our forests.

Notwithstanding the stipulation made by Gov. Hill when he signed the bill providing for the codification of the game laws of New York, the flood of bills on this subject flows through the Legislature unchecked. The Governor, however, has very wisely taken the stand that he will approve no more game bills. He declines to add to the existing confusion of the laws, now that there seems a reasonable prospect that within a year order may take the place of the chaos which prevails at present. He has vetoed Mr. Barton's bill amending the general game laws for the following reasons: "This bill adds Brant Lake, in Warren county, to the list of waters in which the killing or catching of black bass is forbidden between the first day of January and the first day of July. Since the bill was introduced the Legislature has passed and the Executive has approved a measure which provides for the revision and codification of the laws for the protection and preservation of fish and shellfish, and of birds and quadrupeds. In view of the work contemplated by this statute it would seem unwise at present to modify, unnecessarily, existing laws pertaining to this subject. The commission created under the statute above referred to is compelled to make its report in January next, until which time the legislation herein proposed can easily be deferred. The bill is, therefore, returned without approval." For similar reasons he also vetoed Mr. W. C. Stevens's bill amending the game laws for a particular locality. The reasons advanced by the Governor for vetoing these bills are ample, but if others were needed they might be found in the absurdity of passing a special law to govern the fishing and shooting in each pond hole and brush patch throughout the State.

The Sportsman Tourist.

SLIDE ROCK FROM MANY MOUNTAINS.

VI.—BATISTE.

IT is hard to get a good title for a short discursive paper, a heading that indicates the subject matter without the prolixity of a table of contents. Such papers need no title, in fact, any more than a painting needs to have a motto in raised letters on the frame or than a toad needs a tail, but, obedient to custom, I call this sketch "Batiste."

The name brings up the image of a lithe French half-breed, dark, handsome, with the tread of a panther and a multitude of songs in a soft patois. Our Batiste was different. He was an Indian of the baser sort, humble and capable of labor if strongly persuaded, but without tincture of romance. Like most west-coast natives, Batiste could be recognized at a distance by two features. One was the large patch on the seat of his trousers and the other his peculiar stumping gait. These are leading traits. When moccasins are worn the walk of even the fishing Indians is simply awkward, but put the same persons in boots and every step is made on the protuberant heel alone, while the rest of the foot flaps the ground like a dying fish.

Aside from these points, Batiste was a songster and a linguist. He was acquainted with Indian melodies or, at least, with that succession of painful sounds which serve as the air to all native songs, and he also whistled something that my friend, who has a delicate if unpretending musical taste, says was meant for "I want to be an angel." Rather than hear Batiste continually, I should myself prefer that he should be an angel. As a linguist Batiste rivaled Mezzofanti. He could speak the tongues of the Thompson River, the Fort Hope, the Skagit and the Smilkameen tribes, perhaps of many other nations (all sounded the same), and of course he was a master of Chinook.

Now there are interesting details connected with naturally developed tongues. You can often trace race affinities by means of language. You get insight into the growth of ideas and customs, and even the vocal exercises are sometimes extraordinary enough to command attention. It is probably impossible to acquire in adult years the combination of clicks, grunts and hisses that forms the basis of many of the Pacific dialects, and one can safely say that no person past the age of thirty-five can ever learn to speak Skagit or Smilkameen without a trace of foreign accent easy to be detected by a cultivated tribesman.

Chinook, however, is not like these. It is an artificial jargon, a barbarous baby talk, scanty in words, wanting in accuracy, and entirely vulgar in sound. Such terms as *skookum*, *tum-tum* and *muck-a-muck* are only valuable as examples to show how far a depraved ingenuity can debase articulate speech.

But Batiste is only a subordinate person and he may safely be left hewing wood and drawing water while we go hunting.

We had already inspected a good deal of country with a view to the capture of game, but our success had been feeble. Deer tracks, stale beyond the dreams of dyspepsia and the "sign" of early quaternary sheep are interesting only to the eye of science. The herds of the great God Pan have to come within the range of the more domestic deity Frying Pan, or some of its kindred powers, before their full virtues can be known. We wanted meat, and meat in our camp was a great want.

Batiste, besides being as stupid as the *North American Review*, had other exceptional qualities not yet set down. In the famous poem about Jack Sprat and his wife it is not expressly alleged that the husband could eat lean or that Mrs. Sprat could eat fat, but, from the cleansing of the platter by the pair, there is an absolute implication to that effect. Batiste combined the implied capacities of both spouses to an unusual extent. He could not only empty the platter at regular tri-daily intervals, but perform the same feat with entire completeness between meals as often as the chance was offered. I make these comments in no acrid spirit and with no grief. I grudge no mouthful of whatever enormity to the worthy fellow, but it is only fair to give some of the reasons for the chronic need of meat that prevailed with us.

My friend and I were accompanied on our hunt by another man, the sole Indian of the neighborhood, who proved thoroughly sympathetic. In the mouth of Chinook Tom even the contemptible jargon took on a mellow sound, pathetic and musical. It is true that, after the manner of his tribe, Tom tried gently to rob us; but his effort met a swift, a stern repulse, and he retired from his false position with a sweetness and cheerfulness all his own.

To see Tom, shod as he was with speed and silence, advance over a crest on whose further side he hoped to find victims, was a pleasant sight. Lifting each foot like a pointer on a hot scent, poising it a moment with toe extended and treading so softly that he would not break an egg, much less a stick, Tom was the ideal guide. And then his earnest admiration of our simple guns, which he thought peculiarly *skookum*, or strong, and fit to break the bones of a "gooseley" bear. Truly Tom was unique, and his early departure much regretted. But on this day Tom was with us. Up a rough cañon, flanked with cliff, forest and slide rock, we rode for some time, turning the glass every few moments on some distant speck of whiteness that might prove to be a mountain goat. At last we sighted quite a promising stump, as it seemed to me. Tom's unaided vision pronounced the stump to be a goat, but my binocular revealed no living feature. We marched along. Another white stick shone out across the ravine near our suspected stump, and lo! both were goats, and Tom triumphed. But between us and the goats yawned a chasm. We decided to leave our horses and that my friend should take Tom and stalk the game in sight, while I tried my fortune further on. I will first follow the adventures of the detachment and afterward (if the egotism may be pardoned) relate the moving chances of the main body; main only, I confess, by reason of containing the important number one.

I had advanced about a mile, when, on looking back, I saw that the two goats before visible had been joined by two kids and were climbing the slide rock. Soon they passed behind the shoulder of a ledge and vanished, nor could I see anything of the hunters, but afterward learned

that they were far above the game, when the latter, started at something below, shifted their ground. They did not go far, and soon the pursuers caught sight of them through the timber. Tom at once dropped to the ground and four bullets sent the goats rolling in swift procession down the hill. Reader, are you "ill at these numbers?" I admit that four goats are an excess, almost a debauch, especially as few people really relish the meat; but in this instance the cause of science justified the deed, and, if you see in a great museum the stuffed bodies of those two kids, two nannies and a billygoat of the *Mazama* tribe (the latter contributed by a humbler hand), you may recognize these individuals; for there is but one such collection in the world.

Meanwhile I wandered on with hopeful toil. The heavens grew cloudy. Rain fell at times in brisk showers, at times drizzlings. The ridges became unfamiliar. Instead of open slopes with patches of slide rock, the woods grew denser at every dozen yards. I was in a great stretch of land burned long ago, and a second growth of young pine, called "bull pines" in the north, had sprung up, their slender bodies crowded a thick as cornstalks and their lacing branches forming a close "abat-tis." The ground was steep, very steep, wet, and soft with rotting vegetation. The sun was hidden. I could scarcely see the sky, much less any feature of the landscape, and night drew on. I had climbed and descended and twisted and turned until no sense of direction was left me, and I was very tired. I saw a hare a few paces off and shot it, thinking that it might serve for supper, then I sat down to rest and smoke.

I felt for a match. I had none. Lost in the rain with the autumn night coming on and no fire! Lost in bull-pines blind, steeply rising, almost impenetrable, where every struggling step might take me further from food and rest. The situation was unpleasant. From afar, borne by fitful gusts, came the faint roaring of a mountain river. The water seemed to have a thousand maniac voices, wailing and raving, mingling empty laughter and mocking shout, voices in loud dispute and curses half articulate; weird, hollow, terrifying.

Several ideas crossed my mind. First, how disagreeable it would be to be laid up there with a wood rat for nurse and a magpie for doctor. Then I thought I might leave my rifle and coat and, thus lightened, follow down the brook that must flow below, and so reach somewhere.

I decided, however, to retain my property, and plunged and struggled down the hill. By dint of slipping and falling I got to the bottom, where a trickle of water was nearly hidden by a lacework of down timber 10ft. deep. Progress there was blocked, so I decided to climb the opposite hillside. Slowly, with infinite effort, I labored up. Clearly it would take a week to reach the top at that rate, and so I modified my down stream plan and followed the slant of the land, keeping above the water, but with the guiding principle of going always down. And now the clouds broke away a little, and from a great rock I could see some bald mountain tops that I knew to be across the river from camp. Soon the pines became larger and opener, and I got on a game trail, and with quickened steps hurried along till I reached the main stream. Then at last I knew where I was, but not until late that night did a weary man catch the twinkle of the camp-fire through the trees and bless the guidance that had led him home. H. G. DULOG.

LOG CABINS.

I HAVE seen an illustrated advertisement on the covers of quite a number of your papers with this heading, "Log Cabins: How to Build and Furnish Them. By Wm. S. Wicks." I have never seen the work, but think the title of the book and the subject treated upon will of themselves highly recommend it to those who take an interest in such matters, and especially to those who contemplate building the like.

Although the log cabin is almost wholly an American institution, yet there are hundreds of thousands of persons in this country, especially in the Eastern part of it, who have never seen any, as that kind of a structure is now seldom found east of the Alleghanies and north of the Potomac, except on thinly settled tracts among the Adirondacks and other mountains. Now the thought came into my mind, why do not many heads of families, particularly those who are land owners, build log cabins for the use of their children and for themselves also? They would be very pleasant places for holding picnics, and for staying at times during the warm season or any other; and certainly nothing would please the young people in any family so much as would one built in a good location and fitted up with rustic chairs, tables and other furniture.

We have often seen in papers and books subjects with headings something like these: "How to Keep the Boys at Home," or "How to Cause Children to Acquire a Love for Home," and the subjects have been well ventilated already; but, digressing a little for a while, I will write a few remarks apart from my subject, but still in connection with it, beginning with "How not to cause the boys to acquire a love of home." To do this effectively, keep them at work all the time at something, often at the most disagreeable jobs one can find on the farm, if the parent is a farmer, or keep them at work the same in whatever other calling he happens to be in; if they at any time would like a day or more off for fishing, gunning, boating or for some other sport, refuse them, and at the same time quote some of Dr. Franklin's old saws about idleness, lost time, the consequences of losing hours, and all that; then if they enjoy any particular sport, take no interest in it, but by words and actions show them how much you disapprove of such folly (?). Then if they ask for a little cash with which to buy a boat, a gun, fishing tackle or some other sporting implements, generally give them a negative answer; besides, favor them with a good long sermon on spending money foolishly, coming to want or something like that; or if you should furnish the funds, do it grudgingly, and let the amount be so small that it will barely purchase the cheapest, the poorest article, or something second-hand. Now, if the father would go on in that style he would make a complete success of the plan to cause the boys to dislike home and to leave it as soon as possible.

On the other hand, if a parent would like to have the young people stay at home or if circumstances compel them to leave it, to have them cherish many happy memories of the dear old place and its surroundings, it can be easily done by methods just the opposite. Pater

Familias should on some day call his boys around him; yes, and his girls too, and should tell them that he had concluded to build for their use a good-sized, well-constructed log cabin in a grove near some lake or stream. The effect would be surprising. No body of savages in a war dance would cut up more antics than would those young people in the exuberance of their glee. "What, father going to build us a real log cabin! It's something we never dreamed of, too good to be true. What fun we will have in it. Didn't Daniel Boone, Simon Kenton and all of the other early hunters that we have read about, live or stay in them, and now we can have one the same as they did, all to ourselves. Three cheers for the cabin and for papa too!" They would think about it day times and dream about it nights, for they have thought about log cabins many a time before, and read about them too, for more than three-fourths of that pile of story books that the boys have read, treated more or less of log cabins, Indians, hunters and the like.

As for the expense, it need not be much. Even if desirable land has to be bought, it would cost but a little, and the expense of building would be next to nothing, for on most farms there is a plentiful supply of timber. Besides, the boys if large enough would be only too glad to do nearly if not quite all the work. Or if the father has no woodland from which to get a suitable quality of timber, even then the expense would be but a little, as the material could be bought in the rough state and the boys, with the assistance of mechanics, could in a few days prepare the structure, as well as make the rustic furniture to be used in it. Then if it was near a lake or a stream, let the boys have a canoe, a rowboat or a sailboat, or all three of them; swings and hammocks could be hung to the neighboring trees for the use of the girls, so that there would be no end of harmless pleasures for all the children.

Now and then Pater and Mater, with friends of their own ages, might themselves again wish to be boys and girls for the time being, and would once in a while go with their children to the cabin for the purpose of having a regular old-fashioned picnic. How pleased the younger members of the family would be to think that their parents enjoyed the outing as well as themselves. With what pleasure would they unpack the baskets, and how soon the flames would be roaring to boil the water in the teakettle, hung on the crane in the broad, deep fireplace! Then what a jolly time would both old and young have together when the table was spread; and when the day was over the parents would feel that even if both they and the boys had lost that amount of time from business, the pleasure received by the family would more than compensate for the time lost and the money expended.

And in after years, when the parents were no more, the children scattered, the family broken up and the old homestead perhaps in the hands of strangers, how fondly the thoughts of those children would revert to their early home, and especially to that log cabin! It would never be effaced from their recollections. A. L. L.

HORNERSTOWN, N. J.

CALIFORNIA JOTTINGS.

LAKEPORT, Cal., April 16.—*Editor Forest and Stream:* We have been hibernating up here for the greater part of the winter, owing to the heavy rains. It has been one steady downpour since Oct. 1 until about a month ago; then it would stop long enough to give old Sol a chance to show his smiling face for a day or so, when he would again be obliged to take a back seat. The oldest inhabitant scratches his head, looks wise, and says, "I never seed such a winter since the fall of '49 or spring of '50," and I do not think he ever did. But it is over now.

We are resurrecting our troutting outfits, looking up our rubber boots, fish basket, bait box and so on. The straps are gone, having probably been used for lines to play horse with by our boy, and things generally are scattered, but at last we have got everything together ready to start troutting. The small boy is seeking the tempting worm, and we are all watching and waiting until the streams get low enough and the weather warm enough to assure us good fishing. Then we will strive hard to see who will get the first fish out of the best streams.

We think we have one of the most healthful and best game counties in the State. Deer are in great abundance, but not as plenty as formerly, owing to disregard of the law. We have plenty of unscrupulous hunters that kill deer all the year around. A few bear are killed every year, the black and brown. Grouse are very scarce, and only to be found in the mountains. The plumed and helmeted, or, as we call them, mountain and valley quail, are found in great abundance. A great many were killed last season.

On our lake we have the mallard, canvasback, teal, widgeon, sprigtail and other ducks. Last fall and winter a good number came in for a few days, but soon went away again. Some fine bags of snipe were taken.

A great many salmon came up our creeks and rivers this winter. There were several wagonloads brought to town for sale.

I received a letter from the State Board of Fish Commissioners that an appropriation had been made to purchase and import certain game birds for propagation; among others the Bob White quail; a consignment was to be sent to me to be turned loose. The laws of this State make it a misdemeanor to kill Bob for five years, so if people will only regard the law we will have regular old Eastern quail. Thus, when you Eastern people come to see us, you will be welcomed by Mr. and Mrs. Bob White, which will no doubt remind you of the land of cold weather and cyclones. MACK.

SHOOTING PROSPECTS IN DAKOTA.—Britton, S. D., April 19.—*Editor Forest and Stream:* Never in the history of this part of Dakota have the geese, brant and ducks been seen in such numbers in the spring, but to the honor of the resident sportsmen be it said very little shooting is being done. Prairie chickens are also reported to be unusually plentiful. Owing to the short growth of grain last season, a large amount was left in the fields, and with the mild winter and plenty of feed, the spring opens with very favorable indications for an excellent fall's sport. I will endeavor at another time to give you some of the advantages possessed by this locality for the sportsman.—Rex.

Natural History.

THE FLORIDA GARTERSNAKE.

Editor Forest and Stream:

Has it ever yet been authoritatively decided whether the beautiful little gartersnake of Florida is or is not venomous? I hear very contradictory opinions on the subject, one friend telling me it is quite harmless, another stating that a learned Smithsonian professor has pronounced it to be the most venomous of all Florida reptiles—excepting, I presume, the land agency sharks and their touts, whom my own experience goes to prove about the most noxious of all living creatures.

I have been experimenting a little—in *propria persona*—with a gartersnake that I have tamed and keep as a pet. In color it is scarlet, with bands of lemon yellow bordered with black. The head being quite unlike that of a venomous snake, chances appeared fairly safe, so I persuaded it to bite me several times on the thumb before it was so tame as at present. Consequently I think the result may be taken as settling the question, if not previously settled.

About eight or ten diminutive punctures were made, from one of which the snake had no little difficulty in withdrawing a long sharp lower jaw tooth, too long to allow of the mouth closing without its being folded back, as it evidently is, after the manner of a poison fang.

Within five minutes the entire surface of the thumb around the punctures was suffused with red, and remained so for some time, the last trace of inflammation not disappearing for about six or seven hours. No inconvenience, however, was caused by the bite.

After this experiment I am inclined to believe the gartersnake to be a link between the venomous and non-venomous serpents; its non-venomous-shaped head being armed with poison fangs of just sufficient strength to assist in the capture of its comparatively minute prey, while practically quite innocuous against human beings.

As I do not wish to destroy my pet, I could only examine the presumed poison fang while entangled in my own flesh; probably the dissecting of a dead specimen may afford more definitely conclusive proofs. Of the slightly poisonous effect of its bite there can be no question, whether a venom sac exists or not.

Though I have gone in for the casual study of natural history while cruising in all four quarters of the globe, I do not pretend to be learned in American ophiology, but submit this little experience just for what it may be worth.

F. S. DUGMORE.

ST. PETERSBURG, Fla.

[So far as can be judged from Captain Dugmore's description of his pet it would seem to be a coral snake. This belongs to the genus *Elaps*, and is supposed to be very venomous. It is to be hoped that Captain Dugmore will add to the interest of his experiment by having the snake identified by some competent herpetologist.]

INTELLIGENT CATS.

Editor Forest and Stream:

I have two cats, one a tiger, the other a pure black, which I consider to be as high in the intellectual scale as any other domestic animal. The tiger cat, named Topsy, is fourteen years old; the black, named Jack, is five. Topsy in the morning eats breakfast with each member of the family, and always waits until the last member is down-stairs before going to her basket for her morning sleep. On one or two occasions she has come up-stairs after me when I have slept late. She also shows a great preference for the male portion of the family. The moment one of us comes in the house she will jump up and keep up an incessant crying—we call it talking—till she is picked up and petted. She knows as well as we do that when bedtime comes she will be put in the woodshed, and often hides herself in the most out-of-the-way places; a bureau drawer, when she can find one open, is her favorite place. One of her exploits, which came near resulting disastrously to her, was to hide in a trunk one cold night last winter. One of the family was going away and had left a trunk partially packed standing open in the hall. About seven o'clock in the evening Topsy deliberately got up and went up-stairs. We thought she was going to lie on one of the beds as she frequently does, but the search at bedtime failed to reveal her whereabouts. Later, however, one of the family went into the hall, heard a scratching in the trunk, opened it, and there was Topsy nearly smothered to death. It seems that when mother came up-stairs in the dark she stopped and put in the tray and shut down the lid without seeing the cat.

Topsy is also the most inquisitive cat I ever saw. If a package comes in the house she will prick up her ears, and as soon as it is laid down will get up and look it all over. Jack is not as bright as Topsy, but still is a very cunning cat. To show whether they are as stupid as "H. P. U." would make the FOREST AND STREAM readers believe, I will say he is very fond of sleeping in a large easy chair, but is not allowed to do so. If he is fast asleep and any one says: "Mrs. S., Jack is in the chair," he will jump down as quick as a flash and run under the stove. He catches a great many birds, all of them sparrows, which we try to encourage. During the summer there is hardly a day passes without his catching a bird, and never fails to bring it to the house and be told what a smart cat he is. I have never seen him have anything but sparrows, probably because they have driven all the other birds away. One case more I will cite to show that cats are not the fools that "H. P. U." would have us believe.

Some two or three months ago we got a St. Bernard puppy. The cats were very indignant and for a number of days would not stay where the dog was. Being quite different from "Ginger and Chalk" they were not afraid of the dog, but would scratch him every time he came near them. In something like a week Jack would play with him, and many the romps they would have. At dinner after we were through eating we would allow Don to come into the dining room, and would say to Jack, "Slap him, Jack," and hold up a piece of meat as a reward, and Jack would go up and give him a little pat on the nose. Don learned very quickly that if he sat up he would not be hit, and Jack would not try to hit him anywhere but in the face, as he knew he couldn't feel it. Topsy would never touch him except when he came near

her basket, and not then unless she could get near his face.

I could fill up the next issue of FOREST AND STREAM entirely with stories of these two cats, but I have told enough to convince any one who is unprejudiced against cats that they are a smart, intelligent animal, and also a stubborn one.

It is hardly to be expected that a tramp cat or one that has been abused and banged around will show any great amount of intellect, but any cat with kind treatment and proper training will show good results the same way a dog or horse would.

D. T. D.

BINGHAMTON, N. Y.

ACCIDENTS TO HOME BUILDERS.

A PAIR of robins—as has been their custom for several past years—recently commenced building their summer home in an elm tree on the sidewalk in front of my house, and the work went bravely on, with song and rapid flutter of wings. Suddenly the songs ceased and work on the nest stopped. But it was not left alone, for a band of miserable sparrows attacked it, and, if possible, were more active in its destruction than the robins had been in its construction.

A few days later the robins began another nest in a tall maple tree near by, and the work was pushed rapidly. But a few days since it was evident that something was wrong again. There was a great outcry on the part of the robins and an unmusical chatter by pugnacious sparrows. The latter were again victorious, and at once proceeded to demolish the nearly finished nest, which work they soon completed, strings, grass, feathers, etc., being scattered promiscuously about.

This was not all, nor the worst, for the male robin was seen hanging by a cord fastened to its neck and one wing, dead, and not ten feet from the place where the nest had been. The sight attracted the attention of passers by, but it was so high that none cared to ascend the tree to get the bird.

Being anxious to know the facts as to the reason of the bird's death, I spliced my stiff trolling rod—with a knife fastened to the tip—to a long pike pole, and with the help of a ladder and the assistance of a neighbor I succeeded in reaching and cutting the string above the bird.

An examination showed that a string—common wrapping twine—was passed through the wing quills, around the neck, and knotted so tightly that considerable patience was required to remove it, so that death must have been soon effected.

The male being dead and the nest destroyed, the female has departed, so that we are no longer favored with their sweet morning and evening songs.

The question now is, "Who killed cock robin?" Was it suicide from repeated defeats, or was he accidentally caught in the string? Or was it premeditated murder on the part of piratical sparrows?

J. H. D.

POUGHKEEPSIE, April 25.

Editor Forest and Stream:

The day after I read Mr. E. A. Leopold's article, "A Captive Released," I took my gun and went out for a stroll. I had hardly reached the fields before a large flock of crow blackbirds (*Quiscalus purpureus*) attracted my attention, and thinking I might secure a few specimens I loitered that way. The flock was perched in the top of a maple tree in the middle of a large field. On drawing near they all flew away save what seemed to be two that were perched close together. My curiosity was aroused, and after watching and seeing no movement on the part of the birds, the account printed in FOREST AND STREAM flashed through my mind, and procuring a ladder I ascended the tree. On reaching the branch I found a female crow blackbird suspended by the leg from a small branch. It had taken a piece of string, probably for a nest, although the flocks had not broken up yet, and in some way had tied it around the toes of one foot in such a manner as to form a slip-noose. The other end was tangled and wound round the branch, thus making the poor bird a prisoner. The feathers of the wings and tail were badly mussed, showing that it had fought hard for its liberty. I cut the branch off, and mounted the bird in that position, leaving it still hanging from the branch. The leg was entirely torn from the socket and was hanging by the flesh and cords alone. The bird could not have been dead more than twelve hours, as the feathers had not yet started nor the eyes much sunken. I have since heard of two more instances of this kind. One where a barn swallow (*Hirundo erythrogastra*) was hung by the neck by a horsehair, and a sparrow (*Passer domesticus*) met his death in a similar manner.

J. A. L.

OWEGO, Tioga County, N. Y.

Editor Forest and Stream:

Referring to Mr. E. A. Leopold's communication, in your issue of the 17th, describing the accidental hanging of a robin, would say that while walking with a friend in his orchard, in Wisconsin, some years ago, we found a waxwing hanging from the branch of an apple tree, dead. It had been engaged in building its nest, the materials used being dry grass, wool, cotton, lint, etc. It had picked up a cotton string about three feet long, had woven both ends of it into the nest and around the twigs on which the nest rested. The slack had in some way got wrapped twice around the bird's neck, and in its struggles it had choked itself to death. It had apparently been dead two or three days before we found it.

CHICAGO, Ill., April 21.

G. O. SHIELDS.

THE VOICES OF SPRING.—Editor Forest and Stream: Though Montreal is still inaccessible from the sea, Quebec has been luxuriating in an open port and free navigation for a month and more. An ocean steamer was telegraphed yesterday and will stop with us until the Lake St. Peter ice, grounded at Cap Range, takes its departure. In fact, ships and ocean steamers might have ascended the St. Lawrence and landed cargoes at Quebec wharves any time since Jan. 1 last. Oursporting friends, the wild white geese and Canada geese, did not delay a single day their annual spring migration from their winter quarters at the Bahamas, in Florida and Virginia. I heard their loud, joyous *hong, hong*, several weeks back. The Canada geese were flying in a northeast direction, intent on reaching before dark their cherished feeding ground on the St. Joachim Swamp, thirty miles lower down than Quebec, on the north shore of the St. Law-

rence. Their white *confrères* made less noise and flew much lower as they passed. When too much molested by gunners hid in mud holes, with live decoys, on the swamp, the flocks retire to Kamamasha, on the south side of our majestic flood, ninety miles lower than Quebec, stopping for luncheon at Crane Island, or at Goose Island, seven miles lower than Crane Island. The St. Joachim Swamp is the best sporting ground for the *oultardes* (Canada geese), and Seal Rocks excels as the headquarters for ducks from August to November. The breeding haunts of the Canada geese are the remote lakes north of Quebec and the heads of the salmon streams on the north shore of the St. Lawrence toward Labrador. Robins, song and chipping sparrows and Wilson's snowbird chirped their arrival about April 14, round Quebec. As usual, on St. George's Day, a pair of loyal swallows took possession, for matrimonial purposes, of the "high church" erected for them on my grounds, and twittering told me "spring is come."—J. M. LE MOINE, F.R.S.C. (Spencer Grange, Quebec, April 23).

HE DOES EAT WORMS.—Troy, N. Y., April 21.—Editor Forest and Stream: The assertion of "G. C. J." in his letter to the FOREST AND STREAM of April 10, to the effect that woodcock do not eat worms, is a matter of profound surprise to me. While many acknowledge an existing doubt as to how the whistling is made, I believe that few who are at all familiar with the habits of the bird will accept this new proposition as to the woodcock's diet. However this may be, if your correspondent has enough faith in his idea to renew his father's offer of \$50 for a woodcock in which a worm could be found, I desire to claim the forfeit. On Election Day in 1885, Albert Sampson and George Barringer of this city and myself flushed two woodcock in an overgrown cow pasture, a few miles from the corporation limits. This was about 9 o'clock in the morning. I winged one of these birds when he rose, and on picking him up I noticed a common angleworm wriggling in the bird's bill. Removing this worm I pried open the bill, and saw the tail of another angleworm sticking out of the gullet. I succeeded in dislodging the greater portion of this worm also. I think that this should be considered as positive evidence of the fact that *Philohela minor* is a worm eater.—SEYMOUR VAN SANTVOORD.

DO NOT KILL IT.—Thompsonstown, Pa., April 20.—Editor Forest and Stream: Last season when the June flood in the Juniata River receded, it left a large amount of drift banked across the mouth of a small creek flowing into it, thus forming quite a deep, broad pool. In this water, generally toward the close of the day, on several occasions and by different parties, has recently been seen a large otter, the size of its body, as described by one witness, being "as large as your mastiff." The single otter only has been seen, and it is likely that it ascended the swollen waters alone; otherwise it would have been possible for him to have bred in his present quarters. He is very shy, and thus far has happily escaped harm. The occurrence of otters in this river is rare, and I know of one other being seen of late years. If some one who is familiar with the habits of the otter would favor the FOREST AND STREAM with an article on its habits, time of feeding, etc., it would probably enlighten a number of fellow sportsmen, who, like the writer, have had no chance of observing them and are still in the dark as to their modes of life.—CHONIATA.

THE WOODCOCK'S SONG.—Ironton, O., April 24.—Editor Forest and Stream: I have known for a long while that the woodcock had a note much like the jack snipe. I accidentally found it out in about 1883 or 1884. While passing along the road hard by excellent cover for woodcock I heard the peculiar note, as I thought, of a snipe. Watching carefully I saw the bird between myself and a bright evening sky, and at once recognized it as a woodcock, but while still watching, it completed a circle and dropped within 5 yds. of me. I have heard the same note quite often since, and several times have watched the bird with a good glass. Now, last month, while in a blind watching a pond for the evening duck shooting, I heard the same note, and while trying to locate the sound a woodcock alighted within 6 ft. of me, and to my surprise gave notes not unlike what I have often heard a canary bird make—a low musical and quite pleasing sound. I watched him until too dark to see any more. It was more than satisfaction to me to find out that my choice bird for table use had a fine song, even if it was short.—D.

NOTES ON BIRD MIGRATION.—Michigan City, Ind., April 20.—Editor Forest and Stream: March 4 one robin was seen. Robins in rare cases stay here all winter. March 9 saw a flock of geese and a flock of ducks, all going north. March 16, song sparrows, robins and bluebirds seen in small numbers. March 18, ten red winged blackbirds and six seagulls. March 20, meadow larks seen. March 24, one dove and killdeer, robins, seagulls, ducks and meadow larks seen in large numbers. March 25 saw a woodcock and a Wilson snipe. March 27, more snipe and another woodcock. April 7, snipe were common in the marshes. April 14, two martins were seen; another I heard this morning, April 20.—F. L.

NEWTON, N. J., April 14.—I have seen the following birds myself: Crow blackbird and bluebird Feb. 23, crows flying north Feb. 25, song sparrow Feb. 28, chipmunk and red wing blackbird March 12, robin March 13, doves, groundhog and meadow lark March 14, killdeer March 20, geese March 25, bluejays and rock peewees April 1, higholders April 7, tip-up snipe April 14, butterflies April 14.—C. P. M.

EUROPEAN BIRDS IN CENTRAL PARK.—Mr. Eugene Schieffelin, of New York city, recently set at liberty in Central Park 80 European starlings (*Sturnus vulgaris*) and 70 chaffinches (*Fringilla caelebs*).

EUROPEAN WIDGEON.—Mr. W. D. Carpenter, of this city, recently killed on the south side of Long Island a fine specimen of the European widgeon. He is having the bird mounted.

FOREST AND STREAM, Box 2332, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

SCOTT 10, Sept. 5.
L. C. SMITH 12, Oct. 10.
WHITNEY SAFETY 12, March 6.
WINCHESTER 10 and 12, Oct. 3.

ADIRONDACK DEER HOUNDING.

Editor Forest and Stream:

The friends and enemies of hounding deer in the Adirondacks have expressed their opinions so often and so elaborately that it seems impossible that the people and the legislators, their representatives, should not know what changes are necessary in the game laws. But the number and variety of the bills which have been presented at Albany this winter indicate that the public mind has not yet reached a decision upon this important matter. People can still be influenced by forcible arguments on one or the other side, and as long as this is the case the friends of true sport and its continuance must not rest, but do what they have hitherto failed to do, unite, and by concerted action obtain laws which will protect the deer and which will be interpretable by all.

Personally, and I do not stand alone, I would rejoice to see hounding prohibited. Deer would then increase so rapidly that in five years, I believe, they would be more numerous than ever before. During that portion of the year when hounding is legal, and in many places very, very much longer, the hound really has replaced the now almost extinct wolf. We consider hounding the most destructive way of hunting deer. In support of this I might give a score or more of reasons, but let one suffice.

When watching a lake, without a dog, the only deer a hunter will see are those that come voluntarily for food or drink, and that from no great distance. Pursued by the hound, a deer is forced to go to water, is driven there by instinct which tells it that by swimming through a lake it renders itself unscentable. Hence a hunter who uses a dog will see deer that come involuntarily and from afar. Besides, when it is once in the water, the hunter has the deer entirely at his mercy, and how seldom does he show any. With a boat he can row between the deer and the shore, and once headed off it can be overtaken with ease. This makes it almost certain that the deer will be killed. I think it no exaggeration to say that not more than one out of a hundred deer driven in escape from the water, and that one is more than likely to die of exhaustion.

Now let me briefly summarize the most common arguments of the advocates of hounding. They don't deny that a great many deer are killed each year before the dogs, but allege that many more are killed by still-hunters, and that still-hunting is the destructive method and the one to be done away with. To refute this it is necessary only to prove still-hunting less destructive, and we have the hounders caught in their own trap. This has been done repeatedly. Baffled here, the hounder retreats behind jacking, or floating, claiming for that method greater spoils. Again worsted, he is driven to say that dogging co-mingles does and bucks, so that the greatest possible number of fawns is insured! This argument and many others have been proven groundless.

The true sportsmen and the inhabitants of the western woods favor the abolition of hounds, the market-hunters, hotel suppliers and the dwellers in the eastern counties favor their retention. To the former the present fifty days of legal hounding is abominable; to the latter delightful. While I believe that the hotel proprietors and guides on the east side are very short-sighted in wishing to kill all their game at once, and in not permitting its increase, it is, perhaps, unjust that either party should be deprived of the privilege of hunting in its own way. At present the still-hunter has ten days at the end of the season, the floater and watcher fifteen days at its opening, and the hounder the best fifty days; a most unfair division and one which must be changed.

As yet there has been no pre-arranged action, save the introduction of bills by clubs, and these bills are so widely different that it is evident that no law, acceptable alike to the eastern and western counties, will be passed this session. Many of the proposed measures are most dangerous. I refer to those that provide special seasons and restrictions for separate counties. These, because they cannot be enforced, owing to the indefiniteness of the county lines, set a premium on poaching. Suppose, for example, that hounding is legal in Franklin and illegal in St. Lawrence. It is possible, probable, even certain, that more than one dog will "accidentally," of course, cross the line.

It seems to me that, if it can be brought about, there is an easy way to settle the dispute permanently. Let two representative men, one of each side, arrange by correspondence time and a place for a meeting, which all interested would be invited through the daily papers to attend, and at which a bill could be draughted, such that it would suit both parties. Politics and money should, of course, be entirely eliminated from this discussion, however it is to be carried on. I fear that they have had too much influence already.

Will not some advocate of hounding express his opinion regarding the feasibility of this plan, or propose one of his own?

NÚ DELTA.

MALLARD SHOOTING IN NEBRASKA.—*Editor Forest and Stream:* While on a shooting trip in Nebraska last fall I had some fine shooting at mallards as they flew in from the Platte River at night to their feeding grounds, the open prairie, where cattle and hogs are fed with corn. My friend, F. W. Powell, and I killed twenty-five in two nights and mornings at dawn, as they flew over our heads in small flocks. They remain here all winter, I saw them sitting about upon the sandbars of the Platte River during the day. They were then very shy and hard to shoot. They seemed to be very abundant, as I saw them flying about in great numbers at night.—A. HALL (Lakewood, Ohio).

PATTERN AND PENETRATION.

CLABROUGH 12-GAUGE.

THE gun the performances of which are recorded in the following tables was sent for test to the FOREST AND STREAM office from Major Sheldon I. Kellogg, president of the Selby Lead and Smelting Company, of San Francisco, Cal. He with a thousand others of American gunmakers and users had been a watchful observer of the results reached at the Claremont screen and offered to send on his favorite arm for a thorough test. He was promptly invited to send on his weapon with such charges as he wished to have put through a comparative examination. How exhaustively the gun was tried is shown in the fact that 12 sets of cartridges came across the continent with the weapon. Wood, Schultze and two makes black powder were all included, and no less than 4 sizes of shot. It was tried on two very fair days and nearly 200 targets taken to get at the thorough averages always reached when possible at the screen. The No. 7 shot charges were taken for full comparisons, as in this way the three varieties of powder were given in parallel columns and carried out to the corresponding averages. It will be seen by a study of the charges as given how completely Major Kellogg had rounded out all the possible uses to which his neat and satisfactory Clabrough might be put. On the whole it did well, although the grand percentage reached was but 57, which was also, it will be seen, the average of the FFFG powder charge, while the Ducking powder reported 64 per cent. of the charge on the selected circles at 40 yds., making a black powder average of 61 per cent. against 60 per cent. for the wood and 50 per cent. for the Schultze powder. The Ducking powder with No. 4 shot ran up to over 70 per cent.

In making the tests the charges were fired through in the order of the tables, at 40 yds., without any cleaning from the first to the 84th shot. On the next day the 60 yds. shooting was put through in the same order and in the same fashion. The aiming from the rest was done by Superintendent Moss of the range, and he found, he said, the gun to be a capital working arm. With these few words of introduction to the test we leave the tables to tell their own instructive tales.

Charge No. 1 (See Detailed Report).

CHICAGO AND THE WEST.

CHICAGO, Ill., April 22.—That erratic wayfarer, the jack snipe, has seemed of late unable to decide whether he belongs in this latitude or not. All sorts of news has come in about the snipe shooting, but about the only fact to be deduced from it all is, that it is a risky experiment to go snipe shooting yet awhile. It is generally supposed that the fight is not up this far yet, and this idea is supported by the game dealers, who report most of their snipe as coming from Iowa or lower Illinois. Springfield was thought to be at the top of the fight last week, and a good many birds were coming in from Ford county. No regular bags have been reported from the grounds north of here, although H. A. Foss, just back from Iowa, had 98 snipe with him, and reported good shooting in that State. Three weeks ago the shooting was much better, and now that we have had some warm days and nights, enough to bring in the snipe if they were coming, apparently, the question arises whether the pesky things have not all gone on by, and left us in the lurch, despite the high water and the abundant feed. One or two marsh men of the Kankakee country think the birds are gone. The Cumberland shooters do not think so, and argue that if the birds were up yet, they would certainly be heard from on their prime snipe grounds. Somebody came up yesterday and told Billy Mussey that John Watson and somebody else had bagged about 125 snipe at Mak-saw-ba last Monday, and Billy at once started in that direction. He probably won't get 125, for the birds may leave. Mr. Fred C. Donald, General Passenger Agent of the Chicago & Atlantic Railway, with Mr. C. Burton, of the Kankakee line, Charlie Willard and a second railroad man, went down to North Judson, Ind., last Friday, in the official car Fredonia. "That's the only way to go hunting," says Charlie Burton. The snipe did not fly around the car very much, it seems, the party only bagging five birds; but Charlie says they had a mighty good cook—which the same was Scott, the colored boy who carried the coon on the Fredonia's quail trip last fall.

The state of the snipe question being in such a highly fluctuating and non-conclusive condition, it seemed necessary to pursue some original investigation in the matter, and therefore Mr. Alex. T. Loyd and I went down to Shelby, Ind., for a two days' effort last week. Shelby is about three-quarters of a mile from Water Valley, the little tank station on the Kankakee River. The hotel is the only building in Shelby, except the barn, but Shelby is a much larger and more enterprising city than Water Valley. We stopped at the hotel.

This Kankakee country, of which so much mention is made, is really a remarkable strip of country, and rarely was there ever a better for wildfowl than that lying along scores and scores of miles of its course. The Kankakee is a stream across which you can throw a stone sometimes, but over which at others you could not shoot a rifle ball. Never was such a labyrinth of marsh, lagoon, bayou, cut-off and overflowed prairies as it sometimes sets forth, and very often, were it not for the fringe of low timber and thick woodcock cover along the banks, it would be impossible to say what was the Kankakee and what was just plain water. This spring the overflow has been exceptionally great. In any direction we could look water was visible on bottom lands, marsh and field, and the panorama of the great horseshoe bend was such as well deserved its name of the "Water Valley."

Shelby is a great railroad center. Two roads cross there, the Monroe, on which we went down, and the "Three-Is" road, which runs to Muncie and other places. After consultation with the landlord of Shelby we concluded to go east, along the "Three-Is" track, and try the wet pastures lying near by. We passed over miles of excellent snipe ground, but though we saw numbers of ducks we did not start a snipe. The law was out on ducks, so we couldn't shoot at anything, and it looked like a slim day. We went down to the house of "Sandy," a well-known pusher, and he told us to either cross the "Three-Is" bridge and turn to the right among the hummock bog, or to go on across the Monon bridge and try the similar ground west of Thayer (Thayer is another city a mile further south. There are two houses at Thayer). We chose the former course, and found a splendid ground, full of black mud bogs of a quality to excite the admiration of any right-minded jacksnipe. But though we walked and waded and soliloquized, we saw only five snipe, and we took four of them back with us. We spent most of the day trying the little 10-gauge gun which Mr. Loyd was carrying, he having for once torn himself away from his 11lb. Greener. This little gun is the property of Mr. Loyd's friend and hunting companion, Mr. Reuben Donnelly, the young man who makes the Chicago city directory every year. He stays home and works, and Aleck borrows his gun. I should not be surprised if he should steal it, for it proved itself a really remarkable little weapon. I am free to confess that it would kill further and cleaner than my 12-gauge, although it shot rather too close for my notion. Mr. Loyd killed a number of mudhens which were out of range of my gun, and knocked down even so small a bird as a yellowhammer at seventy-five long paces. I see no use for a heavier gun, even for ducks, for this one would kill a duck as far as any 12-gauge I ever happened to handle, and the load used made no recoil, although the gun weighs less than 7lbs. Mr. Loyd had just bought a lot of old wood powder shells at a closing-out sale, and they proved better than he had expected. The load was 34drs. powder (the old C brand) and an ounce of No. 7 shot. Mr. Loyd knows all about those things, and he said that was not too much of the old powder, though 34drs. was plenty of the new powder. There being no snipe we sat down on a bank and began some investigations of a practical sort upon our ammunition.

"You see this powder," said Mr. Loyd, as he cut open one of his shells. "It is hard and tightly compressed, doubtless loaded with the old 7lbs. pressure rule. That's all right for the old wood powder, but all wrong for the new brands. For the new powder you want to just seat the wads fairly, not crowding the powder; otherwise you are liable to make it detonate, and if your shells don't blow your head off they are apt to be irregular at least. The use of black powder in priming wood powder or Schultze is dangerous and should only be done very carefully. I never prime a nitro powder. Mix a dram of black powder with two or three of Schultze, and you will be almost certain to detonate the load and practically sure to burst your gun. Look here."

He cut open one of the old shells and poured the caked

powder out on the grass, then touching a match to it, the powder flared up, not violently, but steadily. We then mixed the contents of a black powder shell and one of 12-bore trap, which had been loaded loosely and properly, and touched off the mixed compound. The result was an open air explosion which made us both jump to get out of the way. That charge, if confined, would have ribboned my gun barrel. These little facts may be useful to somebody who is not thoroughly familiar with the nitro powders.

We continued our investigations by picking out a black powder shell from among my lot, which embraced a wide assortment. I might as well say that I stole this lot of shells out of the FOREST AND STREAM gun test room, where they had accumulated during the course of the trials and were in danger of being fired out otherwise. This job lot of the experts' ammunition was a curiosity (Aleck said it was a miscellaneous lot), and showed well enough the different ideas of different gun men, as well as the carelessness of certain experts who would be disappointed if their guns did not make a good showing. This black powder shell was an instance of the latter. This shell was taken from a box sent down with an expensive gun by a large gun firm who wished the weapon tested. We opened the case and found what was probably 34drs. of powder (a 12ga. shell), with two little black-edged wads on the powder and 14oz. of shot above that. The fault of the shell lay in the wadding.

"I can take the same gun and get 10 per cent. more pattern with the right kind of wadding on the powder," said Mr. Loyd. "He ought to have at least three wads of that sort on the powder and they ought to be a size larger than the shell. That fellow couldn't load shells any more than Thompson's colt."

I never heard that Mr. Thompson's young horse ever attempted to load shells, but I give Mr. Loyd's remarks *verbatim*. Aleck knows a good deal about guns and ammunition, anyway, and the younger men may well note what he says. In private, I never agree with him on any such points for fear he'll get too proud.

But the snipe hunt languishes. The next morning, in company with five young men who had also come down for a snipe shoot, we got upon a hay wagon and went north about four miles, into that portion of the marsh which lies about the well-known Fuller Island. We drove across the long earthen causeway which threads the marsh at this point, and descended from our carriage at a point which looked very promising. Aleck and I winked at each other and chose the left hand side, down wind. Behold the wisdom of our wisdom! We had not gone a quarter of a mile before we heard the novices begin a terrible cannonade, which continued nearly all the morning. For ourselves, we saw only five or six snipe and only got one of them, the birds being so very wild. We started four prairie chickens, right on the wet marsh, and were scared nearly to death by a mallard hen that flew out of a fence row almost under our feet. Parting the grass, we found a beautiful feather-lined nest, with eleven big eggs in it. That shows that April 15 is plenty late for the closing of the duck season. By-and-by we saw the old bird come back to her nest. May the fates prosper her!

We now waded across the wide marsh to Fuller Island, and Mr. Loyd pointed out in the distance the spot where he wished to inaugurate and locate a little club of 25 members, chosen from the Grand Calumet Heights Club. This will probably be done, and a rough camp and boat house put up. The part of the marsh in question is excellent, but it is half a day's push from Water Valley, and there is no nearer place to keep a boat. If this little club goes in (near "Topping's"), its members will be right in the center of the best duck and snipe ground in that region.

Fuller Island itself is a delightful camping spot. It is two or three miles long, they say, though it is narrow. A heavy growth of timber and underbrush covers it. It is fairly alive with rabbits and there are also a good many ruffed grouse. Mr. Loyd's dog, Grouse, had a great deal of fun with the rabbits, or else they had with him.

Still we found no snipe and once more we fell to shooting mudhens with the 16-gauge, keeping Grouse, who is a magnificent retriever, busy bringing out the birds that we shot from the causeway. At 1 o'clock we found the other party at the wagon. They had 6 or 8 jacks and a lot of little sand snipe, or "prairie plover." They said they had seen at least 200 jacksnipe and could take us among them.

After lunch we started out for this spot in two or three little squads. Mr. Loyd stuck to the marsh and finally got across again to Fuller Island. He found no shooting. The snipe had left. Believing the wet marsh still too cold, I followed up a little trickle of water that came down from the fields and soon found myself alone, on about a half mile of black and boggy ground, full of little spring-holes. The snipe were in this corner, a whole lot of them, and if Mr. Loyd had been with me, we should have had good sport. Thanks to the mudhen business, I only had about 25 or 30 shells left and before long I ran out, even of No. 7's. Once I had four snipe down before I had picked up any of them and in this way I lost two of my dead birds, as well as four other later on. The longbills were wild, but they kept jumping all around me and the shells didn't last long. I made runs of 4, 3 and 7 straight, and threw my last empty shell after the second bird I missed out of a double. I should state that I also missed the first one. In all I killed 17 snipe here. A little later on Mr. Loyd picked up five across the river, on the ground earlier pointed out by Sandy, the pusher. We gathered up about 25 birds in all and walked about 700 miles.

That is a fair sample of the snipe shooting here just now. You walk and walk and don't find them, then you blunder on a big bunch of them in some unexpected corner. The character of these big companies led us to think that the birds were finally beginning to come in with the warm weather, and we thought that during the week the flight would be good—unless, except and perhaps.

This snipe hunt took place fifty-three miles south of Chicago. We might have had as good or better luck had we gone half that distance, to Lake Station, on the Little Calumet. All the country, from Little Calumet down, seems overflowed, and we noticed that the ground near the old Florence Benner shooting box seemed in great condition for snipe. These flats were until very lately much frequented by woodcock. It used to be a regular thing to kill a woodcock or two in Florence Ben-

ner's potato patch, and one afternoon some few years ago one gun killed fifty-six woodcock on this very flat, within what is now part of the city of Chicago. One of the best snipe bags made this spring was right near Pullman, and still closer in, along that singular bit of ground near Englewood, some very good sport has been had lately, only about five miles from the heart of the city.

A good many of the boys will probably be out after snipe this week, but the returns are not yet fully in. The probability is favorable for some fast and furious fun before long.

But few golden plover have been killed about here this season. It is nearly time they were here. These birds are not much understood and are not much hunted by Chicago shooters.

The foolish Illinois law still permits the killing of ducks till the first of May. After seeing the mallard upon her nest of eggs nearly two weeks before the first of May, at least two shooters lost all desire to hunt ducks any later, and it is near the truth to say that very few Chicago shooters are trying to kill any ducks in Illinois. We have a better duck law below us. Above us, in Wisconsin, we have a better bass law. It is illegal to catch bass yet in Wisconsin, but, unfortunately, many of our more thoughtful anglers are already at the business of catching bass on the spawning beds. The law says they may.

Mr. C. D. Gammon is out again; after a long and dangerous illness, and looks pretty badly. He ought to go snipe hunting pretty soon. That will cure him, I know. A week or so ago I was all "run down," I believe they call it, and chartered a doctor, who gave me four kinds of medicine and told me not to get my feet wet. "Come in every other day," he said, "and I'll touch your throat for you." He would also touch my pocketbook for me. I went snipe shooting, disobeyed the injunction about wet feet, got good and tired and awfully hungry, and now my throat, etc., don't need to be touched, and I haven't got any "run down." No man can be healthy who hasn't got his nose sunburned. And now the days of sunburn draws on apace, whereat sick and suffering humanity may indeed rejoice.

April 25.—All previous reports about the snipe 'are declared off. The birds are coming in and are in.

Billy Mussey has just got back from his day's shoot at Mak-saw-ba marsh, and behind his desk he has a bunch of plump brown birds such as makes all spectators sigh with envy. He has 36 jacksnipe and 20 plover, yellow-legs, etc., all killed in one day. He evidently found 'em. Billy is a little bit excited yet, but from his story it would appear that he stood out in the marsh and fired broadsides all day, while six natives ran an ammunition train out to him, and three smoke-begrimed powder monkeys passed fresh shot and shell up from the magazine of the boat. The action must have been a bloody and exciting one, and the proof of the accurate service of Billy's artillery.

Mr. Mussey's hunt was on Wednesday, and on that day the air was full of snipe and their "booming" could be heard on every hand. At night the snipe, plover and ducks could be heard passing over the club house all night. Bluewing teal and other ducks were numerous on the marsh, more so than has been the case in a long time. The water has fallen 2ft. in the past week on Mak-saw-ba marsh, and the ground is getting into splendid condition for snipe. Woodcock are nesting in numbers on the club grounds and there will be fine shooting at those birds this summer, along thirty to fifty miles of the Kankakee. Mr. Brown, a Mak-saw-ba member, once last year killed 9 woodcock before breakfast, within a half mile of the club house.

Doubtless many readers are skeptical of the assertion that the jacksnipe will sometimes alight on a tree. Mr. Mussey settles the question, for on his late trip he saw a jacksnipe so alight, and moreover, killed and bagged the bird when it flew. That is rather an unusual thing—I mean it is unusual for a snipe to do so.

Mr. H. C. Hayt bagged eleven snipe on Mak-saw-ba marsh last Tuesday, and Mr. J. Shailer nineteen. There is no longer any doubt that the fight is well on hand at that part of the Kankakee. The snipe are heard coming in day and night, and have been seen by moonlight as they came dropping into the marsh. The last is a rare and singular sight.

To settle all remaining doubt about the birds let me say that Italian Joe, the most successful market-hunter on this green earth for snipe, woodcock and golden plover, is now out at his old stand near Summit, and has bagged 200 snipe and plover in one day. He shoots all the spring and shoots for money. It is interesting to note that his ground is only about eleven miles from the middle of Chicago.

It was Mr. Joe Card, who with Mr. John Watson, bagged 116 birds at Mak-saw-ba. But they got only about half jacksnipe, the balance mixed.

E. HOUGH.
[In issue of last week, read R. A. Turtle instead of "R. A. Twette," as the types had it.—E. H.]

A MEAT HUNT.—A Mr. Buckles, living near Jerseyville, Ill., in December last went to Berdan, Kan., where he was met by three other men, who fitted out two two-horse wagons with all the necessary equipments for a long hunt in the wilderness. They headed for Arkansas City, and drove south into Oklahoma, then west through the Cherokee Strip into the panhandle of Texas, and during three weeks after leaving Kansas they killed 21 deer, 90 wild turkeys, 76 coyotes, which they left where they fell, 145 prairie chickens, and quail without number. They sold enough game to pay the expenses of the trip and had a balance of \$20 each to their credit.—C.

OHIO GAME NOTES.—Dayton, Ohio, April 22.—Woodcock are expected to begin hatching this week. Many more nests than is usual are found around the edges of the swamps and along the branches and streams. Snipe brought in this week are of much larger size than earlier in the season. One hunter brought in 12 yesterday that would weigh 5oz. each. He shot a rail that weighed 9oz. The snipe hunters report an abundance of quail. One party scared up a dozen coveys on one farm Saturday. Their being in coveys shows that the quail are not yet mating.—BUCKEYER.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

THE PRESERVATION OF GAME.

It has come to a question as to how our principal game animals and birds are to be kept from total extinction. So large a proportion of our forests and prairies of forty years ago have since then yielded to cultivation that there has been necessarily a great decrease in the number of wild animals in the country, such as have been sought for food and for their fur. But if the ranges had remained as they were at the time railroads began to be built, with our millions of people free to own firearms and full of adventure as they are, the destruction of the larger varieties of game would have so far exceeded the ordinary increase that very soon some means would need to be found to save them from extinction.

The bison, moose, elk, mountain sheep and goat require a range so large and diversified by mountain, lake and river, as well as thick forest growth and plains bearing grass, that nothing less than our National Park can adequately provide for their necessities, if the animals are to be kept in a state of nature. It is certain that all of the animals named except the sheep and goat are kept in a half domesticated state on ordinary farms. But so far they have not increased much, and always seem to me to need to be more thoroughly domesticated or to have a stronger fence.

The great Adirondack forest will, I hope, soon be made into a park, either by the State or National Government. No place is better suited for the moose and elk, as well as deer. Suitable rules can then be enforced. With an intelligent set of commissioners and energetic wardens, the number of deer can be increased almost indefinitely. One of the main sources of loss in deer production is by starvation. Deer in that cold climate, with its deep snows, "winter kill" or die for want of sufficient food. With enough to eat, none but very old ones would die off in winter and spring. If a few wolves still exist, they could be easily destroyed. Then if the deer shall be unmolested by the summer tourist and his guide, so that the doe can raise her fawns undisturbed, and by the professional hunter when the snow begins to fall, their troubles will be over except as to a winter supply of food.

An ordinary pine and hemlock forest is worth very little for the support of deer, summer or winter. Deer want to browse on the twigs of maple, beech, birch, mountain ash and lichens. Generally, when such food is found, snows get deepest and the crust hardest. And at the first heavy snows, deer go to hemlock and pine thickets. But if a timber cutter breaks a road to the pine and fells ever so many, the deer care little. But when for any reason he fells maple, the deer may generally be found browsing from its top very soon after the chopper leaves his work.

Where the pine has been cut off and the ground burnt over, there soon springs up a thick growth of brush and briars, and then there is food and cover for many deer, where a little while before there were none, making a home. In many places in these pine regions it is practicable to plow small pieces and sow oats and rye. Deer will be sure to find these places. So, if in a place where they are not disturbed they have access to a field of potatoes, it will surprise one to see how many they will dig in one night. In reading a description by a correspondent of *FOREST AND STREAM* of the grounds of a hunting club in Wisconsin, where a large tract was or had been pine lands, I was thinking how that club could plow many patches in that forest and sow oats, or other grain, and be able next July to show its visitors a few deer almost any evening, and when the shrubs and briars got well grown, many deer would find a home there with good food and cover. I regard it as no loss to the deer to have all the evergreen forests destroyed. When that is done, in many places in the West, scrub oaks come in at once, and in a few years produce acorns, and in all places the deer is greatly the gainer. It is found that the Virginia deer likes to stay near a farm. This is only because the margin between field and forest is grown up to brush and briars, and he finds here the food he wants, besides making a raid at evening on a field of growing grain.

In my judgment the preservation of deer will be most largely and effectually secured by private hunting clubs and joint stock companies; and it is a pleasure to know that lands are being secured in all parts of the country by clubs composed of men of culture. Gentlemen are finding the health and rest they need in outdoor sports and finding truth in the old couplet:

Better search in the fields for health unbought,
Than fee the doctor for a nauseous draught.

I would urge that in a place where practicable, when land is being secured for a shooting club, in connection with lake and river a portion of forest be secured and the culture of deer, turkeys and grouse be made a feature as well as that of fish. In the less settled portion of our country such grounds can readily be secured. I camped last fall at a place embracing in one neighborhood more desirable features than I have met elsewhere. There was a small river with a beautiful waterfall. Below the fall was a margin of marshland.

As soon as our tent was set up my companion took his gun. Ducks were as plenty as one could wish, and geese were near by. I took my rod and went to the fall and got some beautiful trout. These were small, from a quarter to half a pound. In the stream just below the fall the trout were large, running from 2 to 4 lbs. Whether salmon come up as far as the falls I do not know, but a few miles below Indians were catching and smoking salmon. Deer were coming from the foothills to the river, and the Indians were said to have killed, after I left, 800 deer and several elk in that vicinity before complaint was made, and the agent recalled them to their reservation, for they had no right to be there. The climate is good, with no rain in summer to bring mosquitoes and other like pests. The autumn weather is so mild and dry that an invalid may remain out in the air day or night without danger. A ranch near by could supply milk and vegetables until the club grounds could be put in order. The land belongs mainly to the Government, except that the falls are most probably included in the ranch property. Take it for all in all it would be hard to find a more desirable spot for a sportsmen's club.

Quail are easily cultivated in this county. The margins of the rivers grow thickets for good cover, and grain planted near by gives all the food they need. Those brought here, the Bob White, have increased wonderfully. They are not only abundant on the bottom lands of the Boise Valley, but have crossed the range of hills into the Payette River Valley. The Chinese peas-

ant and several varieties of grouse as well as the wild turkey could be cultivated in the dry climate west of the Rocky Mountains. Many of the mountain sides have scrub oak chapparral growing acorns such as turkeys like, though with beechnuts and acorns in abundance, I used to find them in the cornfield, where the field was near the woods. When our country is many years older I believe the people will see deer and elk, wild turkeys and grouse quite as frequently as the present generation has done, and for the reason that these and other varieties of game will be preserved on the grounds of private persons and clubs, who will be as proud of their shooting boxes and hunting grounds as gentlemen of England now are and ought to be.

G. H. W.
BOISE CITY, IDAHO.

SPRING SHOOTING IN NEBRASKA.

OMAHA, Neb., April 23.—This is proving one of the most satisfactory springs for wildfowl and snipe shooting that has been experienced here within the past ten years. Notwithstanding the winter was an unusually mild and open one, and that the birds might have been expected to come in in straggling flocks and offer but poor shooting, they did nothing of the kind, but swooped down upon all our lakes and streams, sloughs and marshes within a single day or two. Of course, this made the gunner's life a happy one. It has been no trip at all to go out here on the Elkhorn, to Waubunsee, Bartlett's, Horseshoe or Honeycreek lakes, and a half-hundred other good grounds, any day since March 18 and bring to bag anywhere from two to seven dozen ducks—mallards, pintails, widgeon, redheads, bluebills, and not a few canvasbacks, although the latter, king of all feathered game that he is, has not been as plentiful as some other seasons. And geese! Oh, my! oh, me! The legendary Platte is even yet to-day alive with them, and there haven't been such bags made in twenty years. The Canadas, however, have pretty generally gone north; but yet a few remain. They were here, though, for a period of three weeks by countless thousands, big, glossy-plumaged, magnificent fellows, the like of which I do not believe I ever saw before. Dr. Galbraith killed a Canada out at Brady's Island one week ago that weighed 19 lbs. 4 oz. How was that for a big goose? The geese here now are principally the Hutchins and the snow, and they line the bars in the Platte until they resemble endless snow-drifts. These birds will furnish superb shooting for two weeks yet.

Just now gunners are in the midst of a most glorious snipe season. The precious little gallinago rode in on a high, warm wind one week ago to-night, and since then the meadows and the marshes have literally swarmed with them. As is invariably the case, the birds were in poor condition at first, but in the midst of such splendid feeding as they find here, it doesn't require more than forty-eight hours for them to get in most tempting condition.

Frank Parmalee, who is one of the finest shots in the country, and G. W. Loomis, of the B. & M. R. R., spent yesterday at Gretna, snipe shooting. They found the birds in great numbers and scored a big kill—Parmalee 53 and Loomis 37. The birds were found in the mown meadows, where stand straggling pools of water and where the soil is soft and mellow, and just right for boring, instead of in their customary haunts along the reedy sloughs.

Harvey McGrew, who is one of Omaha's most successful goose hunters, has just returned from a four days' camping near Sioux River. McGrew has six pair of domesticated wild geese which he has trained in a wonderful manner and uses as decoys. He gets geese where the ordinary hunter couldn't get a shot. The result of his four days' shoot was ninety-eight, principally Hutchins.

Billy Townsend, with a party of Eastern friends, were at Waubunsee a couple of days this week. They report the birds exceedingly plentiful, especially redhead, teal and widgeon, and verified this statement by bringing in a bag numbering nearly, if not quite, 200.

Dr. D. C. Bryant and several friends spent yesterday at Waterloo, cracking away at the blue and green wings.

Dr. J. R. Conkling has returned from a two months' Florida outing. The Doctor reports a glorious time, and judging from his appearance all his fish stories are true.

C. Clafin with several other well known business men are encamped on the Platte, at Utan.

"Doc" Haynes, manager of Boyd's opera house, killed seven white geese at a single shot out at Cozad Monday.

JED GRIS.

MORE PRESERVES.

HON. W. T. DUNMORE, Dr. C. M. Hitchcock, W. E. Owen and A. B. Gardner, of Utica, have just purchased of Whitman, Marsh and Ostrander, of Albany, 1,200 acres of woodland in the Adirondack region. The tract is located in the town of Morehouse, Arthurboro patent, and a portion of the land borders on Pine, Little Pine and G lakes, thus affording the owners fishing privileges in all these waters. The lakes are inhabited by speckled trout, and in the first named many handsome salmon are taken. The lakes are comparatively easy of access, and are only four or five miles from Matteson's Adirondack Mountain Hotel and Hoffmeister's place.—PORTSA (Utica, N. Y., April 21).

Ten Potsdam sportsmen have organized the Potsdam Burnt Bridge Club, and have purchased 640 acres of Adirondack forest land from H. W. Stevens, of St. Albans, Vt. The place is good for deer and trout, and is about eight miles southwest of Gales.

Several gentlemen of northern New York have obtained options on about 100,000 acres of land in the Adirondacks, belonging to the heirs of the Blake estate. It is proposed to form a joint stock company of 500 shares at \$100 each. This tract includes a number of fine lakes, and is said to afford remarkably fine fishing and good deer hunting.

PELICANS IN IOWA.—A large flock of white pelicans passed over Sheldon, Ia., a few days ago, from which flock one was shot measuring 7½ ft. in extent. The flock was said to be about two miles long. Wild geese and ducks of various kinds have been wending their way northward for some time; are nearly all gone from here now.—A. S. J. (Hull, Ia., April 21).

CLUB MEETINGS.—The Utica Fish and Game Protective Association has elected the following officers: President, Col. I. J. Gray; Directors—I. C. McIntosh, W. K. Gilmore, W. E. Wolcott, Gustavus Dexter, Dr. C. M. Hitchcock, Elon G. Brown, A. K. Seymour. The Association adopted the following preamble and resolutions: Whereas, the lands belonging to the State in the Adirondacks have been set apart as public domain for the benefit of the public, and other lands are to be acquired by the State; and whereas, various bills are or have been introduced into the Legislature looking to a grant of power to State officials to sell or exchange lands to private parties under color of being barren or untimbered lands; and whereas, the effort and design of these bills is to obtain certain franchises that are valuable to the public at large for fishing and hunting, and consisting of valuable lakes and streams, which are to be turned into private preserves, from which the public are to be excluded, and whereby the intended Adirondack Park will contain little, if anything, of public value; therefore, resolved, that this Association deprecate all such attempts, and are opposed to the granting of all such permits of sale or exchange; also resolved, that our board take measures to respectfully bring these views to our Legislature and ask the enactment of laws to do away with all private preserves within the Adirondack wilderness, and for the enforcement and exercise of the right of eminent domain over the entire Adirondack wilderness; and that the same be kept and reserved by the State authority equally and for the benefit of all, and against all, with suitable, reasonable, consistent and practical restrictions thereto, as to the time, mode and reasons for taking of fish or game therein, and the amounts thereof, to the extent of measuring the supply and prevent diminution and extermination. Resolved, that it is the sense of this Association that unless measures are adopted looking to these ends, the utility of game laws will soon become of no public advantage; but only advantages and benefits by which the few rich may oppress, harass and deprive the masses of rights and benefits which should be equally free to all for comfort and enjoyment.—PORTSA (Utica, N. Y., April 21).

JEKYL ISLAND CLUB'S GAME KEEPER.—I hear that the Jekyll Island Club has secured the services of Mr. John Clarke as head game keeper on the island. I know his father, Mr. Thos. Clarke, now proprietor of the Turf Hotel, Shrewsbury, England, to be one of the best rears by hand of pheasants on the other side of the Atlantic. Mr. John Clarke had a good tutoring under his father for years with the present Col. C. G. Wingfield, of Onslow, Shrewsbury, and shooting members of the club can feel confident that they will see some sport under his management. He will have a great many vermin to contend with, such as wild hogs by the hundreds, coons by thousands, and hawks, snakes, minks, etc., but being a first-class shot and trapper, and with a good staff of white and colored assistants, he will slaughter a good many of them who frequent his rearing establishment. He has only a few hen pheasants up for breeding this season, but next season the game committee intend giving him a good stock, and if they find pheasants will thrive there, there is no reason why it should not be the best shooting grounds in America, and second to none on the other side of the Atlantic. The island at the present time is full of deer, wild turkey, etc.—N. Y.

A VETERAN DEER HUNTER.—A few days since we met the bronzed and smiling visage of one of our veteran deer hunters, "Uncle Jim Slaten," who greeted us with a laugh and an old-fashioned shake that made our arm tingle to the shoulder. No hypocrisy in that grip, nothing but good will and good fellowship. Time writes few wrinkles on his brow, for he is always happy. He was born happy, under a happy planet. He only sees the bright side of things. It is a positive treat to be in camp with him. Luck is never so bad but he can see some bright spots and something to laugh at, and many a hearty laugh has he had at our expense during the pleasant days we have camped together. He had just come back from a three weeks' deer hunt with hounds, in southeast Missouri among the spurs of the Ozarks, on the west fork of Black River. He says that deer is not nearly so abundant as when we hunted there 20 years ago. He saw three and killed none and came back without tasting venison. Had he tried still-hunting, in which he won his laurels, he would have brought back a "buck" or two to grace the old homestead in Illinois.—CAMERON (Elsah, Ill.).

SPRING IN NEW BRUNSWICK.—Frederickton, N. B., April 19.—*Editor Forest and Stream:* The weather is cold and disagreeable here and the river is full of ice. Mr. Coleman, proprietor of the Barker House here, will soon through your advertising columns make to those who love good trout fishing combined with comfort an important announcement. The snow is still of unusual depth in the northeastern part of the Province, which has made it bad for the poor moose, which are being run down and murdered in the deep snows. The so-called stringent game law is, I believe, being violated by many of the citizens of this place, and moose meat is quite a common article of diet, especially on some of the hotel tables. If the local correspondent here to the sporting press would use the space given him in showing up and condemning the work of the pot-hunters, it would be more to his credit than to use the said space as he does. Our fish and game will never receive proper protection so long as greed and selfishness reign supreme with those who claim to be protectors.—STANSTEAD.

OHIO NOTES.—Ironton, O., April 24.—*Editor Forest and Stream:* I had a nice little duck hunt this spring, but pressing business kept me at home so long that I was about one week too late for the flight, and the spring freshet also interfered. Report says there are plenty of wild turkeys, the mild, open winter having given birds a chance, and the prospects for next fall are flattering. Squirrels are very scarce. I think the report of the U. S. team shoots more than pays me for several years' subscription to your paper. I learned a good deal about loading during your gun trials too. Why don't a few more of our gun makers take advantage of them? It is a splendid advertisement. I think I can with my Ithaca gun make an average pattern. Some day I will shoot it, count the shot and send you the sheets to see how they compare with some of the crack guns you test.—D.

ALASKA HISTORICAL SOCIETY.—The Alaska Historical Society, of Sitka, has honored Mr. Charles Hallock by making him an honorary member. Mr. Hallock, for a long time a prominent resident of Brooklyn, is known as the author of a valuable book entitled "Our New Alaska," copiously illustrated, which has reached a second edition, and the friends of Alaska have not been slow to recognize the valuable services done to the Territory by this publication. Hon. Lyman E. Knapp, Governor of the Territory, is president of the society, and the following gentlemen are vice-presidents: Rev. Sheldon Jackson, Sitka; John G. Brady, Sitka; John G. Heid, Juneau; Jas. Sheakley, Wrangell; Rudolph Newman, Ounakaska, and Wm. Sargent, Kodiak; Recording Secretary, George Kostro Metinoff, Sitka; Treasurer, Orville T. Porter, Sitka; Corresponding Secretaries, C. H. Schaap, Henry E. Haydon and Prof. Wm. A. Kelly, all of Sitka; Librarian, Maurice C. Kenealy, Sitka. This is a strong organization, and if its work is prosecuted on systematic lines can be made of the utmost importance to the Territory and the country at large.—*Brooklyn Eagle.*

AN OFF-HAND SHOT.—Homerstown, N. J., April 25.—*Editor Forest and Stream:* On Saturday, the 12th inst., while strolling alone the banks of a creek, I espied a hawk on one of the top limbs of a gnarled old tree at least a hundred and twenty-five yards distant. Having my rifle with me I quickly elevated the rear sight one notch, and taking deliberate aim fired, sending the ball through the bird's body, also breaking both wings. I think it was one of the neatest off-hand shots that I ever made. The hawk was a beauty, measuring four feet and three inches from tip to tip of its wing. My rifle is a Winchester, single shot, weighing 8½ lbs., .32cal. long. I think one can do better work with a rather heavy rifle than with a light one, at least I have found it so from experience; it may be because I have generally used a heavy piece. One soon gets accustomed to the difference in weight and scarcely notices it. For use in the Eastern States I prefer a Winchester single-shot to a magazine rifle of the same make; of the two the former being so much easier to examine and to keep clean, besides being less liable to get out of order.—A. L. L.

CARE IN HANDLING THE GUN.—I remember when I was on a woodcock hunt about eighteen years ago in Ulster county, N. Y., that a very unusual thing occurred, but this as it might happen with some one else less prudent than myself I frequently relate it, and for the same reason would publish it in the *FOREST AND STREAM*. I with my friend, E. S. E., had returned from the woods to start homeward by wagon. As usual I removed the caps from the nipples of my gun before getting into the wagon. Upon one of the nipples I discovered a small quantity of the fulminating powder of the cap. I took my knife and scraped it off and then blew sharply to remove all trace of the powder, and I think also that I brushed it with my finger. But when I let down the hammer with but slight force, to my great astonishment the gun discharged. I would have been willing to wager a thousand dollars that no discharge could take place; but it did, and I was taught another lesson in carefulness.—N. D. E.

BROKEN BOW, Neb., April 24.—*Editor Forest and Stream:* The Broken Bow Gun Club organized on Monday, April 14, with an active membership of fifteen, limited to twenty-five. The following officers were elected for the ensuing year, ending April 1, 1891: A. H. Stuckey, Pres.; H. E. O'Neill, Vice-Pres.; C. P. Hubbard, Sec.-Treas.; Executive Board consisting of A. H. Stuckey, H. E. O'Neill, E. C. House, James Preston, and J. M. Stuckey. Object of the club, as set forth in the constitution, "To enforce the game laws and to perfect its members in the art of wing-shooting."—HUB.

FOWL IN COLORADO.—Berthoud, April 21.—*Editor Forest and Stream:* Ducks and geese are quite plenty here still about our wheat fields and lake, but not much shooting is going on just now. I have killed but 4 ducks this spring, and there are hundreds of them on my lake all the time. A great many stay here all summer and hatch in the alfalfa.—A. A. K.

THE MAINE WINTER.—It has been a good winter for deer, though up Parkertown way the snow has been deeper with the usual result: —C. B. S.

NEW BRUNSWICK LAW.

AN act in further amendment of the laws for the protection of certain birds and animals. Be it enacted by the Lieutenant-Governor, Legislative Council and Assembly as follows:

1. No person shall take, hunt, wound, chase, attempt to kill, or chase, catch, or attempt to catch with dogs, or shoot or attempt to shoot or otherwise destroy or attempt to destroy within the Province of New Brunswick between the fifteenth day of January and the thirty-first day of August in each year, any moose, caribou, deer or red deer under a penalty of a sum not exceeding two hundred dollars and not less than one hundred dollars for each and every offense.
2. No person shall hunt, take, kill, wound, chase, attempt to kill, or chase, catch or attempt to catch with dogs, or shoot or attempt to shoot or otherwise destroy within the said Province at any time or season hereafter any cow moose under a penalty not exceeding five hundred dollars and not less than two hundred dollars.
3. No person shall kill, catch or destroy in any one year more than one moose, two caribou, three deer and three red deer, under a penalty of a sum not exceeding two hundred dollars, and not less than one hundred dollars for each and every offense.
4. The penalties imposed by this act shall in all cases be recovered and applied as provided for by act of Assembly, 41st Victoria, Chapter 45, entitled, An Act for the Protection of Certain Birds and Animals.
5. Section 1 of the act of Assembly, 51st Victoria, chapter 12, is hereby repealed.*
6. The Governor in Council may by order in Council authorize the expenditure out of the public moneys in the usual manner, of a sum not exceeding four hundred dollars in any one year for the enforcement of the game laws of the Province. Passed April 23, 1890.

* Sec. 1. 51st Victoria prohibited killing moose or deer for three years.

A BOOK ABOUT INDIANS.—The *FOREST AND STREAM* will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Advs.*

Sea and River Fishing.

FLY-FISHING ON WILLIAMSON'S RIVER.

THE stream which was the scene of our sport is perhaps the most important feeder of Big Klamath Lake—the Winnisiogee of lower Oregon—and rejoices in the philistine title of Williamson's River. Other streams are incident to the region which have a fly-fishing vogue, but none to the extent of the one named, as it is exceptionally well stocked with black-spotted trout—the common trout of these latitudes—and likewise favors the use of the fly to an unusual extent. The reader of course need not be apprised that the black-spotted trout, viewed as a subject on which the fly-fisher's enticements are to be tried, is of a signally amenable disposition. If there are other fishes more ready to give themselves away on this point, the list is a small one.

For want of space we will pass over the preliminaries through which, on one of the afternoons of the past July, we had been landed at one of the points in question, where we were to begin operations. But here we were under the guidance and leadership of Billy Crawford, a Klamath half-breed of notable prominence in these parts, whose kind offices to us during our trip were unfailing, and to whom our acknowledgments for the same are duly tendered.

The year just passed was marked by a serious drought in Oregon, in consequence of which the river was abnormally low and clear. In the matter of the use of flies here we were in the main governed by the rules applicable to this class of fishing throughout the continent, choosing the darker flies for the earlier part of the day and the lighter ones for the afternoon and evening. But in the way of size the flies proving the most effective were the larger ones. In this respect, and indeed in every other, the general run of black bass flies were found to serve our turn to the greatest advantage.

As will be understood, by reason of the condition of the water, fishing in the middle of the day was impracticable; that is to say, with the average angler. For members of the fraternity coming under this head, only the earlier and later portions of the day at all required the exercise of his gear. As it happened, however, our number included a fisherman in every sense a first-class expert. This was Billy. He was shown to be superior to the limitations which the man of ordinary capacity is forced to reckon with. He fished totally indifferent as to the hour and invariably to some purpose.

Considered in its relation to the requirements of the fly-fisher's art, the stream, or at least such parts of it as came under our direct observation, is a jewel. Averaging from 70 to 100 ft. in width, it affords ample casting room in any direction. Beyond a few willow clumps fringing its banks in places, they are entirely clear of trees, and, therefore, the backward swing of one's leader may be made without fear of leaving it in the grip of some twig or spray. Rapid and pool alternate in it in the happiest juxtaposition. And, lastly, at whatever stage of water, good and secure wading is to be had in it. I have said that the river was abnormally low. This is true in a sense. It was some 2 or 3 ft. lower than usual. At the same time pools over one's head in depth were to be found in it in plenty. It was more particularly the clearness of the water that made the fishing the affair for the discreet handling that it was.

It is not to be supposed that we had got entirely beyond humanity's reach, as we were on the reservation of the Klamath Indians, a civilized tribe, not yet, in the unrestricted exercise of Caucasian brotherliness and good will, wholly improved off the face of the earth. On our way here we had passed through two or three hamlets of these people, all of which were passably neat and comfortable looking.

Our stay in the place where we first struck the river and began fishing lasted a day and a half. We should doubtless one and all have had tolerably fair sport here but for certain competition that we encountered on the part of stranger anglers that as good as knocked Eph and the writer out, our takes being signally trivial. The interlopers were Indians; some five or six of them made their appearance at the point on the river where we were stationed on both afternoons during our sojourn here, and what with their superior knowledge of the best places to fish in and their numerical strength, they crowded us two hopelessly to the wall.

Not so, however, with Billy, who was not to be left behind through anybody's contriving. Doubtless anticipating these incursionary raids, he laid his plans accordingly. Appropriating, while the coast was yet clear, a certain pool of whose excellence he was aware, he never permitted himself to leave it till he knew he could return to it unopposed, or until night put an end to his sport. Backed as he was by the knowledge of every possible dodge calculated to make his flies do their work, his mode of procedure netted him handsome results, his catch first and last numbering some two dozen fish, mostly medium small size, and therefore prizes for the board.

As it was so plain a case that we were over-matched by the Indians at this point, we concluded when discussing the matter at supper on the second evening after our arrival to make a break for another place further up the river, where we hoped we should be less liable to suffer from the infliction in question. On the following morning, therefore, Billy carted us to this new goal, which was some six miles further up stream. The river proved to be somewhat wider here than below, and its average depth was also somewhat greater. Otherwise its features were the same in both places. We found, ultimately, that we were to reckon with Mr. Lo on this new ground to a certain degree, but as the role assumed by him now was mainly that of a good-natured and perfectly unoffending Paul Pry, his presence on the scene counted for little more than nothing.

Everything was ready for us to begin business in this new field of enterprise at about 2 o'clock or a little after, and Billy accordingly opened the ball promptly at the time stated. Eph was also moved to take part in the proceedings a little later. The writer, however, was somewhat more tardy in getting to work, holding it to be his best policy to wait an hour or so to get the advantage of a lower sun before following the example of his associates. In his choice of places where he sought his prey each was guided by his own fancy. Eph and I, with the feeling that this course of procedure ought to

result well for us, as it partook of a more enterprising stamp and had its difficult side, entered the water boldly and tried several mid-river pools, only to be reached by this maneuver. Billy, on the other hand, remained on the bank and contented himself with taking his chances in such places as were to be reached by casting from this standpoint; and really he did not need to be so particular in this matter, as the rank and file would be. Each one of us let out all there was in him in the way of industry and perseverance, and none quit the field till darkness forced him to do so.

On counting up our spoils at the tent door when the contest was over, the tale reached thirty-three fish. Most of these were one and two pound fish. A few would go as high as three pounds, and one was a good five-pounder. Ten of the lot were taken by the spoon hook by Billy, who closed his day's performance by an interval of practice with this implement, as a matter of experiment. With this record to his credit, Billy's commanding skill certainly speaks for itself. What he could have done further in the way of proving his proficiency was a problem that was not to be solved, as with his supper finished he took his leave of us, and we saw him no more till he returned a few days later to wagon us off the reservation. It is to be explained in relation to this act on his part that his home was but some eight or ten miles away, where his presence was needed at this juncture to look after his hay harvest.

We now come to a new deal, as it might be called, instituted by us. It had been a common experience with all three of us during our bout with the trout here to meet with repeated losses of tackle by forcible disruption. Bouncing big fish were, of course, chargeable with the mischief, the fact being that this particular part of the river constituted a famed rendezvous for trout of the character referred to. In some three or four instances we had succeeded in locating the lairs, if the expression may be held applicable, of these terrors, and with the possession of this knowledge, both Eph and I concluded that we had no further call to concern ourselves with small fish in a more serious way, but that our business was with the leviathans in question. We panted for glory, in other words, and possible mention in the sporting journals under the head of a flaring fly-fishing title in double capitals.

The admission must be made, however, that so far as Eph was concerned there were occasional lapses from this rule. Necessity notoriously acknowledges no binding contracts, and, as it was Eph's function to keep our table going, he was forced from time to time to lay the river under contribution and take what it could be made to yield him of the commoner sort. But the writer stuck faithfully to his agreement, and never once during our three or four days' stay here bothered with meaner game.

These bouncers, as we found, responded to our advances with the readiest alacrity during the earlier stages of twilight, and this being the case, the interval in question was of course duly taken advantage of by us to seek to compass their undoing. Naturally their preference ran for the paler flies, the grizzly-king being perhaps the most fetching one with them. Upon no one of these occasions on which we sought an encounter with them was our invitation wholly neglected, the cartel of one or the other of us being invariably honored with acceptance.

The scrimmage opened by the freezing of what seemed to be a heavy chunk of lead to the hook, at which stage matters rested for some three or four seconds with no perceptible change. Next following this demonstration the seeming plumbous body became suddenly instinct with cyclonic life, and took to plunging up and down in the true spirit of the kind of vitality animating it; during which round of performances one realized the fact that he was fast to a trout magnifico of a good yard's length or more. It is to be observed that the lunges of the fish all assumed a vertical direction, thus making the task of the angler, in his attempt to keep his line evenly taut, as arduous as it possibly could be made. So far as we two were concerned anyway, the task was beyond us. Why trick with the *dénouement*? The finish was as our contestants would have had it every time.

We were to be written down then as having failed in the main object of our ambition. The realization of this by us brought its season of depression of course. But our engulphment in this slough was but temporary. The never-failing salve which humanity characteristically turns to in the hours of its failure and set-back we duly made use of; that is to say, we cheapened success in whatsoever form and shape, and declared it to be in reality an evil nane. More particularly as we took care to point out, *ore rotundo*, it was apt to conduce to the enlargement of the human cerebellum to an extent grievously repellant to the general multitude.

In this sublime attitude we left the reservation, as the time came for Billy to put in an appearance with his team and cart us back to our original starting point. All the same, as we reached the confines of civilization and chanced to see an angler of the petticoated sex, the nerry wife of a lumberman, who had lately, after a tussle lasting over an hour, succeeded in subduing a 17½ lbs. trout, I know of one party, sure, in whose mind she was lifted to the top of the tallest kind of pedestal, and so far as this experience was concerned, anyway, would have liked mightily to have stood in her shoes.

W. L. TIFFANY.

CHANGED MASSACHUSETTS TROUT LAW.

CHAPTER 193. An act to limit the time within which trout, land-locked salmon and lake trout may be taken in Berkshire, Franklin, Hampshire and Hampden counties.

Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:

SECTION 1. Chapter one hundred and seventy-one of the acts of the year eighteen hundred and eighty-four is hereby amended by adding at the end of the first section the words: except in the counties of Berkshire, Franklin, Hampshire and Hampden, where such time shall be between the first day of August and the first day of April, under a penalty of not less than ten and more than twenty-five dollars for each and every violation thereof, so that the section shall read as follows: **SECTION 1.** The time within which any person is forbidden to take, sell, offer for sale, or to have in his possession, a trout, landlocked salmon or lake trout, by section fifty-one and fifty-three of chapter ninety-one of the Public Statutes, shall be between the first day of September and the first day of April, except in the counties of Berkshire, Franklin, Hampshire and Hampden, where such time shall be between the first day of August and the first day of April, under a penalty of not less than ten and not more than twenty-five dollars for each and every violation thereof.

SEC. 2. Chapter two hundred and seventy-six of the acts of the year eighteen hundred and eighty-eight is hereby repealed.

SEC. 3. This act shall take effect upon its passage.

Approved April 18, 1890.

ANGLING NOTES.

THE following conversation was overheard lately, and as the statements made are unique and especially interesting to fishermen, we think them worth putting in print. The speaker was a mahogany-faced, white-bearded specimen of the old-fashioned bayman, a man who has fished and shot in the vicinity of New York for at least fifty years. Said he "Talk about kitchen bass at Robin's Reef! Why the folks that go down there don't know nothing about fishing. Now I know a man that goes fishing there, that could give me points, and I think I'm no slouch. He trolls with two lines, one awfully long and one a little shorter, and he rows very slow, hardly moves along. He uses a long leader, but I'll be dog-goned if I know what bait he uses or how he rigs it, exceptin' I know he uses mighty little lead. But I'll get onto it this season, you bet! He just creeps along in about 6ft. of water, round the reef and round the coves on the Jersey shore and my! don't he ketch 'em! It is nothing for him to bring in 80 or 90lbs. of bass, a load for two men. Now, I had great sport last summer on the mussel beds ketchin' weakfish. I've took as many as 250 on a tide, and some of 'em big ones! One day last July I ketched nine shad with shrimp bait. When I went ashore, my chum asked me whose fyke I'd been into, but I told him he ought to know better than to think any one would put out fykes in July; besides, I showed him the marks of the hook. Next day me and my chum went out and ketched eleven more shad—one of 'em weighed 7lbs.! But what astonished me most was that I ketched one day last summer four muskallonge that weighed 60lbs.; one weighed 21lbs. Some folks said they were big weakfish, but I knowed better. They had got over some dam up the river I reckon."

So there are evidently plenty of fish in the harbor yet, that is, if the old chap has not caught them all. The probabilities are the aforesaid big fish were channel bass or spot, of which several have been caught the past two seasons, some weighing over 80lbs. Several years ago we heard of an angler killing nineteen shad one day in the Hudson with small shrimp for bait.

A fine salmon was caught in the Hudson off Sing Sing in a drift net last week, and presented to a gentleman there. A leather-back carp, weighing 9lbs., was also taken in one of the shad nets.

We understand there is some talk of stocking the Hudson River with wall-eyed pike. We should think the young salmon would find them undesirable neighbors.

A great many people who are about taking up the noble art of trout fishing are bothered about a proper rig for wading. Of course it is possible to get along with a pair of rubber boots reaching to the thigh, but they are hot, difficult to dry inside, and they are dangerously slippery. The best arrangement by all odds, though a bit clumsy, is as follows: Over a pair of ordinary light socks wear a pair of wading stockings (English preferred) that reach to the crotch, over these a pair of old-fashioned woolen socks, and last of all, a pair of canvas wading shoes with soft hob nails in the soles. At night turn the wading stockings inside out to dry off the perspiration, and they will last for several seasons. In warm weather most people can do without the rubber stockings; then the same shoes will do, only put on an extra pair of socks.

Word was received last Friday from Bangor, Me., that some 20 salmon have been taken on rod this past week.

The ice went out of Saranac Lake the latter part of last week.

NEW ENGLAND TROUTING.

BEFORE these lines are scanned by the readers of FOREST AND STREAM, the open season on trout and landlocked salmon in Maine and New Hampshire will have begun, May 1 being the opening day. But after all the sportsmen will have to hold on to their enthusiasm a while longer, for winter still lingers in the Pine Tree State. The reports from the lumber people still speak of winter and a good deal of it. The shingle manufacturers at Aroostook and on the St. John, write Boston parties that their logs are so badly frozen in the ice that they will not be able to commence sawing for a couple of weeks. Now this does not sound much like split bamboo rods and trout rising to the fly, but the change from ice to balmy winds and green leaves is very sudden in the northern region. Moosehead and Rangeley are yet full of ice, and indeed I wish that the ice was out of Moosehead if reports are true. The papers say that the Kineo House and other hotels at that lake have been doing very well indeed during the months of March and April, for the reason that they have been pretty well filled with fishermen. These fishermen have been fishing through the ice. That mistaken statute of Maine permits the citizens of the State to take trout and landlocked salmon through the ice, for their own use, after the first day of March each year. The result is that almost anybody fishes that is disposed to do so. They employ guides who are citizens of the State, and a great number of trout are destroyed in a very unsportsmanlike way, and in a way that must afford about as much real enjoyment to the square inch as would be derived from picking strawberries with three inches of snow on the ground. But the ice is getting rotten, and this miserable ice fishing will have to stop. Late reports say that the ice is out of Lake Auburn, and that the Sebago waters are fast breaking up. The clearing of these lakes is an indication of about the time that Moosehead and the Rangeleys will be free from ice. It is usually about ten days from the clearing of Sebago Lake to the breaking up of Moosehead, and the Rangeley Lakes generally clear from two to four days later. Hence the fishing on the Maine lakes may be expected to open about the 10th of May. Indeed, there are several sportsmen who will make it a point to start for Rangeley and Moosehead lakes so as to be there about the 10th, with the full expectation that the ice will then be out. There seems to be an unusual amount of enthusiasm this spring in the direction of trout fishing in Maine. There are probably fifty Boston merchants and professional men who intend to get a brief outing in that direction this spring, and the Rangeley camps and hotels are being pretty well advertised. Capt. Fred C. Barker has been here in the interest of his camps on Moosehead, and Billy Soule has also paid Bos-

ton a visit, leaving some fine photographs of his camps at Cupsuptic. The tackle stores report a good trade, starting with the opening of the trout season in this State. By the way, the trout season in Massachusetts has been an uncommonly good one. Larger trout have been taken than for many years previous, and more of them. Such a feature was noticed, indeed, last year; but this year is still better.

One Boston merchant is not very well pleased with the way he was cheated out of his Fast Day fishing. I would give his name to the readers of FOREST AND STREAM only the gentleman wants the privilege of being mad in silence. There is a guide and cook down on the Cape that has cooked and guided for our friend many a time, and he is a good guide and a good cook. He knows the fishing on the Cape about as well as any of them, but as for his integrity, our Boston merchant does not have a very lofty opinion of it. He engaged by letter to meet the merchant at the depot in his town on Fast Day morning, and with his team to take the merchant to where the big trout do hide. The merchant was there in season, but no team and no guide. He took quite a long tramp to the domicile of the guide. That personage met him with downcast look and uncertain tread, "You have come to go a-fishing," he said, "but I can't go with you. I can't go at all to-day." Our merchant was surprised and displeased. But the guide seemed so crestfallen that he was bound to think something was the matter which did not appear on the surface, so he excused the guide and decided to return to Boston by the next train, as he knew very little of the location of the trout fishing, and did not care to go alone. He thought but little further of the matter till a few days after, when he happened to meet a gentleman who was cognizant of the circumstances and the disappointment of the merchant. After some questioning and explanations he volunteered the information that the honest (?) guide did go a-fishing on that very day, and that he did catch a string of thirty as handsome trout as have been taken in that vicinity for a very long time. Some other fellow had tempted the guide with a bigger fee. So great is the struggle for trout in the waters of this State that it will hardly do to expect honesty and fairness even on Fast Day.

The promises for brook fishing in Maine were seldom better than this year, and this part of the sport will open promptly on the first day of May. The snow has generally departed, at least in the southerly part of the State, and the streams promise to be in good condition for fishing. Several toques have already been taken at New Found Lake in New Hampshire.

B. F. Nichols, well known as the manufacturer of the Nichols split-bamboo rod, and later in the tackle business with H. C. Litchfield, has left the trade and gone to traveling as a salesman for a wholesale house selling wines and spirits.

SPECIAL.

KENTUCKY FISHING.

Editor Forest and Stream:

The angling season is just opening. Wirt Turner has his tackle ready, and he is the guide for this neighborhood. What Wirt don't know about it wouldn't make much of a book. The winter has been mild and waters high, so excellent fishing is anticipated. The veteran Dave Claxon has already taken some fine strings. Black bass and calico perch are the kinds sought by the angler. The Kentucky River borders this county for a great distance, and furnishes good sport at any point where a ledge of rocks, an old stump or tree top can be found. Occasionally I hear of a big one being caught with hook and minnows. Several men have taken "blue tail" or channel cat weighing as high as 40 or 50lbs. To those who have not the patience to angle, the river affords ample and profitable sport with trot lines. A "trot" laid across at any deep place, and baited with minnows or beef liver at night, will often yield 10 or 20 channel cats, from 12 to 18in. long, and when properly dressed this is no bad pan fish. Any angler can find at Lockport, Portroyal and many other points boats and minnows at very reasonable rates, and can find good board and lodging at the hospitable home of almost any of the clever farmers along the river.

There are a few ponds along the river, some connected therewith by sloughs and some not, in which good angling can be had. Notable among them is Fusser's pond, near the mouth of Flat Creek; there is a good one in Clemons's bottom, and one near Portroyal. All are easily reached by boat from Frankfort or Louisville. These are stocked with the calico perch. If the sportsman is not too choicely about variety he can almost any day, when the wind is northeast, count on a good catch, if he is provided with good tackle and good bait. The universal bait is live minnows. I don't remember to have ever seen a black bass or calico caught with dead bait of any kind. The best anglers are of course provided with a good bass rod and reel. This is the home of the "Frankfort" reel, known here as the "Meek" reel, from the name of the originator, B. F. Meek, who lives in an adjoining county. They are by odds the best I have seen, but could be improved perhaps if combined with the "automatic" principle advertised in FOREST AND STREAM. By the way, what is the correct name of the "calico perch"?

NEWCASTLE, Ky., April 21.

J. S. M.

[The calico perch, or bass, is described by ichthyologists under the name *Pomoxys sparoides*. Other names for it are grass bass, sand perch, barfish, tinmouth, bitter head and sac-a-lai. A fish nearly like it is the crappie, newlight, Campbellite, strawberry perch, etc., etc.]

OHIO FISH NOTES.—Dayton, Ohio, April 22.—Pound net fishermen at the lake are having a fine catch of pickerel. The pickerel and perch are full of roe. A party just returned from Lewiston reservoir reports more perch in the water than he has ever known for fifty years, and that although the perch feed upon bass spawn, there seem to be as many bass in the reservoir as ever. Water is running nicely over the dams in the Maine rivers and their tributaries, and the fish easily ascend the streams to spawn. Rod fishermen have not been out much yet, and nothing but goggle-eyes and carp have been brought in. Several of the clubs are caulking boats and overhauling tackle for early sport, and will be on the water if this good weather continues.—BUCKEYE.

TO SALMON ANGLERS.—T. J. Conroy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—Adv.

RANDOM CASTS.

FOR the devotee, to whom of course number is not the sole object in angling, I would recommend the more frequent use of drawn gut leaders and midge flies. The sport to be enjoyed with a pound trout will be a full recompense for any ill fortune that may occasionally befall him in the loss of one, after a good and fair fight for the mastery.

I have heard of a man fishing for salmon with a chunk of codfish. The step from that to jigging is not a long one and did the occasion present, it would no doubt quickly be made use of. But apart from the utter depravity of the fellow who would do such a thing, can any angler conceive what the feelings of this lord of fishes must be, when invited to partake of the flesh of this mainstay of the washtub aristocracy! Horrible.

To straighten a leader, rub quickly between a piece of chamois, leather or rubber; this when you have not the time to soak it.

Loops in leaders, to which the droppers are to be attached, are a disadvantage. They form spaces in which the air remains when on the water, and as they thus become very conspicuous, the principal object of the leader is defeated. This applies especially to those of drawn gut.

Keep a record of the number, size and species of fish that you take on your outings. If to this is added the conditions of weather and water, and any other notable circumstance, you will, as the occasion offers, find pleasure and profit in glancing over your memoranda.

BIG REEL.

ANGLING IN NEW HAMPSHIRE.

COLEBROOK, N. H., April 26.—Editor Forest and Stream: Again the open season for fishing is with us, or will be next week, and doubtless a good number will celebrate May Day by a fishing trip to some of the brooks near the village, for as yet the ponds are covered with ice, though present indications point to an early season.

"Mart" Noyer, the genial proprietor of "Camp Diamond" at the Diamond Ponds, is full of business, making preparations to move from here to the ponds, which he proposes to do the first of next week. He reports more sportsmen "on the docket" than ever before, and will add more room to camps at once.

Fred Flint, from Wilson's Mills, Me., on the Magalloway River, who is well known to many readers of the FOREST AND STREAM, is in town. He reports the snow in that section as nearly gone in the open, but quite a depth still remains in the woods. Ice in the river is out up as far as the lower falls, but he says it will be "about three weeks before much sport can be had."

Amasa Ward, at Hell Gate Camp, Diamond Creek, reports plenty of snow yet, but thinks an early season probable. He has spent the winter in his camp, only coming out once during that time to Berlin to buy his season's supplies and get them hauled in to the settlement by the "tote teams."

O. C. Bumford, who for the past four years has managed the Lake House at First Connecticut Lake, is to open a restaurant at this place the 1st of May. Under Mr. Bumford's management the house was put in first class condition, the best of bedding and furnishing being none to good, and more comfortable quarters are not to be found in northern New Hampshire. I have not learned who is to be Mr. Bumford's successor, but doubtless the house will be opened in time for the fishing season.

Uncle Tom Chester still "holds the fort" at Second Lake, and is looking forward to the annual return of his "sportsman's family,"

ROB.

THE COLOR OF TROUT.

THERE is a wide diversity of opinion among piscatorial experts regarding the reason why the flesh of some brook trout is red and of others white, or rather cream color. I notice in the communication of M. Lee Menninger (April 17), in addition to some other pardonable errors for a novice and a lady, that the difference of color is due to the condition of the water, the red-fleshed trout being caught in swift-running water, while the fish in still water has white flesh. This I know is a common opinion, and another equally common is that the difference of food is the cause of the variation in color. Neither of these beliefs is warranted by the facts. The water no doubt has some difference in the outward appearance of the fish in the varying depth and brilliance of the colors, the clear, pure water and the bright light seeming to develop the greatest depth of color, while the darker water which flows from swamps deadens it. But the color of the water and the food has no effect upon the color of the flesh. Whatever this may be due to is a matter of uncertainty, unless it may be supposed to be a matter of specific difference or variation.

I have had abundant experience in this respect during forty years in many localities. In Loch Leven in Scotland I have taken trout of 3 to 6lbs. weight, some of which had red and others white flesh; in the Westmoreland lakes, particularly Windermere, I have noticed the same difference; the same in trout in the waters of Lake Superior, and of the rivers which flow into Lake Michigan. Here it is the same. I have now a dozen trout taken this afternoon, of which precisely half have red flesh and the other six have white flesh. One, a fish 12in. long and weighing a little over a pound, has the true salmon color—a deep red—and all of them came from not more than a space of twenty square rods in my pond. The very same applies to the fish all down my streams, which vary in color of flesh, and necessarily the water and food must be the same for all of them.

As to the other mistake referred to, the weight of the 14in. trout could not be 3lbs. I am a fisherman, but I never overrate my fish. The 3lb. trout taken in my pond measured 22in. from nose to tip of the tail. I have taken many trout from 14 to 19in. Our fish here are no stouter in build than the common trout of the north, and while a 14in. trout of a lively disposition may feel to weigh 8lbs. or even more at the end of a light rod, it never reaches anything like that weight on the spring scales.

H. STEWART.

HIGHLANDS PARK, N. C.

TROUT IN CONNECTICUT.

BETHEL, Conn., April 26.—*Editor Forest and Stream:* I herewith send a few notes on the trout fishing of this section. The season opened with good weather and clear streams, and there were some good strings caught during the first two weeks. The trout were all up in the small upland brooks earlier than usual on account of the open winter. Ice did not form on any of the swift streams and did not last long even in the swamps. On Fast Day I saw a string in which were some 20 odd trout and nearly as many horn dace. The trout I thought would weigh on an average 1 lb. each. It was a goodly sight. I afterward heard that most of them were taken from a small stream known as Dibble's Brook, with a small scoop-net which could be carried in the pocket. The stream is very narrow with numerous small pools, and the fish could not escape a net. Another party brought in about the middle of the month from a stream known as Little River what was perhaps the largest string of big fish ever caught in this vicinity. Fourteen weighed 16 lbs., two or three of which weighed 3 lbs. each; they were not weighed until several hours after they were caught. The weighing was done by a grocer and was witnessed by a number of men.

The brooks in this vicinity have all been stocked with several thousand fry. It was done during the years of 1885, '86 and '87, the expense of stocking being paid by taking up collections from everybody who was willing to chip in from 10 to 50 cents. We are now reaping the benefit by catching more and better trout than ever. I have not been fishing myself, but two of my brothers have, and caught quite a number, five of which I measured and weighed. The measurements were from the tip of the nose along the side to end of tail, and around the body just in front of the anal fin, using a common tape measure. The fish were weighed with a small spring scale such as are sold by fishing tackle dealers. Following is the result:

No.	Length, inches.	Girth, inches.	Weight, ounces.
No. 1.....	12 3/4	7	14
No. 2.....	12 3/4	7 1/4	12
No. 3.....	9 1/2	5 1/2	6
No. 4.....	9	4 1/2	4
No. 5.....	11	5 3/4	8

I took pains to measure and weigh correctly, so that the above is as near right as possible under those conditions. E. T. J.

BREAKING UP THE ILLEGAL NETS.—State game and fish protectors are active in New York, working in conjunction with the associations and clubs, to suppress illegal nets. The secretary of the Anglers' Association of the St. Lawrence River sent out last week the steamer R. P. Flower, manned with eight good men, with Game Protector Starrett at the head. They succeeded in capturing over 500 rods of gill nets, 61 hoop and trap nets and some pound nets. They were taken in Chippewa Bay, Eel Bay, and above Tibbets Point and along the shore adjoining Henderson. The cash value of the nets amounted to several hundred dollars. State Game Protector Drew was present and was hearty in his congratulations over the success of the raid. The Syracuse Courier has the following: "Illegal fishing in the waters of Onondaga Lake has suddenly ceased. For the last ten days State Fish and Game Protector Carr, of Union Springs, has been in the city and given his attention to the seine and gill net fishers of Onondaga Lake, who seemingly ply their vocation with impunity. During his stay he collected some valuable information. Saturday Mr. Carr issued summonses against 29 individuals, citing them to appear before the county judge to answer for alleged violation of the game law. In his good work, Mr. Carr not only has the backing of the Onondaga Sportsmen's Club, which is working in the same direction, but the sympathy of all genuine sportsmen. The penalty for illegal fishing in this county is from \$25 to \$50."

A GOOD WINTER FOR THE PICKEREL.—Brockton, Mass.—From all sides come complaints against the open winter, because the pond won't freeze over and let the plaintiffs go pickereling. I wonder if any FOREST AND STREAM readers besides the undersigned are interested in the pickerel's behalf. To be sure, he is a nuisance in a pond stocked with other fish, and if a wish could kill, I am afraid it would go hard with the pickerel in a certain pond, where on dressing them I have found inside trout 6 in. long. But I have in my mind a pond where the pickerel reign supreme, where there are neither bass nor trout, and where they have a perfect right to live. Many a cloudy half day have I enjoyed wading the shores of that pond, and many a fine string of pickerel has rewarded me. It isn't a pleasant sight for me to see the pond covered with traps in winter and pickerel enough to feed a regiment lying on the ice. Ponds containing bass and trout are visited by the ice fisherman, too; but a visitor will see nothing but pickerel lying about. Is a bass or trout that happens to spy the wiggling bait, handled carefully and returned to the water? In a few cases he is, but generally he is concealed and smuggled home by the man who can't catch him in his season by fair means. A few open winters may be just what we want, after all.—DARBY.

NETTING FISH IN KENTUCKY.—Ironton, O., April 24.—*Editor Forest and Stream:* Black bass are being caught in quite satisfactory lots in Tызart Creek, at Bennet's Mill. George Howland, the old veteran, caught six extra fine ones there. The fishing will be entirely ruined if there is not a stop put to netting. They put nets in the mouths of branches in time of high water and catch them by the half barrel. I know one man who said he took 20 or 25 nice black bass out of his net at one time, and has caught five big pike this winter. All this is in violation of Kentucky law and deprives the visitor of any chance.—D.

CHICAGO AND THE WEST.—Chicago, Ill., April 25.—Day before yesterday, near Davis, Ind., on the Kankakee, a girl of 18 and her two little brothers, aged 14 and 11, caught seventeen fine black bass, on tackle not of the best. The bass are also biting in the Fox Lake system. At Rushville, Ill., the pot fishermen have been seining in Crooked Creek, and so destroying the large numbers of game fish the high water has brought in, that popular indignation has been aroused, and detective officers have been put out to arrest the offenders.—E. HUGH.

ADIRONDACK WATERS.—Northern New York, April 24.—*Editor Forest and Stream:* The ice went out at Number Four about ten days ago, at Beaver Lake the 16th, inst. and at Still Water the 21st inst. The snow has disappeared in that region, so probably the other lakes in that section are free from ice. When the season opens there will be no necessity of waiting until the snow-water has gone from the brooks, as it went some time since. In fact all the signs foretell excellent fishing from the opening day. Many fishermen labor under the delusion that there is better fishing on the Fulton Chain than in this section. This is a great mistake, as we have better fishing and larger fish. In years past I labored under this delusion, so I know whereof I speak.—OSCEOLA.

CANADIAN FISHERIES.—We have received the annual report of the Department of Fisheries, Dominion of Canada, for 1889, too late for review in this number, and will reserve it for future notice. From the fact that a translation of G. M. Dannevig's report on hatching salt-water fishes, lobsters, oysters, etc., in Norway, is given in the Appendix, we assume that Canada intends to devote more attention to marine fishculture, and we are glad to see this evidence of progress.

EARLY MACKEREL.—Mackerel made their appearance in New York markets from Cape Cod traps last week, about a fortnight earlier than in 1889. The first one reported was taken at South Harwich, April 23.

Fishculture.

FISHCULTURE AND FISHWAYS.

Editor Forest and Stream:

The following tables, showing the results of opening the dams with good fishways, and without any aid from the hatcheries and amid an abundance of sawdust, will be interesting to many of your readers.

The St. Croix River, forming the boundary between Maine and New Brunswick, had been closed up for many years by impassable mill dams and, in consequence, all anadromous fish were killed out. In the year 1873, I think it was, the dams were provided with fishways. I am not quite sure whether any fry have been planted here or not.

Year.	Salmon, Lbs.	Alewives, Bbls.	Year.	Salmon, Lbs.	Alewives, Bbls.
1871.....	2,500	2,500	1880.....	2,500	350
1872.....	2,500	2,500	1881.....	2,500	350
1873 (Fishway built).	2,500	2,500	1882.....	4,000	350
1874.....	2,500	2,500	1883.....	2,500	350
1875.....	2,500	2,500	1884.....	14,800	400
1876.....	2,500	2,500	1885.....	6,000	600
1877.....	2,500	2,500	1886.....	5,000	600
1878.....	2,500	2,500	1887.....	6,000	650
1879.....	3,000	300	1888.....	6,000	300

The dams on the Medway in Nova Scotia were opened in 1873; no planting has been done on the river; moreover, the dams are located some distance above the head of the tide, and, besides, the dams were low and some fish succeeded in passing over them every year, hence there were always some fish in the river. Below I give the yield since the fishways began to take effect or could produce any results:

Year.	Salmon, lbs.	Trout, lbs.	Smelts, lbs.	Alewives, bbls.
1878.....	22,871	2,000	70
1879.....	11,896	4,000	262
1880.....	5,323	4,000	725
1881.....	7,015	3,750	4,884
1882.....	8,388	7,400	2,745
1883.....	21,169	915	8,570	3,282
1884.....	20,315	1,650	15,200	3,082
1885.....	30,230	2,050	10,000	3,005
1886.....	22,005	2,378	18,250	3,505
1887.....	22,934	2,615	21,500	3,837
1888.....	18,450	2,775	22,710	2,916
1889.....	12,900	4,400	23,300	3,805

During the four years from 1879 to 1883 the salmon fisheries declined largely all round our coasts, and judging from the falling off in the catch for 1888 and '89 we are entering upon another period of decline, caused no doubt by natural influences and confined to no locality. No river in N. va Scotia has been so abundantly supplied with mill refuse and sawdust during the past hundred years, and is so still, as this river.

The river Clyde is another marked instance of wonderful improvement caused by simply opening the dam with a good fishway, no planting being done, but an abundance of sawdust and mill refuse running all the while.

Year.	Salmon, Lbs.	Alewives, Bbls.	Year.	Salmon, Lbs.	Alewives, Bbls.
1871.....	1881.....
1872.....	1882.....
1873.....	1883.....
1874.....	1884.....
1875.....	1885.....	350
1876.....	1886.....	2,450
1877.....	1887.....	3,570
1878.....	1888.....	3,975	130
1879 (Fishway built).	1889.....	4,050	300

This river produced but scattering fish for many years before 1871. I have started with that year to show that the river produced no alewives until three years after the dam was opened or salmon until five years, and exactly the same state of things has developed on the St. Croix, it will be observed. I have selected these rivers for two reasons; first, because no artificial aid was applied to them, and secondly, because they have been abundantly supplied with sawdust and all other mill refuse. Many other rivers in these provinces can be named where salmon fry have been planted and which give similar but no better results.

Shad, too, have been successfully passed over dams 17 ft. high, and over natural falls much higher. They ascend wooden fishways of proper construction as readily as any other anadromous fishes. I have never been able to discover any timidity on their part, but they seem to be as enterprising in their efforts to ascend as any other fish, but cannot overcome as much force of water as the salmon or trout.

In view of the foregoing indisputable facts it is clear that the most important matter in connection with the improvement of the fisheries, is to open the dams, go for the poachers without much mercy, and plant all the yearling fish possible to aid nature. The planting of fry I am sure is a losing game, and will have to be abandoned.

Referring to fishways, unless they are properly located in the dam, as well as properly built, in nine cases out of ten they will fail. And like everything else, the necessary knowledge must be acquired by experience, as almost every dam and locality requires different treatment in order to successfully overcome local difficulties, which are often very great.

I have read Mr. Gilchrist's formidable indictment of sawdust as a fish destroyer with much interest, having had a lifelong experience in fishing and milling, with about a quarter of a century's close study of the subject as Inspector

of Fisheries for this Province, where mill dams, sawdust and anadromous fish abound in all our streams. Opportunities for obtaining facts, therefore, exist in abundance. Besides myself there are over thirty overseers of fisheries in the various counties of the Province, many of whom are intelligent and close observers, and after a quarter of a century's connection with the service nearly every man of them has come to the same conclusion with myself, and the same is largely true of the adjoining Province of New Brunswick, while all practical men and most of our native sportsmen hold the same opinions. They have been forced to their present views by actual existing facts, to which all honest men should bow, and these views are "that sawdust is not injurious to fish in any way." The belief that it is has no facts to sustain it, but rests entirely upon fancy. Wherever sawdust exists in a river there is likely also to be an impassable dam, which is the real fish destroyer, and the dust being in bad company bears the blame; that's all. This has been demonstrated over and over again in these Provinces, wherever the dams have been provided with good fishways for any number of years. A compilation of these facts, to a certain extent, will be found in the report on the subject prepared by myself in 1889, a portion of which you kindly reproduced at the time. The statements therein revealed should either be proven to be false or accepted as conclusive by all impartial men. Mr. Gilchrist has added nothing new to this controversy. Mr. S. Willmot and others have been for years regaling us with just such dogmatic fancies, which they seem to think sufficient to offset with authenticated facts.

I am not acquainted with the rivers of Ontario, of which Mr. Gilchrist speaks, but conclude that mill dams, sawdust and anadromous fish bear about the same relation to each other everywhere, and I know that wherever salmon or trout spawn, or where their ova would hatch, sawdust will not lodge, and in still waters or pools where alewives or shad spawn it does no harm, as the hatching process only occupies three or four days, and they will hatch upon sawdust as readily as upon anything else. Nor does it interfere in the slightest degree with the food supply, but on the contrary rather promotes it. When continuously under water it does not decompose, and hence is no more injurious than wood in other forms, with which the waters forming the rivers have always been abundantly supplied, as well as with autumn leaves, evergreen buds and all forms of vegetable products, which lodge in the bottoms of pools and still waters and cover up the beds of the rivers even more effectively than sawdust. In lakes and still waters, however, it may to some extent injure the navigation, but fish of any sort are not injured in the slightest degree by its presence.

Those who held that the world was flat instead of round and the fanatics who held that a certain type of old women were witches and should be burned, had about the same proofs for their belief as our modern anti-sawdust people have for theirs; there being absolutely no existing facts to sustain the idea, it will soon be relegated to the rear with hosts of other myths of the past, driven there by advancing intelligence, the result of closer investigations on the part of those who desire to know the truth. Even now there are scarcely two opinions among those best informed upon the subject.

Let me here produce a few facts from the St. Croix River, a considerable stream, much of which forms the boundary line between the State of Maine and New Brunswick. Immense quantities of lumber have been cut there during a whole century. Mill dams completely obstructed the ascent of fish. Sawdust and mill refuse was all thrown into the stream; the fish which were formerly abundant gradually disappeared. For many years not a pound of salmon or barrel of alewives appears in the fishery returns as having been caught there. In the view of most people sawdust was the cause. During the years 1872-3 fishways were put in the dams. The mills have continued to do their work as formerly. Now, let us see how the fish have been affected by an abundance of sawdust and mill refuse, for no stream in the country has been more bountifully supplied with it. Between one and two hundred million feet have been cut there for many years past. As I have said, not a pound of salmon was taken there for many years, nor until some six years after the dams were opened. From that time, during the seven years from 1875 to 1881, the river yielded 10,700 lbs., or 1,514 lbs. per annum, though the first four years of the period yielded nothing, while during the seven years from 1882 to 1888 the catch was 33,000 lbs., or an annual average of 5,181 lbs., as against 1,514 lbs. during the former period. The catch of alewives shows about the same satisfactory results, while one of the best fly-fishing pools in the United States is located just below the mills, and is full of sawdust continually.

Another splendid pool exists on the Penobscot right below the mills, where all the sawdust from the mills on the large river passes into it. It is also true that both the smelt and frost fish spawn and the ova hatch right in and among the sawdust, and these fish keep up their usual supply, notwithstanding the death-dealing dust. These are facts, and it is also a fact that no dead or dying fish are seen on these rivers. If sawdust is really so deadly in its effects upon fish, how could this state of things be brought about where it so abundantly exists? And this same state of things can be pointed to all over these Provinces, on many rivers even more markedly than on the St. Croix. Mill dams and poachers are the real enemies of our river fisheries.

Direct your energies against them, Mr. Gilchrist, and you will be working to some purpose. W. H. ROGERS.

AMHERST, Nova Scotia.

FIXTURES.

DOG SHOWS.

May 6 to 9.—Second Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. H. W. Wilson, Superintendent.

June 3 to 8.—The Cincinnati Kennel Club's Fourth Annual Show, at Cincinnati, O. G. H. Hill, Superintendent.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 18.—International Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exhibition at Toronto, Canada. H. J. Hill, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 2.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 8.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

THE SMOOTH-COATED ST. BERNARD DOG WATCH—OWNED BY MR. JOHN POAG, TOLEDO, OHIO.

WATCH.

WE give this week a capital picture of the celebrated smooth-coated St. Bernard dog Watch. He is the property of Mr. John Poag, of Toledo, Ohio, who paid the very large price of 900 guineas or about \$4,700 for him. Watch was whelped Nov. 9, 1887, and is by champion Guide and out of Sans Peur. He is nearly white, with orange markings, is of immense size and of majestic appearance. He was shown but twice in England, both times at the shows of the St. Bernard Club. In 1888, when 11 months old, he won first and cup in his class and was reserve for the 100 guinea challenge cup. In 1889 he was first in the open class, and was again reserve for the challenge cup. His first appearance in this country was at Boston, where he won first in the open class and the special for best rough or smooth. At Buffalo last week he repeated his performance at Boston by winning first in his class and the special for the best of either breed. The cut is from a sketch by Harry Tallman.

SCHENECTADY DOG SHOW.

[Special Report.]

THIS was the first dog show given by the so-called Schenectady Kennel Club, which is composed of two men of this city and one of Albany. The dogs were a decidedly poor lot, with the exception of the Irish setters. The management was the worst ever seen. The club advertised that the show would be governed by the American Kennel Club rules, and they were most shamefully ignored. People would stand before the huge St. Bernard, look at the number of his bench, consult their catalogue, which would read beagle hounds, and those who knew no better were satisfied. The feeding was done by J. A. Rickard & Co., agents for Austin's dog bread. The attendance was very small, the door receipts averaging \$12 per day, and the whole thing was a complete fizzle. The officers were: C. W. Cornwall, President and Secretary; G. A. Rose, Vice-President; T. J. Farley, of Albany, Manager. Mr. Jos. Lewis judged all classes.

MASTIFFS.

In the open dog class there was but one entry and that was absent. Bitches brought out Lilly which was awarded first, she being the only one in her class. She is a poor specimen, weak in back, large in ears and lacks width in skull, and was in poor condition. In the puppy class there was but one, Juno, a mongrel.

ST. BERNARDS.

These were a poor lot. The rough-coated class for dogs contained Daniel, Kinglimmon and Webster. Kinglimmon being absent, Daniel was awarded first, Webster next. Neither was a show dog, both being wolfish in head and undersized. Grover B. and Cleo, in the puppy classes, were alone.

NEWFOUNDLANDS.

Sancho Pedro and Rover were placed in the order named in the open dog class. The awards were correct. Flora, the only one in the bitch class, received the award. She was not in show condition, being altogether too fat. Don in the puppy class should not have been recognized.

COLLIES.

In the open class for dogs, Dr. Cloud was first, Ship second; bitches, Flossie first, Joe second; puppies, Jessie first, Lassie Dorff second. Jessie will be noticed in good company when a little older.

GREYHOUNDS.

The open class for dogs contained two, Spring and Don, and they were placed in the same order. Don is better in

bone and muscle, but has a crooked leg. In the puppy class Don Pedro was first and Gene second.

POINTERS.

In the open class for dogs Spock's Peabody was alone. Bitches brought out Faustina and Fatinitza, and they were placed in that order. The awards should have been withheld, as the tails of both had undergone an operation and were bleeding. Daisy, in the puppy class, was alone.

SETTERS.

Out of five entries in the open dog class for English setters but two were present. Sport left the judging ring with the blue ribbon, Bob was second. In the bitch class Jessie was alone. The catalogue showed ten entries in the open Irish setter class. Pardo, a youngster of 18 months, was first, and is a good one, although a trifle weak in back, which he will probably outgrow. Mardo, a trifle too dark in coat, was next. Beauty, first in the bitch class, is a real nice little bitch, but was in no show condition. Julie Vernwood was second, Nellie A. Van Allen third, and Nellie Husted vhc. Gordons were a very weak lot. Snyder first, Don Juan second, and Kent IV. third. Kent and Juan should have been reversed, as Juan is poor in coat, weak in loin and has gooseberry eyes.

SPANIELS.

Cider was the only one in the open class. In the bitch class Jessie was first. In puppies Pine Grove Bessie was first and Priene Grove Gennie second and Gipsy third.

FOXHOUNDS.

But three were entered in the open dog class. Birgman got first and Rover second. Jack, who was third, would have made it very interesting for Rover had it not been for his badly disfigured head. Blue was the only one present in the bitch class, and Nero was alone in the puppy class.

BEAGLES.

Don was alone in the open dog class and received the award, and Gipsy Queen in the bitch class.

TERRIERS.

In the bull-terrier class for dogs Jack was first. Mac, second, was poor in head and chest, and the award should have been withheld. In the bitch class Lathrop's Nellie took first, Shaefer's Nellie second. Dick first and Dan second in the puppies. In the three classes for fox-terriers there were 26 entries. In the open dog class Prince was first, Dauntless Dan second. In the bitches Dorothy took first, Bessie second, Pine Grove Dolly third. Dolly should have been placed ahead of Bessie, she being a poor specimen.

PUGS.

One poor one, Sherry, coarse in coat, in head and badly overshot. There were thirteen other dogs benched that were not in catalogue, the most of them wearing the blue and red ribbons.

LOPIS.

TORONTO DOG SHOW.—Toronto, April 21.—*Editor Forest and Stream:* Kindly insert the following under your list of dog shows to be held during the present year. September 15 to 18, International Dog Show under the auspices of the Dominion of Canada Kennel Club, in connection with the Industrial Exhibition at Toronto, Canada. The show will be duly advertised in your paper as soon as the premium lists are ready.—H. J. HILL, Manager and Secretary.

TOLEDO DOG SHOW.—*Editor Forest and Stream:* The Tri-State Fair, on whose grounds we expected to hold our bench show during their fair, have decided not to give a fair this year. On this account we will be obliged to give up our bench show.—TOLEDO KENNEL CO.

CHESAPEAKE BAY DOG CLUB.

At a meeting of the fanciers of the Chesapeake Bay dog, held in Baltimore, Md., April 17, a club was formed under the name of the Chesapeake Bay Dog Club. Following is a list of the officers elected for the ensuing year: President, Mr. E. L. Bartlett; Vice-President, Mr. J. O. Norris; Secretary, Mr. J. F. Pearson; Treasurer, Mr. T. M. Jenkins. Board of Governors, Messrs. J. D. Mallory, J. S. Frick, H. Malcolm, J. T. Norris and W. T. Levering. Mr. J. T. Norris was elected delegate to the American Kennel Club. Following is the scale of points and description adopted:

	Value.
Head, including ears, lips and eyes.....	14
Neck.....	6
Shoulders and chest.....	14
Back, quarters and stifles.....	14
Legs, elbows, hocks and feet.....	14
Stern.....	4
Symmetry and quality.....	6
Coat and texture of same.....	16
Color.....	12

Total..... 100

DESCRIPTION.

Head, broad, running to nose only a trifle pointed, but not at all sharp; eyes, of yellow color; ears, small and placed well up on head; face, covered with very short hair; neck, only moderately long and with firm strong appearance; shoulders and chest full liberty, with plenty of show for power and no tendency to restrictions of movement; chest, strong and deep; back, quarters and stifles, fully as much, if not more, power than forequarters, and be capable of standing prolonged strain, and tendency of weakness must be avoided.

Ducking on the broad waters of the Chesapeake Bay involves at times facing heavy tides and seas, and in case of following wounded fowl a dog is frequently subjected to a long swim. The legs, elbows and hocks should therefore be short, showing both bone and muscle, and with well-webbed feet of good size. The forelegs should be rather straight and symmetrical. It is to be understood that short legs do not convey the idea of a dumpy formation. The elbows should be well let down, and set straight for development of easy movement. The stern should be stout, somewhat long, the straighter the better, and showing only moderate feather. The Chesapeake Bay dog should show a bright, lively, intelligent expression, with general outlines good at all points. In fact, he should be a dog worthy of notice in any company. The coat and texture should be short and thick, somewhat coarse, with tendencies to wave over the shoulders, back and loin, where it is longest. It must be nowhere over one and one-quarter to one and one-half inches long. That on flanks, legs and belly should be shorter, tapering to quite short near the feet. Under all there should be a short woolly fur, which should well cover the skin and readily be observed by pressing aside the outer coat. This coat preserves the dog from the effect of wet and cold, and enables him to stand severe exposure, a shake or two throwing off all water. The color should nearly resemble wet sedge grass, though toward spring it becomes much lighter by exposure to the weather. A small white spot or frill on the breast is admissible.

Color is important, as the dog in most cases is apt to be outside the blind, consequently too dark a color is objectionable. The deep liver color of the spaniel makes a much greater contrast, and is therefore to be avoided. The weight should be about sixty pounds. Too large a dog is unwieldy and lacks quickness of movement. Bitches are usually smaller than the dogs, but necessarily so.

DOGS OF THE DAY.

NOTICES have been sent out for the May meeting of the executive committee of the A. K. C., which will be held on May 22. A special meeting of the club has also been called for the same date and will precede the committee meeting. The club meeting will take action upon a few amendments to the constitution, the only one of vital importance being that proposed by Mr. Anthony to make nine members constitute a quorum. I have not the constitution by me, but I am inclined to think that the amendment will only apply to the A. K. C. meeting. If so, it would be advisable to make it extend to the committee meetings as well. It may be that Mr. Anthony's amendment to Article XIII., Section 5, covers this, but there is not sufficient context to give the clue as to what it refers to, and reference to the full text of the article is necessary.

The amendments to the associate members' portion of the constitution, Art. IV., won't make or break anything. There is one, if my memory serves me correctly (these amendments were proposed last February), which left it optional with some persons, who, not stated, to leave names on the list of associate members of those who were in arrears for dues. This was rather sat upon at the Boston meeting by the unanimous passing of a request to the A. K. C. to cease publishing names of members in arrears for the current year. So that it is evident that there is not any great desire to have the proposed amendment to the constitution adopted. I fail to see why a person who has not paid his dues should be placed on the same footing as one who has. It is bad policy for several reasons, but they are too obvious to require setting forth. The only reason for change is to give a fictitious appearance of support at the beginning of the year when members are not prompt in sending in their renewal subscription, but such a course is not the one best calculated to hurry up the cash.

Mr. Frank B. Richards, well known as a critic and frequent dog show, two or three years ago, is very nicely fixed at Boston. When at the Hub a few weeks ago I called at the *Globe* office, where I knew Mr. Richards was employed, and was as surprised as I was pleased to find that he was filling the responsible position of night editor. To those not of the profession I would say that the night editor is the great I am in all cases where there are no special instructions. He is the man who says what goes in and what remains out when there are three or four columns too much set up. Any man who knows newspaper work knows what a responsible position that of night editor is, and it speaks well of Mr. Richards's ability to know that within two years he has climbed so high upon the journalistic ladder.

I think it can be truthfully said that dog show judging as it is conducted in this country is just as straight as it can be. There is none of the English follow-my-leader style over here. And if a dog is good enough to win under every judge he faces during a season there is no disputing his claims to premiership. There is an inclination now and again to try men who have not had experience enough to give them confidence in the ring. They are a little afraid to go against a powerful kennel, and the best dog does not always get his deserts. Well, it is no easy thing nowadays to judge some breeds, unless the man who is so doing has been through the mill and goes to work perfectly oblivious of his surroundings. Once a man begins to think of who is looking on it is all up with his peace of mind, and he becomes rattled beyond hope of recovery. It is a great deal easier to say how a thing should be done than to do it. "Buck" fever, the stage fright of even experienced actors, the "Sheffield funk," which attacks men who are hot favorites for the great Sheffield foot handicaps, are all part and parcel of the same thing which at time shows itself in the judging ring.

The number of ladies who are interested in dogs is gradually increasing. It is a good thing to have them amid us, and there are no more enthusiastic fanciers than those of the fair sex. There is one lady in the Philadelphia district who has not taken any very prominent part as an exhibitor as yet, but I am sure she will ere long. I refer to Mrs. Frank Smyth, of Germantown. This lady has chosen the name of Swiss Mountain Kennels for her establishment, which is situated on East Washington lane, quite close to Walnut Lane Station on the Chestnut Hill branch of the Philadelphia & Reading road. The residence is one of those quaint old Germantown houses which were built substantially enough a century ago to be able to withstand wind and weather for still another one hundred years. Not that it looks old at present, for it has just been rejuvenated, and but for the telltale date stone it would be taken for a creation of yesterday. On a gentle rising ground immediately behind the house are the neatly arranged kennels, each with its adjoining wire fenced yard. Naturally St. Bernards are the leading attraction at a kennel with such a name, and there are some half dozen useful brood bitches on the place, with three litters, two of which have just been weaned. These are by General Butler and Marquis of Stafford, son of champion Save. There is also a three-weeks-old litter by Celtic Rector, son of the Giant Rector, and out of a Victor Joseph bitch. Everything about the place is neat, clean and tidy, and the live stock are kept in excellent condition. In addition to the St. Bernards, Mrs. Smyth has a nice lot of spaniels, including two well-bred and typical cocker bitches of the Obo strain, from one of which there is an uncommonly good young dog that would make a lot of the show dogs take a back seat. One want at the kennels has just been supplied in the shape of a good and well-bred St. Bernard dog. The head of the harem is Arch Duke, by Max out of Theo, who was by Otho out of Margery, by Bonivard. Max was bred at the Chequasset Kennels and was by Hermit, litter brother to Otho. The result of this double infusion of the Otho blood is to be seen in Arch Duke's grand head, while he has not Otho's failing behind. He is a young dog, not yet two years old, and was not brought to the surface till the dog season of 1890 was just about over. He needs a little time to fill out, and when he is in condition he should weigh 180 lbs., for he is just about as tall as any of the roughs of to-day.

Checks have been sent to all winners at Rochester dog show who did not collect at the show. The show encountered bad weather and was not a financial success, hence the promptness in settling up is commendable. A week or two ago I spoke of express delays in connection with shipping from Lee, Mass., to Rochester and return. The explanation is that the express company, United States, I think, only controls some ten or dozen miles beyond Lee, stopping at Pittsfield on the Boston and Albany road. To get the long mileage therefor express matter is sent via New York. To subject live stock to such treatment is most reprehensible, particularly so in the case at point when positive instructions were given to ship via Pittsfield.

How different is the catering by the English companies when an important show is about to be held. For the kennel club show held in London on April 15 to 18, the London and Northwestern, Midland and Great Northern railways each advertised special facilities for the sending of dogs to the show. They certainly manage this better abroad than in this country, as may be seen from advertisements in the English papers. How would it do for the A. K. C. to appoint a committee to get uniform concessions on all lines and better rates from express companies if possible?

Mr. Mitchell Harrison was the purchaser of Mr. Wake-

Walker's collie bitch Gypsy, bought at the late Collie Club show in London at the time Mr. Harrison secured Christopher.

Mr. Henry Halsey, who is trying to make a new club in English St. Bernard circles, was born in New York.

The *Stock-Keeper* to hand last week has a likeness of the collie Ormskirck Amazeant, the son of Christopher, who takes his sire's place in Mr. Stretch's kennels. Amazeant is wonderfully like Roslyn Wilkes in face and expression.

The action of the A. K. C. at its last meeting in disqualifying the defaulting Albany show officials has had the desired effect, and the prize money has been paid to those to whom it was so long due.

Dr. Daniel Lee, who acted as veterinary at the Boston show, invites Mr. E. Sheffield Porter to attend his lecture on the dog's ear at the Harvard Veterinary School, and still holds to his opinion that the gun test was a legitimate one, and proved that Beryl was not totally deaf. I would have greater faith in Dr. Lee's opinion if he had not disqualified a St. Bernard belonging to a friend of mine, which had a dried surfeit sore. I suppose he thought it was mange, but any person with a knowledge of dogs could see that it had been made by the animal licking himself. If it had been a wound or raw there might have been some excuse, but the raw had entirely healed over and the skin was quite dry before the dog was sent to Boston. I felt much annoyed about this business, because it was at my earnest solicitation I got the owner to enter the dog, and knowing that no person who knew what surfeit was would disqualify the dog, I had the dog sent on. Nothing whatever has been done to the dog in the way of dressing since his return, and the bare spot is now covered with hair. Dr. Lee's reply to Mr. Porter's letter was not a very gentlemanly one, and when it comes to a question between those two as to a dog being deaf, the New Haven gentleman will snow under the Harvard M. D. V. on a vote of the dog men of this country.

Mr. W. T. Payne, President of the Southern California Kennel Club of Los Angeles, writes me that there is every prospect of the club's coming show being a very successful exhibition. Mr. H. H. Briggs, of the San Francisco *Breeder and Sportsman*, will judge all classes, as he did last year. Mr. Briggs is as popular on the Pacific coast as he made himself at the High Point field trials a few years ago.

I learn from Mr. Weiss, of Bethlehem, that he has lost his Irish setter champion Nellie. Mr. Weiss has had anything but a pleasant experience in dogs so far, but to a man of his determination there will be a "get thar" some day.

Roslyn Torfrida, in whelp to Christopher, has arrived at the Chestnut Hill Kennels, but I regret to hear that the brood bitch Mavis strayed from there last week. She is a sable with white breast, good long head, but does not carry her ears up. She is too valuable to lose, and I hope will soon come to the surface.

Mr. C. H. Boddeley, of Champaign, advises me that the dog poisoner is at his nefarious work out there. He has just lost his collie Tramp II., and Mr. Muss has lost one of his black and tan terriers.

RUNS WITH THE FOXES.

I.—A FOX HUNT ON CAPE COD.

CHRISTMAS morning, '89, in a farmhouse on Cape Cod; time, 3:30 A. M. The alarm clock rings and Sport and his young brother slowly awake to the realization of the fact that the morning of the much-talked-of fox hunt has arrived. The stars are shining brightly and the weather is still and remarkably mild; but the latter conditions are favorable, and the dogs will have no difficulty in following the trail over the sand.

On descending to the dining-room a cheerful scene meets the eyes of the hunters, as a fire of huge logs is blazing in the large old-fashioned fireplace and a substantial breakfast already on the table, is something that at once claims their attention. Taking their guns and plunder, they sent themselves in the team and start for the rendezvous, which is to be at the *Globe Hotel*—where they find the rest of the party assembled. The pack consists of two large raw-boned foxhounds, led by their owner, a gentleman whose regular calling is "keeper of the county jail"—but his sporting proclivities having been aroused, he has arranged to procure a substitute for the day and has joined in the sport.

The party is made up of eight, and taking the dogs in the wagon, we start on a drive of about nine miles, to the head of the neck as it is called—one of those curious tongues of sand, seven miles long and from a quarter to a half mile wide—studded with high sandhills, with here and there a swamp.

Arrived at the starting point the skirmish line takes intervals and move slowly forward, the master of the hounds in the lead, carefully looking for a fresh trail, which is quickly found and the dogs are let go.

Hard traveling this—as at each step we sink deeply into the loose sand, and there are many sandhills in our path, but we get an occasional note from the bounds and press forward with enthusiasm. It has been growing lighter for some time now and as the writer reaches the top of a particularly large hill he passes and feels amply repaid for the pangs of early rising, by the scene presented to him. On the right, the sun shows a large expanse of salt marsh and beyond a large harbor—while on the left the surf is breaking heavily on the beach. The high land near Plymouth is also in sight and one's thoughts revert naturally to Pilgrimage times—and something suggests the picture of John Alden, walking on the beach and pondering over Priscilla's gentle hint.

But the dogs are coming this way again, and every one is on the alert, when to our horror we see the fox dodge number one, the beach guard, around a small sandhill and gain the beach. At once there is a wild break for the shore, but as the owner of the "applestock" reaches the bluff the fox is discovered a hundred yards away and going like mad up the shore. Our youngest member is on hand, however, and firing his light single-barreled gun starts in pursuit, as he afterward explains with the idea of getting another shot.

It is very discouraging, but the day is still young, and soon the dogs pick up a fresh trail, and hope revives as the hounds drive reynard into a small swamp, which we surround, and taking commanding positions on high sandhills wait patiently for the chance of a shot. For an hour or more the chase circles around, while the sharp baying of the hounds tells us that they are getting closer and closer upon their prey, and that this sort of thing cannot continue much longer. The Professor has the beach station this time, and once more the fox tries the old game; but this time he was well watched, and suddenly there comes a puff of smoke and the Professor leaps to his feet. Reynard staggers, but it takes a second barrel before he drops, and with a wild yell the Professor is upon him and makes sure that he will not escape. After a few moments of exultation we light our cigars, and shouldering the game retrace our steps toward the spot where the horses are left—a couple of miles distant.

The distance is about covered, when on looking down into a small valley we discover the rest of the party seated around a large mince pie and refreshing themselves from a

goodly flask, with a liquid which would hardly pass muster in this prohibition country. The homeward drive is enjoyable, and we are in condition to appreciate the Christmas dinner which follows, saddened only with the thought that our vacation is over and that the morrow will find us at the desk again.

THE DALMATIAN.

THE standard adopted by the Dalmatian Club of England on March 26 is as follows:

The Dalmatian in many particulars much resembles the pointer, more especially in size, build and outline, though the markings peculiar to this breed are a very important feature and very highly valued.

1. *In general appearance* the Dalmatian should represent a strong, muscular and active dog, symmetrical in outline and free from coarseness and lumber, capable of great endurance, combined with a fair amount of speed.

2. *The head* should be of fair length, the skull flat, rather broad between the ears, and moderately well defined at the temples, i. e., exhibiting a moderate amount of stop, and not in one straight line from the nose to the occiput bone, as required in a bull-terrier. It should be entirely free from wrinkle.

3. *The muzzle* should be long and powerful, the lips clean, filling the jaws moderately close.

4. *The eyes* should be set moderately apart and of medium size, round, bright and sparkling, with an intelligent expression, their color greatly depending on the markings of the dog. In the black spotted variety the eyes should be dark (black or dark brown); in the liver spotted variety they should be light (yellow or light brown).

5. *The ring round the eyes* in the black-spotted variety should be black; in the liver-spotted variety brown, never flesh-colored in either.

6. *The ears* should be set on rather high, of moderate size, rather wide at the base, and gradually tapering to a rounded point. They should be carried close to the head, be thin and fine in texture and always spotted, the more profusely the better.

7. *The nose* in the black spotted variety should always be black; in the liver spotted variety always brown.

8. *The neck and shoulders*.—The neck should be fairly long, nicely arched, light and tapering, and entirely free from throatiness. The shoulders should be moderately oblique, clean and muscular, denoting speed.

9. *Body, chest, back and loins*.—The chest should not be too wide, but very deep and capacious; ribs moderately well sprung, never rounded like barrel hoops, which would indicate want of speed; the back powerful; loin strong, muscular and slightly arched.

10. *Legs and feet*.—Of great importance. The forelegs should be perfectly straight, strong and heavy in bone; close to the body; forefeet round, compact, with well arched toes (cat-footed), and rough, tough, elastic pads. In the hindlegs the muscles should be clean though well defined; the hocks well let down.

11. *Nails*.—In the black variety, black and white; in the liver spotted variety brown and white.

12. *The tail* should not be too long; strong at the insertion, and gradually tapering toward the end; free from coarseness; it should not be inserted too low down, and carried with a slight curve upward, but never curled; it should be spotted, the more profusely the better.

The coat should be short, hard, dense and fine; sleek and glossy in appearance, but neither woolly nor silky.

14. *Color and Markings*.—These are most important points. The ground color in both varieties should be pure white, very decided and not intermixed. The color of the spots in the black variety should be black, the deeper and richer the black the better. In the liver-spotted variety they should be brown without admixture of black. The spots should not intermingle, but be as round and well-defined as possible, the more distinct the better; in size they should be from that of a sixpence to a florin. The spots on head, face, ears, legs, tail and extremities to be smaller than those on the body.

15. *Size*—Dogs, 55lbs.; bitches, 50lbs.

MR. BELMONT'S FOX-TERRIERS IN ENGLAND.—Following are the comments of the London *Field* on the fox-terrier classes at the recent Kennel Club show: "The fox-terriers were only fairly numerous and of no more than fair quality, the wire-hairs, as usual, suffering from the withdrawal of Mr. Carrick and Mr. Maxwell as exhibitors. Mr. A. Belmont, Jr., of New York, is to be complimented on his spirit in sending the pick of his kennels over here to be pitted against our cracks, and it was pleasing to note him successful in challenge dogs with Dusky Trap; still, he should not have beaten Hutton Prince, for Trap has gone off since he won here before, and many admirers of the terrier never considered him quite high class. Regent, too, was beaten; but Result, owing to an injured jaw, was not able to put in an appearance. In the corresponding bitch class Vesuvienne, looking almost better than ever, easily beat Rachel, who was in nice trim; her beautiful body and shape still remain, but she has grown wider in front than ever, and is thus hardly in the running with Mr. Vicary's favorite. The latter's kennel won easily in the next class with Venio, another improving dog; second to him was the bad-headed Ruby Baronet, a dog Mr. Raper once sold for £3, a useful sort of terrier as a workman, with the best of bodies and excellent legs and feet, but his head should always keep him from a foremost position in a good class. Mr. Ref'mond was, however, thoroughly consistent throughout his awards, preferring body and legs to the head. Ruby Trigger, bc., is a much better dog than Baronet, quite in the first rank with his strong, powerful jaw, a little too square and not sufficiently cut away, and excellent body and character. Mr. Tinne was vhc. with Monte Carlo, again inferior in head; Lord Monington, a middling dog, the Cambridge winner, was fourth; Hutton Billy fifth, and Rational third. Billy should have been fourth. Mr. Raper's dog second, and Hazard not in the money at all. Belmont Rubicon, who came with a considerable reputation from New York, is very moderate indeed, and barely deserved his bc.; he is wide in front, has a moderate body and coat, an execrable stern, and his head and ears are by no means what one wishes to see on a first-class fox-terrier; the fact of the matter, Belmont Racket is the smarter terrier of the two."

DEATH OF NAIAD.—We are sorry to learn that the bull bitch Naiad, winner of first at Buffalo, is dead. We stated last week that upon her return from the show she was found in her box nearly lifeless when the train reached Albany, but that there were hopes of her recovery. She was too far gone, however, and died on reaching New Haven.

THE IRISH SETTER CLUB MEETING.—Des Moines, Ia., April 26.—*Editor Forest and Stream:* On April 17 I received notice from Mr. Max Wenzel, Secretary of the Irish Setter Club of America, saying that there would be a meeting of the club in New York city on the 19th inst., and also stating "that business of importance requires your attendance." I did not receive this till the afternoon of the 17th inst. I don't know who is to blame in this matter, but it seems that it is hardly a fair thing to members to give them what amounts to no notice of the meeting at which their presence is required on business of importance. I immediately wrote a letter and sent my proxy to one of the members of the club, whom I expected would be in New York, but it did not get there till after the meeting. I think that if they are going to make a success of this club they ought to give us a chance to be least represented at meetings of importance.—F. H. PERRY.

DEATH OF HOWARD HARTLEY.—Mr. Howard Hartley died at his residence in Pittsburgh on the 23d inst. Stricken with paralysis about two years ago, he has since lingered in a state of partial consciousness, some of his faculties as clear as ever and some a perfect blank, capable of receiving some impressions and utterly impervious to others, and completely cut off from all power of communicating the thoughts that evidently teemed in his brain. From such a frightful imprisonment, a happy death is a most merciful release. Although almost unknown to the new fanciers of to-day, Mr. Hartley was a well known figure at dog shows of five or six years since, his magnificent figure, open, hearty face and cheery manner impressing itself on all. With the kindest of hearts and the most open of hands he was a friend to all who deserved friends, and eminently the kind of man most missed in dog circles. To his widow and young son we extend our most sincere sympathies.

THE GERMAN MASTIFF OR GREAT DANE.—The German Mastiff or Great Dane Club of America has published a monograph of the "German Dogge," giving a history of the breed from ancient times down to the present day. The work is a complete and useful handbook that should be in the hands of every lover of the breed. Quotations from the principal authorities, both ancient and modern, are given, together with the German, English and American standards. A very attractive feature of the book is the illustrations, of which there are twelve of representative dogs. The work also contains the rules of the club, a list of the officers and members, a table of weights and measurements, and a glossary of terms. The monograph was compiled by Mr. W. F. Fox, the president of the club, who evidently has spared no pains to make the work what it is, a complete monograph of the "German dogge."

DEATH OF MR. T. B. LEE.—Another lover of the St. Bernard has gone to his long home. Mr. T. B. Lee, of the Alta Kennels, Toledo, O., died Friday morning, April 18.

MR. A. C. WILMERDING, President of the American Spaniel Club, has moved his office to 163 Broadway, nearly opposite his former office.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Inspiration. By E. G. Taylor, Philadelphia, Pa., for lemon and white pointer dog, whelped Aug. 11, 1888, by Bang Bang out of Belle.

Gypsy Bang Bang. By A. S. Aborn, Wakefield, Mass., for lemon and white pointer bitch whelped January, 1888, by Bang Bang (Bang-Princess Kate) out of Boski (Beaufort-Zube).

Hera. By Wachusett Kennels, Fitchburg, Mass., for orange, white markings, St. Bernard bitch, whelped Jan. 18, 1890, by Otto H. (Otto-Juna) out of Merchant Princess (Merchant Prince-Bernie).

Princess Florine. By C. H. Jackson, Brooklyn, N. Y., for orange and white English setter bitch, whelped Nov. 1, 1889, by Jack out of Fanchon.

Count Rill. By J. C. Hopkins, Brooklyn, N. Y., for black, white and tan English setter dog, whelped Sept. 21, 1889, by Gath's Mark, Jr. (Gath's Mark-Katie Noble) out of Tip (Boswell's Ned-Gordon's Gyp).

Monie. By F. O. Gross, Philadelphia, Pa., for red Irish setter bitch, whelped Jan. 29, 1890, by champion Elcho, Jr. (champion Elcho-champion Noreen) out of Laura (champion Warrior-Sally).

Jova Ruby. Red Irish setter bitch, whelped Jan. 20, 1890, by Claremont Patsy out of Nino, by F. H. Perry, Des Moines, Ia., to G. Norburg, Holdrege, Neb.

Gladys. Red Irish setter bitch, whelped May 30, 1888, by champion Tim out of Lady Edith, by John H. Gale, Providence, R. I., to R. H. Burr, Middletown, Conn.

Tun T. White and tan fox-terrier dog, whelped Nov. 2, 1889, by Hillside Tarquin out of Nora, by Learned Kennels, Hudson, N. Y., to H. H. B. Angell, N. Y.

Balthus. Blue belton English setter dog, whelped March 17, 1881, by champion Rock out of Cockerton's Meg, by H. F. Schellhass, Brooklyn, N. Y., to R. H. Alberts, Jr., Hoboken, N. J.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

E. S. Port Elizabeth.—I have a dog puppy about 4 months old that has the mange. It was inherited from its mother. It broke out on the head in little sores until now it has swelled the neck up twice its natural size. Ans. Put three drops of Fowler's solution of arsenic in the food daily. Use diachylon ointment on the sore places, and keep the bowels open with syrup of buckthorn in teaspoonful doses.

W. R. C.—I have a pointer pup about eight months old that has something wrong with his eyes. There seems to be a thin skin growing over the eye balls from the inside and lower part of the eyes. It may be a cataract. He also has a little thick neck. What had I better do for him? Ans. Give 5 grains of iodine of potash in form of a tablet or pill night and morning; also a 5-grain quinine pill each day. You can conceal the pill in a small bit of meat. Sponge the eyes with borax and water, a teaspoon to the tea cup of water.

J. A. B., Vincennes, Ind.—My pointer pup, 12 mos. old, is lame in the right shoulder; has been so for four or five months; there is great shrinkage of the muscles; it does not flinch to pressure on any of the joints, but objects to the paw being raised on a level with the shoulder and pulled forward. Don't think it is out of joint, for he uses it quite well when he is chasing birds or rabbits. Can you suggest a remedy? Took him to one local veterinary, got some liniment which did no good. Ans. It looks like rheumatism. Friction with a stimulating liniment like chloroform liniment or "horse liniment" will benefit. Also give 10 grains of salol three times daily and keep the bowels open with compound cathartic pills, three at a dose.

W. F. D., Towanda, Pa.—My Llewellyn setter dog, 2 years old, is sick. Appetite very poor, growing poor in flesh, eyes dull and run slightly, coat very dull in color, and sheds very little hair. Nose warm but not dry. Stomach seems weak and will not retain food, especially raw meats. Dog seems dull and stupid. Ans. Do not feed raw meat. Give cornmeal mush with a few bits of meat. Give 10 grains of salol three times daily and keep the bowels open with compound cathartic pills, three at a dose.

W. F. D., Towanda, Pa.—My Llewellyn setter dog, 2 years old, is sick. Appetite very poor, growing poor in flesh, eyes dull and run slightly, coat very dull in color, and sheds very little hair. Rifle and Trap Shooting.

RANGE AND GALLERY.

NEW ORLEANS RIFLE CONTEST.

THE Metropolitan Club, of New Orleans, will, on Sunday, May 4, inaugurate a rifle contest for the championship of Louisiana. The club has a fine range at its quarters, No. 625 Royal street. The shoot is open to all rifle teams in the State. Besides prizes to be given to the club there will be several individual prizes. The first prize for clubs will be an elegant silver punch bowl, with eighteen cups to match, and will cost about \$250. An individual championship medal will be given to the men making the highest total in all the shoots. This will be the largest contest of its kind ever given in the country, and the champion team will probably secure its six best men and issue a challenge to any other six men team in America. Fuller details are given in the following agreement already signed by some of the clubs:

We, the undersigned captains, representing our respective rifle clubs, hereby agree to enter a team consisting of eighteen men, with five substitutes, for the purpose of contesting for prizes offered under the auspices of the Metropolitan Club, and to be shot for on their range under the following conditions:

The names of the men above named will be furnished by the captain of each club with the names of five substitutes. In case there are more than those named will be allowed to shoot in the contest, and the man shall shoot two scores the same day in the same contest, and said twenty-three persons whose names are furnished must be bona fide members of the club so entering them.

The prizes will consist of one prize for each club participating in the contest. No prize will be offered or valued less than \$25, and as many prizes will be offered as there are clubs entering and shooting in the contest.

Prizes will be known as first, second and third, and the club making the highest score three times in the different contests shall be entitled to first prize.

The club holding the second best place in each of the different contests shall be entitled to second prize, and the club holding third best place in each of the contests shall be entitled to third prize. No club shall be entitled to two prizes. In case there should be a tie for a place between any two or more clubs the clubs so tying shall shoot over again, and the club making the highest score will take the place tied for, and the next highest score in the shoot off shall take the next place, etc.

All guns used in the contest be 22cal. open sights, any desired target, and no other than the standard target.

The judge, scorers, caller and painter will be appointed by the Metropolitan Club, but each club may appoint a person to see that the score is correctly tallied.

No person or persons shall be allowed to approach the targets except the judge, caller and painter, and the judge's decision shall be final.

(Signed) Wm. McCoy (for Arnold Rifle Club), Geo. B. Adam (for Endeavour Rifle and Pistol Club), F. Strauss (for Claiborne Rifle Club), Theo. Kramer (for Expectation Rifle Club), John B. Mayer (for Southern Rifle Club).

BOSTON, April 26.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day. The shooting conditions were good and some fine scores were made. E. F. Partridge won the bronze and silver medals. In case there the spring meeting of this association will be held June 14 and 15, with a large list of matches and prizes for rifle and pistol. Following are the best scores made to-day, distance 200 yds., standard American target:

Record Off-Hand Match.

PHILADELPHIA, April 22.—Weekly competition of the Galety Rifle and Pistol Club was held at their headquarters, 127 North Ninth street, this evening. Mr. S. W. Merchant was the winner of the weekly silver medal, while the Wurflein medal was captured by J. J. Mountjoy for the first class men, John G. Rea, of the second class, getting the silver medal. In case there the bronze medal for the third class. Official scores of 10 shots on 4 in. ring target, 25 yds., using Wurflein rifles, plain open sights, off-hand, resulted in the following order, possible 250:

First Class.
J J Mountjoy.....241 J A Felix.....230 F M Frees.....227
E T Travis.....230 J B Eames.....229 R C McCreedy.....220
H J Mehard.....232 G F Root.....228 W Wurflein.....216

Second Class.
J G Rea.....229 S J Merchant.....208 A Shoemaker.....201

T F Shonert.....213

Third Class.
B C Hurn.....187 A Koch.....177
Pistol scores at 125 yds., Wurflein pistol, open sights, same target as above, as follows:

J J Mountjoy.....220 R C McCreedy.....202 A Shoemaker.....119
E T Travis.....220 A N Koester, Jr.....146 H C Fox.....109
J A Felix.....214 J Keifsnnyder.....184 A Koch.....97
J G Rea.....211 S J Merchant.....122 S W Merchant.....72
G F Root.....209

ST. LOUIS, Mo., April 23.—The ninth tournament of the St. Louis Pistol Club came to a close with the shoot held to-day. W. Bauer quit high on both the straight and handicap average, which gives him possession of the medal and also the first handicap prize. Alexander took second and Wallace third. At the last shoot McBean and Fodde tied at 115, but on the shoot-off the former won. All shooting is at a 1½ in. bullseye, distance 125 yds., possible in 10 shots 120. The score:

A McBean.....115 G Alexander.....113 O Wallace.....108
F A Fodde.....115 D Barker.....113 W C Mackwitz.....108
L V D Penet.....114 J Schaefer.....113 A Bengel.....107
M Summerfield.....113 M Billmeyer.....112 E Grainger.....96

A meeting will be held next week for the purpose of awarding the prizes and also to perfect arrangements for another tourney. Some little dissatisfaction is being expressed against the 3-pound trigger pull, and it is quite probable that hereafter members will be permitted to use any pull they may choose.—UNSER FIRZ.

SIGHTING SHOTS.—A Canadian correspondent, protesting against the abolition of sighting shots at the various local shoots, especially that at Toronto and Ottawa, says: "A rule has been adopted by the Ontario Rifle Association, and this change makes it very difficult for a single man without friends among his competitors to stand a show for a good prize, no matter how good a shot he may be. The new rule has produced this result: Three or four men agree to divide the aggregate prizes they may win. They make their entries so as to shoot immediately after one another, if possible, putting their best men last, and then

SAN FRANCISCO, April 19.—One of the greatest rifle contests of the year, the annual prize shoot of the German Schuetzen Club, took place at Harbor View range to-day. A large majority of the best shots on the coast were present, and the sharp competition made the scores unusually good. During the morning the shooters banged away quietly and methodically, and as usual, when excitement was lacking, a phenomenal "dickety" was made, though the averages were good. In the afternoon, however, as the time approached when the targets were to be pulled down, the excitement rose to a fever heat, and every marksman exerted himself to the utmost to make the top score. At 3 o'clock Wm. Glimdeman held the best ticket at 93, and the indications were that he would carry off the first prize. Soon afterward, however, a prolonged shout of exultation announced a new champion, and Adolph Strecker, the champion shot of the California Schuetzen Club, held up to view a ticket with 94 inscribed at the bottom. Though nearly all continued to fire away, it was conceded that this was a phenomenal score and not liable to be beaten. A veteran rifleman, who has wielded a peep-sight gun for many years, and whose nerve and eye are unflinching, was present, however, and now began to shoot as though his life depended upon it. His trusty Winchester was cleaned out, and armed with a fresh ticket he began his onslaught upon the targets. His first shot, a 25-ringer, was greeted with cheers, and nerved by success he fired again. This time he scored 23, and it was apparent except for an unforeseen accident, he would equal, if not exceed, Strecker's score. Another 23 followed, and the third shot on the trigger, and Strecker breathed a sigh of relief, for it would take 23 more rings to tie his score, while 24 was requisite to win. The rifleman was calm and steady, however, and drew the rifle slowly to his eye. An instant of suspense, a report, a cloud of smoke, the flutter of a small red flag across the face of the target and all was over. He had made 96. Shouts of "Kuhnie! Kuhnie!" rent the air, and Fred Kuhnie, the veteran, was hailed and hailed about the floor of the stand by his friends, all anxious to congratulate him on his wonderful score. Dickety shooting was almost given up, and as the time for closing was near, the marksman exerted themselves to make the last bulls-eye and 25-ringer, and Philo Jacoby made the dead center within a few moments of the close, but an instant later Geo. Helm jammed a bullet within the 25-ringer and his shot was not heard. On the last 25-ringer shot depended a cash prize and a handsome silver salver and fork, donated by the owner of the park. After an hour spent in banqueting and speech-making the shooting tickets were compared, the best scores picked out, and the prizes, ranging from \$25 down to \$1, distributed. In this contest over 2,000 shots were fired, and the affair was a decided success, both financially and otherwise.

JERSEY CITY, N. J., April 22.—Considering that many of the members of the Excelsior Rifle Club are amateurs, their shooting record is superb. At a regular weekly shoot held at Hansen's range, 78 Montgomery street, this eve, the following scores were made:

F G Kittredge	240	Boag	234	J Hughes	228
V J Channing	239	W Hennessey	233	P M McMenamin	228
W H Halliwell	237	J Speecheer	231	W Webber	227
I P Hansen	238	J Hauck	229	B Clark	227

DARINE.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

April 30-May 2.—A. S. A. A. Tournament, Columbus, O.
May 7-9.—A. S. A. A. Tournament, Lafayette, Ind.
May 14-16.—A. S. A. A. Tournament, St. Louis, Mo.
May 21-23.—A. S. A. A. Tournament, Kansas City, Mo.
May 28-30.—A. S. A. A. Tournament, Minneapolis, Minn.
June 10-13.—Thirteenth Annual Convention and Tournament of the Iowa State Association for the Protection of Fish and Game, at Davenport, Iowa, J. W. Howard, Secretary.
Aug. 18-23.—Third Annual Keystone Tournament, at Corry, Pa.

CLAREMONT SHOOTING ASSOCIATION.

NEW YORK, April 26.—After much discussion pro and con we have started in on live bird shooting. Our tournament began yesterday with an all-day shoot at live birds. The center blue-rook traps were removed, together with the stands and screens. The screens were removed, and the traps were taken to the eastward and westward, and so, we had as good a place to plant live bird traps and shoot at their inmates as can be found in the country. As fast as shot the birds were retrieved and the wounded killed, and every detail looking to the comfort and safety of shooters and their friends was carefully carried out. No scouts were allowed, and here is one ground where the spectators and shooters are not in danger of being injured from the fusillade of bullets. A policeman was on hand all day, but no case of disorder needed his attention. There was the nucleus of a big crowd to-day, but the rain had the promise and potency of being wet, and most of our would-be contestants stayed away.

Saturday was a day like unto Friday, and the crockery smashers had to fight it out with the rain trickling down their backs and running off their hats. The main object of the day was to get under cover and near the stove. However, we had a good tournament and fervently hope for better weather next time. AD VANCE.

Below are the scores of the live-bird shooting: First—Davenport 3, Lindsey 4 and Lindsey 3; second, Class 4, Rose 4, Davenport 3, Lindsey 3, Fisher 3, Leddy 3 and Quimby 2; third, Class 4, Rose 4, Davenport 3, Lindsey 3, Fisher 3, Leddy 3 and Quimby 2.

Four birds, \$5 entry, 3 moneys, 8 entries: Quimby, Lindsey, Lindsey, Leddy and Fisher tied for first money with a clean score, Rose second with 3 and Class third with 2. In the shoot of Quimby won.

Four birds, \$2.50 entry, 3 moneys, 8 entries: Lindsey, Class and Miller, making clean scores, divided first money, Quimby, Davenport, Fisher and Leddy tied with 3 kills, and like their predecessors, divided second money, Collins, with 2 kills, was third.

Eight birds \$7 entry, 3 moneys, 9 entries: Quimby was first with a full score, Davenport, Lindsey, Miller, Collins and C. M. Hedden tied for second with 7, Leddy and Hughes, with 9, tied for third. In the shoot off between the second best men Davenport missed and the others divided the money.

Five birds, \$5 entry, 3 moneys, 8 entries: Quimby, Lindsey, Lindsey, Hedden and Miller tied with clean scores, Hunt was second with 4 and Class third with 2. In the shoot off for first the contestants were on an equal footing at the finish and a division of the money was then decided upon.

Five birds, \$5 entry, 2 moneys, 6 entries: Quimby won first on a clean score, while Miller and Class tied for second and divided.

Five birds, \$5 entry, 2 moneys, 6 entries: Quimby, Class, and Hedden tied with full scores for first, and Miller, with 4, secured second.

Extra event, miss and out, \$2 entry, 1 money, 7 entries: Miller and Class tied with 6 and divided.

Four live birds, \$3 entry, 3 moneys, 9 entries: Quimby 4, Lindsey 4, Hathaway 4, Jones 3, Collins 3, Sampson 4, Smith 3, Sigler 3 and Miller 3.

Four live birds, \$3 entry, 3 moneys, 9 entries: Quimby 4, Lindsey 4, Miller 4, Simpson 4, Collins 3, Smith 3, Sigler 3, Jones 2 and Hathaway 1.

CONNEERSVILLE, Ind., April 21.—Though a drizzling rain fell throughout the day's shooting here something like 800 people assembled to witness the match between the Cincinnati and Conneersville selection of shots, which again resulted in a victory for Cincinnati. Bandle, who was a big winner the day through, captained the Cincinnati boys, Roots acting for Conneersville. The match, when it opened with W. E. Limberg, of Cincinnati, as referee, was conceded to the home team, but toward the finish the visitors took a spurt and won, the conditions being 15 single birds per man in Shooting Association style as appended:

Snider	1110110001010-9	Dayton	111111101010-12
Jordan	1110010111110-11	Bandle	111011101111-13
Roots	1110110101010-8	Frank	1011011100101-10
Hakelman	1110110001010-8	Bohemian	0101011010101-8
Thomas	0111010101010-8	Murphy	111010101111-12
Titie	0101010101010-6-43	Willie	1010001010111-7-62

Ten sweepstake matches followed.

April 24.—The West Toronto Gun Club held their shoot for the cup yesterday, and a large crowd of spectators witnessed the sport. The weather was exceedingly fine and a very fair score was made, D. C. Walton being the winner again: D. C. Walton 21, Wm. McDowall 16, P. Wakefield 15, H. George 15, T. Boswell 14, B. Williams 14, C. Hinton 11, E. Brown 13, D. Beatty 10.

OHIO TOURNAMENT.

TOLEDO.—The programme for the Ohio Trap-Shooters' League's annual tournament at Toledo on May 13, 14 and 15, is an attractive one. The L. C. Smith \$500 trophy, representing the championship of Ohio, is to be contested for at this meeting under the management of the Toledo Gun Club. The events are all likely to prove interesting, and a large number of the best shots from all over Ohio will be present. The programme is as follows:

First Day.

Event No. 1, League, 10 single blue-rook targets, entrance \$1.50.
No. 2, open to all, 20 single blue-rook targets, entrance \$2.50.
No. 3, League, 15 single blue-rook targets, entrance \$2.
No. 4, open to all, 10 single blue-rook targets, entrance \$1.
No. 5, League, 10 single champion clay-birds, entrance \$1.50.
No. 6, open to all, 20 single champion clay-birds, entrance \$2.50.
No. 7, League, 15 single champion clay-birds, entrance \$2.
No. 8, open to all, 12 single champion clay-birds, entrance \$1.

Second Day.

Event No. 1, League, 10 single Keystone targets, entrance \$1.50.
No. 2, open to all, 10 single and 8 pairs Keystone targets, entrance \$1.
No. 3, League, 15 single Keystone targets, entrance \$2.
No. 4, open to all, 20 single Keystone targets, entrance \$2.50.
No. 5, League, 20 single and 8 pairs Keystone targets, entrance \$2.
No. 6, open to all, 15 single Keystone targets, entrance \$1.50.
No. 7, League, 20 single Keystone targets, entrance \$3.
No. 8, open to all, 10 single Keystone targets, entrance \$1.

Third Day.

Event No. 1, League, 15 single Standard targets, entrance \$2.
No. 2, League, 20 single Standard targets, entrance \$5, for the championship of Ohio and the L. C. Smith \$500 trophy.
No. 3, open to all, 10 single Standard targets, entrance \$1.
No. 4, open to all, 10 single and 3 pairs Standard targets, entrance \$1.50.
No. 5, open to all, 15 single Standard targets, entrance \$1.50.

An extra event, open to all. Shooting commences at 9 A. M. American Shooting Association rules, revised, will govern all matches. The Keystone system of rapid firing will be used. The purses in open to all events will be divided, first 40, second 30, third 20 and fourth 10 per cent. For the four best averages in all League events, except the trophy contest, 40 per cent. of the net proceeds of the tournament will be divided in the same ratio as the purses. All extra birds will be charged at 3 cents each. The Central Traffic Association has authorized excursion rates from all points in Ohio.

MINNEAPOLIS GUN CLUB.—April 25.—From scores of our

last shoot you will find that the interest in trap shooting is growing every day. Weekly shoot for badges at 15 singles and 5 pairs Peorias. Senior class:

Babcock	10101111000101	10	10	10	11-14
Cutter	1110111001011	10	10	10	11-17

Whitcomb	00010110110111	10	10	00	10-13

Whitcomb wins senior badge, Ensign wins junior badge and Terrill wins amateur badge.—H.

OMAHA, Neb., April 23.—The Omaha Gun Club at its last regular meeting elected the following officers for the current year: W. H. S. Hughes, President; W. E. Musselman, Vice-President; Wm. Townsend, Secretary; Goodley Brucker, Treasurer; Board of Directors—Messrs. Gwin, Parmelee and Nason, J. R. Stice, John Dunmire and Judge Kennedy were elected to membership. A resolution in memory of the late George Crook was read and passed. He was a member of the Omaha Gun Club, and the surviving members of the club declared their sympathy with him that they had lost a faithful companion; the nation a great chief; the people a good citizen; the world a great man, and our club an honorable sportsman. The club's regular weekly shoot took place this afternoon, resulting as follows, 25 blue-rooks, 5 traps, 15 birds, rise:

Parmelee	24	Dunmire	22	Small	23
Townsend	22	Brewer	25	Dickey	23
Hughes	23	Brucker	22	Karty	21
Petty	24	Clarke	18	Rheen	13
Reynolds	18	Nason	22	Stubbs	21

The club shoot was supplemented with a 10 live-bird shoot, \$5 entrance, English modified rules, 30yds. rise. The score:

Parmelee	10	Hughes	10	Dunmire	8
Brewer	10	Townsend	9	Nason	8
Petty	9	Clarke	8		

On the shoot-off, Hughes won first and Townsend second.—JED GRIS.

CORRY, Pa., April 17.—Following are the scores of the weekly shoot of the Corry Gun Club. The improved Keystone traps were used for the first time and gave the best of satisfaction, although they were somewhat new to the members, which perhaps accounts for the poor scores of some of the members. With the exception of a gust of wind now and then the weather was pretty fair.

Austin	111111111011111111-23	Wetmore	111111111111111111-22
Laurie	01110001111011111110-19	H Arnold	1001011110101010101-19

Howard	1110110000100011100001-10	Austin first, gold medal; Wetmore second, gold medal; Laurie bronze medal.	

Twenty-five-birds sweep: Ellis 19, Edwards 14, H. Arnold 20, Penrose 21, Austin 19, Ellis 15.

En-bird sweep: W Howard, Wetmore 8, Lewis 8, Lawrie 6, Edwards 6, Ward 4, H Howard 4, Penrose 16.

Twenty-five-birds sweep for small wagon:

Penrose	01110111111111111111-23	Edwards	0001110011101111101010-16
Laurie	11110101010101111111-20		

AUBURN, April 23.—The Onondaga Sportsmen's Club won an exciting match with the Auburn Gun Club, at Auburn to-day. There was a dispute as to the result, Syracuse claiming to be the victor and Auburn insisting the score was a tie, but before the Syracuse returned home they discovered after a careful examination of the score that they were the winners by two birds.

The shoot, which was at 25 birds each, was witnessed by a large crowd. A hot lunch was served on the grounds and after the shoot a supper was given to the visiting marksmen. Following is the score: Syracuse: LeFevre 21, Montgomery 25, Hookway 22, Mosher 24, Holden 25, Ayers 17, Chase 21, Steel 21, Becker 15, Spangler 16, Faddock 22, Nearing 23, Ailing 20, total 323. Auburn: Stewart 23, Wright 17, Carr 22, Kipp 21, F. Steel 21, Howard 21, De Wit 23, Nellis 21, Whitney 23, Tuttle 23, Brinkerhoff 23, Kerr 16, Church 21, total 374.

EXCELSIOR GUN CLUB.—The newly organized Excelsior Gun Club are to give a three days' tournament on their grounds at Pearl River, N. Y., on May 6, 7 and 8. The first two days will be devoted to blue-rooks and the last day to live birds only. The grounds are located at Pearl River station, and are reached via New Jersey and New York R. R. from the foot of Chambers street.

A BIG JERSEY SHOOT.—The four talked of match between teams of fifteen men from the Newark and Middlesex Gun Clubs has been finally arranged, and May 15 has been decided upon as the date. The grounds of the Middlesex Club, at Dunellen, N. J., will be the scene of the contest. The meeting will be the shooting event of the year, as both clubs are recognized as having the strongest live bird shots in the county among their members. The conditions of the match are, 15 men a side, at 10 live birds each, modified Hurlingham rules to govern, the losers to pay for birds.

THE MIDDLESEX SHOOT.—Dunellen, N. J., April 23.—Beautiful weather favored the sportsmen who were in attendance to-day at the second April shoot of the Middlesex Gun Club. The events were open to all, and a mixed programme was shot off, live birds and blue-rooks, and a break with the live bird shooting being the feature of the day's sport. The attendance was not as large as is usually seen at these popular grounds, but those who participated enjoyed a good day's sport. There were plenty of live birds on hand. The scores:

Event No. 1, 9 blue-rooks, American Association rules, unknown angles, 3 traps: Brantingham broke 7 and took first money, Tee Kay second, and Dr. Clark and Dr. Ziegler third, each with 8.

No. 2, same conditions: Brantingham 7, Tee Kay 7, Manning and Ziegler 6.

No. 3, same conditions: E. D. Miller 9, Ziegler 8, Tee Kay 7.

No. 4, same conditions: Miller 9, Ziegler 8, Tee Kay 7.

No. 5, 10 blue-rooks, rapid firing system: Miller and Brantingham first with 9, Tee Kay, Dr. Clark and H. Wallace 8 each, R. Manning 7.

No. 6, same conditions: Tee Kay 10, Miller and Dr. Clark 9, Wallace and Brantingham 7.

No. 7, Tee Kay and Miller 70, Dr. Clark 9, Wallace and Van Sickle 8.

The conditions of the next event were somewhat novel, and were modeled after the form of live bird shooting. The contest was between Tee Kay and Dr. Clark, and a break with the live bird, only scored one-half.

No. 8, 30yds. rise, both barrels allowed, second to count one-half: Tee Kay first with 7½, using his second one. Miller second with 7, using his second four times, Wallace third with 6, first barrel.

No. 9, 7 live birds, \$5 entrance: Dr. Clark 7, Miller 7, Ziegler 6, Terry and Wallace 6. Wallace withdrew, the others shooting out the tie in the next event; it was won by Miller. Third was div. by Darby and J. Hack.

No. 10, 7 live birds, \$5 entrance: Miller 7, Darby 6, Ziegler, Hack and Clark 4 div.

No. 11, 4 live birds, \$3 entrance: Miller and Terry 4 div. Second was tied for by S. G. Smith, Ziegler, Darby and Applegate. The tie was shot off miss and out. Ziegler missed his shot and retired. S. G. Smith missed his second. Darby and Applegate shot round after round until the eighth, when Darby missed and retired, leaving Applegate to take the money.

DAYTON, O., April 25.—The Kennel Gun Club held the first shoot of the series of 13 contests for the season of 1890 at the club range to-day, 30 singles and 5 pairs inanimate targets to each man, American Association rules. There are four prizes, each member to count his five best scores, the highest average taking first prize, the club cup; second prize, a Winchester rifle, etc. Frank Wilcox, superintendent of the kennels, was referee;

	S.	D.	T ¹		S.	D.	T ¹

SAN FRANCISCO, April 19.—Eighteen members of the San Francisco Gun Club attended the third shoot of the season at the Oakland track to-day. A pleasant afternoon was enjoyed and good sport witnessed. The birds were a strong lot and flew with great rapidity from the traps. The best record so far is that of John K. Orr, who came out at the head of to-day's score. Ed Donohue was second, followed by a shorter and a longer score, and so on, the foremost in the seasons to follow. Not a few of the shooters found it difficult to see a white bird as it left the trap on account of the reflection of the sunlight upon a white fence in the background, for which reason several birds were lost to the shooters. The sportsmen will have the color changed before another match. The score follows:

R B Woodward	10	W Levinson	6	J K Orr	12
C F Stone	9	E W Chapin	7	H W Jellett	8
F H Swett	7	F Webster	10	W J Golscher	8
F G Sanborn	7	F Webster	8	Ed Donohue	8
E F Tichenor	6	J T Harvey	9	R A Eddy	10

After this follow a special shoot between C. and Eddy, of 10 men each, for two rounds, the stakes \$30 and the losing side to pay for the birds. The names and scores of those who shot in this contest are:

J K Orr	1-2	R A Eddy	0-1-1
Ed Donohue	1-2	R B Woodward	1-0-1
S J Butler	2-1-2	J D Harvey	0-0-0
W J Golscher	1-2	S J Kellogg	1-2-2
F Webster	0-0-0	F Webster	2-1-2
H W Woodward	1-0-1	E F Tichenor	1-2-1

The club's next match will be held on May 30 at San Rafael, as it has been the custom every year to have a picnic and shoot on that day. The shooting will begin in the morning, and several side matches will be shot in addition to the stated shoot.

DENVER, Col., April 23.

TORONTO, April 19.—The Stanley Gun Club held the first of a series of five shoots to-day at the Woodbine. The prize is a handsome cup given by the club, to become the property of the member winning it the most times in five years. The members are handicapped, some being allowed a greater number of birds to shoot at than another. Mr. Sawdon, Jr., was the winner, with a total of 19 out of 18 singles and 5 pairs: Sawdon, Jr., 19, Winchell 18, Conner 18, McDowall 16, Drayson 16, Henry 12, Bayles 12, Samuels 11.

April 22.—A novelty in the shape of a shooting match took place at the Woodbine this afternoon, the contestants being members of the Toronto Gun Club. The conditions were a double rise match in sparrows and artificial blackbirds, both being released at the same time. Townsend and Briggs shot at sparrows first barrel and the blackbirds next, and Andrews and McDowall the blackbirds first and the sparrows next. The following is the score at 10 birds of each kind, 18yds. rise: A. Townsend 14, G. H. Briggs 13, W. McDowall 13, E. Andrews 11. A sweep at sparrows was shot afterwards, Mr. Briggs winning first with a clean score and Townsend second.

N. Y. STATE SHOOT.—The thirty-second annual convention and tournament of the N. Y. State Sportsmen's Association for the Protection of Fish and Game, will be held at Lyons, N. Y., June 9 to 13. The programmes are now ready for distribution. Artificial and live birds will be used, and an unusually strong programme will be offered. The Dean Richmond live bird trophy, which was won last year by the Queen City Club of Buffalo, will be competed for by the teams. This trophy has been contested for under old rules for many years. Two hundred yards rise, gun below the elbow, the birds sprung from plunge traps. An effort is being made to have the donor of this trophy change these unsatisfactory conditions. In addition to the regular events open to residents of the State, a special programme is offered, open to all, and this will draw shooters from all over the country. The meeting at Albany, of last year was largely attended, and it is expected that this tournament will be no exception, as the committee are making great efforts to have everything run smoothly. Handsome merchandise and cash prizes will be offered, and liberal guarantees will be given in the open-to-all sweepstakes.

RED BANK, N. J., April 25.—The Riverside Gun Club held their weekly shoot to-day, using clay-birds only as targets. The opening event at 10 singles was won by F. Beale, with a clean score. E. M. Cooper and Oscar Hesse were second, with 9 each; Ed Throckmorton third, with 8. Second event, team shoot, 5 men, 30 singles and 5 pair doubles for each man: John Cooper, Oscar Hesse, F. Beale, Dan Belshaw and R. B. Coleman, on the winning team, broke 118; E. M. Cooper, E. Throckmorton, Jas. Cooper, J. B. Bergen and Dr. Ed. Field the losing team, breaking only 111. Final event, at 10 singles: Ed. Throckmorton won, with a clean score; John Cooper was second, with 8; E. M. Cooper and F. Beale tied, with 7 each.

BELFAST, Me., April 24.—The Belfast Gun Club had a public shoot on their grounds last day. There was a fair attendance, but the wind was too strong for good shooting. Each member fired about 100 rounds of cartridges. The contest was at glass balls and clay-pigeons. The first match was at 25 glass balls. The following is the score: Geo. T. Read 17, Chas. R. Coombs 15, Fred Sanborn 13, John Healey 12, L. D. Berry 11, M. Smith 10. The second match was at 25 bluebirds. The score: Coombs 15, Read 14, Sanborn 13, G. T. Read 11, Smith 9, Sanborn and A. Read fired off the which read: A third match was at 25 bluebirds, 15 singles and 5 doubles. The score: Coombs 14, Healey 10, Tuttle 9, Sanborn 8, Morse 7. The fourth match was at 25 glass balls. The score: Sanborn 10, Coombs 10, Billings 16, Healey 13, Berry 13, Tuttle 12, Smith 10, Morrison 10. Coombs and Billings shot off the Coombs won.

WORCESTER, Mass., April 25.—The first of the series of prize contests at Coal Mine Brook range, under the auspices of the Worcester Sportsmen's Club, took place this week. They are to continue weekly for the present, and will not end until February, 1891. The match is under the American Association rules. The day was fine and the attendance good. Following is the score at 25 birds each: C. Crompton and W. L. Davis 24, M. D. Gilman and C. R. B. Cladin 23, W. R. Henry, A. K. Bowditch and C. Forehand 22, E. R. Burbank, M. A. Linfield, E. F. Swan, A. L. Gilman and P. H. Holden 21, Geo. A. Sampson, C. A. Parker, G. J. Rugg and C. E. Fuller 20, E. Welch, F. M. Harris, H. M. Webber and A. P. Cutting 19, E. Jewett, Dr. Hill, H. M. Cole, W. H. Cole, E. Howe, W. E. Johnson and A. B. F. Henney 17, W. H. Cole, E. Knowles, F. Forehand and V. E. Prentice 16, G. W. Langdon, J. B. Garland and C. Cutting 14, H. D. Jourdan 13, W. M. Hunt and C. H. Colvin 12, A. G. Munroe 8.

PHILADELPHIA, April 26.—The Challenge shoot between Edward Beck and John Crowther against E. Dawson and Wm. Bourne for \$25 a side, which was to have taken place this afternoon on the grounds of the Frankford Gun Club, near Bridesburg, was postponed on account of the inclement weather, the referee deciding that it rained too hard to have a fair contest. The contestants, not to be disappointed, engaged in an individual prize shoot at 25 targets per man, 5 traps being used, Association rules governing. E. Dawson won first prize, with Wm. Bourne second. Following are the individual scores: John Crowther 13, Edward Beck 7, E. Dawson 17, Wm. Bourne 14. In the evening E. Dawson, P. Richards, H. R. Sickle and Wm. Bourne, all of whom are members of the Frankford Gun Club, met on the club's range in a rifle shooting contest, 20 shots per man. The following scores were made out of a possible 200 points: E. Dawson 182, P. Richards 181, H. R. Sickle 164, Wm. Bourne 176.

ASBURY PARK, N. J.—The Bonnett Gun Club was reorganized on April 19. The new club will be known as the Bonnett Club, and incorporation papers will be filed next week. Among the incorporators are: Messrs. R. E. Drummond, J. O. Wainright, R. T. Grayson, H. C. Holland, H. C. Morryott, S. O. Rogers, C. E. Borden and H. E. Willard, of Asbury Park, and B. P. Morris and Chas. Morris, of Long Branch, who last week bought in at auction the valuable property and land of the former club at Bonnett Island, Barnegat Bay, some five acres of land, besides buildings, boats, guns and fishing tackle.

SHOOTING GROUND.—The Jeanette Gun Club tried a new shooting ground recently for their regular monthly shoot, but the experience of the members was not satisfactory, and they are on the point of looking out for a new ground, which is easy of access to the city. This club and in fact all other of this city desiring a thoroughly satisfactory ground cannot do better than try the Claremont grounds. Fourteen cents pays the round fare from Liberty street, and the grounds are within 5yds. of the station, with scores of trains daily and range keeper is constantly in attendance.

OTTAWA, April 20.—The St. Hubert Gun Club have arranged an excellent programme for May 24, and hope to see a very strong western representation. Their own men are in good practice, and as usual, render a good account of themselves, particularly in the team matches.

CLEVELAND, O., April 14.—The clouds looked so leaky all the afternoon and the weather generally was so bad that the Cleveland Gun Club had a much smaller attendance than usual. The wind was high and the birds ducked badly. Rudolph won the "A" badge and Flack the "B" badge. The score was: Wall 13, Flick 12, Rudolph 20, Tamblin 13, Holt 17.

HUTCHINSON, Kas., April 4.—The gun club is in good working order, and as a sample of work I inclose scores of a shoot to-day: 15 single bluebirds: Young 14, Allen 12, George 12, Bartlett 8, Dodge 8, 25 singles: Young 24, Allen 21, Bartlett 15, 9 singles 3 pair: Bartlett 13, Young 10, Allen 7.

LONG BRANCH, N. J.—On May 5 a team of eight men from the Riverside club of Red Bank, will shoot a 10 bird race with the Central Gun Club of Long Branch for the birds. Shooting will begin at 2 P. M.

Yachting.

DOWN THE COAST IN A NAPHTHA LAUNCH.

ON Feb. 14 the Rambler, the latest and largest launch built by the Rambler Engine and Power Co., left their works bound for Florida. The Rambler is 53ft. long, 8ft. beam, with 16 H. P. engines, is fitted with electric lights, and furnished in the most luxurious style.

The day was anything but a bright one, and before we had cleared the East River the wind had hauled S. E. and was blowing hard.

A good snug harbor was found in the Atlantic Y. C. basin, and better weather for our start to sea awaited.

Not until Sunday did favorable weather appear, and then the keen N. W. wind having blown its raw edge off, we sailed away at 11 A. M. certainly with the best wishes of a group of bronzed yacht skippers standing on the breakwater's end.

Away we went through the Narrows, out to sea by the Swash Channel, and on 15:15 M. had the Hook Beacon bearing due W. Our crew was not at all uneasy at this time—captain and engineer only. It certainly did seem odd to be slipping down the Jersey beach in February in a 53ft. launch, but then the weather was warm enough for April, the air had a clearness seldom found in summer, and the Rambler was forging ahead through the sparkling sea at her prettiest. By 1:45 P. M. we had the Long Branch pier bearing W., and waved our caps at the natives, no doubt astonished at seeing such a tiny craft, but the elements at this season. The wind still held N. W., off shore, and the sea was smooth enough for shell boat rowing.

We had hoped to run the Jersey beach on this off shore wind, but old Neptune certainly had no intention to let such a trifter as Rambler slip to Florida without a good struggle.

M. we were about off Barnegat Light; here the fickle wind backed to S. W. and the fun began. Light's sea soon rolled up, which of course was now ahead with the wind to A. H. A. M. The engineer soon succumbed to a bad dose of seasickness hereabouts, and the captain saw he would have his hands full.

We kept the ship bucking away at it, but the bearing of Barnegat light shifted not a quarter of a point. In fact it soon became evident that it was useless to attempt to drive the Rambler against the heavy wind and sea now encountered. Fortunately we were prepared for just such an emergency as this, and at 7:30 P. M. we hove over the sea anchor or drogue, took a careful look at the sailing lights, and then from the little pilot house kept as good a lookout as possible.

By 2:30 A. M. of Monday the sea had moderated somewhat, and we were quietly under way again. Stood off to the southward, though we did not appear to get any farther, and at last put the wheel over and bore away for Barnegat light. At 4 A. M. we were off the inlet, which, by the way, is one of the most dangerous on our coast. We were piloted in at 3 P. M. (high water) by one of the life-saving service men, and were soon anchored behind the light.

Barnegat light, though rising erect out of the snowy sands at its base, and flanked by clumps of cedar, the point of beach on which it stands putting out into the sea, presents a scene of rare beauty unsurpassed by anything on our coast. The "camera fiend" would here find a subject well worthy of his best efforts.

From this picturesque little nook we sailed away on the 18th at noon, ran down Barnegat Bay and came to for the night off Carver's Island.

Break of day found us underway on Feb. 19, and by 10 A. M. Tucker's Island light was due south.

Out of Little Egg Harbor Inlet we steamed and were soon upon the somewhat uneasy bosom of the broad Atlantic. By 2:30 P. M. the lighthouse at Sea Island City bore northwest. A heavy swell now came rolling in from the northeast, which certainly told of the wind came out northeast. The weather grew threatening and at 4:40 P. M. we ran by the iron pier at Cape May and with a sigh of relief rounded the cape soon after. We stood on up Delaware Bay until it was too thick to make out the lights, when we dropped anchor to ride it out off Co-hansey Creek. By 9 P. M. a southeast gale was on the rampage, which lasted the best part of the night and gave us a lively rolling.

Next day, Thursday, Feb. 20, we made an early start and made Delaware city by 10 A. M., our supply of naphtha entirely exhausted. The wind had now shifted to northwest and the weather grown bitterly cold. Arrived at Philadelphia on Friday, Feb. 21, where we took on board our stores and traps of the owner, and also shipped a colored steward.

From Philadelphia, which we left on Monday, Feb. 24, until Sunday, March 9, when we left Beaufort, N. C., the voyage was a pleasant one with fair weather and no outside work. Early dawn on March 9 found us again at sea. The weather looked extremely favorable; wind north west and moderate. Glass rising. By 11:15 A. M. we were off Boque Point. At about 1 P. M. the wind shifted to northeast—a most unexpected change—and soon began to blow a gale. Made Popskill Inlet by 4:15 P. M., but could not get in, as breakers showed clear across the inlet. Wrightsville Inlet was ahead at 6:25 P. M., our last hope of a harbor north of Cape Fear. The fates were again against us. We could not enter the inlet owing to heavy sea and darkness. There was nothing for it now but to get as far out to sea as possible and round the Frying Pan Shoal; not a particularly pleasing outlook for a naphtha launch. Stood our compass course for lighthouse until 8:15 P. M., when the sea came so heavy we headed her up to it, and steered "to keep her alive."

At 1 A. M. on Monday rigged all our oil bags over the bows and stood off before it to cross the shoal. The oil (Belden's Wave Quelling) certainly did a world of good and probably saved the ship from being pooped. As the sea moderated we stood in for Beaufort, and anchored in Lockwood's Folly Inlet at 6:25 P. M., having been out of sight of land for about 21 hours.

As our naphtha was getting short, ran back to Wilmington on March 11. Took aboard stores and naphtha and ran down the river again to its mouth, where we waited for more favorable conditions for our run to Charleston.

On Saturday, March 15, the Rambler left Cape Fear River at 1 P. M. The weather had cleared and the wind was favorable from N. W. By 4:30 P. M. we were in the mouth of the river, and the wind commenced to blow in earnest. Waves and Neptune had conspired and were evidently not to be trifled with.

Along the beach we ran, holding as close as we dared for the smooth water, and at about 8 P. M. sighted Georgetown Light. To get into Georgetown harbor was impossible, and again the little ship had to stand to sea. We set a compass course for Roma Light, and ran off before it. Oil bags out and ship made as snug as possible. Kept our course except for two hours, when we had to head up to it.

The forward deck was continually filling with water, which got below, and with what worked in at side windows soon had the water above the floor. The engineer and steward were too sick to be of any use, and the aspect of affairs was so miserable as to be positively comical if one can imagine it.

At dawn we sighted Fort Mifflin Light, and after hours of fighting finally made the land under the lee of Bull's Island. The water, along slowly now, as burners were smoking from the deluge of water poured down the stack. By 5:30 P. M. we were fast to dock in Charleston, the crew about tired out. A visit to the Signal Service Office disclosed the fact that wind had blown at a velocity of thirty miles an hour.

Let Charleston on March 18 and arrived at Jacksonville, Fla., on March 20, after a pleasant trip.

From Charleston, south, the course is all inside and comparatively easy, save an ugly stretch from Fernandina to St. Johns River.

On April 6 we left Jacksonville for home, arriving at Charleston on April 13, running about eight hours a day, at a speed not over 7½ knots an hour. Rambler will proceed North as the weather permits.

T. I. MILLER, late captain of Rambler.

THE CHAMPIONSHIP IN YACHTING.

THE challenge of the owners of the American seventies to Lord Dunraven and Mr. Ralli, so far from being received in the spirit in which it was intended, has been met with the plea that British yachtsmen have often been met with the plea that it is now time for Americans to take the other side in return; and that if they want any racing with British yachts they must cross the Atlantic for it.

To understand how incorrect this view of the matter is, it is only necessary to look at the common usage in all sports in England and America, and nearly every one there is a champion, generally recognized as such, who will not have himself open to challenge from the native, ready to defend his title. And when the time he is under no obligation to waver about in search of some one to defeat him, or even whom he may defeat; his laurels are assured and he may enjoy them in quiet as long as no one comes forward to challenge for them.

Whatever may be said of the management of the international yacht races, and open competition, have been so unquestionably on the side of the American yacht that the American's claim the championship of the seas. Those who would dispute this claim must come here, it is mere idle talk to demand that the champion should set out in search of new battles.

It is most unfortunate that the recognized emblem of the championship, the America's Cup, has been withdrawn from the field for the time being, and the challenge of the seventies footers is in itself an attempt to repeat the challenge of the foreign challengers the rights denied them by the New York Y. C. That this has not been recognized and properly acknowledged, is little to the credit of the British yachting journals.

As matters stood last fall, American yachtsmen did not feel that it was incumbent on them to send any representatives to England to demand the superiority of American craft, and at the same time British yachtsmen were unwilling to continue the battle for the championship through further races for the America's Cup, owing to the unfair conditions by which it was hampered. This far opinion has not changed here as to the necessity of American yachts crossing the Atlantic; their superiority may at least be assumed until it is disproved by some challenger; but, in order to give an opportunity for a challenge on fair terms, the offer was made to Lord Dunraven and Mr. Ralli, if these gentlemen have for other reasons, no harm is done; but it will not do to cry off under the plea that if Americans want races they must cross for them.

If the smaller sizes of yacht were in dispute there might be some excuse for such a plea. The victories of Madge, Minerva and Clara have left no question as to the superiority in the smaller classes, and American yachtsmen have not retained in fact, no other course is open to them—they need by the way, a new champion. The opportunity has been offered to them to meet the best of a class that is now and always has been, save for three seasons, the representative singlestick class of American yachts.

THE CLARISSA.—This 20-rater cutter, building in Ireland at Messrs. Rogers & Co.'s yard, Garrickfergus, Belfast Lough, for the owner and designer, Mr. H. M. McGildowny, completes the list of no less than six vessels which have been constructed during the winter for the 20-rater class. The Clarissa will carry a full area of about 2,600sq. ft., and will measure 46ft. on the l.w.l., 42ft. on the g.l.w.l., and 38ft. on the s.w.l. She is a 20-rater, built at Southampton, appears as if Mr. McGildowny has hit off a happy medium in this important dimension, as the above-mentioned boats are 46ft. 8in. and 45ft. 3in. respectively. The Irish design may be described as a large and powerful boat, and of great strength in construction, with a view of being converted into a cruiser should she not be successful as a racer. But calling to mind the performance of a previous design of Mr. McGildowny's, the Melissa, there is little to fear that the new ship will be able to hold her own against her rivals. Like the new Melissa, the Clarissa will make the passage around the Lizard, and take part in the south coast regatta.—Field.

MASSACHUSETTS Y. C.—The new club house on Rowe's Wharf, Boston, will soon be completed, and will prove a great convenience to the members. The five-story brick building has been fitted up in hard wood, with an office, locker room and bath room on the lower floor; two reception rooms, one for ladies, on the second floor; a billiard room and pantry on the third floor; above which is a hall for dancing or dining, with a kitchen in the upper story. The rooms are handsomely furnished, and the entire building is fitted with electric lights.

NOT IN THE PROCESSION.—Designer McVey, of the Boston Herald, has made a little list of forties that are "not in it" with Minerva this year as follows: Nymph, Chiquita, Verena, Helen, Awa, Maraquita, Gorilla, Chispa, Tomahawk, Chocoma, Chocoma, Xara, Pappose, Baboon, and others. Liris is not included, but she says "Liris is fast, she has shown it; and it is remarkable to see her stand up and carry her immense sail spread. A good showing is also prophesied for the Adams Gossoon."

NEW BRITISH YACHTS.

ONE result of the general change of rule that has been going on in most yacht clubs for the past ten years is that American and British models have approached each other more closely than ever before, and the contests between the two nations are apt to be carried out in the future on much more even terms than were possible between the old sloops and narrow cutters. As some of the new British craft will be seen this year in American waters, and also as the course of design abroad is specially important just now in its bearings on the classification by corrected length, the following list from the *Field*, of the new British yachts will be of interest to our readers, especially in comparison with a similar list of American craft which we will publish next week. One noteworthy point is the number of new craft, a conclusive proof that the new rule has not stopped building abroad, as its opponents claimed that it would do here if adopted. The list of new craft is a long one, and includes a large fleet of racers. Another point is that the building of very large racing yachts has practically ceased abroad, only two over 70ft., Thistle and the new Iverna, having been built in five years. At the same time the smaller classes are filling up rapidly with the best efforts of the leading designers, with plenty of sport in the way of match sailing. In the 20, 10, 5 and 2½-rating classes good fleets of modern craft, similar to our forty and thirties, are found, with the closest competition in each class. In nearly all cases the yachts are built to the full limit of the class, and thus no time allowance is given or asked, adding much to the interest in the racing. As yet the dimensions of the new boats are not fully known, but we have heard of no very narrow craft, and the proportions are practically the same as last year, from 4 to 14 beams. The yachts which will be seen in the *Field* are: *Vreda*, built in 1888, the new *Amira* and *Jessica*, both 20-raters; the *Becher* 40-footer and the *Uves* 30ft. cutter. The *Field*'s list is as follows:

The following description of the boats is also given:

The cynosure among the many racing yachts building for this coming season is the *Thistle*, built in the yard, on the banks of the Fife, for Mr. John Jameson. This new cutter was designed by Mr. A. Richardson, and it is said she is to be christened the *Shamrock*, which will seem a fitting name, because her chief antagonist is to be the Scotch cutter *Thistle*. This cutter is intended, it is reported, to float to a waterline length of about 84ft., and she has a beam of 19ft., and will have a draft of water of about 18ft. On the way that she is fitted with a centerboard, which will drop 8 or 9ft., but its case for housing does not come above the cabin floor. She appears to have a large body with a long entrance and moderately fine run. So far as body goes, we should say she is some tons larger than *Thistle*, and will probably be a very powerful boat in a breeze. Her rating will probably be about 13½ against *Thistle*'s 12½; but as *Thistle* is 2½ft. longer on the waterline, the sail area will be pretty nearly the same. A very likely looking 40-rater is also building close to the new cutter. This yacht has been designed by the builder's draughtsman, Mr. Soper, and is building for Mr. A. D. Clarke. She has, so far as can be judged, a very light-looking body with a remarkably clean run, and an entrance probably as good as that of the Scotch forties. Of course, like all modern yachts with a high forefoot, the *Castenet* is to be the name of the new yacht—has a mussel-shaped bow, and is therefore quite in the line of that respect. If she has enough power she ought to make a name in the class, for certainly she looks every inch a flyer.

In the yard of Alfred Payne & Sons, there is a whole fleet of racers building, the largest of which are two 20-raters. The longer of these is the *Stola*, built for the Hon. V. Montague. She is 84ft. 3in. on the waterline, with a 19ft. beam. She has been planked with cedar wood, and will not be coppered. The surface of the plank has been highly finished off and varnished. This, at any rate, ought to reduce surface friction to a minimum. The other 20-rater is about a foot shorter, and is building for Messrs. Sidney Campbell and Reginald Cox. As this yacht will carry a little more canvas than the *Stola*, she will have a trifle more displacement, or weight, but her beam will be actually less. These two yachts, like the others building in the yard, have been designed by Mr. A. E. Payne, and have very easy-looking lines, and altogether they look like business. They need be good boats to stand in with *Dragon*, the crack of last season, especially as she is having some weight added to her lead keel. The two 5-raters building in the yard have square sterns, like *Humming Bird*, and plume the sails in a way that is being considered of a greater advantage than the forefooted cutter, and a greater deck room afforded by a counter. The *Glycera* is 33ft. longer (31ft.) and beamier of the two, and has been built for Mr. Philip Perceval, Jr. The *Alvida* is 1ft. shorter, and has been built for Lord DuRaven. Neither of them has the fin-shaped keel, and the underwater outline of the sheer plan is much the same as that of other yachts of the class. The *Uranus* has been designed by Mr. A. E. Payne, and has a fin-shaped keel, and a universal joint at the elbow in the sternpost. A square sterned 4-rater has been built for Mr. A. Robertson, and the following 2½-raters: *M'iss*, Mrs. Rudston Read and Miss Mabel Cox; *Camilla*, Mr. R. G. Keele; *Lugger*, Mr. Beaucher; and another for Mr. C. Newton Robinson. The *Camilla* will have a centerboard, and will have all been designed by Mr. A. E. Payne and vary a little in length, and of course in sail area. The idea being by thus ringing the changes to get one boat which shall be good in smart breezes and another that will excel in light winds, as it is pretty certain, so far as class racing is concerned, a boat

cannot be contrived which shall have qualities in the highest degree for performing in light winds and strong winds. However, so far as very light winds are concerned, a class racer canvassed for such winds would have a very poor chance of making a pile at our coast regattas. Mr. Payne has also designed a square-sterned lugger for Mr. F. Smith, to compete in the Thames 21ft. class. She will be named *Genie*.

The *Moya*, a 31ft. 6-rater from Payne's design, is building in the adjoining yard of Black & Co., for Mr. G. B. Thompson. This craft has a counter, and it is understood that she will dispense with topsail, and compete in some of the Solent matches before proceeding to St. George's Channel. In Black & Co.'s yard there is a 20-rater building for Mr. Towers Clark, from a design by Mr. G. L. Watson, as well as an 8-rater by the same designer. A 42ft. waterline craft in the same yard is nearly ready for launching and is intended for Halifax. She was designed by Mr. Wm. Fife, Jr., and is of the Minerva type. We understand that her sail area will equal that of the 20-raters, and she has the appearance of being a very powerful boat. At Cowes a 20-rater, named *Ghost*, has been built by Messrs. Wm. White & Sons for Mr. Ames, from a design by Mr. C. Clayton, and she is said to be a very capable-looking craft. *Luke*, of Amble, has built a 5-rater, named *Quinque*, for Col. Bucknill, who also designed her; and Messrs. Camper & Nicholson, at Gosport, have built a 5-rater, named *Valentine*, for Mrs. Schenley. There are several other boats of various ratings building at Southampton and other places, particulars of which will be found in the table.

The Clyde yachting season promises to be the most stirring ever enjoyed. The Fife never had so many craft, and if the raters are not all 100-tonners the sport will not suffer, since the fives, tens and twenties will mainly reinforce the matches in which amateurs will be the sailors. Curiously enough three of the cutters in hand are for the Zuyder Zee, where the shallow waters have curtailed the depth to the advantage of the beam. These match cutters are, and handsome boats, with fiddle bows and long counters, and, unless for the absence of the keel, look pretty much like the build in fashion some thirty years ago. With centerboards and lots of lead they might be mistaken for improved American sloops, but oddly enough the Dutch owners, guided by the reputation of Fife's *Minerva* in American waters, have ordered keel cutters. About the success of these new boats we can be no doubt, but if Fairlie is to renovate the Dutch pleasure navy a brass foundry will be wanted by Messrs. Fife, since the Dutchman's delight in his yacht has hitherto mainly rested on the glitter of the brass rails and fittings with which Dutch builders cover their decks. These three vessels will measure about 25 tons, and are well ready for launching.

A new 20-rater for Mr. McDonough is planked and decked, and does look a handsome and powerful vessel, with a lead keel heavy enough to steady an immense sail area, with the easiest of bilges and the longest of bows, this new cutter must prove a dangerous antagonist for *Dragon* and the new twenties building. With teak topsides, pitch pine and American elm have been used for the bottom, and the decks of white pine have been so carefully selected that a knot is not to be detected for miles. This cutter will be raced during the summer, but will eventually be taken across the Atlantic, her scantling being designed for the ocean voyage. Walnut and satinwood are to be used for the cabins, and the builders will finish the cutter's outfit in a style that will make her the most complete 20-rater afloat. This cutter will be round at the early Thames races, where she will meet *Dragon* and Captain Clark's new two-tonner.

For Mr. Kenneth Clark, of Paisley, Messrs. Fife have about completed a new 10-rater; and for Mr. Andrew Coats, of Paisley, they have a 10-rater in a forward state. These cutters are built extra strong for cruising purposes in Clyde and west coast. Mr. Clark has named his cutter *Encore*, and the cutter for Mr. Coats is another *encore* in model, construction, and every detail. These two cutters will have Yvonne to race against, as also the new 10-rater building for Mr. Arthur, from the design of Mr. G. L. Watson. The veteran *Doris* is having some alterations, to bring her level with the new boats and win the three prizes which will complete her score of a hundred prizes. Mr. Stephens, of Colla, is building a new 10-rater, which is the fourth new ten building on Clyde, and the veteran *Doris* and Yvonne, will complete the half-dozen of Clyde 10-raters that will all be collected in the same class anywhere else. These new tens are built in the most substantial manner, in view of passages across the Irish Channel, and especially round Land's End for the invasion of the Solent, to carry off the "plunder" like the Norse fleets of the olden times.

A 6-rater is building at Fairlie for Mr. Burrows, owner of Curry's, and a 6-rater also built at Fairlie for an English owner. The 6-rater is also building for an English owner at Fairlie. She is to be raced in the Irish Channel, and may hold the 6-raters in check. The firm have sent out designs for a 5-rater to be built at Abbo, in Finland, where yacht racing is making wonderful strides since Mr. G. L. Watson and Mr. Fife have been sending out designs. Among other foreign orders Mr. Fife has designed another *Minerva*, being built at Black's, Southampton, for a H. Fife owner. This boat will be built in a very exceptionally strong for the Atlantic voyage, and being 22ft. longer than the original *Minerva*, is bound to give a good account of the Boston *Minerva* when they meet on the other side of the Atlantic. For Mr. D. B. Richardson, son of Mr. David Richardson, who owned *Circe*, *Selene*, *Cythera* and a lot of other famous yachts, Mr. Fife has designed a 2½-rater, building by Mr. Ninian, of Largs. The boat will be similar to the 2½-raters designed by Mr. Fife for Irish owners last year, and is certain to be the forerunner of a class in Clyde.

For Mr. McGlashan, of Paisley, the firm has designed another 2½, which is being built at Paisley, and which is the first rater built in that port, and being under the critical eye of the population, is certain to be perfect in every way. Various orders for boats, for a H. Fife owner, have been in consequence of the work in hand been refused. But the firm have in hand a new 17ft. lugger for cruising for Mr. Donaldson, of Yvonne. Being slightly over the measurement she will be excluded from racing. For Irish owners Mr. Fife has designed three new boats for the Water Wag class, of which Mr. Fife's Rose of last year was the most successful up to date. The Water Wags are designed with long keels. A 40-rater for a 40ft. cutter, to be built in New York, and a design for a 40ft. cutter—corrected length—for Lake Ontario complete the foreign business of the firm.

So that the schooner rig should not be altogether ignored, Messrs. Fife have in hand a small two-masted cruiser for a Clyde owner.

But the design on which Mr. Fife has been most exercised is one for a lugger of 40-ton rating, being built at Eastbourne as an experimental craft, to prove what a lug rig is alongside the cutter rig. This new craft may eventually solve the question which the famous New Moon, built for Lord D'Esrey, was constructed for, and which is to settle whether or not the fishermen are correct in asserting that they carry lugs in their boats in preference to mainsails, for the reason that a lug, properly set, will reach a bay and take her to windward faster than a gaff. Great interest will attach to the result of this, the most recent experiment, to test the assertion of the fishermen. All the yachts building at Fairlie have fiddle bows except Mr. Donaldson's lugger, and as a consequence some carving is wanted for stemheads. Indeed, ship carvers, after a long depression, are having a wonderful boom in their artistic line of business.

CORINTHIAN NAVY.—A large and attentive audience gathered in one of the parlors of the Hotel Marlborough on April 25 to listen to the second lecture delivered before the Corinthian Navy. Mr. J. J. Ramsay presided, the assembled Corinthians on a preliminary cruise, explaining the various parts, etc., and giving a good deal of excellent and practical advice. A movement is on foot to establish a board of examiners within the navy, who shall have power to grant certificates as able Corinthian seamen and as masters to all members who can qualify. A new squadron has been formed on the St. Lawrence River, with headquarters at Clayton, New York. Mr. Frank Taylor has been elected vice-commander, and Mr. G. L. Ramsay, of New York, a port station has been established at A. Bain's boat house, Clayton, New York. A flag raising will take place on Saturday afternoon next at the port station foot of 162d street and the Hudson River, at 3 P. M. Mr. John Johnson has been appointed a member of the regatta committee. The Staten Island Squadron will hold a regatta at Seawards, New Jersey, on June 14. The following are proposed for members: Mr. J. J. Ramsay, Mr. G. L. Ramsay, Mr. Edward Willard Brown, Daniel Manning, T. Hubert Boyd, A. B. Boyd, James Harris, H. G. O. Dunham, A. L. Clark.

MONTGOMERY SAILING Y. C.—First race April 20. Course Morristown to Indian Creek. Weather clear, wind northwesterly.	Length.	Start.	Finish.	Corrected.
J. S. Lever, tuckup.....	15.00	1 40 00	2 49 40	1 19 40
Stranger, sharpie.....	15.00	1 40 00	2 52 08	1 22 08
Sadie, canoe.....	16.00	1 31 40	2 52 12	1 22 12
Vesuvius, tuckup.....	15.00	1 40 00	2 52 15	1 22 15
Vesuvius, tuckup.....	15.00	1 40 00	2 53 55	1 23 55
Igdonis, tuckup.....	15.00	1 40 00	2 57 20	1 27 20
Katie L., tuckup.....	15.00	1 40 00	2 59 00	1 29 00
Nellie.....	15.00	1 40 00	2 58 05	1 28 05
Priscilla, tuckup.....	15.00	1 40 00	2 58 12	1 28 12
J. S. Frith, tuckup.....	15.00	1 40 00	2 59 00	1 29 00
Gracie, skiff.....	12.00	1 50 00	3 03 00	1 33 00
Mary L. ducker.....	15.00	1 30 00	Capsize.	
Lizzie B. ducker.....	15.00	1 32 55	Capsize.	
Starlight, canoe.....	16.00	1 34 40	Withdrawn.	

This was a slashing race from start to finish; the wind came over the hills in gusts, striking the boats with sledge-hammer blows. The canoe *Sadie* carried 90ft. in two leg-of-mutton sails, and made a remarkable record under the circumstances. The ducker *Lizzie B.* had 17ft. in a boom and gaff sail. She carried a crew of three men, and was knocked down by the wind, but was hauled within ¼ mile of the start. The ducker *Mary L.* had 90ft. in a lateen sail, and with a crew of two men was driven under when close hauled on the wind. The F and W Playford, a former champion tuckup, sailed along with the fleet. She carried 102ft. of sail, and had a crew of two men. At the end of two miles, when the wind, she was knocked down, righted, and sailed on. The left hiker *Katie L.* had 200ft. of sail, but lost her halliard rigging at the masthead just before the start and was thereby disabled. She had, however, run 1½ miles with the wind on the port quarter, without swamping, previous to this accident.

—E. A. LEOPOLD, Secretary.

KNICKERBOCKER Y. C.—The arrangements for the Knickerbocker Y. C. regatta for May 30 are now complete, and are of a nature to guarantee an event which will surpass any regatta ever given by the club. The entries show six good full classes, and it has been decided to give prizes to the first and second boats in each class. The steamer *Taurus*, of the Iron Steamboat Co., will go over the course. The committee having the regatta in charge for the current year is composed of Oscar H. Chellborg, chairman; C. F. Smith, George Gage, James H. Sparkman and Charles M. Connolly. Tickets for the regatta may be obtained from Mr. A. Varian, 252 Broadway, at fifty cents apiece.

HAMILTON Y. C.—Officers, 1889: Com., Mr. Sanford; Vice-Com., S. O. Greening; Capt., E. Jarvis; Sec., J. H. Fearnside; Treas., G. P. Birely; Meas., H. Ambrose; Gen. Com., J. F. Monck, Harry Lee and John Stewart; Delegates to L. Y. R. A., Capt. Jarvis, J. F. Monck and Harry Lee. Ex-Com. Monck has presented a \$200 cup for the new 35 and 40ft. corrected length classes, and the owners of *Marguerite* have presented a \$150 cup for the 25 and 30ft. classes.

THE SKIPPER IN THE ARCTIC SEAS.—The author of "Three in Norway," Mr. Walter J. Clutterbuck, has lately published through the press of Longmans, Green & Co. another interesting volume of sport afloat in the story of a five months' cruise on a sealing vessel between Greenland and Spitzbergen. The story of life aboard ship is varied by trips ashore in search of game, and the book is interesting to both yachtsmen and sportsmen. The illustrations are very good.

ROYAL CANADIAN Y. C.—At the annual meeting on April 26 the following officers were elected: Com., A. R. Boswell; Vice-Com., T. McGaw; Capt., C. A. B. Brown; Hon. Sec'y, S. B. Harman. Committee, L. O. Percival, H. Blake, F. Arnold, G. Boulton, M. A. Cosby, G. E. Evans, J. Mitchellson, A. Piddington, J. E. Robertson, R. F. Stupart. The club has a membership of 646 and is in a very satisfactory condition.

SOUTH BOSTON Y. C.—The house committee of the South Boston Y. C. has evidently had the ladies in mind in making up the following programme: May 30, hop at the club house, 8 P. M.; June 28, ladies' day and view, hop in club house, 8 P. M.; July 10, hop at club house at 8 P. M.; July 31, moonlight sail; Aug. 1, hop at club house at 8 P. M.; Aug. 23, hop at club house at 8 P. M.

CHANGES OF OWNERSHIP.—Vivien, sloop, has been sold by E. J. Greacen to Messrs. Greten and Deetjen, New Jersey Y. C. Alert, schr., has been sold by Henry Bryant to Lyman Nichols. Viator, schr., has been sold by E. A. Weyth to W. G. Brokaw.

A GOOD RUN.—The schooner *Helen*, Com. Middleton, Quaker City Y. C., on her return from her winter cruise ran from Havana to Charleston, 756 miles, in 117 hours' continuous running. *Helen* is a centerboard yacht, 62ft. l.w.l.

LIRIS.—This cutter left Norfolk on April 23 and arrived off Bay Ridge two days later. She still carries her winter rig, but will soon refit for racing and bend the new Laphrore canvas.

Canoeing.

Secretaries of canoe clubs are requested to send to **FOREST AND STREAM** their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to **FOREST AND STREAM** their address, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1889-90.			
Commodore:	HENRY STANTON.....	{ New York.	
Secretary-Treasurer:	F. L. DUNELL.....	{ New York.

EASTERN DIVISION MEET.—After a visit to Boston in search of a camp site for the Eastern Division meet, Vice-Com. Gage has announced Haggitt's Pond, in Essex, the date being May 30 to June 1.

Delaware River, Oct. 26, Sunday. Lindley was to have met me at 8, but 8:30 arrived before him. We drove $\frac{3}{4}$ of a mile to the dock, and then, loading the boat in, drove one mile to the river. As I sat, as usual, amidstships, the populace looked at us with considerable astonishment. Lindley was perched on the bow while I lived, and he encouraged me on the way many familiar acquaintances to look up and say good-bye. I was not at all disconcerted. In fact it seemed that everybody in town had a word for Lindley. The latter generally replied with much feeling, "This boat's come all the way from Canada, I'd have you understand." Intercepting a milkman, I seized the opportunity to fill my can. Once at the Delaware, a crowd of willing hands helped us off with the boat. Lindley, who was a good swimmer, waded to a mixed assemblage standing on the steamboat pier, pulled out a life preserver, stroked at 9:30 and glided out on the Delaware River with a swelling heart to think that this was the last stage of my voyage.

"All journeys end in welcome to the weary."

I arrived at about 4:30, having rowed 26 miles from Riverton. The fifth and last stage of my cruise included 281 miles of rowing and one mile of portage, the delays making a total of one and quarter days in nine days' traveling, not including the opposition of wind and wave. The full summary of the cruise was as

Many new canoes are now dropping in and we have about as many members as we can conveniently accommodate, having been obliged to turn away several applicants for membership.

There is a rumor of a Delaware River Meet to take place about midsummer.

Max.

REEFFING A REG-O'-MUTTON SAIL—*Editor Forest and Stream:* If the preference expressed by Mr. Stevens for Reg-o'-mutton sails for canoes should be shared by canoeists generally they will be interested in hearing of an excellent way of reefing and furling them which I have seen on a Norwegian boat. The sail is hoisted by a halyard which stretches the foot of the sail to the end of boom, and a clew line which stretches the foot of the mast, thus rolling the sail, or part of it, around the spar. The foot of mast was a metal pin stepped in a metal socket. Reefing can be effected in this way during a race without the loss of headway. The forward sail can be made larger than the main sail, as most canoes are, with a boom to it—not only larger, but handier.—MIRAMICHI. [This method of reefing has been used to a limited extent in canoes.]

A. C. A. MEMBERSHIP.—Northern Division: G. A. Duggan, Machine; A. G. Kohl, D. Robertson, Montreal.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

FOR SALE.

Fast Cruising Yacht

XARA

Cutter rigged. Length over all, 48 feet. Water-
line, 40 feet. Draught, 8 feet 4 inches. Beam, 13
feet 2 inches. 14½ tons of lead in keel. No
inside ballast. Stateroom aft, with two berths
and set basin. Cabin and stateroom well finished
in cherry and upholstered with best hair. Ample
headroom for a tall man in stateroom. Cabin and
forecastle. Xara was designed by Edward Burges
and built by Lawley in 1888. Lawley was
given plenty of time to build her, so that the work
was in no way hurried or slurred. She is as
thoroughly built as a boat can be. She will be
delivered either in Boston or New York.

ANSWERS TO CORRESPONDENTS.

CAPERCAILZIE AND BLACK GAME.

IT gives us much pleasure to print from advance sheets an important report which Hon. W. W. Thomas, Jr., our Minister to Sweden, has sent to the State Department, respecting the adaptability of the capercailzie and black game for introduction into this country. Minister Thomas is a devoted sportsman and angler, and having enjoyed the pursuit of these grand species of game in Sweden, has with true patriotic feeling been prompted to add the birds to the game supply of his own land. There are indeed few things our foreign representatives can do more useful to their country than to add to its fauna a valuable animal or fish. In suggesting the enterprise so well represented in his report, and in urging it upon his home government, Minister Thomas is performing a distinctively public service.

His report is very full. He gives the history of both birds, their habitat, food, haunts, habits, results of shipping and acclimatizing them in other lands, with the mode and cost, and points out the sections of our country fitted for them.

The birds would certainly be a most desirable acquisition. The habits of the capercailzie are much like those of the ruffed grouse; and the foreign bird is about ten times as large. Old cocks weigh from 10 to 12 pounds, and sometimes exceed the latter figure. They lie fairly well to the dog early in the season, about the same as the ruffed grouse. The flesh is like that of our prairie chicken. There is no gamier bird than the black cock; its weight is 3 pounds, and it lies like a stone to the dog. Its flesh is much the same as that of the capercailzie.

Minister Thomas has occupied much of his leisure time, during several years of residence abroad, in studying the fitness of these birds for America and the practicability of their introduction here. He may be considered then as a safe guide, and his favorable opinion of the feasibility of the undertaking should be accepted as conclusive. He reports that after this thorough investigation of the subject he is convinced that the birds will stand the voyage and thrive in all our Northern forests from Maine to Oregon; down the wooded slopes of the Rockies and Pacific Coast ranges to the southern border; and down the Alleghanies, Cumberland Mountains and Blue Ridge, through Virginia, Kentucky, Tennessee and

North Carolina, to South Carolina, Georgia and Alabama. His suggestion that the Government might legitimately undertake the importation of these species, putting the birds out in the National Park, commends itself. If it is within the province of the Government—as it most assuredly is—to protect and conserve the native varieties of game, it is no less a proper field of enterprise for it to add to the indigenous stock in the way here recommended. The transplanting of the capercailzie and the black game is not experimental. It has been done with success in other lands; no reason presents itself for the presumption that it cannot be accomplished with similar good results here. It is worthy of trial. Congress should be induced to act in the matter. The commendable enterprise of Minister Thomas in laying before the State Department this project for increasing the game food supply of his native land should receive indorsement and practical adoption.

MR. SAMUELS'S WORK ON ANGLING.

DURING the present month, the Forest and Stream Publishing Company will issue a new work on angling under the title, "With Fly-Rod and Camera." Its author, Mr. E. A. Samuels, President of the Massachusetts Fish and Game Protective Association, is one of the most devoted and expert salmon fishermen of America. For more than a quarter of a century he has made annual excursions to the salmon rivers of Canada and the trout lakes of New England. He is a polished writer of long experience, and besides this possesses exceptional skill as an amateur photographer. On his trips to the woods and streams, his camera has been as much a part of his outfit as his rod or his note book.

The results of his long experience are given in the present stately volume, and while its reading matter is full of interest, it is really as an art volume that the book merits special distinction. The illustrations comprise 150 full-page plates, which are direct reproductions by a half-tone process from Mr. Samuels's photographs. In the number and quality of its illustrations, "With Fly-Rod and Camera" is the most elaborate book on angling ever issued from the American press. The subjects include views of the picturesque scenery of Canada, the famous salmon rivers and pools, incidents of travel and camp life, and numerous instantaneous pictures of actual fishing.

If this book is remarkable as an example of the photographer's art, it is not less interesting to him who is seeking for information on the art of taking trout and salmon with the fly. The text, with not less graphic effect than the illustrations, pictures everyday experience in what is beyond question the grandest angling in the world; it fairly bristles, too, with hints and instruction, interspersed with incident and anecdote. While not professing to prepare a manual of angling, the author of "With Fly-Rod and Camera" has given us a work so full of interest and of practical guidance that no salmon or trout fisherman, angler or novice, can afford to leave it unread.

The work, which is a super-royal octavo, page 7x9½in., will contain 480 pages, 150-full page illustrations, and will be ready for delivery May 27.

THE DEATH OF "NESSMUK."

THE sad intelligence, which came to us last Saturday, announcing the death of "Nessmuk," was not altogether unexpected. For several months past it had been known to his friends that Mr. Sears was in a very feeble condition, and his death was regarded as a contingency by no means remote. Last summer, too weak to make a camping excursion to the woods, yet powerless to withstand the longing for a taste of the old life, he pitched his tent beneath the hemlocks of his home yard, and there with his grandson "played" at an outing. After the long and weary confinement of the winter just past, he craved outdoor life; and on the last day of April, supported by loving arms, he went out for a little while under the same trees. The next morning at 2 o'clock, May 1, he passed away. Last Saturday, in the spot he had selected beneath those same hemlocks, they laid him at rest. His age was sixty-nine years.

His death brought to its close a life which was in many respects singular and worthy of note. George W. Sears, in the character of "Nessmuk," by which he was known to readers of this journal, was the product of peculiar circumstances.

His was a woods life. In fact, as he once humorously

put it, "he took to the woods for very life." When at an early age, being of consumptive tendencies, he was told by his physicians that but a year or two of life lay before him, with pluck and resolution undaunted, he sought healing and strength from the forests and the mountains. From that day he was for much of the time annually a woods dweller, sleeping under canvas, in "brush camp" or beneath the rough bark lean-to; following the deer and the bear, studying the secrets of the wilderness; and all the while proving the blessed influences of the simple outdoor existence to build up a fragile constitution and restore to health. But while dwelling thus apart from society, there was nothing of the spirit of the recluse in him; he was in touch with his fellow men, alive to the questions of the day, concerned with the problems of society, a student of human nature. He was gifted with a superior intellect, and it did not stagnate in the woods. Uneducated in the schools, he was yet self-taught, and well taught. He knew the best authors. That was no idle boast of his, on being asked what books he took into the woods, that he found it necessary to take none, seeing that he carried Shakespeare and other poets under his hat. He possessed a rich store of mother wit, a vast fund of practical common sense, a philosophy of his own. He commanded the respect of intellectual men with whom he came in contact. A distinguished clergyman once wrote us after spending a fortnight in camp with "Nessmuk," "Of all the men I have ever met, Sears is the best worth knowing."

It was some ten years ago that our correspondent "Awahsoose," R. E. Robinson, the author of the "Uncle Lisha's Shop" series, wrote to the FOREST AND STREAM asking what had become of that one of the old *Spirit of the Times* contributors who over the signature of "Nessmuk" had charmed the readers of that journal with his descriptions of wild woods life. This published inquiry brought out a response from "Nessmuk" himself—George W. Sears—and shortly thereafter he wrote for these columns a series of "Rough Notes from the Woods." The papers attracted immediate attention, and by them the name of "Nessmuk" was made as familiar to the sportsman of the present as it had been to those of *Porter's Spirit* days. Mr. Sears speedily took his rightful place among the most popular of the FOREST AND STREAM's many contributors, and held it so long as he continued to write. His abundant experience, his rich store of information in all branches of woodcraft, his familiarity with the ways of wild creatures and sympathy with the wood-folk, a never-failing fund of anecdote, shrewd insight into human nature, the terseness and compactness of his quaint style, his command of English and sturdy assertiveness—all these combined to win for him an interested and devoted following. Whether he wrote of the hackneyed, fashion-plagued Adirondacks, the remote wilds of the Northern Michigan Peninsula, the dense forests of Pennsylvania, or the swamps and hamaks of Florida, it was all one; each locality was invested with a new interest when seen through his eyes, and made fascinating by the charm wrought of his personality.

Perhaps the best specimen of "Nessmuk's" prose is the little manual of "Woodcraft," published in 1884, containing the "boiled down" information and lore he had spent half a century in acquiring. In these days, when there flows from the press a never ceasing flood of empty books manufactured by literary charlatans, to read the terse, suggestive chapters of "Woodcraft" is as refreshing as to inhale the perfumed air of the old woods lot after a June shower.

It is by the volume of poems, "Forest Runes," that the name of Mr. Sears is destined to be longest remembered. He was a genuine poet; his was the verse that comes to the brain and presses for utterance. In his poems he speaks to many a responsive soul. There are touches deep and pathetic, and others in lighter mood. The "Runes" came from the pen of one who was used to call himself only a "ragged woodsman," but in truth they had their origin in the heart of one who knew human life in all its phases of joy and love and toil and bereavement; and who had a deep sympathy with humanity in its every condition, but more than all in its humbler aspects. This is one of the noteworthy points of his career, that "Nessmuk" the woods-dweller, the haunter of forest fastnesses, was yet a poet of the people. Nor is there in this any occasion to wonder, for it was in his solitude amid the pines and the hemlocks that he found time to ponder and study the great questions

of human life; and yet did not, as others have done, lose sympathy with those who in the heat and dust and perplexity of the day were cheered and encouraged by the words he wrote and sent forth from his woodland camps.

The salient points of "Nessmuk's" life are best told in these modest notes which he himself prepared as a preface to the "Runes," published in 1887:

It is a sad necessity that compels a man to speak often or much of himself. Most writers come to loathe the first person singular, and to look upon the capital I as a pronominal calamity. And yet, how can a man tell aught of himself without the "eternal ego?"

I am led to these remarks by a request of my publishers that I furnish some account of myself in issuing this little volume of verse. Readers who take an interest in the book will, as a rule, wish to know something of the author's antecedents, they think. It might also be thought that the man who has spent a large share of the summer and autumn months in the deep forests, and mostly alone, for fifty years, ought to have a large stock of anecdote and adventure to draw on.

It is not so certain, this view of it. The average person is slow to understand how utterly monotonous and lonely is a life in the depth of a primal forest, even to the most incorrigible hunter. Few city sportsmen will believe, without practical observation, that a man may hunt faithfully in an unbroken forest for an entire week without getting a single shot, and one wet week, especially if it be cold and stormy, is usually enough to disgust him who has traveled hundreds of miles for an outing at much outlay of time and money.

And yet this is a common experience of the most redent still-hunter.

In the gloomy depths of an unbroken forest there is seldom a song bird to be heard. The absence of small game is remarkable; and the larger animals, deer, bears and panthers, are scarce and shy. In such a forest I have myself hunted faithfully from Monday morning till Saturday night, from daylight till dark each day, and at the end of the first day brought the old double-barreled muzzle-loader into camp with the same bullets in the gun that I drove home on the first morning. And I crept stealthily through the thickets in still-hunting moccasins on the evening of the last day with as much courage and enjoyment as on the first morning. For I knew that, sooner or later, the supreme moment would come, when the black, satiny coat of a bear, or the game-looking "short-blue" coat of a buck would, for an instant, offer fair for the deadly bead.

And once, in a dry, noisy, Indian summer time, I am ashamed to say, I still-hunted 17 days without getting one shot at a deer. It was the worst luck I ever had, but I enjoyed the weather and the solitary camp-life. At last there came a soft November rain, the rustling leaves became like a wet rug, and the nights were pitch dark. Then the deer came forth from swamps and laurel brakes, the walking was almost noiseless, and I could kill all I could take care of.

It is only the born woods crank who can enjoy going to the depths of a lonely forest with a heavy rifle and stinted rations, season after season, to camp alone for weeks at a stretch, in a region as dreary and desolate as Broadway on a summer afternoon in May.

It is only the descendants of Ananias who are always meeting with hair-breadth escapes and startling adventures on their hunting trips. To the practical skilled woodsman their wonderful stories bear the plain imprint of lies. He knows that the deep forest is more safe than the most orderly town; and that there is more danger of meeting one "bridge gang" than there would be in meeting all the wild animals in New York and Pennsylvania.

These facts will explain why I have so little to relate in the way of adventure, though my aggregate of camp life, most of it alone, will foot up at least twelve years.

I can scarcely recall a dozen adventures in as many years' outings, culled from the cream of fifty seasons. Incidents of woods life, and interesting ones, are of almost daily occurrence; and these, to the ardent lover of nature, form the attraction of forest life in a far greater degree than does the brutal love of slaughter for the mere pleasure of killing something just because it is alive.

Just here my literary Mentor and Stentor, who has been coolly going through my MSS., remarks sententiously, "Better throw this stuff into the stove and start off with your biography. That is what the editor wants." I answer vaguely, "Story? Lord bless you; I have none to tell, sir. Alas! there is so little in an ordinary humdrum life that is worth the telling. And there is such a wilderness of biographies that no one cares to read."

"Well, you've agreed to do it, you know, and no one is obliged to read it. It will make 'filling' anyhow; and probably that's all the Editor wants." Which is complimentary and encouraging.

"I must say it's the toughest job of penwork I ever tackled; I don't know where to begin."

"Pooh! Begin in the usual way. Say you were born in the town of —"

"There's where you're out. I wasn't born in any town whatever, but in what New Englanders call a 'gore'—a triangular strip of land that gets left out somehow when the towns are surveyed. They reckon it in, however, when it comes to taxes; but it rather gets left on schools."

"Ah, I can believe it. Well, fix it up to suit yourself. I suppose the editor keeps a 'balaam box'."

Taking this leave and a handful of my Lone-Jack, C. saunters off to the village, and I am left to myself. Perhaps his advice is good. Let's see how it will work on a send-off. For instance, I was born in a sterile part of sterile Massachusetts, on the border of Douglas Woods, within half a mile of Nepmug Pond, and within three miles of Junkamaug Lake. This startling event happened in the "South Gore" about sixty-four years ago. I did not have a fair average start in life at first. A snuffy old nurse who was present at my birth was fond of telling me in after years a legend like this: "Ga-a-rge, you on'y weighed fo' pounds when you wuz born 'n' we put yer inter a quart mug 'n' turned a sasser over ye."

I could have killed her, but I didn't. Though I was glad when she died, and assisted at her funeral with immense satisfaction.

Junkamaug Lake is six miles long, with many bays, points and islands, with dense thickets along its shores at the time of which I speak, and a plentiful stock of pick-

erel, perch and other fish. It was just the sort of country to delight the Indian mind; and here it was that a remnant of the Nepmug Indians had a reservation, while they also had a camp on the shores of Nepmug Pond, where they spent much time, loafing, fishing, making baskets, and setting snares for rabbits and grouse. They were a disreputable gang of dirty, copper-colored vagabonds, with little notion of responsibility or decency, and too lazy even to hunt.

There were a few exceptions, however. Old Ja-ha was past ninety, and the head man of the gang. He really had a deal of the oldtime Indian dignity; but it was all thrown away on that band of shiftless reprobates. There were two or three young squaws, suspiciously light of complexion, but finely formed and of handsome features. "I won't go bail for anything beyond."

The word Nepmuk, or as it is sometimes spelled, Nepmug, means woodduck. This, in the obsolete lingo of the once powerful Narragansetts. The best Indian of the band was "Injun Levi," as the whites called him. He was known among his tribe as "Nessmuk;" and I think he exerted a stronger influence on my future than any other man. As a fine physical specimen of the animal man I have seldom seen his equal. As a woodsman and trusty friend he was good as gold, but he could not change the Indian nature that throbbed in every vein and filled his entire being. Just here I cannot do better than reproduce a sketch of him and his tribe which appeared in the columns of FOREST AND STREAM in December, 1881. I will add that Junkamaug is only a corruption of the Indian name, and the other names I give as I had them from the Indians themselves:

Nessmuk means in the Narragansett tongue, or did mean, as long as there was any Narragansetts to give tongue, Woodduck, or rather Wooddrake.

Also, it was the name of the athletic young brave who was wont to steal me away from home before I was five years old, and carry me around Nepmug and Junkamaug lakes, day after day, until I imbibed much of his woodcraft, all his love for forest life, and also, much of his good-natured shiftlessness.

Even now my blood flows faster as I think of the rides I had on his well-formed shoulders, and a death-grip on his strong, black mane. Or rode "belly-bumps" on his back across old Junkamaug, hugging him tightly around the neck, like the selfish little Egotist that I was. He tire? He drown? I would as soon have thought to tire a wolf or drown a whale. At first these excursions were not fairly concluded without a final settlement at home—said settlement consisting of a head-raking with a fine-toothed comb, that left my scalp raw, and a subsequent interview, of a private nature, with "Par" behind the barn, at which a yearling apple tree sprout was always a leading factor. (My blood tingles at that recollection too.)

Gradually they came to understand that I was incorrigible, or, as a maiden aunt of the old school put it, "given over," and, so that I did not run away from school, I was allowed to "run with them dirty Injuns," as the aunt aforesaid expressed it.

But I did run away from school, and books of the dry sort, to study the great book of nature. Did I lose by it? I cannot tell, even now.

As the world goes, perhaps yes.

No man can transcend his possibilities. I am no believer in the supernatural, mesmerism, spiritualism and a dozen other isms are, to me, but as fetish. But, I sometimes ask myself, did the strong, healthy, magnetic nature of that Indian pass into my boyish life as I rode on his powerful shoulders or slept in his strong arms beneath the soft whispering pines of Douglas Woods?

Poor Nessmuk! Poor Lo! Fifty years ago the remnant of that tribe numbered thirty-six, bound, feet and clothed by the State. The same number of Dutchmen, under the same conditions, would have overrun the State ere this.

The Indians have passed away forever; and when I tried to find the resting place of my old friend, with the view of putting a plain stone above his grave, no one could point out the spot.

And this is how I happen to write under the name by which he was known among his people, and the reason why a favorite dog or canoe is quite likely to be called Nessmuk.

The foregoing will partly explain how it came that, ignoring the weary, devious roads by which men attain to wealth and position, I became a devotee of nature in her wildest and roughest aspects—a lover of field sports—a hunter, angler, trapper and canoeist—an uneducated man withal, save the education that comes of long and close communion with nature, and a perusal of the best English authors.

Endowed by nature with an instinctive love of poetry, I early dropped into the habit of rhyming. Not with any thought or ambition to become a poet; but because at times a train of ideas would keep waltzing through my head in rhyme and rhythm like a musical nightmare, until I got rid of measure and metre by transferring them to paper, or, as more than once happened, to white birch bark, when paper was not to be had.

I never yet sat down with malice prepense to rack and wrench my light mental machinery for the evolution of a poem through a rabid desire for literary laurel. On the contrary, much of the best verse I have ever written has gone to loss through being penciled on damp, whitish-brown paper or birch bark, in woodland camps or on canoeing cruises, and then rammed loosely into a wet pocket or knapsack, to turn up illegible or missing when wanted. When

"I looked in unlikely places

Where lost things are sure to be found,"

and found them not, I said, all the better for my readers, if I ever have any. Let them go with the thistle-down, far a-lee. (The rhymes, not the readers.)

I trust that the sparrow-hawks of criticism, who delight equally in eulogizing laureates and scalping linnets, will deal gently with an illiterate backwoodsman who ventures to plant his moccasins in the realms of rhyme. Maybe they will pass me by altogether, as

"A literary tomtit, the chickadee of song."

There must be a few graybeards left who remember Nessmuk through the medium of *Porter's Spirit of the Times*, in the long ago fifties; and many more who have come to regard him kindly as a contributor to FOREST AND STREAM. If it happens that a thousand or so of these have a curiosity to see what sort of score an old woodsman can make as an off-hand, short-range poet, it will be a complimentary feather in the cap of the author.

The *Christian Union* is to be congratulated for having added to its corps Mr. William B. Howland as publisher. We know of no one of the religious journals more deserving of the highest talent in its business office, nor of any one more worthy of the place than is Mr. Howland. As the founder of the *Outing* magazine, and for several years the editor and publisher of the *Cambridge, Mass., Tribune*, Mr. Howland has given abundant proof of the possession of unusual enterprise and ability, and in the broader field now opened to him these will surely tell to the advantage of the *Christian Union* and its widening circle of readers.

The Sportsman Tourist.

CAMP LIFE IN COLORADO.

MANY times when on hunting trips and in camp I have thought how fortunate I was in my boyhood in having a kindly old grandfather—a veteran of 1812—who had been in early days an ardent hunter and trapper. His talks around the fireside in the long winter evenings will always be remembered as among the pleasantest experiences of my boyhood life. This was at an age when the deadliest weapon I was allowed to handle was a bow and arrow, and I tell you there was no one who could make an arrow quite equal to grandfather.

My father was a lumberman, and after a summer on the farm he would pack up what was necessary, and away we would all go to the pine woods of northern Wisconsin. This meant lots of work and worry for father and mother, but a long grand picnic for us boys. There was a large settlement of Winnebago Indians near the scene of father's operations, and we would hardly be settled in our log cabin a day before I would be off to the Indian camps and hunt up my comrades among the Indian boys, and we would then try conclusions at shooting with bow and arrow, running races and such like sports. I think now that my love for such things made them like me, and made me safe in their hands. I could never quite equal their best shots, and small wonder, for I've seen little rascals not over ten to twelve years old knock a penny from a split stick at 20 to 30 yds.

Before my grandfather died he taught me not only how to trap the different animals, but to tan their skins either for leather or fur; he also taught me to load and fire a long old-fashioned single shotgun, and I believe it was a prouder day for me when I killed my first bird, than when, years after, I stood over my first elk or mountain sheep.

Fifteen years later I was in the Elk Mountains of Colorado doing a little mining and a good deal of hunting. I wonder if there will ever come a time when I can enjoy another such a spell of wild, free camp life. What a joy there was in living in that high, dry atmosphere. I was as lean and hard as a trained stag hound. No tramp was too long for my hardened muscles. As I pause from writing and look up at the old sombrero, hob-nailed boots and duck coat on the walls of my den, a flood of recollections comes over me that makes me want to turn my back on civilization once more and again wander among the snow-clad peaks for game worth killing.

I never shall forget a pleasant little incident that occurred on one of our jaunts in the Gunnison country.

There were three of us in the party. We had outfitted at a small town on the Gunnison River, and with ponies, pack mules, camp outfit and a month's supply of provisions had started up one of the small streams that empty into the Gunnison. It was in the latter part of summer; beautiful weather, and not a drop of rain need be expected for months. Our objective point was a range of low mountains in the Ute reservation, near the head waters of the stream we were following, where I confidently expected to catch a black-tailed buck or two before he had rubbed the fur off his horns, as I wished to get a fine set of antlers. I have noticed that at this time of the year the bucks climb up into the highest hills and remain, usually in some quaking aspen grove, until their horns are hard. Once or twice in my wanderings I have been fortunate enough to approach within 40 or 50 yds., and quietly watch them rubbing their horns on a tree. Oh, for a camera to have photographed the noble fellow before breaking his neck with a rifle ball!

We had finished our first day's ride, picketed out the animals and were making preparations for supper, when we saw three horsemen approaching from down the valley. They were accompanied by the usual number of pack mules, and on a near approach we recognized two of them as old comrades in the mines years before, who had spent the winter in Mexico and were on their way back to the mines. The third man of their party was a stranger to us, but as the sequel will show proved a welcome addition to our party. A general invitation to share our camping ground was accepted, and an hour later, with pipes lit, and our feet to the fire, we settled down for an evening of solid enjoyment. The boys from Mexico entertained us with talk of greasers, bright-eyed Mexican beauties, legends of the Aztecs and cliff dwellers, and the hours passed quickly.

I had noticed when the stranger unpacked his mule his careful handling of a violin-shaped box, but it was nearly midnight before I thought to ask him what he had in the package he handled so carefully. He answered that it was "just an old violin I keep to amuse the boys with." The hour was late, but nothing would do but we must have some music, and no Ole Bull with a genuine Stradivarius ever charmed an audience more than this fellow did us, and when he played "Home Sweet Home" with the sweetest variations I ever heard, it is needless to say we were all more or less moved, and more than one of us was obliged to change his seat in the light for one more in the shadow, and grumble at the smoke to hide his emotion. We afterward learned that the little musician was classically educated and had played in some large Eastern concert company. A failure in business and disappointment in love had driven him an exile to the Western wilds, where he hoped to retrieve his fortune and forget his sorrows. The new arrivals were ready for anything in the way of adventure, and concluded to join our party.

We had passed a mile or so back on the road the shanty and out-building of a ranchman, and remembering that we saw a garment hung out on the line that could not well belong to a male ranchman, I concluded to go back and see if there was any fresh butter to be had at the house. On approaching the buildings, I was met by the wettest, muddiest, and most profane man I ever saw. He was a typical Arkansas bull puncher, and I shall not soon forget his artistic swearing. I could almost imagine I smelled brimstone, and nearly made up my mind to beat a retreat, but thinking I could not be the cause of his wrath, I remained to learn what the trouble was. He finally cooled off enough to explain. The beavers were bothering the life out of him by damming up his irrigating ditches, and he had had to tramp to the head of the ditch every morning for some time, and under the night's work of the beaver. On explaining what I wanted he said we could have anything on the ranch if we would only stay over a few days and manage some

way to kill the beaver. Remembering we had a trap in our outfit, I told him that if the boys would consent to stop over a few days I would try my hand at catching them. I told him not to disturb the dam next morning until we could look the ground over. The boys consented to lay over, and the next morning saw us all gathered at the dam, but not a soul in the party had ever trapped a beaver. Remembering the stories of my grandsire, I undertook the leadership. Taking a short axe I went out on the dam and cut a section about a foot square out of the center, letting the water pour through. The ditch at this point was about 9ft. wide and 4ft. deep, then taking a short pole I set the butt end securely into the bank under water, and springing the small end around, I fastened it to the trap, sticking willows through the trap to hold it in position till loosened by the struggles of the beaver when he would be swimming around under water. The trap must always be fixed so as to keep the beaver under water, since if left high and dry he will proceed to gnaw his foot off, which is all you'll get for your pains.

The first one we caught was the largest beaver I ever saw. We carried him to the ranch and made out his weight by the old-fashioned steelyards to be just 40lbs. After that they grew smaller, until we caught the last one, which was about the size of a large muskrat. Poor little fellow, he had tried to do the work left him by his fathers, as a bunch of willows the size of a lead pencil drawn up on the dam attested. The ranchman was profuse in his thanks, and nothing was too good for us. I believe he would have considered a pony apiece small pay for the work done. We had lost nearly a week's time, but the pack mules had rounded out in great shape on the luscious grass in the river bottoms.

We had done a little hunting and fishing, and antelope, grouse and trout had been on the bill of fare almost every day. But all were anxious for a start, so we lost no time in getting ready for the trail again, and it was a jolly crowd that left for the reservation that morning.

FOX LAKE, WIS.

WANDERER.

A BIT OF ADVICE.

IF you have not laid out your vacation for the season, begin now, and you will enjoy it in anticipation from now until you go. I always get a year's pleasure out of my summer vacation, in anticipation, participation and retrospection. Now a word to those who cannot spare the time for a summer outing. It is a well known and generally accepted fact that the aggregate results of a year's labor will be greater in the case of the man who works ten months and plays two in the year than in the case of the man who works twelve straight months. And from an economical point of view such outings are cheaper than staying at home; also when looked at from a physiological standpoint, see the grand results. The recuperation of vitality and rest for brain and body is worth more than many times the cost of the trip—paid out for medicine and doctors' bills.

I do not mean for you to go to some fashionable summer resort, have your mail come from the city every day, and indulging in dancing, bathing, dinners and all other sorts of social dissipation. This would only be jumping from the frying-pan into the fire. What I mean is to go to some quiet farmhouse in the mountains, or with your family or a few jovial friends go and camp out in the pine woods, on the banks of a clear pure spring or lake, where you can get good fishing and hunting. Take along your rod and reel, gun and dog, leave behind your mail, except your FOREST AND STREAM, and all business matters.

What you want is change—a change from the din, rush and worry of city life, to quiet rest and enjoyment. Try it once, and I know you will not miss taking a regular summer vacation every season if it is possible to do so.

FOREST CITY, IOWA.

Natural History.

FOREIGN GAME FOR AMERICA.

IN a report to the Department of State, our valued correspondent, Hon. W. W. Thomas, Jr., Minister to Sweden, recommends the introduction of the capercaillie and black game in America. This interesting report is given in full below:

I have the honor to call your attention to the importance and practicability of introducing the capercaillie and black game of the Old World into the United States. The capercaillie and black game are the two most important wild birds in Sweden and Norway, and make a valuable addition to the food of the Scandinavian people. These birds are excellent upon the table, their flesh resembling that of our prairie chickens.

Throughout the fall and most of the winter you may see the capercaillie and black game hanging up in large bunches or lying heaped up in great piles along the market-places of Stockholm: scattered about as profusely as wild ducks in the markets of Chicago and Minneapolis in the month of October.

THE CAPERCAILLIE.

The capercaillie is the largest and noblest of the grouse family—the family to which our pinnated grouse (prairie chicken) and ruffed grouse (partridge or pheasant) belong.

The full-grown male capercaillie weighs from 10 to 12lbs., and some specimens considerably exceed this weight. These birds, in fact, approach very nearly the size of the wild turkey of America.

The home of the capercaillie extends over a wide range of latitude and temperature in two continents. From the wooded, mountainous regions of northern Spain and Greece, northward throughout Europe, this bird is found in most of the lofty forest districts suitable for his abode, and where he has not been exterminated by man. This grouse is abundant in the great pine and spruce forests of the Scandinavian peninsula, Finland and Russia, and the vast forest stretches of northern Asia.

The capercaillie is an extremely hardy bird. In Sweden and Norway he is found in large numbers up to and beyond the arctic circle, as far as the seventieth parallel of north latitude. He can endure the severest cold and deepest snows of the longest winters. He often avoids the bitterest cold by burrowing into the snow, thus obtaining warmth and shelter.

This bird subsists on the coarsest and commonest food. He feeds upon the buds and leaves of trees, the needles

or leaves of the pine and spruce, young pine cones, clover and grass, berries of all sorts, seed and grain, and insects of every kind. In the depth of winter a capercaillie has been known to live for more than a week in the same pine tree, subsisting entirely upon pine leaves and young pine cones.

The capercaillie is preëminently a bird of the pine woods, or pine mixed with birch, spruce, maple and other growths. He loves wooded hillsides better than wooded plains, and he must have fresh water near by—either a brook or pond or a piece of swampy ground.

He is a local, not a migratory bird, though sometimes lack of food or other causes may drive him to extensive wanderings. In his habits he much resembles our American ruffed grouse—though in size he is nearly ten times as large—and, I believe, will thrive anywhere in the United States where our ruffed grouse (called partridge in New England and pheasant in the Middle States) is found.

BLACK GAME.

The black game inhabits nearly the same regions as the capercaillie. He is equally hardy, and can withstand the cold and snows of the most rigorous northern winters. His weight is about 3lbs.—about the same as our prairie chicken. The male bird is a lustrous, metallic black in color; hence the name. He has, however, a white stripe in his wings, and his jet black, outward-curving tail feathers are much prized as a hat ornament in the Tyrol.

The black game is also a grouse, and he is often found in company with the capercaillie, or at least in close proximity. The black game is also a bird of the woods, but the birch is preëminently his tree, though he is met with in mixed growths of almost every variety. He does not frequent the deep woods so much as the capercaillie; he loves better the borders of the forest, and woods and groves with frequent openings. He is also fond of cranberry swamps, and in swampy lands is often found miles away from any forest.

His food is much the same as the capercaillie, though not quite so coarse. It consists chiefly of the buds and leaves of trees, berries and insects. In summer the black game is very fond of blueberries, raspberries and cranberries; in winter he feeds principally upon the buds of the birch, hazel, alder, willow and beech, and when pressed for food will eat the young green cones of the pine. This bird seems to be equally fond of animal food, and readily eats snails, worms, the larvæ of ants, flies, beetles, etc.

He is a more social bird than the capercaillie, and comes out more into the fields and clearings and nearer the abodes of man.

WILL THEY THRIVE IN THE UNITED STATES?

Hundreds of times when traveling through the forests of Scandinavia I could scarcely resist the conviction that I must be back again in the woods of New England. Here in Sweden are the same hillsides and mountains, the same swift, clear brooks foaming in their rocky beds, and the same forest trees—the pine and spruce, the birch, maple and beech, the oak and ash. Here are the same wild berries, too; and in Sweden you may pick wild strawberries, raspberries, blueberries and blackberries, just as with us in America.

Then take the two grandest and most useful of the wild animals of Scandinavia. The reindeer of the fjelds is almost identical with our own caribou, and the most expert naturalists have been unable to distinguish any substantial difference between the Swedish elk and the moose of America. The fact is that a great portion of the United States—at least one-third, perhaps one-half—is fitted to be the home of the capercaillie and the black game, for there is a suitable climate, a suitable broken country of hill and dale, well watered and covered with a suitable forest growth; and this forest growth, together with its underbrush and bushes, will not only provide shelter for these birds, but will furnish them with all the food they require until they become as plenty as European sparrows now are in our streets and public parks. It is my firm conviction that these valuable birds will thrive throughout all the wooded districts of New England, New York and Pennsylvania, and westward through the greater portion of the States of Michigan, Wisconsin and Minnesota. They will also find a congenial home along the wooded slopes of the Rocky Mountains for their entire length, as well as in the wooded ravines and declivities of the mountain ranges of California, Oregon and Washington. And not only here. The fact that these birds are found among the hills and mountains of Europe as far south as Greece, Italy and Spain renders it almost certain that they will find a congenial climate and nature throughout the entire ranges of the Alleghenies, Blue Ridge and the Cumberland Mountains, together with their spurs, sidehills and outlying forest districts, and may thus easily be acclimated over large sections of the States of Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia and Alabama. And besides the districts above enumerated there are doubtless many other portions of the United States well fitted to be the home of these magnificent game birds.

THEIR INTRODUCTION INTO THE UNITED STATES.

The easiest and cheapest way would be by obtaining their eggs, sending them to America and having them hatched out there. I am sorry that I cannot recommend this course. Eggs have repeatedly been sent to Germany and Great Britain, but every such attempt has turned out a complete failure. The only other method is to procure and ship adult birds. This method has also been tried, and the results are such as to give us great encouragement.

The capercaillie was originally found in Scotland. His great size and fine flesh caused him to be keenly hunted and some generations ago he was utterly exterminated. About fifty years since some 150 capercaillie, adult birds, were shipped from Sweden across the North Sea to Scotland. They arrived safely, were liberated in a suitable locality and lived and increased. Their descendants are living and increasing to this day, and the capercaillie is again added to the food birds of Scotland.

I find there have been several shipments of both capercaillie and black game of late years from Sweden to various parts of Germany, Austria and Hungary to localities where these birds have been shot out or where they had never existed. In the instances where proper care has been exercised most of the birds have arrived in good condition, have taken kindly to their new homes and are breeding well there.

Within four years a considerable shipment of black game was made from Sweden to southern Austria, near the Italian boundary, and, notwithstanding the birds were ten days upon the road, and that there were many changes of trains, they all arrived sound and well, not a bird dying on the passage. There are now direct steamers from Gothenburg, Sweden, also from Copenhagen, just across the sound, in Denmark, to New York and Boston. The passage in the summer time occupies some twelve or thirteen days. Surely the fatigue and hardship of this passage would be less than ten days in freight cars. Neither will the salt air have any bad effect upon the birds. Both love to inhabit the wooded islands along the coast, and fly readily from one to the other across great reaches of water. I think the best time for transportation would be late in August or early in September.

THE COST.

I find the birds recently shipped to Germany have cost \$12 each for capercaillie and \$7 for black game. These prices seem to me high. I found, however, that many of the birds are injured in snaring, and many more die after a few days' confinement. Birds suitable for export, and for which the above prices are asked, are all strong, full-grown birds, without injury or blemish. They are kept for a considerable time in captivity, and are, in fact, nearly half domesticated before they are considered suitable to ship on a long voyage, so that the prices may, perhaps, be only a fair compensation for labor and time and the inevitable large mortality among the birds during the earlier part of their captivity. I believe that at least one hundred birds of each species should be shipped to give the experiment a fair trial. In case we can obtain no reduction in the price this will make—

One hundred capercaillie, at \$12.....	\$1,200
One hundred black game, at \$7.....	700
Total.....	\$1,900

The birds must be placed in roomy coops of the best construction, and not crowded. They must have a light and airy position on shipboard, and some one should be sent to take charge of them, or some sailor or steward on board must be specially instructed, so as to properly feed and care for them. The expense of building the coops, of freight and caretaking will be considerable, to which must be added freight and expense from the American port of landing to the destination; so that, allowing for all contingencies, a sum of \$3,000 will be required for the undertaking.

WHERE SHALL THE EXPERIMENT BE TRIED?

It seems to me the National Yellowstone Park is the proper place to first liberate these birds, and to make the first attempt to acclimatize them on American soil. I have never had the pleasure of visiting this grand park, but if the accounts I have read are correct, there are to be found within its borders hillside forests, well watered, which will furnish these birds with all needed shelter and food. In the National Park, also, the birds can be protected by the Government against poachers. The only objection to the park is the long journey by land necessary to reach it; and this, added to the long sea voyage, might be more than the birds could endure. However, upon the arrival of the birds in New York, a proper person could decide whether they were in a fit condition to stand the western trip. If they were not, there are hundreds of places within twenty-four hours of the Atlantic where the birds could be liberated with advantage.

Should our Government be willing to try this experiment with a liberal hand, other shipments could be made, and separate flocks of capercaillie and black game be set free in different sections of the Union. The great forests of northern Maine, the Adirondack region in New York, the Allegheny Mountains, and the woods of eastern Minnesota would be especially adapted for this purpose.

I have made the matter of the introduction of the capercaillie and black game into my native land the study of leisure hours for many years, and have sought information which would throw light upon the undertaking from every available source. And it is only now, when I am convinced that success is reasonably certain, that I venture to recommend the experiment.

It appears to me that if we take into consideration the value of these birds as articles of food, the great size of one of them, the hardy qualities of both species, their power to withstand cold and snow and the utmost rigors of our climate, and their ability to live and thrive upon the coarsest of products of our forests which products now largely go to waste—it appears to me, I say, that all these considerations together are amply sufficient to warrant our giving the acclimatization of the capercaillie and black game in America a fair and thorough trial.

For my own part, it will be a labor of love to assist, in every way in my power, any effort to add these noble birds to the fauna of America.

W. W. THOMAS, JR., Minister.

UNITED STATES LEGATION, Stockholm.

EVENING GROSBEEK IN PENNSYLVANIA.—Montoursville, Pa., May 1.—*Editor Forest and Stream:* Early in last January a friend described to me a flock of strange birds he had seen the day before. From the imperfect description given I concluded they were snow buntings, and so paid no further attention to the matter. A few weeks later he killed three of them, and then I saw at once they were unlike any bird I had ever seen here. Upon investigation I found them to be evening grosbeaks. They have never before been recorded as appearing east of Ohio, and but seldom east of Lake Superior, but as is well known a number of specimens have been taken in this State and in New York during the past winter. The birds numbering about forty, have kept together in a single flock all through their stay. Their food seems to consist entirely of wild cherry pits. They readily crack the stones with their stout bills, and a flock feeding on these makes a noise resembling a miniature Fourth of July celebration. The male has a loud, clear and beautiful song, while both birds have a peculiar piping whistle, which is apparently used as a call note, and is kept up constantly. Two or three weeks ago the birds became quite uneasy, keeping well to the tops of the trees and ranging for miles up and down the river; but they finally returned to their old haunts, and now seem to have lost in a measure their tribal organization, and to-day, April 30, they are to be found in all parts of the grove, making love to each other in much the same manner as turtle doves, seemingly well contented with what I believe will prove to be their summer home.—F. F. CASTLEBURY.

BIRDS FROM DEEP WATER.

WE are indebted to Dr. G. Brown Goode for the following interesting items extracted from a letter recently received by him from a correspondent in Cleveland. Cormorants are said occasionally to take, in deep water, hooks baited with pieces of fish. The letter given below tells of three other species of birds taken at considerable depths:

"Lake Erie was free from ice during the winter, so that the fishermen never lost a day's fishing from this cause. Gill-net fishing is carried on here in the lake through the entire season in waters from two to thirty miles off shore in depths varying from 20 to 60 ft. Last spring (March 15) a female red-breasted diver (*Colymbus septentrionalis*, Linn.) was taken ten miles off shore in 40 ft. depth; this season (March 15) another like specimen from about the same locality; both stomachs contained partially digested fish bones. April 20 one of the lake fishermen brought in a full plumaged red-breasted or red-throated diver, which was caught in 45 ft. of water ten miles off shore. April 12 a fine male long-tailed duck (*Anas glacialis*, Linn.) was brought me, taken twenty miles off shore in 55 ft. depth of water, an unusual depth, it seems to me, for this bird to reach. I have known the loon (*C. glacialis*, Linn.) to be taken on hooks and gill-nets set in 100 to 150 ft. of water quite often.

"Some fifteen years ago a mound was excavated at Black River, thirty miles to the west; it was covered with the stumps of our largest forest trees. The usual amount of bones, cinders and stone implements were found, but the most noticeable of all was a very large whelk shell (*Fulgur carica*, Linn.).

"The fishes taken here are mostly yellow perch, pike-perch, saugers (*Stizostedion canadense*), herring (*Coregonus artedii*) and occasionally a whitefish. The fishermen have brought in daily through the winter from eight to twelve tons of fish, caught in this locality. DR. E. S."

AN ANCIENT HATCHET.—*Editor Forest and Stream*: I now have in my possession an ancient Indian tomahawk or pipe of peace. It is made of blue steel and is inlaid with silver. On one side are the moon and seven stars. On the reverse side is a diamond with the letters I. D. W., both sides having two bands of silver running up from near the edge of blade to the handle. Around the bowl of the pipe is a band of silver, with a silver mouth-piece to stem or handle. Where the stem enters the hatchet or pipe it is bound with a band of silver with a silver screw going through the eye and screwing into the handle. The history of this tomahawk as given me by my father is as follows: On my father's place, about fourteen miles from this town, stood the famous Indian gallows, which was about the center of the territory owned and occupied by the Tuscarora tribe of Indians. When they sold out their lands and left here a part of them went to Alabama (near Tusculum). In the year 1836 my father visited friends in that section, and while there this tomahawk was found by a farm hand while plowing on the farm of a Mr. Malone, who purchased it of the man and presented it to my father, who had a new stem or handle put in, as of course the old one was decayed. He always kept it in good order, and it is a very pretty relic, the silver parts being as bright to-day as they possibly were two hundred years ago. The handle which was put in by my father is of hickory, and is a beautiful dark color from age. It was supposed to have been the property of the head chief of the Tuscaroras, as it was too costly for a warrior.—CASHE (Windsor, N. C., April 28).

EUROPEAN WIDGEON.—The note of the capture of a European widgeon, by Mr. W. D. Carpenter, in our issue of last week, requires revision. It appears that the bird was not killed on Long Island, as we were informed, but in Maryland. Mr. Carpenter writes us as follows: "I killed a very good male specimen of the European widgeon (*Anas penelope*), on the 25th of last February, at the Carroll's Island Club, Baltimore county, Maryland, of which I am a member. I fired at a flock of about nine widgeons, and dropped three. When the dog brought them ashore I saw that one was different from the others, so took good care of it and have had it mounted. It can be seen at the office of Mr. L. S. Foster, 35 Pine street, in this city." We are informed by Mr. Sam'l W. Fairchild that last November Mr. R. H. Robertson, of this city, at the Narrows Island Club, Currituck county, N. C., shot a handsome specimen of the European widgeon, which he has had mounted.

TEN CENTS WELL INVESTED.—In April, 1889, I happened to be, one morning about 7 o'clock, in a bar-room. A tramp entered with a young robin in his hand and offered it for a drink. I gave him the drink, took the robin home, put the bird in a spare room, fed it with bread and milk, worms, etc., and along in the early part of June, when the bird had gathered good strength, set him adrift to fight his way in the world. This spring he has reappeared (alone as yet) and eats from a cup set in the garden with bread and milk in it, is afraid of no one about the house, comes within 10 ft. of whoever chirps to him and makes himself perfectly at home. Although there are three other pairs who frequent our grounds, he is the only one who will eat out of the cup.—A STEADY READER (Buffalo, April 26).

A MAY TRAGEDY.—Standing in the mill road a few minutes ago I was witness to a scene that caused me to feel as if I had seen a murder done. Carelessly glancing out the door I saw a small hawk, with meteor-like swiftness, descend on a pair of mated robins, which were contentedly feeding on the green. Descending two flights of stairs, three or more steps at a time, I was certainly less than a minute in reaching the place, but found to my regret that I was too late. The bird of prey had already done his work and retreated with his captive. The only traces of it that I could see were a few tail and breast feathers of the victim, showing the spot of the fatal encounter.—CHONLATA (Thompsonstown, Pa., May 2).

THE President has signed the bill making the appropriation for the National Zoological Park, and the future of that institution is thus assured. All friends of science will rejoice that the Government has at last undertaken this important educational work.

A BOOK ABOUT INDIANS.—The *FOREST AND STREAM* will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk Tales," giving a table of contents and specimen illustrations from the volume.—ADD.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 16, May 30.
FOLSOM 10 and 12, Sept. 26.	REMINGTON 12, Dec. 5, Feb. 6.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 26.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 10.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WHITNEY SAFETY 12, March 6.
LEFEVER 12, March 13.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

CHICAGO AND THE WEST.

CHICAGO, Ill., May 1.—The lagging duck season of this State is now ended legally. It practically ended, at least for all thoughtful shooters, weeks ago, and was even then long enough in all conscience. The winter was mild, and the ducks came up unusually early this season. Some of the best shooting of this year was had away back in February. The bluewing teal, among the latest of the flight, have been scattered all over this section for a long time, and they and many other ducks are paired and nesting on the larger marshes.

It is probable that most of the jacksnipe have now gone north. We have had no rain of consequence lately, and the ground in many localities formerly good has grown too dry for them, and the grass also is now getting too high. The snipe have acted very queerly this spring, and no one has been able to figure very much on them. Some good bags have been made in localities where not much was expected, some of the best localities have yielded poorly, and others have afforded shooting alike tantalizingly good and poor. For instance, Charlie Wilard a week or so ago got 127 snipe near Willow Springs, on the Des Plaines River, and many other good bags were made down that way. Yet, at Water Valley on the Kankakee, the birds seem to have been very scarce. I think the Water Valley boys stick too close to the river. There were birds there, but they were five or six miles north, nearer Lowell, and in the edges of the fields on the North Shore.

Messrs. C. D. Gammon and Geo. T. Farmer took 7,000 shells and a wagon down to Cumberland marsh. They figured that they had the best natural snipe marsh on earth, and that the birds were now due to be there. They hunted two days and got seven snipe. The birds were past due, but allowed their paper to go to protest.

A week ago last Wednesday, the snipe were swarming on Mak-saw-ba marsh, as has been duly recorded; yet when the night came, where were they? Three days ago the aforesaid abundance was conspicuous by its absence, or by its local patchiness. For instance, Al Sharp—or "Slick Sharp," as he is better known—got 41 birds in a day, while Roll Organ only saw 9 during an entire morning, of which he bagged 7. Seven out of 9 is pretty good shooting for Roll, or so the boys tell him. After which it may not be strictly necessary to say that Mr. Organ has returned from his very pleasant six weeks' trip and sojourn with the California boys and has settled down to his business here of wearing medals and things, as see small print elsewhere.

Bear in mind that the Mak-saw-ba, Cumberland and Water Valley districts are only sections of the marsh on the same river, the Kankakee, and it will then appear strange that news should now be coming in from Kouls, not so very far from the latter place, which says that all the snipe in the country seem to be there. Last Monday Harry Loveday's boy killed 30 odd snipe at Kouls, and then, seeing that he was running out of shells, went to shooting golden plover, of which he killed 120, during the day. It was on account of this run of birds that word was sent up to Fred Taylor telling him to come down quick.

MAY 2.—In describing the general lay of the region hereabouts, more especially in reference to the location of the different clubs, I have previously spoken of the Fox Lake region, the Illinois River region, the Calumet country, the sandhill country and the Kankakee country. I have never said much, if anything, about the Des Plaines River country, chiefly from the reason that no sporting organization of note is located in that direction, and partly because that country is much overrun with the black-coat class, Sunday shooters, boys, loafers, and who togeth or loves a Zulu. Yet mention of the sporting resources of this favored city would be incomplete without some word about this region, which has, or did have, great natural claims to be a genuine shooting locality.

The Des Plaines valley unfortunately ran too close to toward Chicago, just across a low ridge from the big lake, and one day Chicago, by the trifle of making water run up hill, returned evil for good by turning the vials of her wrath-bearing refuse barrel, billed through to the Mississippi, via Illinois River. The effects of this are nearly audible, anywhere along the banks of the canal, down Summit way. Still further down, there is the "Feeder," a sluggish stream which runs through the marsh known as the "Sag," and so on over to the Little Calumet, which it strikes somewhere near Blue Island. It may be remembered by a select few that Mr. Loyd and myself explored that mysterious stream, the Little Calumet, last fall, and established the hitherto unknown fact that the aforesaid stream does not run up hill, like the Chicago Canal, but runs down hill all the way, unlike the Grand Calumet, which runs first one way and then another, just as it takes a notion. The water out here is singular in its habits.

Well, from the above description it may be seen that a skilled canoeist, industrious and not afraid of wading, might wend his way and work his passage from Tolleston club house, or from twenty miles above there on the Little Calumet, down to Blue Island, through the feeder and clear on over to the Des Plaines country, unless he got lost or stuck in the mud somewhere. If our country calls us, Mr. Loyd and I may some time have to explore the Feeder and see which way it runs and where it runs to. It is alleged to start or to end somewhere about six or eight miles below Summit. It may be seen, therefore, that any well followed thread of narration about Chicago shooting would eventually bring one out just about where this narrative is now.

All this country is peppered out of the same box. The country along the Little Calumet, the Feeder and the Des Plaines is marshy, low and snipeful. Toward the

latter stream, however, the land rises more quickly, and spreads out into the wide fields of wealthy farmers. On these fields the golden plover are to be found, usually in greater plenty than anywhere else in the State of Illinois. Summit is a favorite resort of the actual or would-be plover shooters, and every Sunday that station and Riverside, two miles higher up, are filled with young, old, and uniformly beer-loving shooters, who would be charmed to kill a jacksnipe, delighted to kill a plover, pleased to kill a meadowlark and quite content to kill a robin, a thrush, a bluebird or a sparrow. This rabble does not usually get so far down as Willow Springs, and often there is good shooting at that point. Still further down, on the Chicago & Alton road, there is a place called Romeo, and yet further down is Joliet. I always thought that this place was meant to be called Joliet on account of Romeo, but I am no antiquarian and probably I don't know. At any rate, there is good snipe and plover shooting near either of those towns and also near Lamont, which is a sort of cousin to Romeo—though they say the farms are posted very generally in that section.

Hearing that Italian Joe, the market-hunter who devotes most of his time to plover shooting, was getting a good many birds near Summit, I ran down there the other day, stopped at Jack Wilburn's place on the bank of the malodorous canal, and got directions which enabled me to find Joe and also to find the best of the snipe grounds. Shooting with Joe, we had no trouble in getting some plover, although the birds were not so plentiful as they had been earlier in the week; but when we started out to try for a dozen snipe or so, we discovered that hardly a dozen snipe were left in the country. Persistent hunting, or low water, or warm weather, or all of these, had within four days caused these vexatious birds to forsake that locality. Some shooters who came in from the Feeder that evening had three dozen, and said the birds were thick over there. Reports also came up from Lamont which said the birds were on hand there in good numbers. We certainly worked a good territory around Summit.

The Des Plaines River all along the points named is lined with low warm covers which in season abound in woodcock. On the "Island," just above the bridge, a number of woodcock are now nesting within eleven miles of the center of Chicago. I regret that I cannot say we find woodcock on the paved streets here, as they do in New York and Brooklyn, but challenge any other city of over one million to show woodcock nests any closer in toward the sound of the church-going bell.

While hunting over the fields about Summit I started a hen prairie chicken out of a fence row. I saw two other single birds flying across the country, and while in the plover blind saw a little flock of seven chickens cross over and light on some spring wheat. The residents told me that the prairie to the south of us was a great "booming ground," and that a good many chickens were there mornings and evenings. We heard them once or twice while we were shooting. It is probable that we will have some chickens again in Illinois this year.

Our shooting on this little trip was done on the great farm of that eccentric genius, "Long John" Wentworth, one of the earliest and wealthiest citizens of Chicago, who died about a year ago. Mr. Wentworth had for a number of years kept a flock of wild turkeys, and there are about 200 to 300 of these great birds left in his woods now. This has been a great flock. As high as 200 birds have "swarmed" and gone off in a season, scattering all over the country, from Wisconsin to Indiana. Many of these have been killed, but of the great majority no accounting has ever been made. Considerable poaching has been done on the home farm, but this is promptly punished if detected, and I understand the flock is to be kept together.

My friend, the daily reporter, comes out this week with a long funny story about a certain respected citizen, who is alleged to have been out recently and to have met an accident "while hunting chickens with his trusty gun and well-trained dog." Pretty tough on the respected citizen; but the reporter probably meant snipe.

MAY 3.—The mystery of the large wild animal, which has for the last two or three years been seen on muskrat houses and elsewhere on the Kankakee Marsh, near Water Valley, is solved. The animal is a spaniel that broke away from Dick Turtle, and ran off into the marsh and never came back, but ran wild. This dog has a history. It ate up a set of furniture and was supposed to have been killed for the offense. Mr. Turtle, however, concealed the dog in his office, at the top of a five-story building, and locking the door went out for lunch. When he came back he found about 5,000 standing at the foot of the building, all wanting to lynch the man who had hung the dog up on the top floor. Dick looked up, and saw the dog hanging out of the window, sure enough. Hurrying up the stairs he found a most singular state of affairs. The dog had evidently made a bolt and jumped straight out of the open window, five stories above the pavement, and its life was saved by the merest chance. There was a nail driven down in the window ledge, only about an inch projecting above the sill. On this nail the ring on the end of the dog's chain had caught as it sprung the window, and strange to say both ring and collar staid in place, and the dog was left merely awaiting in suspense till some one came along and told it how far it was to the bottom. Dick pulled the dog in and tried to reason with it. Later on he took it down to the marsh, and it bolted again, as above stated, and has never been touched by human hands since then. The animal is evidently a victim of dementia, insanity or delirium tremens.

While shooting snipe the other day, an incident occurred which I have never heard spoken of as happening under the observation of any one else. Two jacksnipe sprung up and I knocked the first one down, missing the second. I threw out the shells and put in new ones, walking as I did so up to the bird that was killed. I found it at once, and noticed that it was half sitting up, with its back toward me, just at the side of a hummock of black mud. When I stooped to pick it up, I found that its bill was buried in the side of the hummock, clear up to the head, and it took quite a little pull to loosen it. The ruling passion was strong in death, and Ephraim was joined unto his idol. The bird was stone dead; it was the bird I had shot, and it had been but a mere moment since the shot was fired.

Shot fly much further down wind. A few days ago I dropped a snipe out of flock dead at 113 paces from where I stood. The shot was No. 7, and the birds were going down a strong wind. E. HOUGH.

BY MOONLIGHT.

THIS is a case of "meet me by moonlight alone," but has nothing whatever to do with the tender passion. nevertheless. The deer creature in this case is deer indeed, and the passion it inspires is that fierce one, instinct in the human breast that leads man to destroy that which they admire. In other words, this is an attempt to portray an evening's delight in a Sierra Nevada foothill alfalfa field, watching for deer.

I never took kindly to the watching of a deer lick, believing that it was taking an unfair advantage of the game. In that case the hunter is up in a tree, far above the ground, where a deer always looks for danger. Again, his elevation prevents the animal from catching the scent, and the advantages are all on the side of the man. In this case also the hunter chooses the most favorable point of outlook, and stations himself at a distance where it is simply murder to shoot at his game. On the other hand, in an open field chances are equalized. The deer has a show for his life, which is what every true sportsman desires. The hunter is on the ground where he can be both seen and smelled; and the deer has the choice of any part of the field to feed in, and is not confined to one particular spot in close proximity to the hunter, where the choice of positions gives the latter the best light. Here, then, matters are evened up, and the deer has even odds with the man, as the Irishman said when he whittled the duck's bill to a point, to "give the crather even odds wid the hins."

At the lick, if a deer comes at all he comes surely to his death unless the watcher is a novice and gets the buck fever; but in the field the hunter may sit all the night and watch one or more deer, as the case may be, daintily feeding on the flowers and tender tops of the alfalfa, now approaching a little nearer, bringing the watcher's interest to fever point; again going further away, and sending expectations of a shot down to zero or below. This, to my mind, constitutes the charm of this method of hunting, and I will try to detail the events of one unsuccessful and another successful night, to give the readers fair examples of the sport.

First, I would remind the reader that our California summer lasts pretty nearly the year round, and the seasons are distinguished as the wet and dry. The dry season commences about June 1 and lasts until November usually. During this time vegetation is parched in the valleys and foothills, and a green and tender blade of vegetation can only be met with along the banks of streams, or where man has diverted the water from its natural course and used it for irrigation. Consequently the deer that remain in the foothills during the summer (the greater number retire during this season to the higher slopes of the Sierra) make frequent visits to these irrigated fields for the purpose of enjoying the green and succulent herbage as a palatable change from the parched vegetation, which otherwise must form the staple of their diet. In September many of the large bucks come down to the foothills in search of the acorns of the white oak; and these latter with an occasional feed of alfalfa constitute their diet. It is then from about Sept. 1 until the rains come that this form of sport can be most satisfactorily enjoyed.

I used to be very fond of the sport, but for the last five or six years circumstances have prevented me from enjoying it, and hence it is that I take pleasure in recalling the past nights spent in its pursuit, as much for my own as the reader's pastime.

It was in the September moon, early in the '80s, that after a drive of ten miles I found myself at the well-cultivated ranch of a farmer friend. He told me that the deer were coming in every night, and the prospects of getting a buck were good. His alfalfa field comprised a spot of level valley among the rolling hills, about ten acres in extent, through which ran a small stream, dry now, but in places deep enough to hide a man and screen his head with the weeds on its sides. On three sides it was surrounded with fine oak and pine timber, with the usual manzanita and chapparal undergrowth; just the place for deer.

Dusk found me safely ensconced in a depression caused by the stream, protected by a warm overcoat and a heavy robe wrapped around my nether limbs; for be it known that any one who wants to sit motionless for hours in comfort must be well wrapped up. The field was a "flat-iron" in shape, and from my station could not be nearly all commanded with certainty by the rifle, even in daylight. The field was nearly all under my vision, the moon at my back and the chances for a shot favorable.

The day and its noises departed, and gentle night stepped in, with Cynthia slowly climbing the starry arch. The cicada commenced his shrilling cry, the nighthawk circled noiselessly overhead, and the owl hooted his melancholy serenade to the moon.

By the way, does the western nighthawk ever fall through the air with the booming sound that the eastern does? I have never observed it do so, and would like to know if any one else has ever noted the fact. I mean the species *Chordeiles popetue henryi*, which is the only one I have ever seen in this part of California. The specific differences between this and *C. popetue* are so slight that one would expect their habits to be the same. Certainly their flight and call notes are similar, though the latter are less often uttered. But to resume.

As the last rays of daylight fade away, and this side of our globe is left to the sovereignty of the moon, now rapidly approaching its full, familiar objects become deceitful and weird. That little clump of chapparal on the bank of the arroyo, which was plainly a bush a few moments ago, is now endowed with seeming motion and ever-changing shape, and needs close scrutiny, oft recurring, to keep it from becoming a buck with branching antlers. The shadows of the encircling timber become living creatures, and the straining vision shapes out many a moving form that takes a long hard wink to change back to its original guise. The light daylight green of the alfalfa changes to deep blue, and the gathering dews deck its glistening leaves with a countless sea of sparkling gems that reflect the cold rays of the moon with a phantom iridescence. The stars appear pale and small in the presence of the magnificent queen of the night, and the murmur of the pine-clad hills comes down to me with a drowsy cadence. Now and then a favorable eddy of the night zephyrs wafts the subdued roar of Bear River, a mile away, to my strained ears. Then there comes, pulsing on the air, a faint throbbing sound, fading into silence; then again, swelling out more distinctly, to again die completely away. There, again it

comes! What is it that makes this rhythmical beat like a fever-pulse in ears? Too-o-o-o-t, and the shrill whistle of a locomotive, mellowed into music by night and distance, explains the mystery, as it winds its way with many a devious twist and turn among the obstructing hills, and puffs and labors with its load, up a gradient of 115 ft. to the mile, on its way to the effete East.

But hush! surely there is a ghostly form standing where nothing stood a moment ago; yes, a deer surely, but only a doe, for there comes stealing out of the shadows after her two smaller copies of herself. Quietly and daintily they step around, nibbling here a mouthful and there a mouthful, but surely and gradually coming nearer and nearer. In an instant these are forgotten, for there, broadside on, with his blue coat and branching antlers gleaming in the rays of the moon, stands a noble buck. How proudly and slowly he advances, scanning every object with a careful eye, until evidently satisfied that all is well, he too plunges his delicate muzzle into the cool dew-laden clover. Then comes a moment of hope, then despondency, as he advances or recedes in his dainty croppings of the fragrant tips of the herbage. Confound this jade of a doe, she is almost upon me, and will surely get my scent and then the jig is up for this night. But no, after coming so close that I could see the moisture gleaming on her coal black nose, she gradually edges off toward the side of the field and the buck is almost within certain range. But, darn a hog anyhow! I had been warned by my friend that a band of wild hogs had found a weak spot in his fence and had been visiting his field every night, and here they come—a dozen strong.

Now, give me a wild hog to scent danger before any other living creature that I know anything about! They came rushing into the green feed, and commenced munching and champing their jaws, after the manner of hogs, for a few minutes, seemingly oblivious to everything but gorging themselves. Suddenly one of them stopped munching, threw up his head for an instant in a listening attitude and then in a plain and uncompromising tone of voice said, woof! Instantly every son of a hog among them dropped his mouthful of grass and stampeded, and in ten seconds of time there was not a hog or a deer within a mile of me, and the air in my immediate neighborhood took on a certain burning and lurid appearance, that would put an old Bunyan's Pilgrim's Progress print of Hades to the blush.

So ended the first inning, with the score in favor of the deer. Stiff, cramped and sore, I arose from my constrained position, after a four hours' watch, and trudged off to the house to finish the night in bed.

With a promise to my friend that I would return before the moon was too old for good watching, I returned home the next morning with a deeper-rooted prejudice against hogs than ever before.

Three nights afterward I made another journey to the same place, and with better success. This time I chose a spot on a sidehill, near where the large buck came in on the previous evening. A farm road skirted the irrigated ground on the south, and on the bank, by the side of this road, stood a pile of cordwood. This I chose for a stand (or rather sit), as I could set some wood on end, leaning it against the end of the pile, and forming a little recess in which I could comfortably sit, with my legs well wrapped up and dangling over the side of the bank. I found this an advantageous position, as I was elevated above the level of the green field some ten feet, which of course aided my vision. This stand did not command nearly so much of the field as the one in the arroyo did; but what it did command comprised the acute angle of the irrigated land, where all the deer came in on the previous evening. Ensconcing myself snugly in my little recess, with a sack stuffed with straw for a seat, I found myself luxuriously situated and awaited the coming of darkness. This soon crept on, and the moon being past its full, the landscape was wrapped in total obscurity and the voices of the night began to babble their secrets to my strained ear.

Dark night, that from the eye his function takes,
The ear more quick of apprehension makes;
Wherein it doth impair the seeing sense,
It pays the hearing double recompense.

Hints of the coming moon soon made themselves apparent in the eastern horizon, and soon she peered through the pines that crowned the hills in that direction; and field, hill and tree again took shape under her soft rays. The cicada's monotonous shrilling music filled all the sleeping world, and again the words of the immortal bard describe the scene:

How sweet the moonlight sleeps upon this bank!
Here will we sit and let the sounds of music
Creep in our ears.

The hares came and played about my feet; a little burrowing owl, *Speotyto cunicularia hypogea*, alighted on the woodpile, within a foot or two of my head, and crooned out his peculiar harlequin-like utterances. A small black object presently caught my attention, and soon I was in a shiver of fear, as a large *Mephitis americana*, vulgarly known as a skunk, came galloping down the road, now and then stopping to pick up a cricket. He came close to the bank on which I was sitting, and when opposite stopped and sniffed deliberately at my feet, and then rising up took a smell at the muzzle of my rifle which rested upon them. I could plainly hear the sniffing noise he made as he pursued his investigations, and actually held my breath in apprehension lest he might take umbrage at my presence and dose me with his nauseous scent. After a second or two he dropped down again, and whirling around and elevating his tail to a perpendicular, raised his hind parts as though they were on stilts, and began to very slowly straggle off, evidently ready for action. I nearly swooned for a moment, and after he had gone sat in a cold perspiration for some time. I got a dose of skunk medicine once when a boy, which has given me a half horror of the animal, and Heaven forbid I should ever get another.

The hours wore on and no deer appeared on the scene. When within about one hour of midnight, being cold and tired, I leaned forward to take a careful survey of all my surroundings, preparatory to giving up in despair. Judge of the thrill of excitement that pervaded me, as I looked toward my left, to see, standing ghost-like in the full rays of the moon and within ten feet of me, an enormous buck. How he ever got so close without making a sound will always be a mystery to me. There was something so actually uncanny about his appearance that it startled me. I sat in motionless amazement watching his stately

form, and unable, from my nearness, to make even the slightest movement, or scarcely to breathe. Why he did not scent me I cannot tell to this day, for the breeze, what little there was, was blowing directly toward him, and by stretching out my arm at full length, I could have touched him with the muzzle of my rifle. After what seemed a very long time, he stepped forward into the clover and began quietly feeding within twenty steps of me. The tension of my nerves gave way as I saw that the noble fellow had not scented me, and slowly raising the rifle to a level, I aimed for his heart and fired. The smoke hung low in a dense cloud in the damp moonlit air, but surely, through the bellowing echoes of the night I could hear the thump of his hoofs as he bounded off. A clean miss, by all that's unlucky! But surely no; I had splendid aim, and he was so close that it cannot be. And just then came a dull sound as of a falling body, and following this came a rattling gurgles, as of a creature breathing in sore distress. Guided by the sound, I advanced about a hundred yards, and lying in the dewy clover was a magnificent buck giving his last spasmodic gasp, shot through the heart. Taking out my knife I attempted to bleed him, but no blood came. Every drop of blood in his veins had escaped into the chest cavity, through the ragged hole in the heart, and he had run until it was spent, and then dropped dead. He was the finest specimen of the blacktailed deer I ever shot, weighing 211 lbs. and with fat on his rump 1½ in. thick. When opened, his paunch was full of acorns, which accounted for his fine condition. I have had many other nights, both before and since, spent in like manner in different fields, but these two will give a fair sample of a sport in which both the hunter and the hunted have a fair show. This cannot be said of the detestable jack-light. AREFAR.

AUBURN, Cal.

LOG OF THE LAUNCH GREENWING.

LEFT Vicksburg 9:30 A. M., Monday, Jan. 13, 1890; out West Pass 10 A. M. Entered the old river at 11 A. M.; passed Steele Bayou at 1 P. M., the bridge 2 P. M. Entered Little Sunflower River at 4:20, tied up at 5:30, two miles above the Mounds.

Started on 9 A. M. Tuesday up river. Where we couldn't see one way we saw-ed it through drifts, and rode logs where too deep to saw. Stopped about a mile above Coon Bayou for camp. Lawrence located and Polk shot a young gobbler with his rifle, and after a hard race Lawrence ran him down and retrieved him. All were much elated over the good start made.

Wednesday, Jan. 15.—Although raining hard all were up and out soon after daylight. Got our rubbers washed and saw nothing. Rained nearly all day. P. and L. went down the river just before night and saw lots of turkeys near Coon Bayou, and made one shot without getting anything.

Jan. 16.—P. and L. were out early to get turkey while roosting. L. shot at two, wounding one, but not finding it. P. and I went on down the river, he hearing and seeing a flock just above old upper camp, but not near enough for a shot. At night P. went up the river two miles and I down below lower camp, neither seeing anything. It was a very cold day. The ice was over ½ in. thick, and the frost like a young snow.

Jan. 17.—P. and I went down to the old camp and out to the lake, flushing a flock of turkeys there, but not near enough for a shot. L. went out back of camp and flushed a flock there. After dinner we moved camp two miles down the river. Three days without getting anything makes us fear we will go home without being burdened with game, as turkeys killed Tuesday will hardly keep, as it is getting warmer again.

Jan. 18.—Bright, warm and pleasant. P. and L. went down to the bayou. They saw deer and flushed turkeys, but did not get a shot at them. P. went up to the lake toward night, turkeys ran almost over him within 10 yds. of the boat, and went to roost near by. P. got in his work on one, bringing a nice gobbler back to camp, making all cheerful, and elating him so he beat the others badly at cards for the first time.

Jan. 19.—Cloudy and warm in the morning and sunshine in the afternoon. P. went out early in the morning. L. and I slept until 8 o'clock, bathed, put on clean clothes, hung out bedding to air, moved the boat closer to the bank, and had breakfast ready by 11 o'clock, by which time P. had gotten in. P. went out in the evening hunting a mythical lake east of camp, which trappers had told us of last year, and found it. Quiet and pleasant day.

Jan. 20.—Monday—Pilot went to old camp after squirrels. On the way up he flushed a flock of turkeys and shot a hen from it. Spent the day up there but got nary squirrel. Nearly ran over a big moccasin. P. and L. went to run out. Saw plenty deer signs and flushed some turkeys; got none.

Jan. 21.—All out prospecting but got nothing. L. located a flock of turkeys going to roost just above run out.

Jan. 22.—All up at 4 A. M. to sneak on the turkeys while at their morning nap. Got there about 6 o'clock, found them all there. P. took a position on the right bank watching the sentry on that side. L. and Pilot went to attack the main body located in a tree on the left bank. Thinking to surprise them before they woke, we got out of boat and were creeping up the bank, as we thought, very quietly, when the sleepy, unsuspecting turkeys took wing and left, proving their reputation for sharpness, and out witting us completely. P. then dropped down and killed one on his side. Nothing else was seen that day.

Jan. 23.—All were out in the morning. Saw nothing. Moved camp below the big drift. P. and L. paddled back to Coon Bayou, which was prospected for three or four miles. Nothing was seen.

Jan. 24.—Left camp at 8 A. M., arrived at anchorage at 3:30 P. M., running slowly most of the way. Killed a duck in Old River, and crippled and chased another. Brought in three turkeys, having consumed one in camp.

All well after a charming trip, which all enjoyed, although but a small bag was obtained. Estimated distances: To Steel's Bayou, 19 miles; L. N. O. & T. bridge, 7 miles; mouth of Little Sunflower, 18 miles; Mounds, 5; Coon Bayou 10; Run Out, 10; Howlett Bayou, 5; total, 74 miles. W.

FOREST AND STREAM, Box 2,833, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloam," "Dick Swiveller," "Sybilens" and other competent authorities to be the best treatise on the subject extant.

SMALL GAME IN NORTHERN MEXICO.

WHAT anticipations were indulged in on the eve of a protracted trip in the Northern States of Mexico! A trip, not by rail, but "outside a mule;" camping out free from restraints of civilization, and so far from population or towns that the rifle and shotgun must be depended on mainly for supplies; offering all the possibilities for hunting and observation of game, known and unknown. Since boyhood, for thirty years resident of several States from New York to Texas, accustomed to hunting of small game when the cares of business would allow, the mere idea if such a trip renewed the feelings of youth, which many middle-aged persons think passed forever.

A good rifle was purchased, a good shotgun was already possessed, and what is better, a full knowledge of how to use it, for as a rifle shot I freely confess that in shooting at game I am not a success judging from the hunting accounts usually seen in print.

I shall confine myself in this article to the small game to be found in the States of Chihuahua and Sonora. We had protracted camps on the rivers San Pedro and San Bernardino, and other waters in the Sierra Madre, which range is merely a continuation of our Rocky Mountains after the depression which exists at the southern boundary of Arizona. On these waters were killed the usual varieties of birds of plumage, mallard, widgeon and teal predominating. Nearly all varieties of waterfowl, from the swan to the ox-eye snipe, are common to the elevated plains of Mexico, where water is abundant and may be had until February in the best of condition.

It is often asked, "Where has the game all gone?" Here geese, ducks, cranes, snipe, curlew, etc., abound, seeking a haven of rest with our neighbors, who, as a rule, are not hunters of small game and look upon a shotgun as a curiosity. A bunch of mallards will at any town collect a crowd, and the elated hunter be asked in all seriousness if they are good to eat. The American sportsman should rejoice that at one point on the continent the breechloader is practically unknown.

The resident varieties of small game are not many, but some of them are important. Wild turkeys are fairly plentiful in the Sierra Madre, and afforded fine sport as well as welcome addition to our larder. These turkeys are not identical with those of the United States, being much lighter in color of plumage, as well as having the head less covered with hair, and being somewhat greater in size as a rule.

The common or Bob White quail is unknown, as are the grouse family. They are replaced by the blue and topknot quail, which are very plentiful, but afford little sport, as they run before the dog, and when shot, if not instantly killed, will roll and struggle like a prairie dog until some hole is reached, when they are lost to the hunter, for in a section of country where snakes and tarantulas, to say nothing of scorpions and the lesser venomous pests, abound, it is exceedingly dangerous to run one's hand in dark places.

In the mountains in scattered timber another variety of quail is found, called "fool quail" in New Mexico and Texas. It is probably one-third larger than the common quail, and a handsomer bird and superior for the table. Usually the coveys are small, not more than four to seven birds being found together. I question very much the scent-exuding properties of these birds, for a very fair pointer that I had with me could never be induced to work them satisfactorily. The usual plan of killing them is the primitive one of "busting with a rock" or breaking their necks with a stick or whip, or a cowboy very expert in the use of a pistol may shoot their heads off. They lie extremely close and only start up after one's passage, unless actually disturbed by the feet; then it is a snap shot or nothing, for it is rarely that one can be flushed the second time.

Woodcock are probably unknown in the States named, but the jacksnipe or English snipe are abundant on suitable grounds, while the grass plover is plentiful on the great plains, especially in Chihuahua, and I have seen some in Sonora.

Of doves, in many places classed as game, the northern portion of Mexico possesses at least four varieties. The smallest compares in size with the robin, and is a familiar bird, often nesting in the crevices of the adobe buildings of the country. The plumage is in general the same as our common dove, except the dark spots on the wings are more decided in color, and they show less white in the tail. Our common dove is also plentiful and at times becomes a decided nuisance at small water holes, befouling the water so as to make it undrinkable. The next in size—say one-third larger than the common dove—presents the same general appearance, but shows a large white spot in each wing, very noticeable when flying. These doves are plentiful on the Sonora River, and are fine eating, as I can personally vouch for. The fourth variety is nearly identical in size with the domestic pigeon, with bronze-blue back, chestnut breast, growing lighter underneath. In full plumage they have a white ring around the neck, and with their red feet and plumage with its metallic sheen, are unquestionably the handsomest bird of the family *Columbidae* that I have ever seen. I killed a number of them in the southeast end of the Huachucas only a few miles from the American boundary, and have also seen them in mountain regions lower down the country.

Rabbits, both jack and cotton-tails, are plentiful and too common to be considered game in Mexico or any of our own Western States.

Of the squirrel family, neither the black, gray nor fox varieties are found, being replaced, however, in rocky, brushy regions by two varieties of rock squirrels comparable in size to our gray and fox. These rock squirrels are gray in color, with hair coarse and harsh to the touch, and living as they do in the crevices of rocky bluffs, are extremely hard to kill or at least to get in hand. Their flesh is sweet and tender. In the heavy pine forests of the Sierra Madre is found a beautiful tree squirrel, a soft bluish fur covering the back and head, shading into nearly black on the sides and down the legs, while the throat and belly are again toned into pure white. The eye is fine and black, while the ears are tipped with black hairs fully an inch in length, and the tail is fine and beautifully shaded with black and maltese blue. They are very active, being somewhat less in size than the fox squirrel and would make interesting pets, but frequent dollars that I offered for young ones failed to secure a single living specimen.

On the San Pedro River, an unknown semi-aquatic bird—seen frequently afterward—attracted my attention

and a load of shot. This bird compares in size and general appearance with the long-billed curlew, only the bill is about one-half length, and plumage is a jetty bronze black in color. It was dressed, but unfortunately lost from a pack before camping time, so its game qualities were lost to me. It has no local name.

In this same San Pedro River numerous beavers can be found, especially in its upper waters, where they seriously interfere with attempts to use the water for irrigation, for the beavers, according to Western usage, exercise the prior right of possession and dam up the *acequias* regularly every night. One was killed by our party, but as we were tenderfoot and fully provisioned at the time, did not test its edible qualities. Whether this is the southern limit of beaver in Mexico—lat. 31°—I cannot say, but I have seen none in other streams.

This list of game is not large, nor is mention made of new species, but what we saw afforded much sport, and when this country is once opened will attract visitors from all sections, for I have only given a plain statement of the small game found, leaving my impressions of the climate, scenery and the actual experience of the trip for future articles if they may be desired.

AUSTIN, TEXAS.

A BEAR HUNT IN TENSAS.

POINT PLEASANT, La., April 15.—In the latter part of December, 1886, Mr. A. A. Skinner and myself started from home to meet W. R. and T. S. Osborn at our old camping grounds on Mill Bayou.

We arrived there about the middle of the day, some time before the Osborns. About 1 o'clock we heard their horses, and shortly afterward they came into camp. After a hasty lunch we took the dogs, some thirty-six in number, and drove the bear-den cane. We soon found that the bears had eaten all the mast around that cane and had moved off. Back to camp we went, packed up and struck out for the Tight-paper Cane, some six or seven miles distant.

On our way Trueman and Lucy, our start dogs, struck the trail of a traveling bear. They began giving tongue, and it was no time before the whole team were in full cry after the bear, a large he. T. S. Osborn unloaded his horse and followed the dogs. The bear led them a lively race of about a mile, when he stopped to fight, but the dogs soon made it too hot for him, and he took to a tree, where he was killed by Osborn.

The sun was getting low by the time we got the bear dressed, but we made it to our camping ground on Spring Bayou in time to get up wood enough to last us during the night. The night was very cold and we had no tents, so we had to have wood enough to keep up big fires. We ate a hearty supper of broiled bear ribs, liver and provisions brought from home, washed down by coffee such as only campers know how to make.

We had a good night's sleep, and next morning before it was light were up and preparing for the day's hunt. By the time we had eaten a hearty breakfast, the sun was up and we were off for the drive. We had not got more than a quarter of a mile from camp before the dogs struck a fresh trail where the bears had been feeding on over-cup acorns. They trailed only a short distance into the cane before the bear got up, with every dog after her. I let my horse out, and it was a nip and tuck race to the stand, about three-quarters of a mile. I got there first, and as she ran into the slough I let her have a load of buckshot broadside and tumbled her over nicely. It was a barren she and fat. Before I could take the entrails out of her the dogs had another bear up. I ran down the opposite cane ridge and was killed by Jim Corbett. Skinner's horse saw the bear as it crossed the stand, got frightened and threw him, then took the trail for home, about twenty-five miles distant.

After I had finished dressing the bear I had killed, I rode in the direction of where I had last heard the dogs. I had not gone very far before I heard them coming back toward me in full cry. I galloped back to where I thought the bear would cross, and sure enough it came, and I killed that one.

Corbett and Skinner came up with the one they had killed, which was a small one; so was the one I just had killed. We got it on a horse and started back to where I had killed the first one, when the dogs started a fourth bear, which I killed not far from the first one.

We then blew our horns and got all the party together, on consulting our watches found it just 12 o'clock. As the dogs had not eaten anything since the morning we left home, we concluded to go to camp, feed them and try the bears next day, as none of the bears we had killed were extra large, and we saw signs of some monsters. We got back to camp in time to dress and hang up all the bears before dark. We had a delicious supper, all ate heartily and then rolled in our blankets, thinking to sleep the sleep of the tired. But alas! about the middle of the night it began to rain, then sleet, and by morning everything was frozen tight, and to make matters worse my horse had gotten loose, leaving me 25 miles from home. Skinner very coolly remarked that he now had company for his tramp, of course.

We broke camp and started for home. Skinner and I each had a negro boy along, so we packed all our traps, meat, etc., on the two mules, bidding the balance of the party good-bye we took the trail homeward. After going about 15 miles Skinner got his horse, but mine I did not see for two weeks.

It continued to sleet and snow off and on for two or three days. That was the last hunt that I was on for that season, but the Osborns went back after the weather cleared up and killed two large bears.

HUNTER.

NEW BRUNSWICK BIG GAME.—Fredericton, N. B., April 29.—*Editor Forest and Stream:* The moose are increasing here very fast, and if properly protected will soon be very numerous. There are now plenty of caribou and red deer. I was informed the other day that the wolves had put in an appearance, but cannot vouch for the correctness of the report. I hope that I was misinformed, as the deer are getting very plentiful in certain localities, and if these pests come among them there will soon be an end of them.—H. B. R.

THE Spangler crimper, advertised in another column, receives the highest commendations from those who have used it, for its regular and even work. Every part of this crimper is made by machinery, thus insuring the utmost accuracy, and all parts are interchangeable. Special tools are now being made for its manufacture, and will be completed soon, when Mr. Spangler will be able to fill all orders, many of which have been unavoidably delayed by reason of improvements in the crimper and the tools used to make them.—Ado.

A CALIFORNIA SPRING DAY.

WHILE driving along in the warm sunshine and in the midst of the beautiful green grass, blooming roses, and many varieties of wild flowers in the fields, we could look away to the eastward some sixty or eighty miles and see the snow-covered Sierras rearing their white heads heavenward, and we could scarcely realize that the snow upon the range in many places is now lying to a depth of fifteen or twenty feet. Calling at the home of a friend on our way, the writer was permitted to pick some beautiful ripe oranges from a tree in the garden, and growing close under the branches of the orange trees, heavy with golden fruit, was a bed of beautiful white lilies in bloom. I gazed from the fruit and flowers away to the cold white mountains in the distance, and my thoughts made a sudden journey to my far away Eastern home, where the mercury hovered between twenty and thirty degrees below zero, and a full-grown blizzard presided over all only last week, and I thought, "who would not be content to dwell in the land of the far-famed and deadly tarantula and centipede!" We saw farmers at work making gardens, plowing, etc., and the much-loved Celestial diligently at work pruning vineyards; and upon all hands a busy scene of industry.

The first creature we encountered in the way of game was a little prairie owl, sitting demurely by the roadside and twisting his head nearly off in his endeavors to keep his eyes on us; but he looked so very wise that we concluded he belonged to a different family from the villainous creatures described by Fannie Pearson Hardy, and deeming his innocence worthy of protection we couldn't harm him.

We were driving along enjoying the beautiful scenery and listening to the joyous songs of the larks, when my husband suddenly called a halt in a mysterious undertone, and when I stopped the buggy he hastily dismounted, and taking the shotgun out proceeded to load it. He was somewhat disappointed to find upon opening the cartridge box that he had brought only No. 6s, and this looked a little extravagant, considering there were nothing larger than larks, blackbirds and robins to be seen. Still there was no remedy at hand, and he had to do the best he could under the circumstances.

Driving on a little distance that our steed might not be frightened at the shots I heard two reports, and in breathless expectation awaited developments. My astonishment was not small when I saw my stalwart gunner come tugging along with two great big blackbirds in his hand.

A faint smile took possession of his countenance as he apologetically exclaimed:

"I couldn't help it, dear, there was nothing else I could get, won't they do better than nothing?"

"Certainly," I replied, "we will have a nice pie for our dinner, though of course it will scarcely reach the dimensions of the famous blackbird pie which was once upon a time supposed to have been set before the king."

We spent a few hours very pleasantly, the cartridges were rapidly disposed of and we reached home heavily laden with nine birds in all, including one little robin.

Game seems very scarce, as we saw nothing larger than the birds mentioned, yet we had a sumptuous dinner and shall certainly be thankful if we always meet with as good success.

SACRAMENTO, CAL.

MARTON.

THE PROFITS OF TRAPPING.

Editor Forest and Stream:

Doubtless there never was more sense and pith given in so few words as is contained in the last sentence of the article under the heading "Snap Shots" in the issue of March 6. Why, there is scarcely a boy in the back farming settlements who has not his traps and uses them for all they are worth, even where there is no fur larger than mink and muskrat. Then, as you go further back to the newest settlements the grown up sons and even heads of families have lines of traps ten and even twenty miles, with outlying camps, and lateral lines extending to lines of other trappers in adjacent settlements. Then there are those who go still further, even as far as the furthest lumber camps, where they make their home camp, with outlying camps beyond; and should an outsider set up a line of traps on such grounds he will soon find his traps, if found at all, "hung up," but most likely they will be in the bed of some stream if not confiscated. This is according to the unwritten law that obtains in the woods. Let the boys take their outing, all the same. Take tent and provisions for camping not far from some back settlement fairly easy of access. Always there are plenty of partridges, and in nearly all the back settlements of western Maine deer and caribou can be found in easy distance, which the nearest settler will be glad to pilot to for a reasonable recompense.

Don't be ambitious of big scores, but go for a fairly good enjoyment of camp life in the woods and you will not be disappointed. On the other hand, if you go thinking of dollars and cents in the way of trapping you will come back sadder and wiser men. I am led to these remarks by being almost constantly in receipt of letters of inquiry as to best places to go to trap; to all such I would emphasize the ultimate of the article referred to at the head of this—don't.

OLD MAN OF THE WOODS.

GAME PROSPECTS.—Paola, Kan.—*Editor Forest and Stream:* I have noted with interest notes on the welfare of game after the past winter. In this locality I do not think game ever fared better. Quail are very abundant here now, principally females, and as the nesting season is approaching, and there is no danger now to the lives of the quail, I predict a great crop this season. The fall shooting here was fine, and after the 1st of January but few quail were killed, as the law is pretty universally respected. The migrating ducks are now upon the rivers and creeks near here, and all sportsmen are happy. The principal kinds killed are scamp, mallard, pintail (red, brown and blue), and a few woodduck. Pinnated grouse are rapidly being exterminated in this county, as they are hunted with such perseverance as the quail had never known. A good many spring birds have arrived, chivvies, field and wood sparrows principally. Robins, tits, woodpeckers and bluejays, crows and hawks started with us all winter.—J. W. M.

FOWL IN MICHIGAN.—Newaygo, Mich., May 1.—*Editor Forest and Stream:* Ducks and geese are plentiful, with an occasional white swan. All are now moving northward, but their fate is only postponed.—LIMBO.

A REVOLVER REST.

THIS is a sketch of a revolver rest I made not long ago. The total length of the contrivance, including the pistol, is 33in., and the distance between the peep sight on the rest and the end sight is 21in., which is about the average distance between the sights on a rifle.

I was led to the construction of the rest by a desire to ascertain, if it was possible, for a revolver with a 3in. barrel, to throw a bullet with any degree of accuracy.

I knew, from experience, that I could not do any creditable shooting with it off-hand and I wanted to find out whether (leaving out the factor of marksmanship) this was due most to the extreme closeness of the sights or the shortness of the barrel.

With this end in view, I secured the revolver firmly at one end of a piece of half-inch board and at the other end fitted a stock, shaped after the model of the stock of the Winchester rifle.

Having screwed on a peep sight and adjusted a lever connected by a piece of twine with the revolver trigger, in such a manner that it served for a hair trigger, and having carefully lined the revolver sights with the peep sight, the contrivance was ready for use. Then came the test. Just outside my window, about 10yds. off, was a maple tree on which was a white spot, possibly 1 1/2 in. in diameter. At this I aimed and succeeded in putting three successive bullets in it. A number of other shots proved that the revolver with the rest was almost as accurate as a rifle up to 30yds., and that the short barrel of itself was not responsible for any misses.

Having demonstrated to my satisfaction that the revolver would shoot straight, I decided next to test the practical value of the combination as an outdoor arm on woodchucks. I walked south from Hartford for about three miles before I got my first shot. Then, just after crossing a log ridge at the edge of a piece of woods, I came suddenly upon a woodchuck some distance from his hole. Aiming carefully, I tumbled him over at about 25yds. A little further on, across the road, I spied another woodchuck making for his hole. As I expected, he stopped at the mouth of the hole, and I gave him a shot at a distance of 40yds. The woodchuck disappeared and I walked toward the hole, uncertain whether I had hit him or not. When about 30yds. off, however, he stuck his head out of the hole. I fired quickly and saw the bullet strike just over him. I cocked the revolver again and walked a little closer, stopping between 15 and 20yds. from the hole with the pistol at my shoulder. "Give me another shot," I thought, "and I'll do better."

An instant after I saw the brown snout of the chuck appear. I aimed a trifle lower than I had before, fired, and when I ran up to the hole there lay the old fellow—and he was a "whooper"—with a bullet hole bored neatly through the center of his organ of curiosity.

I never saw a woodchuck of quite so inquiring a mind. He seemed to be saying each time as he popped his head out of the hole, "That ain't a gun you've got. What kind of an old board is it you're shooting with, anyhow?" I doubt whether his curiosity was ever satisfied.

One screw fastens the revolver in place, the stock is easily detachable, and, as altogether it weighs only 2lbs., this combination is very handy to take on a tramp where a rifle of any great size or weight would be inconvenient.

TYCHO.

THE KENTUCKY CLUB.—Louisville, Ky., May 1.—The present game laws of the State are very loose, and are very poorly enforced. In the Legislature, however, the following bills have been introduced: An act to establish the fish and game warden system, etc. An act for the protection of fish in the waters of Kentucky. An act to amend chapter 46, General Statutes, title, "Game and Small Birds." An act to amend the law in regard to posting lands. All four of these measures were prepared by the Kentucky Fish and Game Club, and this organization is using every endeavor to have them become laws. Those who have no interest either way are unanimous in the opinion that the proposed acts are decidedly in favor of the farmer in every way, and the latter, though he at first objected to be dictated to by the "city chaps," as he called them, is beginning to realize the value of them both to himself and the game, and has instructed his representative to do his best in assisting to make the bills a law. The first three bills passed the Senate almost unanimously, and when all four of them were introduced into the House they were made a special order. Other matters interfered, however, but they will come up next week. The laws will be strictly enforced and all violations will be punished with the assistance of the now great club that framed them.—C. A. D.

SPRING IN MINNESOTA.—McHugh Station, April 23.—Spring has finally made an appearance, much to the discomfort of snow and ice, which are rapidly disappearing. Ducks are coming in abundance and are being bothered very little, and as much also can be said of the snipe, which are quite plentiful; the other migratory birds have most all arrived except a few dilatory ones that seemingly care nothing for the early worm.—J. G. N.

KILLED BY THE WIRE.—Holyoke, Mass., April 28.—*Editor Forest and Stream:* I call on you and your many readers to lament with me the untimely end of a bird born to die game before dog and gun. A poor woodcock, being too venturesome, met his death at the hands of that foul assassin, the electric wire. It is a male bird in fine feather and condition, weighing within a fraction of 7 1/2 oz.—THOS. CHALMERS.

GREEN RIVER AND CORN ISLAND.—Louisville, Ky., May 1.—Green River, of this State, winds its way through the dark chambers of Mammoth Cave and breeds fish without eyes. Great flocks of ducks make their winter home on its clear, deep waters. The river has never been known to freeze over, consequently the web-footed tribe

have no trouble in finding an easy living there when other streams are not fit for winter quarters. In the fall and spring the little bayous along its course are overflowed. These are generally fertile, low spots that have been cultivated, and never become so inundated that a pair of rubber boots would not be a safeguard against a wetting. In February these swamps are black with ducks. Corn Island, in the Ohio River, just above Owensboro, is a great gathering place for geese and pigeons, and when scarce everywhere else they may be found there. For many years a famous pigeon roost has been located there, and still is a retreat, although pigeons are rapidly disappearing from all parts of the South.—C. A. D.

Camp-Fire Flickerings.

"That reminds me."

302.

IN one of the old mining towns of this part of California, away up on the slope of the Sierra Nevada, there lived several years ago, during the active working of the hydraulic mines, a celebrated character, whose modesty, as he is still in the land of the living, forbids my giving his name. His justly celebrated fame arose from his remarkable power of narration. He could take any trivial occurrence that happened in town, dress it up in such glowing colors and throw so many vivid sidelights upon it, that not even the participants themselves could recognize it. G. B. undoubtedly wore for years the belt as the champion liar of that mining region, and one of his stories, that I happened to hear him relate, I think is worth preserving in the columns of the FOREST AND STREAM. I will let him tell it in his own words:

"It was in the spring of '50 that a train of sixty-five on us started across the plains for California. The most on us were young men 'an' able to rough it, but we had three fambly, with about a dozen young uns among us, an' one baby was born on the way. Wal, of course, fresh meat soon got mighty scarce, as there was so many trains on the trail ahead on us that all the game had been killed or scart away. The young mother she kept kind o' pindlin like, after her kid was born, and got sick o' bacon, an' sich like, an' the young fellers that had hosses o' their own to ride, there being half a dozen on 'em in the train, used to scour out on the plains for fresh meat for her. One day three on us got arter a couple o' antelope early in the mornin' when our hosses was fresh an' we jest took arter 'em, a yellin' like Comanches, jest to see 'em run. There was a couple o' hills on the plain that stood seprit, with about twenty rods o' ground between 'em at the fur end, and the critters made a break to go between 'em. We was comin' on arter 'em like we meant to catch 'em, when they see that this open place between the hills had grown up with tall chapparral. Now an antelope won't run up a hill, nor into thick brush if he knows it, so they stopped till we got a'most up to 'em, an' one on 'em tried to run back by us, but one o' the boys stopped him with a charge o' buckshot. The other one seein' what an almighty tight place he'd got into, jest made for the bresh an' tried to jump over it. Wal, sirs! he made the all-fredest jump as ever I see, but when the critter got up into the air he seed he hadn't jumped far enough, an' 'em a liar if he didn't gather himself in the air an' gin another o' the most tremendous jumps that any critter ever did make, an' jest went a-sailin' right on over the bresh an' landed on t'other side on't slick and clean!"

AREFAR.

Sea and River Fishing.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 1.—There will be a few mascallonge and a few bass and a few trout taken by Chicago anglers in the month of May, but the angling season proper will not be on until the first of June. This is a late spring, and it will be some weeks before the fishing is at its best. The bass are spawning in May, and it is wrong to take them before about June 1, no matter what the law says.

Mr. C. D. Gammon and his party will start on a mascallonge trip, probably within a couple of weeks, if the weather warms up in Wisconsin. May is naturally the best month for mascallonge, at least until fall, taking the seasons as they average, and there may perhaps be fair fishing this month. This party was very successful at Vieux Desert last year. The writer may possibly be with them for a day or so this year, as it isn't polite not to accept an invitation two years in succession.

Speaking of mascallonge reminds one that a specimen of that fish was caught a week ago in the Grand Calumet River, below Chicago, where they were supposed to be unknown. Mr. Booth, the veteran fish dealer, pronounced the fish a genuine mascallonge, but doubted its being caught in that stream. Yet this is the third mascallonge caught there of late years. Talking of this last night with Henry Kleinman, who has hunted and fished all over the Calumet country for thirty years, he said that twenty years or more ago they used often to take mascallonge in the Calumet River, and frequently very large ones in their nets out in Lake Michigan. I never knew that the latter water ever had a mascallonge in it, but it cannot now be doubted.

Henry Kleinman told of one way to distinguish a mascallonge that may be of service to some fellow who doesn't know what he has caught. "A mascallonge," said he, "always has a split in his tail, so that the top part is divided clear from the rest of the tail. Now a pike, or pickerel, never has its tail split that way. A mascallonge is darker, too."

Mr. W. H. Comstock, of this city, yesterday showed me a singular photograph. It was taken on March 15 last, the opening day of the Castalia, Ohio, trout season. Doubtless most of the FOREST AND STREAM readers know of that wealthy club and its well stocked stream. The picture showed Mr. Comstock, Mr. A. C. E. y and Mr. Preston Ely standing in fishing costume, and with visible proofs of their success, with their clothing covered with a heavy snow and their faces hung with icicles. Yet on that day the catch of trout was very good. It need not be said that only the fly was used. Other pho-

tographs showed the trout taken, a very fine lot. Mr. Comstock says that the club now has nine miles of water.

Mr. Henry L. Smith, of the Wisconsin Central road, writes to Spalding's that he has been out trout fishing 147 miles north of Milwaukee, but he is painfully silent as to results. Mr. W. F. White, of the Santa Fé system, and long time ago general passenger agent of the A. T. & S. F., the same a very genial man and ardent sportsman, is in town outfitting with some friends for trout, and I understand they go to that lovely water, the upper Pecos, above Las Vegas, New Mexico.

No very definite news has come in by way of actual angling results, except an unconfirmed rumor from Fox Lake that a large-mouthed boy had caught a small black-mouthed bass, the kind that have horns on them. This was near Col. Lippincott's pier. Col. Lippincott's mascallonge is still alive this year, and is said to have chased the steamer all the way across the lake from Lake Villa. If this thing is not destroyed it will kill all the sheep in the neighborhood, moreover frighten the summer hotel trade. It grows yearly larger and larger.

This business of waiting for the fishing season to begin is hard on the constitution. I know where there is some grayling fishing, and some bass fishing, and some trout fishing, all of it not so very far from this city, and all of it new to the general public, the writer included. In consequence of which I have been casting a fly at a bit of paper 30ft. distant on the office floor. This is better than nothing, if you don't raise anything more than a splinter or two. I have invented a fly for bass this season, and am very anxious to try it. It has a yellow body, tinsel wound lightly, with a red tail. The wings are turkey brown, and the hackles mixed red and cinnamon, brown or ginger. This approaches a cross between the Montreal and the professor, and is, I think, new. The Montreal is one of our best bass flies for Western waters, and the professor is a good all-around fly. The new pattern makes a good-looking fly, though what it will do remains very largely to be seen.

Netting of fish is being practiced at Summit, in the Des Plaines. Untold numbers of game fish have been speared in the Kankakee this spring. Gill-netting is going on in the Calumet Lake waters. The Fox River Association can find plenty of missionary work to do.

E. HOUGH.

NEW ENGLAND NOTES.

THE Quincy smelt case is attracting considerable attention among both the friends and enemies of fish and game protection. The case first came up before the District Court at Quincy two years ago, where the defendants, C. L. Prescott, Samuel Gregory and H. Thurber, were complained of for taking 1,000 smelts with seine or net. The statute provides that each person so taking smelts shall forfeit \$1 for each smelt so taken. The defendants were taken in the act and with the smelts in possession, and were acting together, and were each liable for every smelt, but Judge Humphrey was lenient and fined each for only 330 smelt, or \$330. The defendants appealed, however, and the case came before a jury at the Norfolk county Superior Court at Dedham last fall, when they were found guilty of taking 850 smelts. But again the defendants were not satisfied, and through their counsel, J. L. Eldridge, appeared before Judge Aldrich last week at Dedham and moved an arrest of judgment on the ground that the defendants were originally found guilty before the District Court of taking by seine 330 smelts and no more, whereas the said judgment substantially acquitted them of taking the remainder of the 1,000. This appeared in the record, and consequently there could be no judgment in the record. The motion of Lawyer Eldridge has been overruled by the Superior Court, and it will now be sent to the Supreme Court, where the exact wording of the law will doubtless be sustained. The point taken by the counsel is a mere quibble, and is doubtless employed to stave off judgment as long as possible. The decision of the Supreme Court will be watched with interest. The defendants have tried to create a sentiment in Quincy and Dedham that should be strong enough to get the law repealed at the present session of the General Court. But in this they have utterly failed. The best people in Quincy are fully in favor of sustaining the law against the illegal taking of smelt in the river there. They have seen a great increase in smelt under the amount of protection the law has given, though it has been a hard struggle. Each season the stealing of smelt is carried on. By moonlight, by torchlight and in various ways the work is attempted, and woe be to the quiet citizen who attempts to interfere. Still, arrests and fines have been frequent. The decision of the case now before the Supreme Court will, if decided against the illegal smelt fishers, as it doubtless will be, strike something like terror to others. The fine is a heavy one, and makes the stealing of smelt rather dear business.

There are no especially new features in regard to the breaking up of the ice in the Maine trout lakes. A letter from Rangeley on Saturday, May 3, states that unless the weather is very warm, the ice will not go out before the 12th to the 15th. Another letter from Richardson Lake on Monday says that the ice will hardly get out of that lake before the 15th, though if the weather should be very warm, matters might be hurried three or four days. A letter from Moosehead on Friday says that the ice will probably leave that lake somewhere from the 8th to the 10th. The ice is out of Sebago Lake, but I have not heard of any landlocked salmon being taken, though some parties are there fishing. The Maine trout streams are yielding some good strings. Several parties were out from Lewiston and Auburn on Saturday, and were well satisfied with the day's sport.

SPECIAL.

WHERE TO GET ANCHOVIES.—Our east coast as far north as Cape Cod is reasonably well supplied with anchovies, which would serve a useful purpose for the angler in bait-fishing. The west coast, also, has a great store of them; but in Asia Minor there is a stretch of Black Sea coast, east of Trebizond, whereon, Consul Jewett says, "anchovies are so abundant that they sell at the rate of less than one cent per pound. At certain seasons the catch of these fish is so large that they are used as a fertilizer in the fields."

GEO. PRICE, whose uptown fishing tackle store is at 1438 Third avenue, New York, is well-known to anglers in that vicinity, and having succeeded in giving satisfaction in the local field, Mr. Price now asks wider patronage through an advertisement which appears in another column.—*Adm.*

THE WEAKFISH.

ONE of the best known of our marine fishes, because so frequently fished for with success, is the subject of our present sketch. Whether or not you will associate the name with the species to which it belongs will depend on your locality. This name is attributed to the Dutch colonists, of Manhattan, and is current in New York and the adjacent region. In New England the Narragansett Indians bestowed upon it the name squeeteague, which has undergone modifications into squetee, scuteeg and squit. The Mohegans called it checouts. Chickwick has been applied to it in Connecticut. On Cape Cod the term drummers is given, in reference to the sound produced by the fish. In Buzzard's Bay large weakfish are known to some persons as yellow-fins. Great Egg Harbor Bay, true to its reputation for confounding names, has transferred the term bluefish from the rightful owner to its weak victim. Along the coast of the Southern States we have the appellation trout with its variations, sea trout, gray trout, sun trout and shad trout.

De Kay tells us that the species is called weakfish "from the feeble resistance it makes on the hook and the facility with which it breaks away from it, by reason of its delicate structure." The angler who has to deal with a fish of 3 or 4 lbs. will not complain of the amount of resistance it offers, but he must use skill in handling his line.

Distribution.—The weakfish is occasionally taken in the Bay of Fundy; but its normal range is from Cape Cod to East Florida. The supply has fluctuated greatly in Northern waters. In 1803 weakfish were abundant in southern Massachusetts and Rhode Island. About 1816 they disappeared from Provincetown and did not return until 1847. In 1832 they left Vineyard Sound and were rarely seen until 1867 or 1868, when they increased in numbers, and in 1871 hundreds of them were taken at a time in the weirs. In the latter year millions of weakfish appeared in Narragansett Bay, showing up in great shoals between Point Judith and Providence. In 1845, according to the late Capt. N. E. Atwood, the weekly supply in New York market did not exceed 1,000 lbs. There seems to be a re-

common shrimp of the coast (*Crangon vulgaris*), varying their diet in July with rock crabs and squids.

Game Qualities.—For snap and vim the weakfish takes high rank among our game fishes and its beautiful colors make it a favorite with the angler. It is a bold and very free biter, swift as an arrow in its movements, and makes desperate efforts to escape from the hook, but lacks the endurance of the striped bass and the bluefish. The tender tissues around the jaws of the fish are liable to give way during the struggle and permit its escape. Our Northern weakfish has not the vigor of its relative, the spotted weakfish or "sea trout," of the South, and it has not yet, like its Southern congener, developed a susceptibility to the artificial fly.

Capture.—In many of the New Jersey bays a float and light sinker are attached to the line and the hooks are kept within 2 or 3 ft. of the surface. In Great Egg Harbor Bay this rig is in use on flood tide when 6 to 10 ft. of water cover the flats on which the fish are feeding. As a rule only small fish are taken in this way. The rod should be $7\frac{1}{2}$ to 8 ft. long and supplied with a multiplying reel of medium size and a drag. A bass bait rod will answer admirably if sport be the chief object. The reel should hold 100 yds. of braided linen or silk line of the desired size. Some advise "E" line for fish averaging 2 or 3 lbs. The hooks vary in size according to the taste of the angler, from 1 0 or 2-0 to 3-0 or 4-0. The lower hook should be the smaller of the two and kept near the bottom, attached to the line by a single snell at a snell's length above the sinker. The upper hook is placed several feet above the lower on a 2 or 3 ft. leader or a single-length gut, as preferred by the angler. The sinker may be hollow and weigh 1 oz., or solid and increase in weight with the depth of the water and the strength of the tide. If you are fishing for count a short, heavy rod, with a reel that will handle the line rapidly, and a sinker heavy enough to find the bottom promptly, are prime requisites. At all times remember that the weakfish has a tender mouth and will almost invariably escape from a slack line.

Baits.—For April and May fishing there is no better bait than the common shrimp. Soft or shedder crab is an irresistible morsel, and is used wherever it can be had. The white skin of the throat of the weakfish proves very

he sometimes attains to a length of 6 ft. and a weight of 75 lbs.

In the books he figures as *Cynoscion nobile* and is referred to the subgenus *Atractoscion*—a formidable name for a mammoth weakfish. To the fishermen and anglers he is the sea bass, white sea bass, corvina or caravina, and the banded young are sea trout. The color is dull silvery, the upper parts bluish, and the whole fish finely spotted. The general resemblance to our common northern species is very striking.

In California this fish ranges southward from San Francisco to the southern boundary of the State and is most abundant in spring and summer, coming from deep water as the spawning season approaches. Early in October we have seen hundreds of very large size (above 30 lbs.) in the markets of San Francisco, day after day, and the price often fell as low as one cent per pound, or below the actual cost of placing them on the stalls.

It occurs in small schools and is erratic in its movements. Crustaceans and fish constitute its food. Anchovies are especially included among its favorites.

The smaller weakfish of California is commonly called corvina or caravina and sometimes bluefish, from the steel blue color of its upper parts. This handsome fish reaches a length of 30 in. and weighs up to 8 lbs. Its food is about the same as that of the larger weakfish and its flesh is very fine when first taken, but deteriorates rapidly as in the case of our own well-known species.

Anglers of the west coast may begin their angling for weakfish a little later than those of the east, but in fishing for weight the east must give them the front rank. What a royal battle a weakfish of 75 lbs. would wage.

STRIPED BASS IN CALIFORNIA.

I HAVE been accustomed to visit the fish markets with more or less regularity when in port, and have seen striped bass almost every day since my return from Washington. They were noticed increasing in these waters for several seasons, but now they are to be seen in the markets regularly. On Fridays, when the fishermen make their best displays, there are usually thirty or forty specimens to be found scattered over the city, but

THE WEAKFISH, OR SQUETEAGUE.

lation between the variations of the weakfish and the bluefish; when the latter are rare weakfish are abundant.

Movements.—During flood tide they are to be found in the channels feeding on shrimp, crabs and small fish. Near Longport, New Jersey, we have taken them in large numbers in the inlet preying upon anchovies, which, at that season, were unusually large and fine. In running up the channels they enter the mouths of rivers falling into salt bays, and make frequent side excursions over the flats. When the tide begins to ebb, they seek deep water. In Great Egg Harbor Bay, as the spawning season draws near, the fish cease biting, and the gravid fish disappear until this period is ended.

Season.—Females nearly ready to spawn will take the hook at Cape May early in May. The earliest arrival known in the vicinity of New York appeared May 12, 1889, at Great Kills, Gifford's, Staten Island. In the Chincoteague waters they begin biting in June, but take the hook more freely later in the season. During the latter part of August, 1889, great numbers of weakfish were caught in the West Channel of Great South Bay. The fish are in their best condition and furnish the greatest sport in their fall migration late in September and continuing into November. On Sept. 21, 1887, two men caught 200, many of them very large, in the ocean not far from Ocean City, N. J., on a single tide.

Where to Go.—The thoroughfares about Cape May are recommended for early fishing, say near the middle of May. Sometimes large fish are caught about the same date, or even earlier, in Great Egg Harbor Bay. Mr. Spangler mentions Slaughter Beach, in Delaware Bay, Fortescue Beach and the "Shell Beds" opposite Fishing Creek for later fishing. Aug. 15, 1887, the catch in Great Egg Harbor Bay was very large, some boats taking 150 on a tide, the fish scarcely averaging 1 lb. in weight. Tuckerton and Barnegat are favorite fishing places. All of the bays north to Cape Cod yield a goodly supply of these fish during the summer months.

Tide.—The flood is usually considered the most favorable tide, or the latter half of the flood and first half of the ebb. At Tuckerton the ebb is preferred, and at West Bergen, N. J., half ebb to half flood. Weakfish bite freely at night. At this time they run up the creeks in the salt meadows to feed.

Habits.—Weakfish swim in large schools near the surface, pursuing smaller fishes, on which they prey. In their movements and manner of biting they are very capricious, frequently appearing and taking the hook at the most unexpected times and places. When caught, they often make a loud croaking noise like some other members of their family. In dry seasons they are to be found in brackish water, near the mouths of streams. In the months of April and May they feed largely on the

attractive, and pieces of the silvery harvest fish, or butter fish, answer equally well. The eye of the weakfish is often used successfully. Pieces of clam and even the common mussel are frequently effective. Small shiners make good bait, and the anchovy is one of the best natural baits for this fish.

Edible Qualities.—Small weakfish are not worth much for eating; but in the larger ones the flesh is white, flaky and well flavored. It should be bled as soon as caught and used while fresh; transportation is difficult because the fish deteriorates rapidly. A fresh weakfish, either boiled, baked or broiled is delicious and easy to assimilate.

Precautions.—Weakfish are favorites with many persons because of the ease of making a good catch. Do not, however, rush off for a few hours' fishing without learning beforehand whether the fish are present and biting. We have seen much bitter disappointment among anglers on the coast who seemed to think that it is possible to drop a line into any bay from Cape Cod to Virginia at any time of the day and tide and pull out weakfish until their arms ache. Drop a line if you will, but let it be addressed first to some friend who is posted about the fishing, and you will save yourself much waste of time and money and preserve your serenity of disposition—a prime requisite for the successful angler.

THE WEAKFISHES.

THE fishes of the genus *Cynoscion*, popularly known as weakfish, sea trout, sea bass and by various other names, are found principally in North and South America. Our east coast has four species, one or more of which extend into the West Indies; the Pacific coast has five, two of them ranging north to California; there are three on the east coast of South America and one in Peru. All of these are noted for their large size and many are beautifully colored. They are esteemed for food and renowned for their swift and graceful movements and their game qualities. The young in most cases are vertically banded and differ so much in appearance from the adults as to lead inexperienced persons to consider them as distinct species. The mouth is always large and well supplied with sharp strong teeth of formidable size; but the flesh of the jaws is tender and does not hold the hook securely.

The giant among these fishes is a distinguished inhabitant of California waters. It is true that the doctors of science, because of certain differences in the teeth of this animal, have set it apart from its near relatives in a little section of its own, but you and I care little about this method of dealing with our favorites. To us he is a weakfish and almost equal to a tarpon in fighting ability, for

one would have to visit several markets to see that number. They are generally of 2 or 3 lbs. in weight. A very few of half a pound are to be seen. A few days ago a 20-pounder was taken at Vallejo, and one of 30 lbs. is reported from further up the river; but fish of that size are very rare. The Albatross took one at Monterey last week, which is, I believe, the first reported from south of San Francisco. We got it by seining along shore; this was a half-pound specimen.

Carp are now very abundant in the Sacramento. Hundreds of them are to be seen in the Chinese district of San Francisco every day; most of the catch goes to "Chinatown." I have seen none but the scale carp in California, but, if I remember rightly, it was one of the other varieties that I saw in the Willamette, at Portland.

CHAS. H. TOWNSEND.
U. S. STEAMER ALBATROSS, San Francisco, April 14.

SCARCITY OF CONNECTICUT SHAD.

Editor Forest and Stream:

In reading your article of the 24th inst. in relation to the depletion of shad in the Connecticut River by the pounds at and near the mouth of the river, I was reminded of another cause for the scarcity of shad in the river, given me by an old gill-net fisherman a few days ago. He said he had used the gill net for about eighteen years at the mouth of the river and at other points along up the same for twenty miles, and while he knew the pounds to be a great and continual barrier against the entrance of shad into the river, he said, in his opinion, this was not the only one; he thought the breakwater extending out into the Sound was a serious obstruction to the entrance of shad to the river, for as the fish followed east along the north shore of the Sound they met this obstruction, turning them south out into the Sound, and when having reached its limit so that they could again take their eastern course, the circle of their turn carried them beyond the mouth of the river. While this, if true, perhaps cannot be well averted, it may be worthy of mention in assigning reasons for the growing scarcity to almost annihilation of shad in the Connecticut River. The writer remembers when it was no uncommon thing for one haul of a seine to take 500 shad, and has known of twice that number being taken. It seemed strange to him while spending three weeks of the present month in that section to find those fisheries abandoned and not to be able to get a single shad during that time. Truly the Connecticut River has lost the glory of her shad. A.

BROOKLYN, April 24.

TO SALMON ANGLERS.—T. J. Conroy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted flies, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—*Adv.*

CLUB MEETING.

Editor Forest and Stream:

The Mastigouche Fishing Club of this city held its annual meeting a few days since, when the following officers were duly elected for the ensuing year, viz.: Henry W. Atwater, President; E. H. Botterell, Vice-President; George Kemp, Treasurer; Herbert B. Ames, Secretary; Messrs. James Slessor, John Kennedy, J. A. Cantlie, I. H. Stearnes and Robert W. Paterson, Board of Directors. The annual report shows the club to be in a prosperous condition. It has no debts, and a substantial balance in the bank, besides owning a large amount of property.

It is now five years since the club was started, and its membership, which was limited to fifty, is now complete. They have just obtained from the Quebec Government a renewal of the lease of their fishing rights for nine years, and they have also renewed their arrangements with Mr. E. M. Copeland, who will keep the Mastigouche House open to the public and take charge of all visitors to the lakes, as heretofore done.

A few special permits to fish in some of the reserved waters of the club will be issued to a limited number of sportsmen during the season. Such permits can be had on application to Mr. Copeland. The club is about to become incorporated, and has applied to the Government for a charter.

A larger number of guests visited the club lakes last season than in any previous year, and the fishing seems to be just as good as it was the first year. The territory under lease to the club is so extensive and comprises such a great number of lakes and streams that it will be almost impossible for any number of sportsmen, fishing in a legitimate manner, as allowed by the club, to have any appreciable effect in the quantity of trout inhabiting these waters. Some of the largest trout ever caught in these lakes were taken out last season, the honors being carried off by a lady visitor.

H. W. A.

MONTREAL, April 29.

BROOK TROUT IN MINNESOTA.

Editor Forest and Stream:

I must add one more laurel to the piscatorial possibilities of Minnesota's "Lake Park" region, adjacent to Detroit Lake. I recently happened near the east end in a small lake, as yet unchristened, and in size about 200 yds. in diameter by from 50 to 75 ft. deep, fed wholly by springs and with an outlet into Detroit Lake of about a mile in length, six feet wide by a foot deep. Having thought for several days past that the weather was sufficiently mild for the pickerel, pike and bass to begin biting, I laid in a small stock of tempting shiners preparatory to a regular slaying expedition, to occur the first warm morning. This came yesterday, April 23. Having had partly fair luck in hooking the pike and pickerel to the number of a half dozen in half an hour, and while thinking it peculiar that I could not raise a bass, I was suddenly surprised to see the line "zip" through the water rather faster than usual. Imagining the fish to be a bass, I proceeded to slowly reel in, and after thoroughly tiring him out I landed the fish, when, behold! it was as nice a brook trout for its size as has ever been my lot to see. It weighed a trifle over 2 lbs., and was richly diversified with red and yellow spots and beautifully mottled. I have fished all over this section for the past five years, and this is the first trout that has come to my notice in this part of the State. If there are similar instances from this section I would be glad to hear of them, and if not, can the editors advance any theory as to how this fellow happened to be so far from home and the bottom of his family and in spring water? Where there is one fish there must surely be more, and May 1 will shortly be with us with license for all hands to hie to the streamlets and lakelets with their hackles, coachmen, cow-dung and divers other favorites, to lure the finny denizens from neath mossy banks to willow baskets and the pan.

J. G. N.

McHUGH STATION, MINN., April 23.

ANGLING NOTES.

A LARGE delegation of lake trout fishermen have left for the North Woods to enjoy their favorite sport, which is now at its height, and as soon as the weather gets a little warmer the lovers of fly-fishing will be able to join them; but it will hardly be safe to expect the trout to rise well to the fly before the 20th of this month. For the benefit of those who would like to enjoy good trout fishing, and who are prevented from going to the Adirondacks by reason of not knowing where to find open waters, we print the following hints. In the first place, though, we warn them that very little fishing can be expected in the waters on or near the main lines of travel generally followed by the army of tourists. To get good sport they must be willing to rough it and tramp over some pretty hard trails.

Some of the best fishing for speckled trout as well as lakies will be found at Smith's and Albany Lake; Clear Pond, on the route to Mud Pond, affords speckled trout fishing. These ponds are reached by way of Lowville. The well-known Fulton Chain of Lakes is a good locality, reached by way of Booneville.

By the way of North Creek, the last station on the Adirondack R. R., the angler can reach a number of excellent trout waters. The best way is to drive to North River, four or five miles from North Creek. From this point the ponds in the vicinity of Eleventh and Thirteenth lakes are easily reached. Seven Chain Lakes, where Harvey Barney has a good camp, furnishes good fishing, and Cedar Pond, near by, contains large speckled trout. To get at these waters, take the stage from North Creek to the Blue Mountain Lake and get off at Indian Lake P. O., about half way to Blue Mountain Lake. Near Indian Lake P. O. the angler can amuse himself a day or two in fishing Squaw Brook. Minerva, a little town on the road from North Creek to Tahawus, is a good point to stop at, as Minerva Creek affords fair trout. Further on near Newcomb, Zach's Pond is a good place to fish, and Moose Pond can be reached from Aiden Lair.

On the other side of the Adirondacks, good fishing may be had near Brush's Mills, and comfortable quarters and fair trout at Meacham's Lake. These are reached by the way of Malone. Later in the season the small ponds in the vicinity of the St. Regis Lakes afford big speckled trout, provided the angler will camp out and fish late in the evening with large flies.

One of the famous points for large speckled trout is Cranberry Lake, reached, we think, by the way of De Kalb Junction. This lake is on the Oswegatchie River—a famous trout stream. One of the largest brook trout killed in the Adirondacks for many years was caught here last season, weight 5 lbs. 9 oz. The upper waters of the Black River, reached by way of Remsen on the Utica and Black River R. R., contain some fine trout, but they are rather difficult to get at, and one must either take a boat or build a raft, and it will be necessary to camp out. West Canada Creek is easily reached from Remsen, but is much fished.

The best flies for the Adirondacks for the early fishing are the light and dark Montreals, coachman, Abbey, silver-doctor, professor, Brandreth, Beatrice, Howard, brown and black palmers, great-dun, crowding, grizzly-king, Canada, Lottie, black-gnat, brown-hen and sometimes the scarlet-ibis. Size of hooks, 8 and 8 Sproat. It would also be well to take a few large bright flies on No. 4 Sproat, such as the white-miller and Parmachene-belle for evening fishing.

The salmon fishing at Bangor continues fairly good, notwithstanding the great number of nets at the mouth of the river. It is a shame that the salmon do not have at least one day in the week free run of the river. Both netting and rod fishing should be stopped for twenty-four, or better forty-eight hours every week. Mr. Fred W. Ayer has killed the biggest salmon on record, viz., 30 lbs.

RANDOM CASTS.

THE conditions being equal as between fine tackle and the pin, string and pole, the latter does not take the largest fish, the country boy to the contrary notwithstanding.

In the woods, more than in any other place that I ever knew of, a man's true character reveals itself. Trifling inconveniences are magnified into disagreeable opportunities by the selfish, he making use of them to the annoyance and discomfort of those about him. Better by far be alone with your guide, than run the risk of being paired with a mean fellow. It is too late to make your choice when far along on the trip, the mischief is done then, but study your would-be companion well before starting. You may possibly have to eat out of the same plate and sleep under the one blanket before getting back.

In surf fishing, the fishhawk is your friend. If he flies out to sea for his meal you might as well quit fishing until the fish come nearer in shore again. This you will soon know by his following them in.

Angling is not an adjunct to the whisky bottle, as many seem to think, and if less were heard of it from quarters where it should have no place, the uninitiated would not so frequently connect the two when preparing for an outing to the woods or shore. Some papers look upon it as a great joke to introduce the "bait bottle" on frequent occasions. To have to wade through the experiences of Pat and Mike as they tell us of how they "then took a drink after each fish" is not calculated to inspire confidence in the class of material these papers draw upon to entertain their readers. This kind of reading is vulgar, to say the least, and certainly not in keeping with the impressions a sportsman should receive when with nature. The bottle leads to lying, and those who habitually carry it with them, for other than medical needs, are generally the ones given to telling "fish lies."

The breaks in the otherwise regular stripes of the bass are the result of wounds caused by contact with others of their kind when schooling. In chasing the mullet, etc., they do so with dorsal erect.

BIG REEL.

MISSOURI ANGLING.—St. Louis, Mo., April 25.—A few more days like the past week and fishing will open with a vengeance in these parts. Considerable dampness has fallen in this locality of late and the lake, sloughs and streams have been quite muddy, but they are clearing very fast. The anglers are holding themselves in readiness, and just as soon as they are satisfied that the water is in condition, there will be an exodus such as has never been known before. Reports from Current River are to the effect that a few bass and jack salmon were taken down there the past week. If the weather remains settled till next Wednesday, a party, consisting of about ten members of the above club, will go down to the club house to remain several days, "yanking" out members of the finny tribe.—UNSER FRITZ.

TROUT WASTE.—Newaygo, Mich., May 1.—*Editor Forest and Stream:* The law for the protection of trout is a dead letter in this section of the country, in consequence of which the fish are scarce and wild. Their destruction has been great recently, owing to the open winter, and the poachers have been in the habit of openly selling them to the public, which is a direct violation of the law, and those who were not handy with the rod used other means, such as nets, water-shells and spears, and complaints made to the game warden were ineffectual. Two brook trout, that weighed 5½ and 5½ lbs. respectively, were speared near here and were viewed by a number of persons.—LIMBO.

CANADIAN WATERS.—Quebec, April 26.—The weather is cold to-day, consequently the lakes are still frozen over. I presume from all appearances fly-fishing will not be on till about the 15th or 25th of May. Usually the Queen's birthday, May 24, is looked forward to by all anglers as the first day's fly-fishing. Some of my friends of the Laurentian Club went out to their lakes in March. One of them cast a fly in some open water at the outlet of the lake, in the rapids, and was fortunate enough to rise a half-pound trout, which took the fly and was captured. Rather an unusual thing, I presume, because no one would think of making such a trial.—J. U. GREGORY.

WAKEMAN'S improved skeleton bait is a device ingeniously arranged of silver wire, within which a live minnow is inclosed in a manner which prevents its loss, and retains the natural look of a harmless minnow. The bait can be used with success without the minnow, but used in connection with one, is said by those who have tried it, to have unequalled catching power, a single minnow having been said to catch twenty-five bass before being rendered useless. The advertisement appears in this issue, and full particulars will be given on application to the manufacturer.—*Adv.*

NET RESULTS.—We have received from Mr. Thomas Sedgwick Steele, No. 71 Woodlawn street, Hartford, Conn., a copy of the proof edition of the gravure etching reproduction of his famous oil painting "Net Results." The subject is a catch of speckled trout, and they are painted with rare fidelity and most pleasing effect. It is so difficult to find really truthful pictures of game and fish, that we take pleasure in giving Mr. Steele the praise he has won for his paintings of game and fish. "Net Results" is a highly artistic piece of work.

MOVEMENTS OF FISH.—Sculp, tautog and butterfish are becoming abundant in the Cape Cod traps. Mackerel and bluefish also are taken in small numbers.

Fishculture.

THE MIDLAND COUNTIES FISHCULTURE ESTABLISHMENT.

AN American in London writes: "The supply of fish ova this season in England seems to have been unusually plentiful, judging by the appearance of the hatcheries at some of our fishcultural establishments. I this week visited the Midland counties fishculture establishment at Malvern Wells, England, over which I was conducted by Mr. John Burgess, who courteously supplied me with every information regarding some waters which I wished to stock with trout. I found the hatcheries full of *Salmonidae* ova and young fish, and the sight presented by the masses of finny life was one which I never shall forget. Within a large building of brick were ranged side by side a series of tanks, through which a stream of water coursed, oxygenated by miniature sluices, which are fixed at the entrance of each tank. Here we have a perfect stream, which gently ripples over the little nurseries where the young fish lie in perfect ease and safety. What a contrast is this peaceful scene to that of the spawning beds in open waters, which are subjected to destruction by flood, pollution and hundreds of owners of gaping jaws, which fall upon them and devour the eggs. In the inclosed hatchery there are no enemies, no floods, no noxious ingredients to destroy the ova. Here I was shown that only a few dozen ova had perished, and not a single young fish had died out of the millions that are being propagated. Here is a triumph over nature, a triumph so complete that I doubt whether in any other art we can find its equal. On all sides I encountered masses of fish life, waiting to be poured forth into the waters. Each variety is kept in separate tanks, great care being exercised not to mix them. Some of the trout are adapted for rivers, some for lakes, some for ponds and some for streams. On no occasion does he turn them into rivers, streams or ponds until he has ascertained the exact nature of the water, the fish inhabiting it and the amount of food available therein. Having done so, he furnishes such fish as are adapted to the prevailing conditions.

In addition to native fish, Mr. Burgess cultivates some valuable transatlantic forms with the kind assistance of Col. Marshall McDonald, the Fish Commissioner; and these fish embrace the rainbow trout, brook char, landlocked salmon and the whitefish. The acclimatization of the latter fish is being energetically pushed forward. The tanks literally swarm with nearly hatched fry, and it is impossible to describe the lovely appearance they present. Unlike salmon and trout, they move incessantly immediately after emerging from the ova, and are in full possession of their powers of locomotion. The whitefish is well adapted to English lakes and promises to occupy a position among the commercial fishes in this country."

WORK OF THE U. S. FISH COMMISSION.

SHAD.—Car No. 2 left Washington, April 30, with 4,200,000 shad eggs, the fry of which were to be planted in the Flint, O. mulgee, Ogeechee and Savannah rivers and Big White Water Creek. Car No. 3 was sent, May 1, with 4,129,000 shad eggs to stock the Chattahoochee River at Columbus, the Flint at Reynold, and waters near Macon, Ga. The low temperature of the water in the hatcheries produced weak fry and made the shipment of Car No. 2 less satisfactory than usual; therefore, this car has taken on a new supply at Havre de Grace for distribution from Macon as a center. Shipments are constantly going out from the stations to various parts of the Middle Atlantic States.

LOBSTERS.—During the week ended May 3 the Wood's Holl Station made the following exhibit:

Lobster eggs collected during the week.....	1,252,147
Lobster eggs now hatching.....	3,299,320
Largest number of eggs from one lobster.....	22,848
(This lobster was 13 in. long.)	
Smallest number of eggs from one lobster.....	3,049
(This lobster was 9 in. long.)	
Lobsters stripped during the week.....	109
Average number of eggs.....	11,487

The apparatus used in hatching are the McDonald and Chester jars, in which the eggs can be cleaned more rapidly than in the boxes. Mr. Maxwell considers the jars superior to the boxes for developing these eggs.

SHIPPING SMELT EGGS.—The first attempt at shipping eggs of the smelt, as far as we know, was a success recently under the management of Mr. Fred Mather, Superintendent of the Cold Spring Harbor station of the New York Fish Commission. Commissioner H. Burden wanted some eggs for the Sacandaga hatchery, in the Adirondacks, to supply food in waters which are to be stocked with lake trout. These trout would be obliged to come into shoal waters in summer for lack of food in the depths. The smelt are intended to remedy this unfavorable condition. When the hatching of smelt eggs was inaugurated a few years ago, nothing was known about the subject, and until recently the limit of successful hatching was not over 50 per cent. Packing the eggs for transportation is a new undertaking, and, as we have said, a successful one under Mr. Mather's direction. Mr. E. F. Baehm, who received the consignment, estimated that 95 per cent. of the eggs were good. When the box was opened the temperature inside was 48 degrees, the eggs were pronounced a fine lot and have been doing well up to last accounts.

AMERICAN FISHERIES SOCIETY.—The nineteenth annual meeting of the American Fisheries Society will be held at Put in Bay, Ohio, May 14, 1890. A steamer will be in waiting at Sandusky on the afternoon of the 13th and the morning of the 14th, to convey delegates to the island.—C. V. OSBORN, Cor. Sec. A. F. C.

CARP CULTURE and its results will be a subject of inquiry by the Census office.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price \$2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price \$1.50. American Angler's Book. By Thad. Norris. Price \$5.50.

The Kennel.

FIXTURES.

DOG SHOWS.

May 8 to 9.—Second Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. H. W. Wilson, Superintendent.

June 3 to 6.—The Cincinnati Kennel Club's Fourth Annual Show, at Cincinnati, O. Geo. H. Hill, Superintendent.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 18.—International Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exhibition at Toronto, Canada. H. J. Hill, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

THE CARE OF PUPPIES.

[By a Lady Contributor.]

IT IS very hard to have to "pay premiums to experience," but on the lives of all of us such is often the case, especially in the bringing up or treatment of animals.

Who has not lost a horse, cow or dog through want of knowledge, perhaps sending for the veterinary when the animal was beyond his skill? The books on dogs' diseases are so full of disorders that to look them over a novice would fear to accept the responsibility of keeping a dog, deeming him liable to get every ailment human flesh is subject to besides those of his own, and being dumb, harder to treat. The novice need not hesitate, however, the great thing is to keep him well, and to do so, diet, cleanliness and exercise are all that are needful.

There is an absurd notion in this country that a plain diet must be a sign of poverty.

On once congratulating a gardener's wife upon the rosy, healthy condition of her children she said, "Yes, m'am, they are always well; I keep them upon porridge and potatoes; not that I cannot afford pies and cookies as well as Mrs. O'Leary, who gives her freedom of the same, and of the melon patch, and they do forever be ailing."

I know a Mrs. Million, one of whose aims in life is to let her world know how extravagant she is. Calling there one afternoon, I spoke of a little dog that I had seen out with her. "Yes," she said, "I got him from Mr. —, the celebrated dealer in England, giving a lot of money for him. The vet. says he is a most rare dog (he is there now, as he is dreadfully ill). It seems the servants have been giving him woodcock—just fancy, we found a whole one in his basket, no doubt they were a little too gaily." I knew she said this to demonstrate that woodcock were as plenty in her house as beefsteaks were in mine. Be it as it may, the dog died, it seemed a pity that a valuable and rare dog should be sacrificed to the ostentation of a silly woman. Now, I hope that none of my readers are equally foolish about their dogs, realizing that an unhealthy one is like everything else with a flaw—not worth much.

To commence with the feeding of puppies, they should be given dry bread, and buttermilk if you have it, if not, boiled milk, or rather scalded milk. If the scalded milk is found to be constipating, add some oatmeal porridge to thicken it. When he is cutting his teeth, crumbs of toast, hard cracker, or crusts of stale bread are needed. No one cares to eat the outside slice of a loaf, so that may be made stale, hard, and broken up for the little dog. Dry corn bread is very nice. If there are several to feed, get old rolls or loaves from the baker. You will find how extremely fond all aged dogs are of hard crusts. A young one, if given too many at once, will carry them off to bury them, and bring them out on another day.

The English breeders say that the American-bred dogs are so much fed on "slops," meaning maul and soft food, that their jaws and teeth are not as firm and strong as they should be.

"Give my dog a bone." There are bones and bones—never a poultry bone—it splinters up and may stick in the throat, causing strangulation. A big leg-of-mutton bone, a beefsteak bone, will occupy a juvenile for hours sucking out the marrow. Some smaller beef and chop bones do not digest well, as they are crushed up, swallowed and after a time they will be thrown up, and there may ensue a chronic weakness of the stomach, so that good food will not stay down. Cutting teeth on bones sometimes makes the edges chip off. Dog cake is much used as hard food. A good clean dog will be mortified at destroying the tidiness of the house by throwing up his food; such should not be punished for it.

One of the ailments common to dogs is worms—a disagreeable subject, but one that cannot be avoided, and the owner must keep it in mind and be on the lookout. One of the signs is a voracious appetite and keeping thin. When that is noticed a book on diseases should be consulted or the doctor sent for.

You must not give the odds and ends left after dinner to the canine favorite as if he were a pig, for a mixture or a variety of food at one time does not do; besides, there would be some things, such as tomatoes in a stew or cheese in macaroni, that decidedly disagree with him. One of the premiums paid to experience was a beautiful collie puppy, who was kept at the stable and his diet not watched as it should have been. I noticed under the trees a number of pears with bites taken out. I wondered, and asked what person did it. My gardener (who was an Englishman) said, "Hits Dundee, men, as heats the pears, I seed 'im hat hit." I thought nothing of it; the pears continued to drop and be bitten until the dog was very ill. We could not pour the medicine (which he would not take) down his throat for fear of his biting us, so the "bonnie Dundee" died.

The régime for the day should be breakfast of porridge made of oatmeal, corn meal or hominy, with or without milk, a small saucer full for a puppy; crusts and a few bits of meat, if he is over six months, for dinner. A grown up house dog should have very little meat, and only once a day; the dinner should be not later than 3 o'clock, as an early meal is a great assistance to the habit of being "house broke." This should be varied by vegetables every few days for grown-up dogs. A book I have says cabbage—never cabbage. Potatoes are too fattening; carrots and beets nicely prepared should be fed in summer, being good for the blood, dogs usually like them, and are also fond of pumpkin, which has no special merit. A small quantity of vegetables may be mixed with the meat, and if the dog leaves it at first, teach him to like it by feeding with the fingers. At the same time neatness in eating may be taught so as not to soil the carpet by dragging pieces off the plate.

I had a large dog who learned to eat off a fork, and drink out of a spoon without spilling.

A piece of sulphur kept in the bowl of water is of no use whatever save to give it a nasty taste; an animal appreciates a drink of cool, fresh water as much as a person does. Sulphur should be given about once a fortnight in summer; for a grown one a level teaspoonful of flower of sulphur smoothly mixed in milk before breakfast. A friend of mine who had recently "set up" a terrier came to me in a great fright saying that he had eaten the tips off a lot of parlor matches; on inquiry I found he had been stuffed with meat, and nothing else. Was it not a remarkable case of instinct that led him to discover the sulphur matches, and make a medicine of them?

Sweet things, and above all sugar, loosen a dog's teeth, and injure the gums, which may be proved by the number of ladies' pets one sees with only a few crooked teeth in their mouths.

I did not intend to discuss fleas, as I fancied every one knew how to dispose of them, but seeing a query upon that subject I will say that picking and combing will not get rid of them, unless the dog is also powdered and washed. Get the Dalmatian powder, fresh, and put it on the back along the spine, working from tail to head, using the arrangement provided for blowing it on. He should be washed once a week in summer with carbolie soap suds, rinsed and dried very dry with a large burlap towel, then tie him so that he will not roll on the grass while damp. It improves a white dog's color to put a little bluing in the water. Never put him in a tub, it should always be a sponge bath, and is best given in the stable or laundry. For any symptom of skin disease tar soap or sulphur soap should be used, Pears' soap when he becomes dirty or dusty between the regular wash days. A dog likes to be clean, and when washed will jump around as he feels so nicely, and seemingly to show his improved condition to the family.

Eczema is not difficult to manage if you live in the country, but in a city it may become a tax promenading a dog after the novelty has worn off, but it must be done, and he must run as well as walk. Want of exercise and fresh air means a poor digestion, bad breath and skin disease. The mange may not make its appearance, but the hair will look dry like an old door mat, and if long will come out in spots as if moth eaten.

In a city house throw his ball down stairs again and again, and make him fetch it each time; invent some game to keep him in rapid motion and set his sluggish blood going. If there are two it is a nice chance to teach them to respect each other's rights, by throwing the ball or stick, saying "Tottie," "now Leo," and do not let Leo pick it up when you say Tottie and vice versa. It is also well to pursue the same plan of calling their names when feeding, as it prevents grabbing each other's food and snarling over it.

There is much to be dreaded from distemper—bein the illness of puppies—thus, and for other reasons, it is best not to get one under six months old. They rarely have it in the winter, thus the autumn is the safest season to get a young dog, because by spring he will be a year old and go through the second summer's heat nicely. The distemper prevails the worst in kennels where many dogs are kept and boarded. If one comes to his home perfectly well, by observing the laws of health he will either remain perfectly well or have it lightly.

Damp grass is a source of some troubles. Neither an old nor a young dog should be permitted to lie around on grass after heavy rains. Even if he is a house dog it is a good plan for a yearling to have a kennel near the front door full of clean straw, and to be fastened to it for a while each day to have fresh air instead of roaming around alone. Some bird dogs, especially pointers, have sensitive lungs, and in severe or snowy weather want comfort and care and not too much romping in snowdrifts. We had one who had consumption and a cough, so he was sent to the South for a genial winter climate, where he lived until quite old. That pointer was as highly valued by his master as a field dog, as he was loved as the children's playmate.

Animals have not souls, but they have feelings, thought, and memory. They cannot speak nor understand all our verbal language so as to be directed or reasoned with as children are, but they have a keen sense of human feelings, as conveyed by inflections of the voice, and an enduring memory of a person's actions to them, never failing to be influenced through life by the impressions made by the treatment bestowed in their earliest months. Some traits are considered to be inherited; some persons assert that gun shyness is one of them; refinement is certainly inherited, also sweet temper, crossness not always. I know a Newfoundlander, whose parents are extremely cross—his own brother quite unsafe—but he, from infancy, has been so indulged and handled by all the men around the stable that he is very friendly and utterly useless as a watch dog. It is not difficult to make a good-tempered dog cross, and sometimes he becomes so by circumstances. If the family leave the house, he remaining under the care of servants or strangers, who continually snub his attempts at friendliness, he will become morose and suspicious of every one.

I know a dear pointer who was left in this way; he had been the companion of a child, walking beside the carriage when it went out on the village street. After the family had gone he missed his little friend and would run after every baby carriage and nurse he saw; to keep him they tied him, but he broke the cord, then they whipped him on his return; from that he rarely returned, passing days wandering away until a home was again made for him. The subject of bad habits will be entered upon in another article.

G. L.

THE CINCINNATI SHOW.

CINCINNATI, O., May 3.—*Editor Forest and Stream:* The judges announced by the Cincinnati Kennel Club, for their show, to be held June 3-6, are Major J. M. Taylor, for setters, pointers, foxhounds and beagles, and Mr. Jas. Mortimer for all other classes. Inquiries for premium lists are numerous and the prospects are the show will be a very fine one.

Geo. H. Hill, Sec'y.

For the principal breeds the premiums are, \$10 for challenge, \$10 and \$5 for open, and ribbon for puppies, with \$10 for best kennels. For Newfoundlands, toy terriers, other than Yorkshires, King Charles spaniels, Italian greyhounds and miscellaneous, \$5 and \$3.

CINCINNATI, O., May 5.—*Editor Forest and Stream:* Our coming bench show promises to be a success in every way. To do all I can to help it and to oblige some of my friends, many of whom have written me, saying they would send their dogs if I would handle and care for them, I have concluded to handle and show a few of my breed, outside of my string of pugs. This being my home and having a good kennelman, those who send can rest assured that their dogs will be treated right. Entries close May 20.

AL. G. EBERHART,
Manager Eberhart Pug Kennels, 212 Main street.

NATIONAL COURSEING ASSOCIATION.—The spring meetings of the National Courseing Association will be given at St. Louis, Mo., May 11, 14, 16, 18; and Kansas City, Mo., June 10, 20, 21, 22. The stakes at St. Louis will be open for all greyhounds east of Kansas, and a hot class will compete. A large number of imported dogs will be entered, and the local cracks are in fine condition to hold them down.

INDIANA FIELD TRIALS.

INDIANAPOLIS, Ind., April 25.—*Editor Forest and Stream:* The following gentlemen have been selected to judge the Indiana Kennel Club's fourth annual field trials, beginning Monday, November 3, at Carlisle, Ind., viz.: Dr. J. B. Alexander, of Louisville, Ky.; Mr. Gib D. Jay, of Kokomo, Ind.; and Mr. M. R. Williams, of Denver, Col. The club has secured ample grounds where there are plenty of birds. The hotel and livery accommodations at Carlisle are first-class, and the prices will be liberal in the extreme. Although the entries for the Derby do not close until June 1, several have already been received. Every indication points to the most successful meeting the club has ever held. The running rules have been thoroughly revised, and we think they are about perfect. The committee on rules had in view the sole object of giving each dog sufficient time to show what there was in him, and to enable the judges (without being handicapped) to give the prizes to the best dog. You will see by a perusal of the rules (a copy of which I inclose herewith) that we do not recognize any dog as a runner-up.

P. T. MADISON, Secretary.

The running will begin with the Derby, Nov. 3, for all setter and pointer pups, whelped on or after Jan. 1, 1889. Four purses: First prize, 40 per cent.; second, 30 per cent.; third, 20 per cent.; and fourth, 10 per cent. Forfeit \$10, and \$20 additional to fill. Entries close June 1.

All-Aged Pointer Stake.—Open to all pointers that have never won a first prize in an all-aged stake at any recognized field trial in America. First prize, 50 per cent.; second, 30 per cent.; and third, 20 per cent. Forfeit \$10, and \$20 additional to fill. Entries close Oct. 1.

All-Aged Setter Stake.—Open to all setters that have never won a first prize in an all-aged stake at any recognized field trial in America. First prize, 50 per cent.; second, 30 per cent.; and third, 20 per cent. Forfeit \$10, and \$20 additional to fill. Entries close Oct. 1.

Members' Stake.—A members' stake will be run beginning Friday, Oct. 31, open to dogs that have never been placed in any field trial; each dog must be handled by its owner, and no member will be allowed to enter more than one dog.

A dog to be eligible to this stake must be owned by the member ninety days preceding Oct. 31. The entrance fee shall be \$5, payable at time of drawing, which goes to last year's first prize winner.

All stakes shall be sweepstakes. The necessary expense of the trials will be deducted from the stakes. This plan was adopted at our previous trials and gave entire satisfaction.

The new rules are prefaced by this note to the patrons of field trials:

The chief obstacle to the full accomplishment of the legitimate purposes of field trials in the past has been the faulty methods by which the comparative merits of the dogs were determined. The committee on revision of rules of the Indiana Kennel Club believes that the so-called "Spotting System" must be an important factor in any satisfactory solution of the vexed question, but it does not believe that the time is ripe for its adoption without modification, or that any practical method for its application has been formulated.

Rule 4 of the present issue is a combination of the good features of the old and new systems, and under its workings we hope and believe the desired end may be reached.

When called upon to apply the "spotting system" the judges shall set up a high standard of excellence, and dogs must reach it or be cast out.

The club waives the competition to be between dogs of courage and stamina, with confidence in their own ability to find birds, and sense enough in hunting for them to take advantage of the conditions under which they are working; dogs that will point promptly, accurately and stanchly, and show by their behavior the thoroughness of their training. While no time limit is adopted, every dog will be given ample time to demonstrate his natural field abilities.

Rule 1.—The management of the field trials is intrusted to the directors of the club on the grounds, and with them lies the interpretation of the rules. They shall also decide upon all matters not covered by the rules.

Rule 2.—Entry blanks filed with the secretary of the club must show the name, pedigree, date of birth, colors and distinguishing marks placed on the dog's side, and the dog's age, marking or pedigree which shall be proved not to correspond with the entry shall be disqualified and his entrance fee, and winnings if any, forfeited to the stake. The nominating fee must accompany the entry and the balance of the entrance money must be paid before the drawing. Any objection to an entry must be made in writing, addressed to the secretary, and will be acted upon by the directors, whose decision shall be final.

Rule 3.—Immediately after the drawing, the time and place of starting the first brace shall be announced and posted in a conspicuous place. Dogs shall be drawn by lot and numbered in the order drawn, and the order so obtained shall be observed until the stake is finished; except that if two dogs owned or handled by the same person come together in any series, the second dog shall start in the place which the first dog not so owned or handled. This change shall be made in the order of running if possible; if not possible, then in the reverse order of running. If such separation is impossible the two dogs must run together. If in any series after the first two dogs should come together which had previously been in actual competition, the heat shall be decided without running, in accordance with the result of the heat already run.

Rule 4.—Dogs shall run in braces, and when the first series is ended the judges shall announce which dogs are to compete for the prizes. The dogs selected shall continue the running, the beaten dog in each heat being retired, until the unbeaten dog is reached, and he shall be declared the winner of first prize. The judges shall then select from the dogs that ran in the second brace the place which the first dog not so owned or handled. This change shall be made in the order of running if possible; if not possible, then in the reverse order of running. If such separation is impossible the two dogs must run together. If in any series after the first two dogs should come together which had previously been in actual competition, the heat shall be decided without running, in accordance with the result of the heat already run.

Rule 5.—Should there be a bye in the first series the dog shall run a side heat during the time the first brace is down. If the bye occurs in any subsequent series he must run a side heat at the same place and for the same time as the dog in the first brace which he will compete. Side heats must be run under a judge appointed by the regular judges and with or without a brace mate, as they may direct.

Rule 6.—No dog shall be withdrawn except by permission of the directors. Such permission being granted, the heat shall be given to the opposite dog by default. He must, however, run a side heat as provided for the dog in the first brace. Should it be found by the directors that the withdrawal of any dog had been brought about by bribery or other corrupt means, the dog and all persons having guilty knowledge of the transaction shall be disqualified and barred from participation in future trial under the auspices of this club.

Rule 7.—Dogs shall be called in the order obtained by the drawing, and any dog absent more than twenty minutes after being called may be disqualified by the judges and the heat given to the opposing dog. The dog taking the heat must run a side heat as provided for bye dogs in Rule 5.

Rule 8.—The owner or his deputy may work a dog, but when down the owner must not interfere with his dog if he has deputed another person to handle him. In the members' stake the dogs must be handled by their owners. The person handling a dog may work him as he may deem proper, but he shall be obliged to order by the judges for making unnecessary noise or for any disorderly conduct, and if after being cautioned he persists in such noise or disorderly conduct they shall order his dog taken up and adjudged out of the stake. The two handlers must keep together during the continuance of a heat and work their dogs in the direction indicated by the judges.

Rule 9.—When, in the opinion of the judges, a dog scents game, he shall be allowed a reasonable time to locate it. Discretion is left to the judges to order the opposing dog held in check meanwhile. Dogs shall be brought up to back only when the opportunity is favorable to determine if they will back voluntarily at sight of the pointing dog. Both dogs must, however, be started together after birds have been flushed from a point. When birds are flushed to order the handler shall fire one shot unless otherwise directed by the judges. Guns must not be loaded until the point is established.

Rule 10.—All dogs shall be required to retrieve except the Derby entries.

Rule 11.—No dog shall be required to run three successive heats in one day without the consent of his handler.

Rule 12.—No person other than the judges and reporters shall

be permitted to accompany the handler of dogs competing in any heat except owners of dogs running in charge of a handler, and they must retire at the termination of the heat until their dogs again come into competition. Spectators shall be kept at least fifty yards to the rear of handlers. Bitches in season, or dogs afflicted with any contagious disease, shall not be allowed on the grounds.

Rule 13.—All stakes shall be run to a finish if practicable; if not, the judges shall select the winners and award the prizes according to the work done by the dogs remaining in the stake. The judges shall decide if it is practicable to finish and their decision shall be final.

THE OGDENSBURG DOG-KILLING CASE.

OGDENSBURG, April 28.—*Editor Forest and Stream:* In your issue of March 6 was an account of the shooting of Troy my pointer (A. K. R. 6630) by my next door neighbor, A. K. Strong, and his subsequent arrest, trial and discharge by Recorder Derwin's decision that, although "the case of cruelty was proven, the man was justified."

On March 20 appeared an article signed by W. Wade, Hulton, Pa. From it I saw that the writer had apparently overlooked the fact that the offender was tried simply on the ground of cruelty to animals, and not for injury to my property, and the comments could only be construed as applying to the latter mentioned sort of a case. Considering the gentleman inclined to be fair-minded, I wrote a good straight account of the affair to Mr. Wade, referring him to gentlemen who would corroborate what I said, and defining the difference between "injury to property" and of "cruelty to animals," and received an answer which satisfied me that he understood how far from right the recorder's decision was and that he would make the proper correction in your columns.

I was not a little surprised to read in your issue of the 17th inst., a long drawn essay by Mr. W., which he probably intended to have reference to the shooting of my dog, and which contained no reference whatever to the outrageous decision of the recorder on the trial of the offender. In a very pretty way he describes what a paragon of a dog should be, and at the same time writes as if he had been accustomed to owning a dog. Well, I will wager him that he never owned a dog that wouldn't desert the finest dog biscuit known and seek the mystery of a new replenished swill barrel, or that would not pause to meditate over a pile of garden stuff in front of a grocery. Dogs are dogs, and to many people a good dog is like what Phil Sheridan said a good Indian was—"good when he is planted"—but for all that there are many people who dislike dogs who tolerate them because a person who owns and loves a dog is usually possessed of characteristics that make their likes respected by people who know them, and so dogs generally fare well at the hands of the human race in spite of their shortcomings.

Now, I wish to make a statement, and I will take issue with any lawyer in the country. I deny that any person has the right to injure in a cruel manner any dog on earth, no matter how much of a nuisance the dog is, unless the person so injuring the dog had a firm intent to kill the dog, and in the face of the fact that the dog was there with his ear shot off and his neck terribly mutilated, the recorder acquitted him of cruelty to animals.

From the item in Mr. Wade's letter referring to the Johnstown flood subscription, I am inclined to think somebody has been gulling him. That certainly had no reference to any one in this city, as the largest subscription was \$25.

W. H. MURPHY.

RUNS WITH THE FOXES.

II.—A CHASE IN THE ALLEGHENIES.

PITTSBURGH, Pa., Jan. 13.—*Editor Forest and Stream:* In the dense hemlock forests and laurel thickets on the North Fork, a branch of Red Bank Creek, an affluent of the Allegheny River way up in Jefferson county, Pa., foxes are still numerous. The country is rough and rocky, abounding in ruffed grouse, field mice, ground squirrels and rabbits, on which the foxes feed, and being little hunted are on the increase. On any tracking snow you can find their straight tracks intersecting each other in all directions, and many a glorious run have I had in that country, days I count among the red-letter days of my life.

What a glorious feeling comes over a man when tramping through the primeval forest on a beautiful winter day, the lungs filled with the pure invigorating ozone-laden mountain air, every muscle and nerve tingling with vigor, with that feeling of strength and health pervading the whole being, a sensation of which a man who has always followed a sedentary life has no conception, and which is the reward of vigorous, manly, outdoor exercise. Three kinds of foxes are found, the little wood gray, the red and the cross fox, with an occasional wildcat.

With old Leader, the veteran foxhound, and four of his descendants, we started out one beautiful winter morning. There was three or four inches of soft tracking snow on the ground, the air was crisp, just cold enough to make exercise agreeable, and little or no wind—an ideal fox-hunting day. Old Hank Peters, a typical backwoods hunter, woodsman and basketmaker, a character in his way, living in his little cabin up the creek, Ed Emery, Steel Hartman, the druggist, a keen hunter and lover of nature and a manly good fellow, and myself, composed the party.

The hounds were diligently hunting through the thicket, trying to find a track fresh enough to work out, but up to dinner time we had started nothing. The chances looked very small for the day, for unless we could jump reynard from the rock or stump on the sunny side of the hill, where he is wont to take his day nap under such circumstances, we were about sure to draw a blank. After lunch I proposed to follow the crest of the bluffs overlooking the North Fork Creek, where the hounds could hunt down hill among the laurel and small pines, and the wind being in our favor perhaps wind a sleeping fox. We had proceeded perhaps a couple of miles, old Leader hunting close to me, when all at once I saw the noble old fellow throw up his head, sniff the air in the direction of the creek, and make a bee line down the bluff. In a few minutes I heard his bugle note, soon followed by the whole pack in full cry. We all stopped, trying to make out the direction of the hunt, in order to choose our respective stands, as being well acquainted with the lay of the country we had a reasonable chance to intercept reynard at some point of the circle he was sure to make. The hounds ran down perhaps half a mile, then turned, and I knew the fox was coming our way. I ran down the hill about half way, while Ed took position about 100 yds. to the right, a little higher up, old Hank remaining on the crest of the bluff. I carried that day my 45-85-290 Bullard repeater, with Lyman back and ivory bead front sights, an excellent weapon, by the way, with which I have killed many a deer and a number of foxes. In a very few minutes I caught sight of the fox, a magnificent red, ascending the bluff directly toward me and between me and Ed.

As soon as I could, I turned loose several times in quick succession, the fox continuing to climb slowly the steep hill all the time, as if bewildered by the howling pack on its heels and the gunshots in front. Under any ordinary circumstances I would have killed that fox at a single shot; but I believe I had a bad attack of fox ague just then, never looking at my sights, for I did not touch a hair. Now the fox was in a nearly direct line between me and Ed, who turned loose both barrels at once, and the fox went still climbing that hill higher and higher, as if he had a charmed life. It was now nearly opposite Hank, standing on top of the bluff, and I was afraid to empty the remainder of my magazine for fear of hitting him, and I thought Hank had a sure thing of it anyhow, the fox walking past him not 20 ft. away. I can see now Hank snapping his old rifle several

THE MASTIFF DOG BEAUFORT—THE PROPERTY OF MR. W. K. TAUNTON, LONDON, ENG.

times, stamping the ground in anger, but the cap was wet and it missed fire, and that fox went on without a scratch. Not a drop of blood did we find, and in all my fox hunts I never knew a fox to run such a gauntlet and escape unharm. Down the creek went the chase a couple of miles, with us after the hounds, until we struck a dense laurel thicket, where the fox tried its favorite tactics of short sharp curves and circles to throw the hounds off. They kept him running around more than an hour without any of us getting a shot, when finally Ed caught a glimpse of him through the brush and gave him a load of BB. We found blood, and the fox ran down the creek a couple of miles, the blood spurting over the snow at every jump, and sought refuge under a big boulder. I never before could understand the endurance and wonderful tenacity of life of this animal and the amount of blood lost by such a small creature. By this time it was getting dark. We were several miles from home, tired, cold and hungry. We stopped the hole with rocks and earth, and the following day Hank dug out the quarry, still alive, but weak from loss of blood. I was sorry we could not put it out of misery the day before, but we had no tools to dig it out. This ended one of the most exciting fox chases I have enjoyed, the memory of which sends a thrill through my whole frame even now while I am sitting here in my city office. In my next I will give you an account of a wildcat chase, which did not end quite as well for one of us. JULIUS THE FOX HUNTER.

THE ST. BERNARD CLUB MEDAL.

NEW YORK, April 23.—*Editor Forest and Stream:* We send you a photograph of the design for the medal of the St. Bernard Club of America, which has been completed for at the difference shows during the season.

The head on the obverse will readily be recognized as representing the one of Otho; it is from a photograph of the late

champion and rests on the center of a Swiss cross, the arms of which are protruding, giving the medal a very unique shape. On the reverse are two sprigs of edelweiss, the im-

mortelle of the Alps, with space for the name of the winner.

The well-known silversmiths, the Whiting Manufacturing Company, of New York, are getting up the medal, which is a guarantee that it will be first-class in every respect. It will be of solid silver and the same size as the photograph. COMMITTEE ON PRIZES (K. E. HOPF, Chairman).

EASTERN FIELD TRIALS CLUB.—The governors' meeting of the E. F. T. C. will be held at 44 Broadway, New York city, at F. R. Hitchcock's office, on Tuesday, May 13, at 3 P. M.—W. A. COSTER, Sec. and Treas.

BEAUFORT.

THE mastiff dog Beaufort, of which a cut is given this week, was recently imported from England, making his first appearance in this country at New York. He was whelped July 29, 1884, and is by Beau and out of The Lady Isabel. His career in England was a brilliant one, both on the show bench and as a sire. His winnings there were too numerous to mention, some of the more important are wins in challenge classes at Crystal Palace, Brighton, Portsmouth, Warwick, Barn Elms, Ilford and Birmingham. In addition to these he has won firsts at many other shows, besides specials innumerable, including cups and gold medals of the Old English Mastiff Club. At New York last February he won first in the open class and the challenge cup of the American Mastiff Club, and at Boston in April he also won first in the open class. These are the only shows at which he has made his appearance in this country. He is the property of Mr. W. K. Taunton, London, Eng., who has placed him in the hands of Mr. J. Winchell, Fair Haven, Vt., during his sojourn in this country.

COLOR IN ST. BERNARDS.

Editor Forest and Stream:

In attending the circuit of shows the past winter I have frequently heard the remark that nothing but orange-colored St. Bernards stood any chance of winning. To be sure, I heard such remarks more from admirers than from breeders; but the fallacy is quite prevalent and should be corrected.

Neither in Switzerland nor England can an orange-colored dog beat a nearly all white or brindle that is its superior in other respects.

It frequently happens that all the prizes at a show are won by orange-colored dogs, but it is only because they possessed superior character, massiveness of skull, etc. To prove my assertion, I would mention champion Miranda, Gemma, Merchant Prince and our new acquisition, Watch; though it is well to bear in mind that all winners of renown, three-fourths or more white in color, have orange or brindle heads, properly marked.

In England there is champion Peggotty and champion Plantius three-fourths white, and champion Angele a dark brindle. Champion Leonard was nearly all white; but I will speak of the "dogs of the day."

That grand bitch of Dr. Inman's, Haidee, I think, is a dull brown, with no white at all worth mentioning. Most of these have won championship honors—by no means as easy a task as in this country—and must surely be admitted by the most ignorant to be first-class specimens. I will admit that orange and orange tawny are the most popular colors, but the preponderance of white should not be despised by any means. One of our best-made specimens, a son of champion Save, is pure white.

While on this subject of color I will touch on breeding for color, and would like to read the views of breeders on this subject. In my experience the sire has been the reproducer of color. That is, you are far more apt to get orange puppies from a white and orange bitch than from an orange bitch mated to a white and orange dog if there is no inbreeding. In inbred puppies there is a much greater tendency to "throw back" than if outbred. I am convinced that breeders of all varieties of dogs resort to too much haphazard breeding. If we would look more to the grandparents we would have better success with our puppies. For instance, some very ordinary white and orange bitch, whose parents were orange, if bred to an orange dog may prove the most valuable dog in your kennel.

If some of my readers will look over the pedigree of their best dogs and try to recall the color of the parents and grand-parents I think they will be astonished at their own ignorance. Yet the breeder cannot afford to be ignorant on this matter. Judicious inbreeding will prove of the greatest benefit, but doubtless in no other breed will injudicious inbreeding prove so disastrous. NAMQUOIT.

ONE REASON WHY.—*Editor Forest and Stream:* Your vivacious, spicy and always readable correspondent, Mr. W. Wade, in his letter the other day asked why a man had not a perfect "right" to shoot a dog, when the dog annoyed him by trespassing and other nuisances. There is at least one good and sufficient reason, as I see it; and this is that, being a "man," with the God-given privilege of being a manly man, no individual should arrogate to himself the "right" or claim privilege to do a demeaning act. I am not particularly fond of dogs; in fact I detest those that bark at night and murder my sheep. But to shoot a dog, not for the purpose of killing it, but as in this case, with intent to wound and cause suffering, I hold to be an unmanly, demeaning act. And I repeat, cannot see how any "man" can claim the "right" to do an unmanly act. Do we not all of us owe it to ourselves and to each other to be manly? and is not humanity to dumb brutes a quality of true manliness? I submit that it is startling doctrine for a person to preach in print, this contention of Mr. Wade's that any man has a "right" to lower himself to the brutal level of a dog shooter.—GEO. B. MANSON.

SMOOTH ST. BERNARD IMPORTATION.—Mr. Poag, of Toledo, O., has concluded his arrangements and cabled Friday last for the smooth-coated St. Bernard bitch Sunrise, Mr. Smith, of whom she is purchased, says she is a grand bitch, one he selected particularly to breed to Watch. He has bred her to Keeper, and she will be shipped immediately. She stands 30 in. at shoulder and weighs about 150 lbs. If nothing happens to her she will be a great addition to the Poag Kennels.

DOGS OF THE DAY.

A FEW weeks ago reference was made to the very apparent fact that the position of the associate members was not thoroughly understood by all the members, and their standing was more clearly defined. It now appears that at 44 Broadway there is also a misunderstanding, and the advisory committee made a serious blunder at its meeting held on April 7. In the *Kennel Gazette* for that month (which makes its appearance on May 1, and reminds one of the first October race meeting at Newmarket which is always held in September), the following appears in the report of that meeting:

"6. The American Kennel Club vs. Associates in arrears for dues, 1890.

"Resolved, That all members whose dues are in arrears be forthwith notified by the secretary that they are in arrears, and are requested to pay same.

"Resolved, That all names of members, who having received this notice, fail for sixty days thereafter to pay their dues be dropped from the roll of membership.

"Resolved, That the secretary send out these resolutions attached to said notice.

"Resolved, That as dues for the current year were payable January 1st, resignations will not be considered offered since that date, until after the payment of current dues."

I wonder who the wit was that suggested that to get a resignation accepted one must pay \$5. If the \$5 are paid it is hardly likely the person who does so will give up his *quid pro quo*—the *Gazette* and Stud Book.

The fact of the matter is that the members of the advisory committee forgot to refer to the constitution on the subject of associate members, or they would never have made the mistake they did. My friend Dr. Perry will allow me to express surprise that he was so led astray, and Mr. Vredenburgh ought also to have detected that the resolutions were all out of order. Messrs. Belmont, Anthony and Wise did not have occasion to know the constitution as did Dr. Perry and Mr. Vredenburgh, and whatever palliation there is in being forgetful or ignorant of the law is theirs. In Mr. Vredenburgh's case I am at a loss to understand how he failed to see the mistake, for he it was who suggested the amendment to Sec. 3 of Art. IV. of the constitution, whereby its present force is proposed to be altered by substituting "may" for the word "shall," which I have italicized in quoting the section, which is as follows: "Art. IV. Sec. 3. The annual dues of \$5 shall be payable on the first of January of each year to the secretary of the American Kennel Club, and any person whose dues are not paid on or before January 20 shall thereby forfeit his right to be included in the list of members eligible for election to office and to vote for officers for the ensuing year; and if his dues shall remain unpaid at the next annual meeting of the associate members his name shall be stricken from the roll, provided, however, that upon remitting the \$5 dues with an application for membership he shall be reinstated upon the indorsement of his application by the two presidents as hereinbefore provided."

It is easy to see now how ineffectual the action of the advisory committee is. We can take it for granted that not one of the members present at the meeting would pass any resolution so diametrically opposed to the constitution as those regarding associate members. The only thing, therefore, for them to do is to correct the minutes in some way, for of course when they come before the A.K.C. for acceptance they will have to be amended by striking out the unconstitutional portions of the proceedings. You see not one of the persons to whom application is directed to be made for dues for 1890 is a member of the club, nor has he been since the annual meeting of the associates held during the New York show. Every one who has paid his money in since that date, if he did not file an application and get it indorsed by Mr. Belmont and Dr. Perry, is not in reality a member. I do not suppose this has been done in a single instance, and it is just as I said at the associates' meeting at Boston, that the most exasperating thing in connection with the A.K.C. is the disregard of the plain and definite requirements of the constitution. Ninety-nine per cent. of the errors made by the A.K.C. since its organization would have been avoided if it had occurred to some one to see what the constitution called for.

In the case before us we have an instance which is a long way from being an exception, and it will be seen at a glance that the passing of the resolutions by the advisory committee was a waste of time. None will acknowledge such to be the case sooner than the members of that body, mortifying though it may be.

There is another resolution the committee passed to the effect that hereafter official notices of the A.K.C. would only appear in the *Gazette*. That I understand to be that the secretary will send no notices of expulsion or reinstatement to club members of the A.K.C. or to the kennel press. Presumably the object is to boom the *Gazette*, but will it do so? I doubt it for the reason that if the kennel papers choose they can quote from the *Gazette* within a day or two of its publication. Is it a wise step? I doubt it. Let us take, for instance, the Albany Kennel Club case, which appears in the report of this same advisory committee meeting. The A. K. C. was advised by Mr. Gallup, of the Albany Club, that checks for all unpaid premiums, for which he and his brother officials had been expelled and his club suspended, had been remitted to the winners at the show of 1889. The committee decided that he must file a statement of premiums so paid, and thirty days thereafter, if no further complaint is made, reinstatement will follow. No such statements appearing in the April *Gazette* it is to be presumed that none had been received before going to press. Supposing it has already been received it was possible for it to be received by May 2, presuming that the secretary gave the Albany people no more notice than he gave other members. On May 31 the *Gazette* for the present month is sent out with the statement, and the thirty days expiring on June 1 the Albany Club is duly reinstated before any one gets a chance to check the account in such manner as the advisory committee desired. Such a case occurred to me as soon as I read the report, and it would be easy to add many others, such as expulsions during the show season, which ought to be publicly announced at once.

There is another case, notice of which appears in this same committee meeting report, which will bear looking into. At the Baltimore show an exhibitor was disqualified for taking his dogs out contrary to a specific refusal to permit his doing so, for which he was disqualified. The case has been taken up by the advisory committee, how yet remains to be seen. If the exhibitor appealed, the rules provide a definite method of procedure, which is that the case goes to the president, who may grant temporary reinstatement or allow the penalty to continue in force, but in either event it goes to the executive committee at its next meeting, and must be decided by that committee and that committee alone. There is nothing in the rules about the advisory committee deciding these appeals. Altogether I must reluctantly confess that about the only commendable thing done by the committee was to order the money so long due Mr. "Billy" Graham paid to him at once. I suppose the case "Watson vs. Rochester Kennel Club," will eventually be determined. It was started last June, and my evidence as called for respecting request for reserve numbers for the special prizes has been furnished, and now Secretary Yates must put in any evidence he has or lose the case by default.

I don't want that at all, but a decision on the merits of the case as submitted. I don't know that it affects the Rochester Club at all, the specials being donations. This was a case in which an objection was lodged before the show closed, with a request to have reserve numbers taken. The club overruled the protest, which, upon appeal to the A. K. C., was sustained, and we have been backing and filling since last September over the reserve number business.

Nothing funnier has turned up in the kennel world for many a long day than the report of the general meeting of the Scottish Dandie Dinmont Terrier Society, held at Glasgow last month. It is to be hoped that Mr. Lauder, Hon. Sec. Scottish D. D. T. Society, will not be removed from his position, for he is the "Bill Nye" of dogdom as represented in our English exchanges. It was only a week or two since he was boiling over with indignation at Mr. D. J. Thomson Gray, president of the society, for having in an off-hand manner referred to it as the Dandie Club instead of its full name, D. T. and all. Lauder's latest is the official report of the Glasgow meeting. What it is in toto may be judged from the following "bits":

"The hon. sec. pointed out that the programme in his hand was only partially through. However, the president began reading and commenting on some document, which he styled 'A Memorial'." * * * The hon. sec. * * * asked for and proceeded to hand the same to Mr. Cook to read also, but to this Mr. D. J. Thomson Gray objected, strongly supported by Mr. Houlston gracefully flourishing a loosely tied umbrella, with which he threatened to knock down the hon. sec. * * * The president then vacated the chair, declaring the meeting finished, at which the hon. sec. protested. * * * The responsibility for this unparalleled episode in the society's affairs must rest with the president for the following reasons:

Then follow three numbered reasons, the third of which is "By the insult leveled at that official [hon. sec.] and Mr. Cook, when wishing to read jointly in the meeting's presence this extraordinary concoction."

The foregoing is the comedy side of the rather dry reports of club meetings held in England. What strikes one accustomed to parliamentarily conducted meetings is the peculiar looseness of doing business at these English meetings. At the Basset Hound Club meeting Mr. Millais was chairman, and yet of the three resolutions acted upon, one was proposed by the chairman and another seconded by him. The bulldog men are a lot worse than that, however. At one meeting they decided to alter the weights, making class VIII. for bitches 38lbs. and under 45lbs. weight. At the next meeting, when these minutes came up for approval, a proposition was made to alter them, substituting 35lbs. for 38lbs. Extraordinary as such a proposition was, yet nine voted to alter the minutes and only ten to have them stand. Of course the proper way in such a case is to move a reconsideration, but not to alter minutes except to make them a true transcript of what took place.

Mr. Frank Dole has just received the appointment to take charge of the Athletic team of Columbia College, which will represent the college at the international athletic meeting. In addition to this he has also been appointed to a similar position by the Berkley Athletic Club of New York. It is likely he will have to abandon his proposed trip across the Atlantic this summer.

Premium lists are ready for the Cincinnati show of June 3 to 6. Mr. George H. Hill advises me that the committee has secured the services of Major Taylor as judge of setters, pointers, foxhounds and beagles, while Mr. Mortimer will handle the remainder of the classes. Mr. Hill says that the prospects of a successful show are most flattering.

Official notice is given of the disqualification of the beagle Belle of Woodbrook, wrongly entered in the challenge class at New York. Mr. W. D. Hughes's Lou thereby moves up a peg into first place.

Can a person who is suspended for violation of rule 25 of the A. K. C. code, still remain an associate member in good standing? Also, can a person who has been expelled by a club, of which he was a member, and who therefore cannot be employed in an official capacity at any show, be accepted as and remain an associate member?

Has "Ashmont" gone in for bulldogs? I see his Atossa has been bred to Harper. Mr. Sawyer has already received the bitch Dolly Tester from England and bred her to Harper. Thereon hangs another conundrum. Can any medical reader explain why or give a reason for an ocean trip sending a bitch back from two or three months in her period. It has occurred in every case in which I have been interested. Nesta once and Mavis twice. On the other hand Dolly Tester comes over and is bred at once. Probably she was in season when shipped, and I should like Mr. "Harper" Sawyer to let me know if such was not the case.

The *Stock-Keeper* asks Mr. Fred Hinks to say whether he did not stick Beryl as a deaf dog. I know he told Mr. Dole he had a deaf dog, "the best in England," and quoted him at a temptingly low figure. Mr. Dole told me so at New York, and added that he would not buy another deaf dog. "Ashmont" has written one of his excellent articles on the subject of deaf dogs and its hereditary tendency. It is not for me to dispute such an authority, but is it not strange that deafness should be so frequent in white bull-terriers and white cats? Text-books say that white cats with blue eyes are almost invariably deaf, but I had one that was not.

Mr. Fred Kirby has just had the hard luck to lose all but one out of a litter of fourteen St. Bernards. "A bitch, of course, Fred?" "No, I did have one little bit of luck; it is a nicely marked dog."

The *Gazette* for April contains a list of twenty-two "Round-headed Bull-terriers." As they are under a different caption from "Bull-terriers" they are a different breed. Precisely. Then what recognized breed are they? Could an R. H. B. T. win in the miscellaneous class, and if it could not, what will the Stud Book committee do about registering the winners?

Roslyn Queen, the nice collie bitch puppy shown by the Chestnut Hill Kennels at Boston, has a bit of a history. Months ago she went astray and was bought by a farmer for \$2. This farmer sold off shortly after and the collie fetched \$150. About this time Jarrett in his clever way was advertising in the country papers for a "light-brown shepherd slut," with a \$5 reward as a bait. Some fellow who was at the sale saw the "ad," went to the man who had made the purchase at the auction sale, got her for \$2, and sold her to the man whose name appeared as the advertiser. I see Jarrett is now advertising for a "brown shepherd with a leather collar and a piece out of an ear, answers to the name of Mavis." I hope he will have equally good luck and get her back soon, for she was bred a month ago to The Squire.

As the first litter by The Squire has made its appearance it is evident that his age has not interfered with his virility. Dublin S.-ot and Charleroi II. are at Mr. Stretch's Ormskirk Kennels by this time. It is a great pity the latter was so neglected by our breeders.

J. W.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Duke C. By W. Deering and A. Chagman, Silver Creek, N. Y. for black, white and tan beagle dog, whelped Jan. 2, 1890, by Speculation (Ringwood—Imported Fanny) out of Velda W. (Cameron's Racket—Pussie).

John Bull. By Eberhart Pug Kennels, Cincinnati, O., for apricot fawn pug dog, whelped November, 1888, by champion Loris (champion Diamond—Queen Rose) out of May Queen (Young Comedy—Zilla).

Smokie. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug bitch, whelped Feb. 16, 1888, by Leo II. out of Dimple.

BRED.

Prepared Blanks sent free on application.

Duck's Baby—Cherry Boy. J. M. O'Brien's (Worcester, Mass.) cocker spaniel bitch Duck's Baby (Black Duck—Zozo) to C. G. Browning's Cherry Boy (Ebony—Fanchon), April 28.

Maida—Bob Obo. A. Laidlaw's (Woodstock, Ont.) cocker spaniel bitch Maida to P. G. Keyes's Bob Obo (Obo—Nellie), March 12.

Little Girl—Bob Obo. F. H. Cunningham's (Ottawa, Ont.) cocker spaniel bitch Little Girl (Guy—Flora) to P. G. Keyes's Bob Obo (Obo—Nellie), April 13.

Blondie G.—Bob Obo. Dr. Wesley Mills's (Montreal, Can.) cocker spaniel bitch Blondie G. (Pete Obo—Bijon) to P. G. Keyes's Bob Obo (Obo—Nellie), April 12.

Bridford Ruby—Bob Obo. J. F. Kirk's (Toronto, Can.) Sussex spaniel bitch Bridford Ruby (Bridford Dalion—Bridford Bida) to P. G. Keyes's Bob Obo (Obo—Nellie), April 6.

Woodstock Flirt—Obo. Jr. W. B. Palmer's (Woodstock, Ont.) cocker spaniel bitch Woodstock Flirt to P. G. Keyes's Obo, Jr., April 16.

Flora Kay—Bob Obo. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Flora Kay to their Bob Obo, April 25.

Martha—Washington—Bob Obo. Woodland Kennels' (Woodstock, Ont.) cocker spaniel bitch Martha Washington to P. G. Keyes's Bob Obo, April 23.

Tiney Obo—Bob Obo. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Tiney Obo (Obo, Jr.—Princess Tiney) to their Bob Obo, April 7.

Rideau Flossie—Bob Obo. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Rideau Flossie (champion Obo—Gipping Floss) to their Bob Obo, May 1.

Clytie—Blenion Trump. Rideau Kennels' (Ottawa, Ont.) fox-terrier bitch Clytie (Gril—Fury) to A. A. Macdonald's Blenion Trump, April 11.

Cleo—Bob Obo. Corktown Kennels' (Ottawa, Ont.) cocker spaniel bitch Cleo (Hector—Bleck Mes) to Rideau Kennels' Bob Obo (champion Obo—Barrow's Nellie), April 28.

Marguerite II.—Brake. John H. Day's (Red Bank, N. J.) pointer bitch Marguerite II. to C. W. Chapin's Brake, April 23.

Bessie—Bradford Harry. J. H. Slaats's (Lockport, N. Y.) Yorkshire terrier bitch Bessie to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady), April 24.

WHELPS.

Prepared Blanks sent free on application.

Thespian. John H. Matthews's (New York) bull bitch Thespian, April 23, eight pups, by his Portwood Tiger; two dogs and two bitches since dead.

Jest. W. T. McAtee's (Philadelphia, Pa.) fox-terrier bitch Jest (Splauger—Jostle), April 5, four (three dogs), by his Telford (Raby Mixer—Temptation).

Lady Thurman. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Thurman (Silver Shoe—Dixie), April 24, five (two dogs), by A. C. Pitts's champion Kash (champion Bradford Ruby—Lady Cloudy).

Lady Thora. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Thora (Santa Claus—Almah), April 24, five (two dogs), by A. C. Pitts's champion Kash (champion Bradford Ruby—Lady Cloudy).

Pearl Noble. N. Wallace's (Farmington, Conn.) English setter bitch Pearl Noble (Count Noble—Jennie II.), April 24, nine (six dogs) by Memphis & Aven Kennels' Rowdy Rod (Roderigo—Juno A.).

SALES.

Prepared Blanks sent free on application.

Sam. White bull-terrier dog, whelped May, 1889, by Young Prince out of Tilly, by Arthur S. Aborn, Waltham, Mass., to H. H. Hill, North Attleboro, Mass.

Duke C. Black, white and tan beagle dog, whelped Jan. 2, 1890, by Speculation out of Velda W., by F. M. Shelley, Sheridan, N. Y., to Wm. Deering and A. Chagman, Silver Creek, N. Y.

Chequassett Taffy. Silver fawn pug dog, whelped June 5, 1889, by Santa Claus out of Victoria, by Eberhart Pug Kennels, Cincinnati, O., to D. W. Pardee, Brooklyn, N. Y.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE RIFLE IN CALIFORNIA.

LOS ANGELES, Cal., April 23.—Inclosed please find score sheets of matches held at a rifle tournament under the auspices of Co. A, 7th Infantry, National Guard of California, April 19 and 20. The matches were open to any kind of rifles and sights, except telescopic sights; the military rifles and rifles with open sights having a trigger pull of 6 lbs. or over receiving 3 points on the Creedmoor, 4 points on the American and 10 points on the G. M. 25-ring target. The wind was apparently troublesome to the sporting rifles, as few could allow for the same. The low scores (most of the members of Co. A) were occasioned by the boys having to busy themselves during the day with the targets and helping the strangers all they could. This was the first time in southern California that a rifle tournament of that kind had ever been held, and it was a great success in all ways. Everybody was satisfied and no disputes arose. We contemplate arranging another tournament some time during the fall.

April 19. Match No. 1, Creedmoor target, 7 shots:
S Crawford (mil.)...35 F Harris...30 Gilchrist (mil.)...29
E O'Connell (mil.)...29 R H Gray (mil.)...28 W Williams...28
L Munshauer...31 Holbrook...30 Stortebreck...28
Darracott (mil.)...31 Hoesley...29 Fairbank...28
Pierpoint...31 Danicke (mil.)...29 W A Frick...28
J Singer...30 J Frick...28 Guenther...28

Match No. 2, standard American target, 7 shots:
W A Frick...30 Chas Leighton...43 M T Owen (mil.)...37
J D Gilchrist (mil.)...47 J Frick...42 H Williams (mil.)...36
W Guenther...46 R H Gray (mil.)...42 G B Fairbanks...31
L Munshauer...46 H C Miles (mil.)...38 Pierpoint...34
Joe Singer...43

April 20.—Match No. 3, Creedmoor target, 7 shots:
W A Frick...33 H Slotterbeck...30 H Miles (mil.)...29
James...31 S Crawford (mil.)...30 Darracott (mil.)...29
W Gunther...31 Theo Myers (mil.)...31 Harvey (mil.)...29
Chas Leighton...31 A J Scott...30 McCray (mil.)...29
Smith...31 Geo Lamp (mil.)...29 F Schafer...28
J E Frick...31 E Harris...29 F Baldwin (mil.)...28
R H Gray (mil.)...31 Hensley...29 J Singer...28

Match No. 4, standard American target, 7 shots: S Crawford (mil.)...37, W. Frick...31, J. Frick...31, J. Singer...43, A. J. Scott...46, Myers (mil.)...46, R. H. Gray...46, Hanneman...46, James...44, H. Frick...44, Quenne...44, C. Leighton...43, H. C. Miles (mil.)...43, L. Wunderhamer...44, P. E. Gray...39, J. Lyst (mil.)...39, Hutchins...39, W. Gunther (mil.)...37, W. B. Anselme...37, E. Schafer...36, E. Martin (mil.)...35.

Match No. 5, German rifle target, 7 shots: W. A. Frick...37, L. Wunderhamer...34, J. E. Frick...33, Myers (mil.)...33, Miles (mil.)...33, F. Schafer...32, R. W. Fridhamer...32, Joe Singer...32, S. Crawford (mil.)...31, Jackson...31, W. Gunther...31, E. Harris...31, P. E. Gray...31, Quenne (mil.)...31, James...31, Harvey (mil.)...31, G. H. Wilcox...31.

NEW ORLEANS, La.—The great rifle contest for the championship of the State of Louisiana, between the Olympic, Arnoulds, Sunday, May 4, at 3 o'clock A. M., continuing throughout the day and on each succeeding Sunday until completed.

Even in the class where competition still exists, the class of Sea Fox, Merlin, Sachem, Grayling and Mayflower, there is little life and vitality in the racing; no new yachts have been built and the racing promises to be but tame compared with the last three or four years, what there is being confined to Boston. The only ad-

FIXTURES.

dition to the class is an 80ft. cruiser, a wooden craft designed by Mr. Burgess, and intended for off-shore cruising. Her name, Fleur de Lis, recalls old memories of the schooner fleet of twenty years ago, of Tarolinda, Tidal Wave, Idler, Meta, Columbia and others now half forgotten. The owner of the new craft, Mr. George Trotter, proposes to try her on some long cruises, with no thoughts of racing. The 81ft. class has taken no more definite form than it has had for some time, and numbers no additions, with little promise of racing among its present members. Marguerite is for sale, leaving only Oenone, Iroquois and Halcyon. It is something that supplanting that no one has been tempted to copy the handsome little 80ft. Quickstep which showed so well in the racing last year, as she is of a very convenient and economical size and combines racing and cruising qualities in a very fair degree. No one has thought it worth while, however, to build to beat her.

In the single-stick fleet the 90ft. class is still among the was-to-have-beens, apparently further off this year than it was two seasons ago. It still boasts of a middle and a tail, Volunteer and Puritan, but one has shown the least inclination to endow it with a head in the shape of a real steel racer of 90ft. waterline. Even in England, where single stick craft of large size were once common, but one large yacht has been built in three years, and she is 6ft. short of the 90ft. class.

The 70ft. class, although one of the most active in the racing, also shows no additions this year, the sum total of progress being the changing of a middle and a tail, Volunteer and Puritan, but one has shown the least inclination to endow it with a head in the shape of a real steel racer of 90ft. waterline. Even in England, where single stick craft of large size were once common, but one large yacht has been built in three years, and she is 6ft. short of the 90ft. class.

The continued and unbroken success of Clara is a challenge that American yachtsmen can no longer afford to disregard, as she has headed her class since 1885. Not only should it be an easy task to beat her under the present rules and with the latest advances, but the class itself is an excellent one; a steel racer of 50ft. waterline, with a modern type of keel, giving her a very favorable position for the usual summer work and at the same time affording plenty of sport on the regatta courses. Clara is now nearly ready, and with new sails and copper will be in the early races, but with nothing to meet her. The sole addition to the class, the Ventura, or the Broncho of the Bronx, is hardly to be considered, as neither model nor build will make her a dangerous adversary.

The 40ft. class, just now in the midst of a boom about Boston, and new and old together will furnish some good racing. Of the two new additions, the centerboard Millicent was included in our list of last year, being started for Mr. C. D. Owens, but not finished in time. She was sold last fall to Mr. A. B. Turner, of Boston, and was lately launched at Lawley's. She is similar in a general way to the forties Nymph and Verena. The new boat of this class, the 40ft. class, is a keel boat, a Boston yachtsman, Mr. F. B. McQuesten, a similar craft to Alga and of water line 40ft. The fleet now includes Alga, Millicent, Bayadere, Fanita and Vixen, the latter two well known to yachtsmen. There should be some very fair racing for this year at least, all of the boats being of moderate proportions, but sooner or later some one will jump into the class with an enlarged forty, leaving the moderate craft far astern as sailing a pace that they cannot follow.

As it now stands the class has been given a very favorable position with the 40ft. as being less expensive and at the same time giving greater accommodations, but these merits are not due to any intrinsic virtues in the length, 40ft., but merely to the fact that racing in the class has not yet begun. It may be that the crew of a 40 is also sufficient for a 46-footer, but the main point is that the extreme of the smaller class has not yet been reached in the larger, when it does, and we see a 40ft. class, and is now the large as Hildegard, Wenonah or Thetis, there will be no doubt about the advantages of the class. The fact is that as long as they are kept within moderate limits both the 40 and 46-footers are excellent craft, well suited to a very large number of yachtsmen. If both classes can be maintained with plenty of entries in each, so much the better, but unless this proves to be the case it is folly to build more of either, and the class will suffer in the end. This year the 40ft. class will have a good trial in the Bronx, but in New York it is practically dead. The forties will monopolize all of the racing west of Cape Cod, besides some further east. The fall regatta of the Eastern Y. C. will be confined to these two classes only.

The additions to the 40ft. class are fewer than was expected; but, on the other hand, the dire lamentations that were heard at the end of last season, and the dissolution of the class have proved to be groundless; it still has plenty of vitality, and is now the backbone of yacht racing in America, as the 20-rating class, its parallel, is in England. The three American forties are all from the board of Mr. Burgess, but varying from each other and also from all of his previous boats. The principal one is naturally the Gossoon, the others, the Adams brothers, having already owned two of the notable boats of the class, and started in a measure as godfathers to it. After their experience with Paragon in 1887 and Baboon in 1888, they spent last season in English waters sailing on the crack 20-rater Dragon. On their return last fall the new Gossoon was planned, her chief mission being to beat Minerva.

Like her predecessors, she is a keel boat of the same draft as Minerva and also the Burgess boats of last year, Maraquita and Chispa—about 3ft. 5in. The beam, 13ft., is midway between last year's boats, Minerva, 10ft. 6in., and the midship section shows the influence of Minerva, the bilge being eased away and the strong hollow near the garboards being filled out proportionately. The same tendency is seen in the sheer plan, a strong rake to the sternpost, a cutting away of the keel below the mast, while the lead keel is greatly increased in width. The ends above water, with the sheer, remain much the same. Like her two sisters, Gossoon is flush-decked, but the construction is quite different, the scantling being reduced and steel frames substituted at each third space, with steel floors. The planking is single-plank and deck of one thickness also, the example of Liris not being followed in these respects. The mast will be a solid stick, but the boom and gaff will be hollow. Blocks and fittings will be lightened as much as practicable. The lightning process is seen above the horn timbers, leaving just inside the mast from the fore side of the rudder trunk. This reduction, however, does not extend clear aft, the transom and quarter timbers being large and heavy, of white oak.

The next forty is of a different type, the Morgan boat lately described in the FOREST AND STREAM, a centerboard craft about a foot narrower and 6in. deeper than the Nymph type, but with the same easier section and reduced bilge. The 40ft. class, but in this case the tail is lightened by the use of yellow pine for the transom in place of oak. A still more extreme step in the same direction is the new Foster Ventura, the responsibility for which is shared, we believe, by both owner and designer. She is a very deep centerboard craft, drawing about the same as Chiquita, but with 12ft. beam nearly 13ft. less than the latter boat. Of course, the bilge is very light and the whole sweep of the hull and planks is easy, no marked hollow or round. She is of the same construction as the other two, and like them with flush deck. Gossoon and the Morgan boat will carry moderate rigs, considerably larger than Minerva, but not like some of last year's creations.

The 30ft. fleet is just now experiencing a decided boom in the East, a less than a dozen years ago, being in the lead in racing, but a number are for the vicinity of Marblehead, the nursery of the class. Of course the successor to the two Saracens claims first attention, as she is likely to be the best owner and designer can concoct, and to be as well manned and sailed as any. Saladin is an improved Saracen, the dimensions being about the same, 30x10x7. She shows a fine and easy form, with more rake to post and less forefoot than the older boat, and a center sweep to her section. She will be flush-decked with a very long and easy down the center, 9ft. 6in. x 3ft., covered by a combination slide and skylight, and by a light hatch in racing. While this plan is convenient, it has the disadvantage of a loss of strength, so many main beams being cut. Below she has one long cabin and a fore-cabin, the room not being equal to Kathleen's. The frame is similar to Kathleen's, two steamed timbers between each pair of sawn frames, the latter being double, but the scantling is considerably heavier. The cockpit is quite small and there is a good deck for working, but a little obstructed by it or the long companion. The boat will carry a large rig, though still smaller than Kathleen's. The other keel thirties are similar to Saladin in dimensions and model.

Besides the keels there are several centerboard racers of the Shark type, the latter being a flush-decked 30-footer, built last

summer, hence not included in last season's list, the same being the case with the 40, 40 Chocoma, also a centerboard boat. These little craft are both wide and deep. 11ft. 6in. beam and 5ft. 6in. draft. It is worth noting that in this class Mr. Burgess has taken a foot of beam as equivalent to a foot of depth, the centerboard models being 1ft. 6in. wider and the same amount shallower than the keel; equal amounts being thus taken from the draft and added to the beam. We believe that as a conclusion from some experiments carried out some years since by the Nixen Kemp placed about the same relative values on beam and depth. In the same class will be two or three new Cape cats, or boats of the Harbinger type; and altogether there will be plenty of 30ft. racing in the East.

One proposed addition to the class, a sort of 30ft. Minerva, designed by Mr. Gardner, has not been built, the owner using a design of his own which he modestly and not inappropriately named *Chaco*. She is a keel craft with a peculiar afterbody, the quarters flaring out, wide and flat. She is built very lightly on the McIntyre system of composite construction, the frames of light steel angles reversed, with a wood backing on which the planking lays. The keel is a cast-iron trough in which the lead is stowed, the heels of frames being riveted to the sides of the trough and strengthened by steel plate floors. As the woodwork was done by W. B. Smith, builder of *Thetis* and *Huron*, it is unnecessary to say that it is very neatly finished. The arrangement below is peculiar, there being one large space with shelves along the sides, one above the other, which with the rails and battens which form their front suggests the interior arrangements of a chicken house. The construction gives a great deal of room below, but the arrangement is not pleasing.

The 20ft. class of the Corinthian Y. C., of Marblehead, will have a shaking up this year from the advent of a new racer, successor to the *Swordfish*, designed by her owner, Mr. John B. Paine. If she proves even as fast as his first effort there will be fun in the class, and we learn that already a prominent designer has been asked for a boat in this class, and there is some talk of 25ft. down there are fewer new craft than there should be, and of these none are for New York, the home of the small craft being about Boston.

There are a number of young yachtsmen about New York who would welcome the establishment of a 20 and 25ft. class, with frequent races during the season, and there is the matter of strengthening the fleet very materially by the encouragement of new racing blood, but none of the clubs are both able and willing to move in the matter. A double purpose could be served by making a class of 25 or 30ft. corrected length, thus giving every chance for valuable experiments and at the same time plenty of sport. There is no disputing the fact that yachting does not receive the support which it should about New York, when the number of young men who have both time and money for it is taken into account. A great seaport like New York, with all its wealth of yachting history and traditions to sustain, should show a racing fleet of four times the present numbers if she would live up to her reputation, and the way in which such a fleet must be built up is from the bottom, on a foundation of fast and able little ships, manned by Corinthians who can and do sail them. To be sure there are natural drawbacks to be met, in spite of its miles of water there are few spots on the shore where railways have left a foot of ground for a club house, or where an anchorage is possible, and the cruising ground is none of the best, but at the same time there is a chance to do more than has yet been done for the skipper of the 25 or 30ft. racer.

Taking the fleet as a whole, there is a fair number of new craft for the local racing on the lakes and in various localities away from the Atlantic coast, and while this scattered division of the fleet is by no means up to the standard of the coast squadron, it is improving rapidly; designs are sought from the leading designers; the racers of the coast are studied and copied, and a large number of amateur designers are at work with an earnestness that promises good results. Everywhere a marked improvement in design and construction is visible, and at the same time the interest in yachting is growing. The greatest advance is on Lake Ontario, where the new classification by corrected length is to be tried this year with a fleet of new boats and the old ones as well. The chief interest will center in the new *Eifel* craft, almost reduced to a hulk by the too narrow and excessive keel, and the proportion. Against her will be a very successful Burgess boat of the modern compromise type, the head of her class on the lake for three seasons. The other Scotch importation, the 20-rater *Vreda*, will be too large for any established class, and will come in with the odd sizes from 48 to 60ft., so that no close gauge of her speed is possible. The majority of the new boats of the week are of amateur design, and it is more than probable that some will not quite hit the winning proportions under the rule; but on the whole, a most active and useful season is promised, and the result is likely to be highly advantageous to the lake yachting in the future.

One very striking feature of the new fleet is the reaction from the heavy powered craft of last year, and the more moderate proportions now in fashion, together with some improvements in detail, such as more careful fitting of designs, better distribution of ballast, and the cutting down of useless weight. The ordinary wood construction in vogue for half a dozen years or more was far ahead of the old spiketail and hulk build of the shoal sloop; the material was much better, the workmanship was thoroughly fastened. At the same time this construction, all double bottom frames of heavy scantling, is capable of much improvement, and there is a wide margin to work in before a dangerously light machine is produced. The careful selection of only the best timber; a thorough study of the strains developed in a yacht, and of the best means of meeting them; neat and accurate workmanship in the fitting and fastening of all parts, and thorough fastenings as small and strong as possible, will add to the first cost of a boat, but will pay in the end in speed, if not in durability over the rougher and heavier construction.

As matters now stand, there is no likelihood that at the end of the season there will be heard the same outcry against the big craft as last year, but it has been postponed, probably for a year or two, and the need for a different classification, to the building of "brutes" is not so imperative as it seemed last spring. At the same time the heaven is steadily working, and it will be no surprise to see the clubs at the end of the season, or perhaps a year later, swing into line together in favor of a classification such as was proposed last fall.

THE CHANGES IN MARAQUITA.—During the past week Mr. Belmont's 40, *Maraquita*, has been on the ways at Winttingham's yard, where extensive alterations have been made. The yacht was securely blocked up and the entire lead keel was removed, being sawn into sections a couple of feet long. Some of the keel bolts that could not be backed out were also sawn off. A 2½in. oak plank was bolted up under the keel, and the old keel was removed, and when a strong box would be built under the boat, the new keel bolts being first driven. The pieces of the old keel were then melted and run into the mould, the operation being very successful and giving a solid casting. The draft of the yacht remains practically the same as before, but the keel has been lowered 2½in. in the top and 1 inch in the 1½in. in width on the bottom, thus lowering the weight. The alterations would probably have been still more effective if the lead had been made still wider and lower and at the same time not deep. The forefoot has been cut away considerably, the keel being taken off at the knuckle, diminishing as it runs downward. The sternpost has also been cut away at the keel as much as possible to increase the rake. *Maraquita* has now a good mast, put in last year; and with the lowering of the ballast, she should show up considerably better than last season, but it is doubtful whether she will yet be near the head of the procession and able to hold with *Liris* and the new boats.

THE NATIONAL MUSEUM.—The section of naval architecture in the U. S. National Museum, at Washington, has recently been enriched by the acquisition of a beautiful model of a typical British cutter yacht, the gift of Capt. Geo. M. McClain, of Gloucester, Mass. The model has been rigged complete in all details, including ballast, sails, and rigging, and is a fine example of the work of the Honorable Captain of the section of the U. S. Navy, who has over all, 38½in. on load waterline, extreme beam 6½in. extreme draft 1½in. A fine collection of photographs of yachts has also been presented to the Museum by the well-known Boston artist, N. L. Stebbins. These have been mounted in swinging frames and are now on exhibition.

LYNN Y. C.—Mr. Lockhart has sold the Tom Cat to Mr. Randall, of the Lynn Y. C. The steam launch built for Messrs. Baker, Wheeler and Wain is called the *Trio*. She will take her trial trip next week. Mr. Saunders's new 30-footer was launched on April 12. She is the best-looking boat ever in the L. Y. C. fleet. Most all the boats are in the water. Three members of the L. Y. C. have bought the cutter *Otter*, and will have a new overhanging stem put on her. The *Expert* has been bought by James B. Jones and will be sailed under the Lynn Y. C. flag.

RHODE ISLAND Y. C.—At the monthly meeting last week it was decided to engage a room in Providence for town quarters, especially for use during the winter. Vice-Com. Sands read a very complete and interesting paper on boat measurement, his conclusions being in favor of the length and sail area rules. The following dates have been decided on: June 17, spring regatta; July 15, cup regatta, Aug. 27, open regatta; June 21, ladies' day.

LARCHMONT Y. C.

THE measurement committee of the Larchmont Y. C., after being engaged on the subject since early in the year, have lately made public their findings in a report. Though the last of the late rule to adopt the Seawanhaka rule, the Larchmont has gone further than any in the direction of a 60 per cent. allowance table. The report also recommends the adoption of corrected instead of waterline length as a basis for classification. The reports of the committees of other clubs on the same subject were published in the *FOREST AND STREAM* as follows: Seawanhaka, Nov. 14; Lake Y. R. A., Nov. 14; New York, Dec. 8; Eastern, Dec. 12. The Larchmont report is as follows:

Your special committee appointed at the annual meeting to consider and report whether any change, and if so, what, should be made in the system of measurement of yachts for racing, and in the scale of time allowance, hereby respectfully report:

That they have ascertained that every other leading yacht club in the country has already arrived at the common position of taking into consideration both waterline length and sail area in measuring yachts for the purpose of time allowance in racing, and the leading yacht clubs have come to a substantial agreement upon the proportion that each of these elements of measurement should bear to the other. This result has been arrived at after much years of discussion and experiment, and it is sufficient to lead us to recommend that the Larchmont Y. C. should now join its sister yacht clubs in adopting this system of measurement. We therefore recommend that for the future yachts should be measured and rated for time allowance as follows:

To the square root of the sail area is to be added the length on load waterline. The sum thus obtained having been divided by two, the result will be the yacht's measurement for time allowance and shall be known as "racing length."

We recommend that the calculation for sail area shall be based on the length of the spars. Experience has shown that there are considerable practical difficulties in the way of measuring the sails themselves. We submit, herewith, as a part of our report, an amendment to the sailing rules, specifying in detail the method by which all measures shall be made. We recommend that the rule of measurement herein suggested shall apply to all yachts participating in the club races down to the smallest classes. It is confidently hoped by your committee that this will result in reviving the interest and increasing the entries in the smaller classes, as the moderately-rigged boat will, it is believed, be given a far better chance of winning than they have had under our former rule.

Your committee further recommend that all cabin yachts shall be classed according to their "racing length," and open yachts according to their waterline length, as at present. There seems to be no sufficient reason for, and many reasons against, taking into account two elements in measuring for time allowance, and then regarding but one of these elements in classifying the yachts so measured. We do not recommend any changes, for the present at least, in the limits of the several classes. A subject which impressed your committee as one requiring serious attention is that of the scale of time allowance. It is a well-recognized rule that theoretically, and within economic limits, the possibilities of speed vary in different vessels as the square roots of their respective lengths, and to-day practically all tables of time allowance are based on this generally accepted rule.

As stronger winds are required, however, to give to the larger vessels the full extent of their advantage in size, the theoretical scale of allowances would not be adapted to the conditions usually prevalent during the racing season. It has been the customary, therefore, to construct time allowance tables by taking a fraction of the theoretical allowance. That fraction, heretofore accepted, has been found by experience to be altogether too small, so that it has come to be an axiom among yachtsmen that ordinarily the larger boat could more than give her time to the smaller.

The scale of allowance at present in use in the Larchmont Y. C. is 40 per cent. of the theoretical scale. The scale in use by the New York Y. C. is 50 per cent. The scale in use by the Eastern Y. C. is about 57½ per cent. In our opinion none of the scales of allowance is sufficiently large, and we recommend that a scale shall be adopted which will be 60 per cent. of the theoretical scale. We have had a table of allowances worked out on this scale in feet and tenths of a foot. For the purpose of carrying into effect our recommendations, we hereby propose the following amendments to the sailing rules: Cabin yachts shall be classified according to their "racing length," and open yachts according to their actual load waterline length as follows:

In mixed-rig races, schooners shall be rated at 85 per cent. and yawls at 90 per cent. of their respective racing lengths, both for the time allowance. The three classes under the heading of "Entries" to read as follows: Any yacht in either of the classes B, C, D, E, 2, 3, 4, 5, 6, 7, 8, 9, 10, 13, 15, or 16, may enter in a class larger than her class, but in such case such yacht shall assume and be entered as of the minimum racing length specified for the class in which she so enters; if a cabin yacht, and of the minimum load waterline length of such class if an open yacht; but this shall not be so construed as to permit a sloop, cutter or yawl to enter in a schooner class, nor an open yacht to enter in a class with cabin yachts. All entries must be made in writing, and specify the racing length calculated according to the rule hereinafter prescribed, and if an open yacht, the exact load waterline length also, which measurements shall be verified by the measurer of the club before any prize shall be awarded to such yachts.

Yachts shall be measured and rated for time allowance and classification according to the following method: To the square root of the sail area add the load waterline length, and divide the sum by two. The result is the measurement for the time allowance, and shall be known as the racing length. The measurement shall be taken as follows: A base line shall be taken from a point midway between the jib topsail stay and the jib stay, or the bowsprit, or between the flying jib stay and jib topsail stay, on the jibboom in a straight line to the end of the main boom. To this measure shall be added that length of main gaff which will remain after 80 per cent. of the topmast has been subtracted from it. The gaff, for this purpose, shall be measured from the after side of the mast to the end, and the topmast from bounds to the lower side of shroud in topsail halliard block. The length of base line as above defined shall be modified in any case where the spinnaker boom measures more than the distance from the fore side of the foremast in a schooner, or mainmast in a single-masted vessel, to the forward point of the base line as previously defined. Any excess in the length of the spinnaker boom beyond this point shall be added to the base line.

The length to be measured for a spinnaker boom shall be the extreme distance, when in use, of its outer end from the center of the foremast to the mast upon which it is carried. For yawls the base line shall be taken from the same point forward as in vessels of other rig, to the after end of the mizzen boom. In boats which carry no headsail, the forward point of measurement for the base line shall be the after side of the mast, or of the foremast if there shall be more than one mast.

Time allowance shall be calculated upon the racing length according to the table of allowances of the club, which is calculated at 60 per cent. of the theoretical allowance based upon the principal that opportunities for speed vary as do the square roots of the lengths of vessels of different sizes.

(Signed.) FRANCIS M. SCOTT, Chairman,
JOHN H. BLYSLOP,
EDMUND BLUNT,
A. BRYAN ALEX,
EDWARD J. GRACEAN.

THE MORGAN NAVY.—For the past two days it has been whispered about that E. D. Morgan, owner of the *Constellation*, has bought a big English steam yacht, and that the crew of the *Constellation* are to be transferred to it. It is said that Mr. Morgan and Mate Cochran left Port Jefferson, L. I., a few days ago, without giving the club skippers there any idea of their destination, but the latter have come to the conclusion that the before mentioned captain and mate have gone abroad to bring this steam yacht home. Meanwhile, Mr. Morgan and his confidential advisers will not talk about the matter; so all the public can do is to wait and see if the steam yacht in question materializes. —*Boston Globe*.

TRENTON Y. C.—The following officers were duly elected at the annual meeting in April: Com., Alfred Wilson; Vice-Com., Wm. H. Leavitt; Rear Com., Thos. H. Thropp; Sec'y, Robt. Farrell; Treas., C. P. Aronson; Pres., J. H. Wilson; Mess., Jas. B. Taylor, Trustees, President, Secretary, Treasurer, John Gralk, and Peter Thropp. Regatta Committee, Nate Mickel, Walter West and Arthur Manning. Commissary, H. J. Harris. The trustees were instructed to furnish the room. The club is in a prosperous condition. The offices of Fleet Surgeon and Fleet Captain were not filled.

AN EARLY RACE AT MARBLEHEAD.—A proposal is on foot to open the season at Marblehead on Memorial Day by a sweepstakes race for the 30ft., 40ft., and 45ft. classes. Although some of the new boats will not be ready there will be enough to make good racing with the older craft.

MINERVA.—Yachtsmen of the Hub have been feasting their eyes on the shapely curves of the swift *Minerva*, as she rests upon her cradle at Lawley's. Her lines reveal little that was not surmised by our best-informed yachtsmen. It was supposed that she was a craft of big displacement and full sections, and this she proves to be. If anything, the Scotch boat draws more water than she has got credit for, and she is not so much cut away in her profile as many expected. A photographer who tried to take a shot at the *Fife* boat was foiled by the crew, who hung canvas from the bobstay, thereby protecting that much-prized midsection from the over-curious eyes. —*Boston Globe*. At Lawley's yard the 40-footer *Minerva* is hauled out on the ways, and the new 40 Gossoon is in the high shed ready for her priming coat. It is but a few steps from one to the other, so yachtsmen who visit Lawley's just now get a good look at both yachts. The *Minerva* is a "toy," delicate and fair, and shows the hand of an expert, with her egg-like shaped midsection, giving good displacement and small wetted surface; wide lead keel and long bow, almost straight for many feet. In looking her over many would think she has no power and that she would not be able to carry her sail spread. The Gossoon appears large when compared with the *Fife* boat, and while she looks to have considerably more displacement, she really has not as much as her looks would seem to indicate. She has easy form compared with the other Burgess forties, and is still more powerful. Thus, it is not the Gossoon who will be stepped out from the same place as the *Minerva's*. While comparing these two crafts, one of this year's forties might be mentioned, the *Ventura* will bear watching, and a few look for her to carry off the palm. —*Boston Herald*.

CHANGES OF OWNERSHIP.—Narod, steam yacht, has been sold by S. G. Doran to J. H. Hanan and E. H. Andrews. Stranger, steam yacht, has been chartered for the season to Herman Oelrichs, former owner of *Hildegarda*. Oriva, cutter, has been sold by C. C. Monroe to George L. Ronalds, former owner of *Sentinel*, and the same yacht, *Oriva*, has been sold by J. J. Fay to C. P. Holman, of Boston. Nooya, steam yacht, has been sold by J. M. Sears to a New York man.

CORINTHIAN NAVY.—A new port station has been established at Grand View, near Riverdale, on the Hudson River, Mr. Kenshaw Mason Jones being in charge. The Hudson River Squadron were entertained by Mr. Cameron at the port station, foot of 133d street and Hudson River, last Saturday, when the first Corinthian Navy port flag was broken out. The following are proposed for membership: Chas. C. Castle, A. Kendall, Jas. G. Kemp.

BLOCKS, OARS AND MAST HOOPS.—We call attention to the card on another page of Wm. Simpson & Co., 27 Centuries slip, New York, manufacturers of blocks, oars, mast hoops and similar articles. The firm makes a specialty of sails for boats of all kinds.

KATRINA.—While sailing up the Lower Bay a short time since the yacht *Katrina* rescued a man who had fallen from the steamer *Huron*. The yacht's boat was dropped and the man picked up. There was a strong breeze and some sea at the time.

NYDIA.—The new steam yacht *Nydia*, designed for Dr. R. V. Pierce by H. J. Gielow, and built by Winttingham, was successfully launched on May 3rd. The 1-jiner work is well advanced and she will soon be ready for sea.

CORONET, sch., A. E. Bateman, is now off Bay Ridge, her old master, Capt. Crosby, being still in command. She is now painted white. She will sail in a few days on a Southern cruise, touching first at Norfolk.

VOLUNTEER.—The report is current in San Francisco and New York that Volunteer has been sold by Gen. Paine to Com. Philip Caduc, of the Pacific Y. C.; to be sailed around the Horn next fall.

DUNRAVEN'S LETTER.—A letter from Lord Dunraven was received on Monday by Secretary Oddie, but the contents have not yet been made public.

AZALEA AND AGNES.—A special match between these schooners, owned by Edmund Blunt and J. N. Winslow, will be sailed on May 30, under the management of the Larchmont Y. C.

LARCHMONT Y. C.—The formal opening of the club house will take place on May 10, the colors being hoisted at 4 P. M. Dinner will be served at the regular hour.

A WOMAN AS A PILOT.—Mrs. Eliza E. Pool, of Chelsea, Mass., has lately passed an examination and received a license as pilot of the steam yacht *Iris*.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to *FOREST AND STREAM* their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to *FOREST AND STREAM* their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

VIKINGS ON THE CRUISE.*

BY THE DECK HAND.

"WHAT a vile day!" ejaculated the captain of the Viking, a remark that never passed the lips of any old-time marauder; but a vile day it is, and the modern Viking is on pleasure bent, bound for a cruise on the Trent. The wind is blowing dead into S. Ferriy Creek, heavy with squalls of rain, and as the crew peer with cold and rain-beaten faces into the offing, a picture whose keynote is lead color, a decided hankering is felt after the warm fireside they have just left. "No; if we can only beat out and weather the Whitton Light Bore we'll boom up Trent with a fair wind and a flowing sheet," is the sturdy resolve. The canoes are just beginning to feel their legs on the flowing tide: so after a great consultation with the usual Ancient Mariner cased in the usual pair of Fearnought incomprehensible, he advises for the best course, although he hurts the Viking's pride with the remark, "He'd as soon go in a coffin and split the lid for souls." All things are snugly stowed and a couple of reefs taken in; we are towed up a little by creek under the Ancient orders, so that we can get plenty of way on to tack, when we come to the surf; and now, giving strict orders to the White Wings' captain to follow us, we are cast off.

Now she feels it, and with a staggering rush we're away, heading to clear the point on the lee, dead color hauled. "Don't nip her," howls old Fearnought, "keep her full." On we rush through the narrow bit of smooth water, but the point suddenly seems to run out on our weather bow. We're in the tide; board her! yells the Deck Hand. "No, we'll do it," scornfully answers the Captain, with a conquer-or-die sort of gleam in his eye and nipping her close and closer in the wind. Now we are in the breakers. "What's that? Down helm!" Grind, thump, grind. "Up centerboard." Too late; we are ashore. "Another grinding crash, the canoe is laid over on the hard chalk bank, rolling the pennant in the mud with each spiteful breaker that washes over us.

Poor human nature, to find trouble lighter when others are *Viking, of the Humber Yawl Club, is a canoe yawl, 18ft. over all, 17ft. 7in. l.w.l., 5ft. beam and 2ft. 5in. draft, fitted with a small cabin house.

WEBSTER'S UNABRIDGED ANCIENT EDITION.

A so-called "Webster's Unabridged Dictionary" is being offered to the public at a very low price. The body of the book, from A to Z, is a cheap reprint, page for page, of the edition of 1847, which was in its day, a valuable book, but in the progress of language for over FORTY YEARS, has been completely superseded. It is now reproduced, broken type, errors and all, by photo-lithograph process, is printed on cheap paper and flimsily bound. A brief comparison, page by page, between the reprint and the latest and enlarged edition, will show the great superiority of the latter. These reprints are as out of date as a last year's almanac. No honorable dealer will allow the buyer of such to suppose that he is getting the Webster which to-day is accepted as the Standard and THE BEST,—every copy of which bears our imprint as given below.

If persons who have been induced to purchase the "Ancient Edition" by any misrepresentations will advise us of the facts, we will undertake to see that the seller is punished as he deserves.

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black bass; No. 1, black bass; No. 2, bass and pickerel; No. 3, muscalonge, salmon, trout and bluefish. It is guaranteed to catch bass when all other baits fail. It effects a great saving in minnows, on account of the protection afforded by its peculiar construction, one minnow having been known to catch twenty-five bass before it was rendered useless. For sale by all dealers and by the manufacturer. Send for circular and price list.

The Celebrated Divine Rods:

Split Bamboo, Bethabara, Greenheart, Dogma and Lancelwood. Twisted split bamboo rods. An entirely new method of treating the bamboo, giving it a twist while winding, thus distributing the strain equally all around the rod and making absolutely the strongest bamboo rods ever constructed. Made only by the manufacturers, **DIVIN & BECAFT, successors to Fred D. Divine, Utica, N. Y.** Mention FOREST AND STREAM.

SOMETHING ENTIRELY NEW.

THE SPANGLER Perfect Crimper
Endorsed by Everyone.

The above is the only tool that will positively crimp every shell alike no matter should the load or length of shell vary half an inch. Every load is held firmly and in proper position while the paper is being turned evenly, and the edge of the shell is squarely seated on the wad. The above not only insures uniformity, but entirely obviates the possibility of the load becoming loose in transportation. For loading Schultze and Wood Powders, its superiority cannot be over-estimated, as it is a well known fact that the elasticity of those powders tends to displace the load—the cause of many otherwise unaccountable. Send stamp for specimen shell. For sale by dealers everywhere. Manufactured only by **A. E. SPANGLER, Patente, Fulton, N. Y.**

SYRACUSE BAMBOO FURNITURE CO.

(Successors to SYRACUSE FISH ROD CO.)

Syracuse, N. Y., U. S. A.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tugs, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

THE BEST IN THE WORLD.

The Bray Fly-Book.

AT A POPULAR PRICE.

AS EVIDENCE OF THIS ANGLERS SHOULD NOTICE THE FOLLOWING CHANGE IN THE PRICE OF THIS WELL-KNOWN BOOK.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, MAY 15, 1890.

{ VOL. XXXIV.—No. 17.
{ No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 183 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

	ANSWERS TO CORRESPONDENTS.

THE LANDOWNER'S VIEW.

THE question of the moral right of sportsmen's associations to buy up or lease large tracks of lands for their own exclusive use is one that is more and more forcing itself on the attention of the public. We have had in these columns a good deal of correspondence on this subject within the last few years, and almost all of it on one side of the question. It has been and still is rather the fashion to talk of these large associations as monopolists and oppressors of the poor, and to speak of them and their action in securing and preserving large tracts of land as little less than criminal. There are few questions to which there are not two sides, and it is quite clear that this one is no exception to the general rule.

It may be taken for granted that the game of any State belongs to the people of that State at large, and not to a few individuals nor to any restricted class of this people, but it is also well established that this common ownership is limited in one important particular. While the game may belong to whomever can take it, the person who has the first right to attempt its capture is the man on whose land the game is. Further than that, the statutes provide a legal remedy for this landowner against any one who may venture on his property for the purpose of taking game or for any other purpose.

Of course, it seems very hard, in sections where the shooting and fishing have always been free, that those of us who have been accustomed to wander over the country without let or hindrance should now be prevented from going where we please; but there is another view to be taken of this matter. There seems to be no good reason why the acres owned by the farmer should not return him all the income he can get out of them, provided he does not use the land for any purpose which is in conflict with the laws of the State. He may dig potatoes from his field, may cut timber from his woodland, quarry building stones from his rock ledges, may catch

and sell fish which swim in his brooks and ponds, and may capture the birds which feed in his stubble fields. If he has a right to do all these things, he also has the undoubted privilege to lease this right to any one else. If by leasing the shooting on his land he can add to his income \$20 or \$25 a year and a like amount by leasing the fishing, why should he not be at liberty to do so?

When a joint stock company leases an immense tract of land for the purpose of growing wheat upon it, as is done in Minnesota or Dakota, no one hears the cry of monopoly raised against the stockholders. That is regarded as something perfectly legitimate, a mere business enterprise. They purchase or lease the land with the expectation of making money. But when a joint stock company or an association leases 100,000 acres in Virginia or North Carolina for the purpose of preserving the game and fish which are found upon it, people cry out that the public is being robbed of its rights.

One thing seems very clear, that if we are to have game and fish in this country much longer, it is necessary that game and fish must be preserved. The universal experience is, that this protection will not be undertaken unless it is looked after by a few people who are directly interested in it and deeply interested, because they expect in the sport which they are likely to have on this protected territory, a direct reward for their efforts. Such people incidentally benefit the country which surrounds their preserve by protecting the game, and the overflow from the preserve stocks the adjacent country.

It is popular just at present to talk against this system of preserves, but it is just as well for people to remember that there are two sides to the question.

A QUESTION OF ETHICS.

AT the meeting of the American Fisheries Society, in Philadelphia, a year ago, it was proposed to hold the next meeting of the society at Put-in-Bay, Ohio. There was a difference of opinion among the members present as to where it should be held, some of them preferring Washington to any other place. After a spirited debate, during which Mr. Osborn, President of the Ohio Fish Commission, assured the Society, that if the next meeting was held at Put-in-Bay, the members should have the finest bass fishing in America, the vote was taken and it was decided, by a majority of one, to meet in 1890 at Put-in-Bay, Ohio.

An interesting question presents itself in this connection. In the debate above referred to, a member asked whether they took black bass in Ohio during the month of May, and the reply was made that there was no law against it.

The black bass are spawning in this month, and in many States they are protected by law, as they ought to be everywhere. Members of the American Fisheries Society may be supposed to be acquainted with the habits of the bass, and to know whether it is or is not wise and proper to take them at this season, whether the law-makers of the State have seen fit to protect them or not. The example of such a body of men as the American Fisheries Society ought to have weight with anglers generally, and a good many people will be interested in their action in this matter.

Without ourselves expressing any opinion on the point we submit it to our readers as a question of ethics: Should a self-respecting angler take a game fish from the spawning beds, providing such taking is not in violation of any statute?

MR. CAREY'S RESPONSIBILITY.

THERE is a bit of history with regard to the report of the Public Lands Committee which has yet to go on record. It has to do with the position taken on this bill by Mr. Carey, the delegate from Wyoming Territory.

The people of that Territory are very anxious that the National Park bill should pass. The Park lies almost wholly within Wyoming and the bill gives Wyoming courts jurisdiction over the reservation. A very few citizens of Wyoming are financially interested in the railroad project and want it to pass; many thousands are interested in agriculture, see the danger which threatens their water supply if a railroad should enter the Park, and so are bitterly opposed to the Public Lands Committee amendment. There is thus a strong feeling among Mr. Carey's constituents that he ought to use every means in his power to pass the bill without a railroad amendment,

We have already stated that in committee it was decided by a majority of one, to add to the bill the amendment granting a right of way to the Montana Mineral Railway, the minority desiring to report the bill just as it came from the Senate. And we have it on the authority of a member of the committee that Mr. Carey voted for the amendment, in other words, for the railroad.

By his vote in the Public Lands Committee, Mr. Carey has arrayed against the bill all those friends of the Park who are opposed to the railroad, and unless the House cuts out the amendment recommended by the Public Lands Committee these people will do all they can to kill the bill. Moreover, his vote in the committee will oblige Mr. Carey to speak on the floor of the House in favor of the amendment. He will thus have to take openly a position which is directly opposed to the wishes of the people of Wyoming, and it cannot be doubted that his taking such a ground, without being able to give any reason for it which will appeal to the common sense of people generally, will greatly injure him in Wyoming Territory.

Now Mr. Carey, besides being Delegate from Wyoming Territory, hopes to be elected Senator when that Territory is admitted to Statehood. He is a candidate for a seat in the upper house of Congress, and was thought to have fair prospects of being elected, but it is quite possible that when the people of his Territory find that he has allied himself with a railway corporation and has thus endangered the passage of the Park bill, his popularity may not be so great among the people of Wyoming as it has been. It is quite possible that his vote in this matter may seriously jeopardize his Senatorial prospects.

SNAP SHOTS.

WE present as an object lesson the complete record of the game legislation at Albany this year. The list shows that fifty-five bills were introduced, of which forty-six were not passed, six became laws, and three were passed but remained in the Governor's hands at the close of the session. This is the last time such an exhibit should be made. The newly appointed commission on game law codification, it is hoped, will put the statutes into such shape that future legislation in this field will be simplified. The commission is empowered to "revise and codify the laws" and "report such codification to the Legislature" by Jan. 15, 1891. The members of the commission are E. G. Whitaker, from the Attorney-General's office; Gen. R. U. Sherman, from the Fish Commission; Hon. Robt. B. Roosevelt, from the New York Association for the Protection of Game. The act, with characteristic Albany shiftlessness, calls it the "New York Society for the Protection of Game."

FROM a member of the U. S. Fish Commission who has just visited the Delaware we learn that the shad fishermen are destroying the "mamoose" in large numbers on that river. They are caught in the gill-nets and killed merely out of spite. When told that the fish so destroyed are the young of the commercial sturgeon, one of the most valuable species in the river, they declared them to be a distinct kind of sturgeon without value and simply a nuisance. This is all wrong, and the State authorities should stop it at once, for the "mamoose" is really the young of the species which adds so much to the revenues of the Delaware River fisherman.

We are told that the Michigan game warden system is working well. Arrests are being made in all parts of the State, and everything is done to prevent violations of the law. Since January, 1889, the total amount of fines and costs are about \$1,989.00, and about 200 arrests have been made. Success is reported in preventing the shipment of game from the State thus far.

The ice on the lakes of the Province of Quebec still holds, and there is yet a great deal of snow in the woods. It is probable that anglers will not get at the trout there before June 1. A correspondent writes: "Our season is short, but what there is of it is awfully good."

Here is a sign of the times. There have been taken at Tuxedo Park 5,600 trout up to Saturday night, May 10; 5,000 trout have been sold from the hatchery, and the club has on hand 25,000 two-year-olds, 40,000 yearlings and a large number of this year's hatching,

The Sportsman Tourist.

IMMUTABLE.

THE old man sat on an empty soap box, slowly winding a waxed string around the fractured butt of a fishing rod. The porch, overhead profusely covered with a luxuriant creeper, ran each side of the door and had for flooring puncheons laid directly upon the ground. On one side of the door stood a rough bench with a battered tin pail with the neck of a long gourd, used for a dipper, just sticking up over the rim. On the other side, just over the old man's head, hung a banjo, which, judged by its looks, was not kept for ornament alone. The little boy stood by the old man's side watching almost impatiently every movement of the sable fingers as they slowly repaired his misfortune.

"Got it most done, haven't you, Uncle Thuse?"

"Yes, honey, mos' dun; doan yer go bruck um agin, Marse Fod, kase ef yer do it's dun gone pass anuder mendin'."

"I'll let the next snake go without hitting him," said the boy.

"You's got ter, honey, else fish wid a cut pole," replied the old man.

"What makes you always say 'got ter,' Uncle Thuse?"

"Why, Marse Fod, got ter, deys der strongest words dat yer can fine in dat big book in ole Marse's lib'ry, what's cotched um all for der white foks ter pick outer. Now, dere yer rod and took keer of um. Wait a minit, honey, ise gwine ter gib yer a touch of der ole Cremony and tell yer all about dat ar 'got ter.'"

The old man rose from the box and took down the banjo, and after tightening a string here and there, put one foot on the box, and with a preliminary flourish, struck up a broken sort of a chant, not unmelodious, as follows:

Co'n cob in er pile, got er meat ter smoke;
Hick'ry stick a-stannin' dar, got er fire ter poke.
Ole dog blinkin' in der sun, got er coon ter tree,
Danderlion by der paff, got ter feed er bee.
Der growin' co'n jus' showin' silk, got er crow ter feed,
End er baccor fiel' a-leafen out, nigger got ter weed,
Der cherry tree cotton white, got ter bear der fruit,
Shotes a-runnin' roun' der swamp, it's shore deys got ter root.
Der highest buzzard in der sky has got ter drap ter feed,
Ef yer want gyarden truck yer've got ter plant der seed.
Watermillions gittin' ripe, got ter watch 'em close,
Little chickens fryin' size, it's high deys got ter roost.
When Marse Gabrel blo's er horn, got ter com' ter time,
To der mansion in der sky got er sta'r ter clime.

The old man finished, hung up the banjo in its place by the door, and without a word passed down the path to the creek, with the little boy by his side carrying the repaired rod.

FRED. R. SHATTUCK.

Boston.

ANGOSTURA.—I.

THE Mexican Central Railway has completed its branch from San Luis Potosi to Tampico. Regular trains will be running in a few weeks. This is the second road connecting the Gulf with the central plateau, which, in spite of its dryness and general forbidding aspect, is and will continue the chief home of the Mexican people and the center of their commerce. A railway which establishes communication between this plateau and the outer world by the highway of the sea, is hardly less than an epoch in the country's history. Connection with the Pacific Ocean has not yet been made. We are to have on April 21 a grand demonstration over the inauguration of our new road, the President of the Republic being engaged to attend. Mexico loves a fiesta of whatever class. But as somebody might accuse me of having real estate to "boom," should I continue to tell of the commercial importance of this recent enterprise, I will come more directly to my story.

Fabulous accounts had long been given me of the game to be found along the line of this road, and I was of course rather excited. Construction trains were running some twenty-five miles from here, going out and coming in daily. I had for some time been looking for a loop-hole in my daily tasks, when a friend invited me to go with him down near "the front" to an hacienda on a hunting trip. Thinking I could spare two days I agreed. Then, in order to make the trip a little more complete, I said two and a half. Mr. Hampson, son of the chief contractor, and in charge of the work, kindly supplied us with passes. The party consisted of Mr. C., a Mexican gentleman, Principal of the State Military and Technical School, familiarly known (after the manner of Mexico) as "Don Ramon," an Anglo-Spanish dentist and his wife, Mrs. E., who is an American, and your scribe, who, notwithstanding his name, is an ordinary American citizen. I must not forget either the good-humored, faithful "mozo," of Don Ramon, with a name so odd that, though I listened attentively whenever it was called, I could not make it out.

Having loaded one coach with guns and baggage, the four principals bestowed themselves in another, and after a little maneuvering with a balky horse were off in search of that train. As carrying passengers was not its business, it did not occupy a prominent stand by the side of the station. Still, we did find it. While waiting for a start we learned from the conductor that we should have to change from his train to another to reach our destination, and that to get back the second day it would be necessary to start almost immediately on our arrival. We promptly cut this gordian knot by deciding to stay four days instead of two; and dispatching a boy with a note to the little wife, we settled down to our fun, positively declining to hear from our conscience on the subject of neglected work. Expecting to start at 1 o'clock, we finally got off at 3:30 P. M. The sun was warm and the dust awful. Our little hobtail caboose was full and more, as there were a number of passengers besides the train men. Baggage was put out on a "flat" loaded with rails, however, and we were fairly comfortable. There were a dozen or fifteen cars loaded with building material ahead of us. At every switch some changes had to be made, and the engineer was more speedy than gentle in his movements. We could hear the approaching rattle of the "slack" when started or stopped, and gripping the seats and setting our teeth would hold on for life.

Toward sunset we reached the top of the sierra which

is one of the backbones separating the central plateau from the slopes of the Gulf. While standing here an obstreperous Texas norther that had trespassed on Mexican territory began to whisk its tail in our faces. Following the cool breeze came a rolling huge mass of fog, and the change from the dry, crisp air behind us was delicious. This mountain range serves as a barrier against the moisture of the Gulf, nearly all of it being precipitated on the eastern side. The lines may be distinctly noted in the vegetation. A similar change may be seen in crossing the Cascade range in Oregon, or, on a smaller scale, the Coast range in California. Seeing the setting sun behind us we at last started down. It is a long, winding 3 per cent. grade, and the cars had only hand-brakes. The train hands were evidently a little nervous, and the chief brakeman, a long, big-footed, blue-eyed negro, would work off his excitement occasionally by dancing a shuffle by the side of his wheel. We went down safely, however, enjoying (some of us, at least) the scenery, which, though not bold, is pretty and interesting. While on a long stretch of a lighter down grade and running about 30 miles an hour we had an exciting episode. One of the wheels under a flat car loaded with rails broke square into two pieces. It did not leave the track, but at every revolution made the car jump as if running on the ties. The negro, who was sitting on a bale of telegraph wire just behind the broken car, tore through the caboose yelling with fright and actually pale. The engineer went careering serenely on, and we expected momentarily to go into the ditch in the undesirable company of two or three carloads of steel rails. Presently somebody uncoupled the caboose and we put on the brakes and slowed up. It was down grade, and we followed at our leisure, soon overtaking the train which had stopped. We patched up and pulled into the next station.

There we changed trains. That is, our engine and caboose stopped and a new engine without a caboose took charge of the train. We disposed of ourselves and baggage on top of the rails and telegraph wire. It was dark and raining a little, but we were jolly. We adjusted ourselves to boxes, bundles, etc., and covered ourselves with blankets and shawls. The crippled car went to pieces and blocked the track ahead of us. We had to move ourselves around it to another "flat." Bundles, valises and guns, especially the latter, were carefully transferred. Mrs. E. was merriest of all. She actually liked to ride with steel rails for cushions, and wasn't the rain just "jolly"? We pattered along at a snail's pace for another hour. Here we found the hacienda coach waiting for us, with a ride of ten miles still in view. The train rumbled slowly on, and Don Ramon, breaking into his best English, waved his hand from the coach and said, "I am ver' happee to see you go!"

It should be explained here that we were invited by Don Ramon on the strength of a life-long intimacy with the family to whom the hacienda belongs. The place itself is a very large and wealthy one, so large that I do not dare give its dimensions. A young man of the family, whom we soon came to know and esteem as "Don Luis," has charge of the hacienda and lives there alone, the rest of the family living in the city. We reached the "big house" finally at 1:30 A. M., tired and sleepy and still merry. We were glad, however, to get out of the lonely night wind and spend the rest of the night sleeping comfortably indoors.

AZTEC.

"A LIGHT IN THE WINDOW."

MUCH reading of FOREST AND STREAM and its many interesting stories of adventure, not founded on romance, but drawn from the actual circumstances of life, reminds me that I too have had some experiences in roughing it over mountain and in forest; and perhaps an account of one of the incidents may prove of interest. For there must be others who, like me, look forward to nothing with more pleasure than an outing in the wilds with rod and gun, where the grub cooked by yourself and companions, if it would not do to serve up at a fashionable summer resort, has a flavor and toothsome, born of much exercise, that can never be appreciated by the scented and kid-gloved darlings of society who have neither the sand nor the good sense to renew their vigor by such laborious pleasures.

I had passed the spring and summer of 1880 in the vicinity of Tin Cup, in Gunnison county, Colorado, hunting, fishing, prospecting and working for "grub stakes;" and in the latter part of August started with my partner, Nathan J. Conover, of Freehold, N. J., for a tramp southward. We were both of us "tenderfeet," but had been in the mountains long enough to get our bearings pretty well; and with a good jack to carry our camping outfit, tools and effects, and with gun on shoulder, we footed it along by easy stages, camping when we found good places for grazing for the jack and prospects of fair hunting and fishing, until we finally located in Ouray, at that time a thriving mining town on the borders of the Ute reservation.

Here we stayed until late in October, when I was reminded in a very painful manner that this was a bad part of the country for me to pass the winter in. It began to rain one night, and before morning the rain had turned to snow, and before it stopped snowing the snow was four feet deep on the level. This snow was to me a deadly enemy, as I found. I had frozen my feet terribly in crossing the Cotton Wood Pass from Buena Vista to Hillerton (now Abbeyville) in the preceding March, and as soon as I went out into the snow my feet began to sting and burn, until it seemed they were afire, and I was obliged to take to the cabin. The snow did not last long this time, but I knew it would soon come to stay, and I did not intend to let it find me there. By walking over the range to Lake City, I could save about \$15 of stage fare, and as a thirty-five-mile tramp was nothing to me at that time and the money was, I determined to be economical. So Nate and I and Frank Carney, of Ouray, started out one fine Sunday morning, Carney to go to a point where a trail called the Bear Creek Trail left the regular one, which would considerably shorten my route. Nate was to go with me to the top of the range, and by carrying my "grip" for that distance, lighten my journey.

Neither of us had been over this trail, and so shortly after we struck snow, as we did after getting up a couple of thousand feet, we lost the trail and soon found ourselves wallowing through snow 3 or 4 ft. deep. There were but two things to do; either go back or make directly for the top of the range where the snow is always light, the wind blowing it off from the ridges. After an

almost interminable climb we got to the top and followed the ridge around to where the trail must cross. It then being too late for Nate to go back alone, he determined to go on to a little town some distance down the mountains where we could both stay all night, and then he could return next day. He was a tall, powerful fellow, considerably over 6 ft. in height, broad-shouldered and lathy, and looked as if he could stand more hardship than a dozen ordinary men; but he was young—not yet twenty, and age had not, as it proved, hardened his strength to that toughness that only comes with years.

It was late in the afternoon when we crossed the range, and we hurried on, for we knew we had a hard struggle before we got down through the snow, and were both tired. We started up a couple of bighorn sheep just after we had started downward, but what would have made my heart jump at any other time hardly stopped me now, for I could see that Nate was giving out. I was carrying all the load, and often lightened myself by starting the grip rolling down a steep incline, when it would go hundreds of feet before stopping. A crust that had frozen on the snow during the latter part of the afternoon made it all the harder for us, for it was not strong enough to hold us up and broke through at every step. Just before dark Nate gave up entirely and sat down in the snow. I tried to get him to come on, but he said he had to rest. Then I tried to build a fire, but there was nothing near us but sagebrush, and the dead bushes seemed all soggy and wet, and I failed entirely. I finally got Nate up, and with one of his arms over my shoulder, in my desperation I almost carried him a mile further, when I saw that this could not last, I would soon be as badly off as he was. Again I tried to kindle a fire, but this failed, and I was about to give up in despair, when I saw way ahead of us down the mountain a light, twinkling. It was stationary, and knowing there must be some one there, I covered Nate, now unconscious, with my overcoat and struck out for it.

It was a terrible struggle, but I finally reached the light, which I found shone from a window in a large rough board shanty, built for the accommodation of a force of men engaged in building a smelter or some other building. As soon as I could tell my story half a dozen of them started back on my trail, and in the course of a couple of hours Nate was stretched on a bed made upon the floor close by the stove. He got up in the morning a little stiff, but otherwise none the worse for his exposure, but could remember nothing of our trip from a point shortly after we crossed the range. He did not try to return by the Bear Creek Trail, but took the old one, which, if it was several miles longer, had the advantage of a beaten track.

The thought sometimes comes to me now, what would I have done if the window had been left out of that side of the shanty? And a queer sinking of the heart always follows, for I could not have deserted my comrade.

J. M. R.

THE WOODS AND THE WATERS.

Editor Forest and Stream!

I do not know who selected the title which has stood at the head of your columns for so many years, to rejoice the hearts of all true lovers of nature, but whoever did it, my friend Chas. Hallock or "any other man," "built wiser than he knew." Not only in the field of outdoor sport, but in their economical relations to the industries of mankind are the two inseparable, and the stream depends on the forest for its steady flow.

As I have begun by talking about New Hampshire, I will stick to my text, though all New England and northern New York are in the same category with us in this matter and the forests of the Adirondacks are as much needed to keep up the water supply of the Hudson, as are those of New Hampshire for the Merrimac. It is a safe estimate to say that one third of the population of New Hampshire are supported by her water power, and if all the small industries were carefully counted in, it would not surprise me if it reached nearly one-half. The last census gave us nearly a little more than 350,000 people. Now on the Merrimac River we can count: Manchester 45,000, Nashua 15,000, Saco 3,000, Laconia and Lake Village 6,000, Franklin 3,000, Tilton 1,000, Fisherville 2,000, and Bristol 1,500, making 76,500 on the Merrimac River alone, and these are probably under the number of inhabitants to-day.

Then we have on the Cochecho and Salmon Falls River: Dover 15,000, Great Falls 6,000, Salmon Falls 2,000, making about 100,000, and when the smaller towns on the Connecticut watershed are added, and such towns as Exeter, Peterboro, Keene, etc., scattered all over the State, we are going to pass the 118,000 required for a third of the population. Besides all this the waters of the Merrimac are used twice over again in Massachusetts, at Lowell and at Lawrence, with 120,000 people more, and those of the Connecticut do double duty at Turner's Falls and Holyoke. Having spent a large part of my active life on the Merrimac River, going there in 1841 to study mechanics practically, in the same way that Mr. Squeers' pupils studied botany, I know something of the fluctuations of that river, which are very great, although owing to the use of Lakes Winnepesaukee and Squam as storage reservoirs, they are not so marked as they now are on the Connecticut, to the banks of which I have returned after many years' absence. When Lowell was begun, its projectors expected to utilize about 9,000 constant horse power, which by improved dams and wheels has since been increased to 10,000, and after that was used up steam has been called in to aid, but such are the variations of the waterflow, that the mills are sometimes operated by 9,000 horse power of water and 19,000 horse power of steam, and sometimes the reverse or 19,000 horse power of water and 9,000 of steam, and both engines and wheels are provided for each contingency.

There are a few days every spring when the deluge of water, from the hills now stripped of their forest covering, drowns all the wheels and leaves the mills dependent on such power as they can get from their engines; but the great reservoir system to which I have alluded tends to equalize the flow very much, and I do not notice the great summer shrinkage which I find in the Connecticut on my return to my native town.

Here, when I was a boy fifty or sixty years ago, the river seemed full for weeks of great pines, floating leisurely down from the region about Haverhill and Lancaster; and great rafts of saved lumber, built in "boxes," as they were called, so as to be taken to pieces to pass through the locks at Bellows Falls and Hadley, came

down with cabins on them, in which the raftsmen lived, cooked and slept on their slow passage down the river. Sometimes they tied up to the bank opposite the village over night, and were a great resort for all the boys for bathing and fishing. Then in the summer great flat-boats, impelled by sails when the wind was from the south, and by poles when it was not favorable, came up the river from Hartford, Conn., bringing rum, salt fish and molasses, hardware and lime for the country traders, and were carried back on the rafts when empty.

For one or two summers a steamboat ran on the river from Bellows Falls to Windsor, Vt. Nothing of the sort can be seen now. The only boats are an occasional ferry-boat or the skiffs in which the farmers on the opposite side of the river cross to the village for their mail or the boys use for bass and pike fishing. The huge pines have all disappeared from the upper Connecticut valley, and the axe of the lumberman is fast stripping the spruces from the forests at the headwaters of the river, which the State foolishly sold some twenty years since to lumber speculators, and for two or three weeks in June the river is full of floating logs, from a decent stick of timber down to those the size of a man's leg, and which should not be cut these forty years to come. At the rear of the drive of logs come 80 or 100 men, with their tents, and boats, horses and oxen, pulling the logs off the shoals and bars and from around the bridge piers where they have stuck, and sweeping them all down to the great steam mills at Northampton and Holyoke. I had a long chat a few days since with Mr. Russell, the owner of the great paper mills at Bellows Falls, who deplored this waste of lumber, and said this small spruce was too small to be profitable even to grind up into paper pulp. Still, this same reckless and ruthless waste goes on.

When a very small boy, sixty years ago, I went with my father to see a great conflagration on a hillside near the village, where to make a convenient cow pasture the great pine logs were rolled together in piles and burned where they had grown.

I have seen the same thing done, half a dozen years ago, on Clear Stream, one of the tributaries of the Androscoggin, just east of Dixville Notch, and in other places north of the White Mountains, where the land had fallen into the hands of French Canadians, who thought a tree an abomination and an excrescence to be destroyed as soon as possible.

Nor is this destruction confined to the Northern States. I have seen as I traveled through Virginia, the Carolinas and Georgia, the red soil of the abandoned "old fields," seamed and scarred with innumerable gullies, the water in once clear streams red with mud, and the fire-scorched soil showing no symptom of a return to a valuable forest growth.

It is to the fire, more than the ax, that the barrenness is due. A piece of woodland, simply cut and left as "sprout land," will soon reclothe itself, but when the fire has been over it the vegetable soil, the growth of centuries, has been destroyed, together with any seeds that may have lay dormant in it. I have no faith in these "dormant seeds" after a scathing fire. The letter you sent me from Mr. A. C. Sikes, of Springfield, Mass., was duly received, but with all respect to him, I am too near the psalmist's limit of "three score and ten" to waste much time with a pickaxe (or spade) on distant hill pastures or to expect to see anything better grow from them if I did, than their present crop of sweet fern and hardhack.

It would take a regiment of strong-backed, short-bodied navvies to produce an impression, in all summer, on the first range of hills east of our village, and I do not propose to waste my remaining strength in any such effort. It is a question of national interest, although the right to do what is needed may be one of those "reserved to the States," but it is time something was done to keep our once well-wooded country from falling into the barren condition of the hills of Judea or the table lands of Spain.

My attention was turned to these questions long since by the writings of the late Hon. Geo. F. Marsh, of Vermont, our former Minister to Italy; and when in Concord a dozen years ago getting appropriations for the Fish Commission through the Legislature, I had a number of conversations on the subject with my old friend, the late Hon. Geo. G. Fogg, who had just returned from a term of diplomatic service abroad as Minister to Switzerland. He insisted that it was useless to attempt to restock our waters until we first restored the forests which fed them, and he was to some extent right.

It is often claimed that there are more acres growing up to woodland annually in New England than are being cut off, which may be true; but it must be remembered that when a man cuts off one acre of wood he cuts the growth of forty years, and that it would take the annual growth of forty acres to equal what he has cut down on one; and if the land were burnt over and pastured it would take 100 years to restore it!

Since writing my last letter on the "Hill Farms" I happened to pick up the last volume of "Belknap's History of New Hampshire," published in 1791, or 100 years ago, in which the author speaks of the great influx of settlers into New Hampshire from Massachusetts and Connecticut, and the way in which they cut down and burned the forests and planted Indian corn in the ashes, besides the large amount of the latter which were converted into pot- and pearl-ash. This was at that time a great industry in New Hampshire, and I well remember in my boyhood the old "potash kettles," which formed part of the equipment of every country store. As I have before said, I have noticed not only the diminished summer flow of our great rivers, but more especially that of my favorite trout brooks, in some of which their former finny denizens have become entirely extinct from the droughts of the last twenty years. The two wet summers we have just had are partly restoring them, and I last summer restocked one with trout obtained from the State Hatchery.

I am not familiar with the Swiss and German forest laws, but only know that no trees are allowed to be cut until they have been certified to be big enough by a government inspector, and that no land is allowed to be burned over after cutting. Some such laws are what we need, by the States to protect the headwaters of the streams within their borders, by the National Government to protect those in the yet unorganized Territories, and all should work together to that end. It is all very fine to say that steam is as cheap as water power, and more easily manageable, which may be true in the coal regions, but is very far from it in those which are supplied with water power, and coal is not inexhaustible, as England is beginning to find out to her cost. Neither is

natural gas, which was so loudly proclaimed a few years since as the "fuel of the future," and electricity is not a motor of itself, only a transmitter, and depends on water and steam to furnish the original energy.

When New Hampshire and Vermont were frontier States, they were cleared up as Mr. Belknap describes, then the tide of emigration flowed westward, and my first recollections are of the wheat flour which we ate coming from Genesee Valley. Now it comes from Minnesota, then an unbroken wilderness.

It is amusing to read the very absurd theories, to return to my former topic of the "Hill Farms," which are broached by different people and papers for their abandonment, ignoring the simple fact that the scanty soil, once made fertile by the ashes of years of forest growth, has been worn out, and must be restored by nature's slow process after the lapse of years, or even ages!

One very usually well-informed New York paper charges it to the tariff. Now, the tariff has no more to do with it than the Code of Justinian or the Institutes of Menn. The greatest exodus I ever saw from New Hampshire was in 1835-6, under the Compromise Tariff of 1832, when the duties on foreign goods were reduced to the lowest point they had ever been since the country adopted the policy of raising revenue in that way. Those were the days of wildcat banks and cities on paper. The fertility of the prairies of Indiana and Illinois had been discovered, and the young men of New England started for them in droves, as they did to California in 1849.

The emigration from New England has been due, not to any tariff, but to the old Berseker blood of the old northern Vikings, who reaped Old England from the shores of the Baltic, and crossing the Atlantic founded a New England in a new continent. Spanning that continent in its ever westward march, it is now building cities on the shores of the Pacific, Daniel Webster well said, speaking of England and her progress, that "her morning drum-beat, following the sun and keeping company with the hours, encircles the globe with one continuous strain of the martial airs of England!"

Whole families of the early settlers became extinct in the male line, and only descendants of daughters or distant relatives are left to continue the stock of families prominent in this town at the beginning of the century.

I spoke of "Sam's Hill" and the old veteran for whom it was named, but did not give his name, Col. Sam Hunt. His male race is extinct; the meadow and the farm of which I spoke at its base bear the names only of the husbands of two of his granddaughters; the people are gone. The Wests went West, as might be expected, half a dozen of them, and so did the Stevenses and Morrises and others, till none of their name are left, and a new generation, the descendants of the "railway builders," are taking their places. As an agricultural State of importance, New Hampshire may be counted out in the future, but there is yet profit to be made on the best lands, in supplying some of the wants of the great body of the population, who are engaged in various manufacturing industries; and it is to this end, growing larger and more important the longer I look at it, that I urge the adoption of such measures as will serve to restore her forests at the headwaters of her streams and maintain her water power, which seems to me to be the mainstay of her future prosperity.

Incidentally with this comes in the restoration of her fisheries and the preservation of her game, thus offering continued attraction to the inhabitants of the cities who annually seek her mountains in thousands for health and recreation.

The above remarks are equally applicable to New York and Pennsylvania, for the headwaters of the Hudson, the Lehigh, the Delaware, the Susquehanna and the Ohio are being equally impoverished and are equally worthy of preservation with those of the Merrimac and the Connecticut.

Finally—A friend suggests to me that I should urge as a beginning a moderate appropriation by the Legislatures of New Hampshire and Vermont for the purchase at such nominal value as they now can be purchased at of some of these abandoned farms lying around the headwaters of the streams and their restoration to forest. Such action would tend to improve the water power, to furnish timber to be judiciously cut in future, and to increase the fish and game, which make these States a desirable summer resort.

It will be far more useful than a spasmodic effort to restock them with Scandinavian emigrants, whose children will be sure to take early trains for the West, if the parents stay on the soil long enough to raise any.

CHARLESTOWN, N. H.

NESSMUK.

Editor Forest and Stream:

I opened my FOREST AND STREAM with the usual delight this morning, to be saddened at once, when my eyes fell on the announcement of the death of "Nessmuk."

I feel as if I had lost an old friend, for although I never saw him, his well-known signature has been familiar for many long years, and I have tramped and camped with him in spirit, if not in the flesh. I can hardly agree with you, that his "Forest Runes" will be his chief memorial, for there is poetry in all his prose, and a true flavor of old Isaac Walton himself in his simple narrative. What can be more pathetic and touching than the account in "Woodcraft" of his carrying the apples and peaches to the two poor sick children in the Michigan wilds?—What more perfectly sketched and more fascinating to the angler, than "Meeting Them on the June Rise?"

The true child and lover of nature, he leaves many mourners behind him and a gap in our forest literature which few can fill. It needs not to say, "Peace to his ashes." Nothing else could ever rest upon them. It only remains to wish that his gentle spirit may find "happy hunting grounds" in some one of those "worlds beyond this," to which we all look forward, when the eyes that look on this one are closed forever and the unfathomable veil which conceals the future is lifted at last. He has but like a good woodsman gone before!

CHARLESTOWN, N. H., May 9.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

FOREST AND STREAM, Box 2,332, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Glean," "Dick Swivel," "Syrillene" and other competent authorities to be the best treatise on the subject extant.

Natural History.

BLANCHARD ON NOMENCLATURE.*

THIS production from the pen of a French savant, appearing in Bull. Zool. Soc. of France, Vol. XIV., 1889, pp. 87-157, is a most notable one. The resumé, under seven heads, may be briefly summarized as follows:

1. Of the nomenclature of living organisms. Here Dr. Blanchard is binomial, yet giving trinomialism a place, from its utility, and not discarding the word *varietas* or its abbreviation *var.*

2. Of generic names. These should be either Latin or Latin in form and unique in character, avoiding in zoology those preoccupied in botany, and *vice versa*. Geographical names are reserved for specific use.

3. Of specific names. The genitive is the proper case for these, and they should be either a word recalling some characteristic of the species or its habitat, or derived from the names of persons for whom the species is called.

4. Of the manner of writing generic and specific names. Generic names require a capital for the first letter. Specific names, declares Dr. Blanchard, and here he is at variance with American zoologists, simply follow the usual capitalization of ordinary writing. Readers of scientific literature know to what diverse capitalization this tends.

5. Of subdivision and union of genera or species. In these cases the law of priority should so prevail that the original name follows the type elements. Where doubt exists, the writer has some liberty of choice, but his action is final.

6. Of family names. Such are to be formed by adding *idae* to the root of the type genera, or *inae* where a subfamily name is sought.

7. Of the law of priority. This grand law, the firm ground upon which we gladly plant our feet, is emphasized; the limit being binomialism, founded by Tournefort in 1700, used by Lang in 1722, and followed by Linnæus in 1758. All pre-Linnaean names to be employed, subject to some limitations. Names to be rejected sparingly; cases of barbarisms or of words from their similarity likely to cause confusion excepted.

L. S. FOSTER.

NEW YORK, May 10.

*De la nomenclature des êtres organisés, par le Dr. Raphaël Blanchard, 1889.

AN OLD GRAVEYARD.—Considerable interest has recently been taken by the daily press of this city over a supposed Indian mound discovered near Inwood—about 205th street—and on Monday last the discoverer, Mr. Chenoweth, and Dr. Seeburg gave a description of it before the New York Academy of Sciences. A number of human remains were exhibited, together with fragments of pottery and a few stone implements, the impression being given that the bones and the undoubted Indian remains were of the same age and were closely associated. This impression appears to be wholly erroneous. There was undoubtedly an ancient hearth, or fireplace, adjacent to the spot from which the human bones were removed, and from this hearth have been recovered interesting remains, as shells, pottery, deer bones, arrow points, and so on. But while this is true, it is also true that the human bones found were taken from an old graveyard. Persons now living can recollect when wooden crosses marked these graves, hand-wrought nails with fragments of wood fibre, preserved by the oxide of iron, have been taken from at least one grave, and with one skeleton a lot of buttons were found. The mold of the coffins was seen in taking out the skeletons. It is claimed by the discoverers that the mound in which these skeletons were found is an artificial one, and an attempt is made to connect it with the mounds of the Mississippi Valley. This is wholly fanciful. The mound is a natural one, the site of an old white man's graveyard, and there does not appear to be a particle of evidence to connect the human remains with the Indian hearth. The discovery of this last is interesting, but in no sense warrants the conclusions attempted to be drawn by the amateur archaeologists who made the find.

HARE COURSE.—Your issue of March 6 contains a little description of a coursing match on the ice—a mink chasing a hare. Your correspondent asks, did he catch him? I think he did. It called to mind a little thing I witnessed 20 years ago. I had mounted my pony one frosty winter morning for a two mile ride to school. For about half a mile the road ran parallel and 100yds. distant from a grove. Riding along here, and slackening to look toward the grove, I noticed a rabbit acting queerly. He was running back and forth, round and round, and in every way acting like a lunatic. I could not discover the cause of his queer actions until he headed directly toward me, when I noticed a little white weasel at his heels. Every rod or so the weasel would make a desperate jump at him, but until they got close to me the weasel did not succeed in holding him. Just as bunny struck the road ahead of my pony the weasel landed on his back and caught him back of the ears. The rabbit bounded into the air and all over but could not shake him loose, and after a moment or two gave it up and dropped his head like a sheep when caught by a coyote or dog. At this stage of the game I interfered, and as the weasel was so intent on his victim, I killed him the first blow with my riding whip. The rabbit was not injured badly, but was so tired and frightened he did not attempt to leave me and I picked him up in my arms. Now, then, how long had it taken this little bloodhound to run him down and tire him out. I had always supposed they only caught rabbits in brush holes or burrows. I have hunted many kinds of big game and had a few thrilling experiences, but never got more excited than when watching this chase.—W. E. W. (Fox Lake, Wis.)

PHILADELPHIA ZOOLOGICAL SOCIETY.—The eighteenth annual report of the Philadelphia Zoological Society, just issued, contains interesting information. The additions for the year were 235 mammals, 218 birds, 533 reptiles and 1,105 amphibians. An unusually large number of specimens, not previously represented in the collection, has been received during the year, and lists of these, with notes on some of the rarer species, are given in the report, which is an interesting document.

CALIFORNIA'S FIRST FISH COMMISSIONER.

THE leading spirit of the first Fish Commission of the State of California was the late B. B. Redding, one of the most interesting of writers on fish topics, and one of the most genial and generous of men. He was known, one might truthfully say, to hundreds of hunters, fishermen, prospectors, guides and mountaineers, from Arizona to Oregon. I have gathered up many of the scattered articles of this eminent citizen of the commonwealth of California, and my sense of their literary value has steadily increased while I read them. Here at least was a man who wrote of what he knew and loved, and that with rare exactness and adequacy of expression. As I have hunted up his crisp outdoor articles, many of them buried in old files of California newspapers, I have wondered why no publisher has yet edited and arranged them in a volume.

B. B. Redding was one of the merged with overflowing physical vitality, upon which he drew greatly and continuously. He was a pioneer of California, an early journalist, a business man and a scientist. He had been Mayor of Sacramento, Member of the Assembly, and Secretary of State. At the time of his death he was at the head of the Land Department of the Central Pacific Railroad, and besides being the chief Fish Commissioner of the State, he was a regent of the University of California, and the President of the Board of Trustees of the Academy of Sciences. In all these relations, the old "newspaper instinct" never left him; he had the habit of appeal to the public sense of right and wrong, with a simple, earnest statement of the "facts of the case." Times without number, men would come to him and say: "Redding, help me to post the public, help me to start this movement—if you can't no one else can." If he could be shown that the object was a worthy one, he always "took hold."

Mr. Redding's later writings are mostly connected with his work as Fish Commissioner. Every year he went to the wildest regions of the Northern Sierras, about Shasta, then a hundred miles from a railroad, or into some other equally inaccessible retreat. Here he observed many facts, and with his rare power of expression, wove them into his remarkable articles, contributed to a wide range of journals. I find, for instance, several articles of his in *FOREST AND STREAM*, one for March 13, 1878, on "The Spawning of California Salmon;" another, a very valuable contribution, "How Fish Hear," in the issue for September 19, 1879; and a third, on "Aboriginal Fly-Fishing," published Oct. 1, 1881, about nine months before his death. These are instinct with healthy, breezy life, and full of a marvelously close observation. He studied Indian life as no other person on the Pacific coast had ever studied it. In one of his best magazine articles, entitled "How Our Ancestors Made Their Implements in the Stone Age," he caught the most minute details of an old Wintoon arrow-maker's fast-perishing art. In still another article which he wrote for me in 1879, while I was editor of the *California Horticulturist*, on "Camassia esculenta as a Food Plant," Mr. Redding showed how complete a knowledge of the California Indians he had acquired.

Mr. Redding wrote well and often of practical horticulture. Whenever I met him I gathered something of permanent value about the resources of California, or some new special product. He wrote one of the first and most valuable papers published on the "Artesian Waters of San Joaquin." His paper on the "Foothills of the Sierras" first called public attention to that vast and fertile region. He first described and experimented with the wild hemp of the Colorado river bottoms. He wrote long and widely circulated articles on oranges, olives, palms, the "climate of California" and many cognate subjects. He spent large sums of money in horticultural experiments, some of which have resulted in growing profits to the State. No other man of his time appears to have mapped out with such accuracy the lines of social and material development on the Pacific Coast.

But, after all else is said—after the wide range of his peculiarly practical literary life is noted and analyzed, from his papers on "Carbon Paint" to his "Voyage to the Galapagos Islands," Mr. Redding's chief pleasure in writing is clearly seen to center about his beloved "Fish and Fishing." Out of seventy-nine articles he published between October 1877 and August 1882, thirty-nine are devoted to fish topics. Six of the Fish Commissioners' Reports are also chiefly or altogether his work. These seventy-nine articles, besides hundreds of unsigned editorials, and innumerable signed articles that have never been collected, were mostly written, as he once told me, "without pay, on subjects that needed public attention." If the editor of a country newspaper wrote to Mr. Redding and asked for an article that was timely and practical, he often got it, a few days after. Some of the best papers Mr. Redding ever wrote were penciled on board a train, for some obscure publication. He was as guiltless of any egotism about his own work as any man I ever knew, and he wrote, as he talked, with charming frankness and clearness, but without any waste or surplus, often putting what professional writers would call "material for a column article" into a paragraph.

His thirty-nine fish and fishing articles, of which I have memoranda, are largely devoted to trout and salmon, though shad, German carp, yellow catfish, white fish, Japanese carp, and several other species are the subjects of separate papers. He published in the *Tuolumne Independent* in 1875, a long paper on "That Fish Ladder," one on "Sawdust," in the *Keno Gazette*; and one on "Going Fishing," in the *Sacramento Bee*, for June the same year. The *San Francisco Bulletin* was one of his favorite mediums of communication, and he gave them papers on "Pacific Coast Fish," the "McCloud Hatchery," "A Fishery in the Pitt River," and many similar topics. He wrote for the *Sacramento Record-Union*, the *San Francisco Chronicle*, the *Rural Press*, the *Daily Post*, the *Argonaut*, the *Californian*, and many other Pacific Coast publications. During 1880, I find that he published eighteen articles, all of considerable length, and ten of them devoted to fish and fishculture. It must be remembered that all this time he was at the head of the Land Department of the Central Pacific Railroad, and was besides engaged in business enterprises of his own.

A number of his articles were on miscellaneous topics, all useful and worth reading, even now. A long paper on "Shellac and Lac Dye," contributed to the *Rural Press*, a study of "Prehistoric Man," especially on the Pacific Coast, written for the *Reno Gazette*, another on "Wild Rice," in the *Pacific Life*, and his "Mount Shasta," which the Central Pacific Railroad Company published, will sufficiently show the range of his investigations.

But his scattered papers and varied contributions to current literature, admirable as they were in themselves, have a still greater interest from the fact that they were a sort of unconscious protest on his part against the mere money-making grind. He was a business man of great ability, but his natural bent of mind lay toward the natural sciences, and he could have won distinction in that field. He kept track of every archeological or historical discovery of importance on the Pacific Coast; he dug into shell mounds, and gathered fossils, measured trees, interviewed pioneers, and preserved in his articles material of high scientific value. Reverend Horatio Stebbins has said: "The mental qualities of Mr. Redding were of the highest order. His was a mind essentially scientific, having that indomitable courage, that steadfastness in him, that steady power of questioning and arranging facts, that characterizes the greatest of scientific men. Had he made science his vocation instead of his avocation, he would have attained to a reputation in the scientific world that would have been brilliant."

Nevertheless, when all else is said, I count it as more to the credit of this old pioneer, who came to California in 1850, and he helped so much to create the State, that when he

fell suddenly dead in the midst of his work, not only San Francisco flags went at half-mast, but after awhile, when the news was told along the McCloud, the Indian tribes came to the Fish Station to ask if it was truly so, and then said: "There never again will be any one so good and wise to come here among us." Five years later, a pioneer of the Southwest who had often written to Mr. Redding to "come down and explore the Colorado Cañon," said: "I never asked any one else to take a trip." In hundreds of homes the sense of personal loss felt when Mr. Redding died has never ceased to exist. The Wintoons and Pitt River Indians, I make no doubt, remember the grave, kindly, broad-shouldered man who studied their customs, and listened to their traditions. And times innumerable, since the State lost this outdoor citizen, there has been need of that cheerful, sweet-tempered readiness to use a well-trained pen for the public benefit.

NILES, Cal.

CHARLES HOWARD SHINN.

A LARGE SET OF CROW'S EGGS.—While on an ornithological tramp on April 24 I found my first nest of the season—a common crow's, containing five eggs. I did not then disturb the eggs, but as I happened to be there again on the 29th ult., I again climbed to the nest and was much surprised to find nine eggs. Thus in the four days since my first trip, four more eggs had been deposited. I resolved to see the end of this curious set, so left everything as it was and returned once more on May 2, when I found ten eggs. Evidently the birds were satisfied with their extraordinary efforts, so I took the eggs for my collection. After leaving the nest I spent nearly two hours at some distance from the grove watching to see if more than one pair of crows were interested in the nest. The male and female soon came, and after some hesitation the latter went to the nest, looked in and returned to her mate with loud cawing. He seemed wholly unmoved by her sorrow and they soon flew away. But no other crows came. In markings the eggs are not uncommon, varying from dense fine markings to the usual dashes and spots of brown and umber. Neither do they differ much in size, the measurements of which I will cheerfully furnish to any interested party. These facts seem to show that the eggs all belong to the same crows. Is not this the largest set of crow's eggs on record?—A. C. KEMPTON (Wolfville, N. S.).

WAPITI IN GERMANY.—In the current number of the *Zoologist* it is stated that a wealthy Berlin manufacturer has a shooting near Luckenwald, where the wapiti (*Cervus canadensis*) has been acclimatized. Between Jan. 20, 1889 and Jan. 20, 1890, seven of these animals were shot there, one of them having a head of fourteen points.—*Nature* (London).

NOTE OF THE SNOWY OWL.—Edgar, Neb., May 9.—Some time ago a correspondent asked about the call made by the snowy owl. There are a couple in captivity here, and they seem to be doing well, eat heartily and are apparently healthy. The only noise they have been heard to make is a kind of whistle.—H.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN APRIL.—Received by purchase—One jaguar (*Felis onca*) ♂, one douroucouli (*Nyctipithecus tringatus*), one six-banded armadillo (*Dasypus sexcinctus*), one grison (*Galictis vittata*), two nyctibeas (*Boselophus pictus*) two toque monkeys (*Macacus pileatus*), one night heron (*Nycticorax griseus*), one yellow-bellied songster (*Liothrix luteus*), one greater tit (*Parus major*), two whistling swans (*Oxyanus americanus*), one purple gallinule (*Porphyrio martinica*), one loon (*Colymbus torquatus*), one ariel toucan (*Ramphastos ariel*), two Indian pythons (*Python molurus*), twelve iguanas (*Cyclura decolorata*), one horned iguana (*Iguana tuberculata rhinophora*), one alligator snapping turtle (*Macrochelys leucirina*), one water moccasin (*Aneides trionyx piscivorus*), five ground rattlesnakes (*Crotalophorus mitchilli*), one diamond rattlesnake (*Crotalus adamanteus*), nine common hooded snakes (*Heterodon platyrhinus*), one spotted hog-nosed snake (*H. platyrhinus atrox*), three coach-whip snakes (*Bascarium flagelliforme*), one scarlet snake (*Cenophora coelestis*), fourteen king snakes (*Ophiodon retusus*), nine black snakes (*Bascarium constrictor*), one corn snake (*Coluber guttatus*), two indigo snakes (*Spilotes eremicus*), two common water snakes (*Tropidonotus sipedon*), one bronze water snake (*Tropidonotus taeniatus*), one chicken snake (*Coluber quadricinctus*), one harlequin snake (*Elops fulvus*), one Osceola's snake (*Oseola elapsoides*), and one pine snake (*Pityophis melanoleucus*). Received by presentation—One common opossum (*Didelphys virginiana*), one screech owl (*Scops asio*), two grass parakeets (*Melospiza undulatus*), one yellow-fronted parrot (*Chrysotis ochrocephala*), one cannet (*Sula bassana*), one king vulture (*Cyparhys pona*), one white-throated sparrow (*Zonotrichia albicollis*), one woodcock (*Philohela minor*), eleven alligators (*Alligator mississippiensis*), six wave-lined lizards (*Sceloporus undulatus*), three elegant utas (*Uta elegans*), one garter snake (*Eutania sirtalis*), one Florida terrapin (*Pseudemys couicina*), one spiny lizard (*Sceloporus spinosus*), two horned lizards (*Phrynosoma cornuta*), and one tree boa (*Ziophisoma hortulana*). Born in the Garden—One gazelle (hybrid between *G. subgutturosa* ♂ and *G. dorcas* ♀), four kray foxes (*Canis virginianus*), three prairie wolves (*Canis latrans*), and one Virginia deer (*Capreolus virginianus*).

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 16, May 30.
FOLSON 10 and 12, Sept. 26.	REMINGTON 12, Dec. 5, Feb. 6.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 26.
GREENE 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENE 10, Sept. 12, Sept. 19.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WHITNEY SAFETY 12, March 6.
LEFEVER 12, March 13.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

MASSACHUSETTS GAME LAW.

CHAPTER 249.—An act to amend an act for the better preservation of birds and game. Be it enacted by the Senate and House of Representatives in general court assembled, and by the authority of the same, as follows: Sec. 1. Chap. 232 of the acts of the year 1888, amending section 1 of chapter 276 of the acts of the year 1886, is hereby amended so as to read as follows: Sec. 1. Whoever takes or kills a pinnated grouse at any time, or a woodcock, or a ruffed grouse, commonly called a partridge, or a quail, between the fifteenth day of December and the fifteenth day of September, or a wood or summer duck, black duck or teal, or any of the so-called duck species, between the fifteenth day of April and the first day of September shall be punished by a fine of \$20 for every bird so taken or killed. Sec. 2. Whoever at any time takes or sends, or causes to be taken or transported beyond the limits of the Commonwealth any woodcock, quail or ruffed grouse, taken or killed within the Commonwealth, or has in possession any such bird or birds with intent to take or cause the same to be taken out of the Commonwealth, shall be punished by a fine of \$10 for every bird so had in possession or taken or caused to be taken or sent beyond the limits of the Commonwealth as aforesaid. Approved April 30, 1890.

JACKSNIPES IN NEBRASKA.

OMAHA, Nebraska, May 5.—This has been a great spring for Wilson's snipe, and bigger bags have been made than for a long series of years. There is no accounting for this remarkable flight of the birds, however, and I haven't even a conjecture to offer. I am bold enough to express the belief, though, that Nebraska shooters will not see another such season for many a long year to come, if ever again.

No one who has ever indulged in the sport will deny that spring snipe shooting is about the most enjoyable and exhilarating of all outdoor sports, and still I stoutly hold, as with wildfowl shooting of all descriptions, it should be prohibited by law. This precious little bird only drops down in our marshes and meadows in the warm mellow days of April and early May, to make love and tryst, and secure a little rest and nourishment before continuing its weary flight on to the north. They are on the way to the hatching and breeding grounds, where the sound of man's footfall is seldom heard, and should be allowed to reach here for the brief period that marks their stay, and then proceed unmolested on their way. This would always assure us magnificent fall shooting, when the birds would be as plump and fat as veritable butter-balls, a hundred fold superior to what they are found to be in the spring. But there is no law whatever in Nebraska for the protection of this bird, and any of the water fowl either for that matter. When the jack comes, either in spring time or hazy autumn, you can take your breechloader, go down in the bogs and knock him right and left—that is if you know how—with impunity. Why is this?

The jacksnipe (*Gallinago wilsonii*) is, in my estimation, the choicest of all our feathered game. The quail or the woodcock cannot be mentioned in the same breath, at least in my opinion. As plenty as they are here, now, they command to \$2 and \$2.25 in the market. They are little, but they deserve as much attention at the hands of the Legislature as the quail, duck, dove or any bird of insectivorous proclivities. This spring shooting is telling with terrible effect upon their numbers, and within a few years more they will entirely fail to put in an appearance in these, their old haunts. Every year, to the observant and solicitous sportsman, the decrease becomes more and more noticeable, and he calls louder and louder for succor at the hands of the law-makers.

Why do I shoot snipe in the spring, asks the doubting nimiror? I answer him sharply, because all the rest of the Portuguese do. If I hung up my gun alone it would accomplish nothing, save to give some of the alleged shots round about here a better chance to make a big bag themselves, and I'll not do it. As long as shooting is permitted in the spring, I'll have my share of it, but I would hail with satisfaction supreme the enactment that should compel all to forego this spring slaughter and give the persecuted jacks an opportunity to recuperate and multiply.

There are magnificent snipe grounds within easy reach of this city. To the west, stretching away up the beautiful Elkhorn Valley, is a low-lying wild meadowland of the richest and blackest soil, corrugated and broken with tufted nigger-heads and trickling rills, making one of the choicest feeding grounds the hungry snipe ever struck. This loamy reach, too, is dotted here and there with clumps of blood-twiggled maples, with bunches of wild rose and acres of liliputian cane, pucker brush, flags and slender-spined buffalo grass, which makes a favorite home for song birds, for turtles, frogs, gartersnakes and an occasional rattler of the prairie breed. In July and August this, too, is a famous rendezvous for woodcock, and I have made many and many a famous bag here. Still it is the jacks' paradise, and as there is more genuine pleasure and excitement in an hour's snipe shooting than there is in a whole day's woodcocking, I will give you my experience out there of ten or twelve days ago.

The Doctor and I went here together, and what a glorious day we did have! South breezes were blowing warm and balmy, the yellow sunshine flooded the forest, field and wallow, and all the conditions were superb for a successful shoot.

Once upon the ground, and Fan, the Doctor's old Gordon, was ordered about her business. I do not usually take a dog for snipe, but on this occasion the Doctor was anxious that his setter should have experience, and as they never come amiss in assisting you in recovering the killed, of course I offered no objection. A dead snipe is about as hard an object to find as the proverbial needle in a haystack. Without a dog much care must be exercised in marking down the fallen bird, and they should be recovered at the earliest possible moment, as the homogeneity of a well-ordered snipe ground is a wonder and a perplexity always.

Fan looked up into our faces a moment with her bright, intelligent eyes, waving her tail in delighted anticipation. "He on!" repeated the Doctor, and with an eager whine she bounded off, dropping to a quick walk with her delicate nose to the ground. After completing a circle she returned and gazed up into Doc's face as much as to say, "No snipe here." She was waved off again and vaulting the conical tussocks, treading gingerly through the brackish pools, searching grassy thickets and reedy caverns, and nosing the ground generally, she made a picture well calculated to stir the blood in the veins of the ambitious sportsman. Suddenly, as the Doctor and I were both astride an old rail fence that bisects the upper marsh, we simultaneously noticed a resilient movement on the part of old Fan; then she became as immobile as if cut from stone, with her dilated nostrils drinking in the scent that came from a small, scraggy clump of pucker brush. "Birds, Sandy," admonished the Doctor, and then in his improvident haste, his rubber boots went "kersock" in the oozy mud on the other side.

"Skeap! skeap! skeap!" and away, here and there, and thither and yon, darted little brown and white shapes, twisting and convoluting in the dazzling sunshine like so many feather lunatics, and although taken at a decided disadvantage, astraddle the top-most rail of the old zig-zag fence, I got in two shots, grassing a bird with each, while the Doctor, with language entirely inexcusable, was extricating his rubbered limbs from the agglutinated loam.

At least fifteen birds had flushed, and they had dropped all about us in the undergrowth and grassy slough. Fan still stood crouching, gazing back at us with a wistful, impatient look, but at the irate Doctor's "Go fetch!" she

sprang forward and in a jiffy the two defunct jacks were at his feet.

We were not slow in getting to work I can assure you, and as the aid of the Gordon's keen nose was entirely unnecessary, if not a downright hindrance, the Doctor ordered Fan to heel. She followed meekly, with an injured look in her great eyes, as all well-broken dogs will, and we were soon at it.

The freshness, the picturesqueness and the romance of the whole scene were delightful. A few yards on we jumped another flurry of birds, and we both got in two barrels, only killing a jack apiece, however. As luck would have it we both shot together at the last bird, and I had scored a clean miss with my first barrel—overshot the zigzagging little rascal. But the next moment I made up for it by a corking double. "Great shot!" cried Doc from the other side of the swale.

As I reached my lost bird I gazed upon him with queer emotion, as he lay there at my feet in all his delicate beauty—lay there amidst a cluster of peeping dandelions and curling cresses, a glossy, high-bred, high-fed cock.

With what little reference and thought to man exists the greater part of the Deity's creation. Some things appear to be made for his use, but what myriads of others, grand and beautiful, have no connection with him or his presence.

The snipe and the glossy blades of the tiger lily glisten alongside each other in the solitude of the gloomy slough. The graceful birds, the budding vegetation waving in curves of matchless loveliness, the lumpy pools, the grandeur of the whole wild landscape, all ask not the eye of man to admire them. Yet he thinks the world created especially for him, instead of being but one of the countless expressions of the Almighty, one of the atomic links in the infinite series of creation. All, from the vasty heavens to the squirming ephemera, are but portions of the mantle which the inscrutable Master wraps about Him for purposes of his own.

Sneak! from the crypt of straggling flags at my very feet, and but a step from his dead mate, flushes an unwary bird.

Where are the influences of my sentimental musings—where the fruits of my moralizing? My Lefevre is to my shoulder—a puff of azure smoke, a sharp report, and the snipe plunges dead into the mud!

Crack! crack! echoes the Doctor's gun.

He has worked off to the right and is beating up a favorite ground of mine down along a tortuous slough, half hidden by spreading splatterdock, the lurking place of the pinkeye and the piping batrachian, where the jacks are found when nowhere else.

Finally the distraught birds became so scattered and wild that it was only at infrequent intervals that we got a shot. I was thinking seriously of getting out of the bottoms, as I had noticed a cloud in the west drop its gauzy ladder to the rim of the horizon, and felt that one of those erratic April showers so common here was about to catch us. The Doctor, however, was in his element, and insisted on staying, and nothing loth, I floundered on.

An April storm! Soon the distant bluffs mingle grayly, then the whole perspective was swallowed. The shadowy groves of willow and maple melted, the further line of puckerbrush was next in the misty mingle, and then with a rush the shower was upon us.

The marshes, so soft and tender and pleasant in the sunshine of the morning, became in a moment sticky and reeking wet. But this preliminary deluge was of but short continuance. To the wand of sunbeam the misty curtain lifted and there was the instantaneous glitter all about. In a few moments, however, a second installment of the shower came, engulfing the already dripping groves and swaying reeds, and changing again into jewel work under the sun. For the next hour there was a quick intervening of rain and sunlight. The former would streak the scene, then blue eyes would open in the sky. The arcades of the woody groves would glow, darken, be masked in the shower, only to flash again into gold.

Things continued thus for an exasperating length of the time. The Doctor and I were long since drenched to the skin and bubbling over with disgust, but at last the dingy, lead color above whitened, broke into large fragments and then, as if by magic, the vault overhead was one smiling expanse of blue. Again we started forth, leaving the clump of maples in which we had sought shelter, and working overtoward the oozy meadows that ran clear down to the bed of the Elkhorn.

How the blackbird chirped and the robin sang, the whole scene putting on a look as sweet as a fairy face I know.

As enthusiastic as ever, amid such entrancement, we reached the meadow lands and here jumped the birds again, probably 30 or 40 getting up simultaneously and whirling and tumbling away in the glistening air in all directions, some dropping down again, like ghosts, among the nigger-heads, not 100yds. away, while others, perhaps the ones that had been ofttest flushed, rise into space until mere specks, when they circle and dart, and flutter and whir in the most erratic flight, until we grow tired of waiting to mark them down. All about us, in the soft, black soil, we saw where the birds had been boring for angle-worms, while their graceful tracks, crossing and recrossing like net-work, showed how they had been disporting themselves during the spasmodic storm.

We continued our shoot, with varying success, for an hour or two longer, and then, as our game pockets were bulging with birds, our clothes soggy and steaming, our legs weak and unsteady, and our stomachs empty, we started for the city, which we reached just as the tender tints in the April sky were trembling away into the soft gray of the deepening twilight. SANDY.

PROTECTION AGAINST RUST.—Elmira, May 5.—Pure lard and mercury (three parts lard, one mercury) will preserve your guns from rust for any length of time. To save trouble, you can get it already prepared at any drug store. It is nothing more nor less than angutim. Apply as you would oil. A light coating is sufficient. Leave barrels open if you like.—NILMAH.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

A MEMORY OF JERSEY.

PERUSING my favorite journal, *FOREST AND STREAM*, I came across "Ruffles in New Jersey," which reminded me so vividly of a few days' sport I had there shooting partridge, quail and rabbits, that it occurred to me that it might interest some of my fellow sportsmen to read a short account of our outing.

There were four in our party, the senior member, "Uncle," a hale and hearty good fellow, true sportsman from tip to toe; his little one-year-old setter bitch Fan; Jack, a whole-souled model of manhood, ever ready to please and oblige any one, and the writer, full of love for the woods and nature—never tired, when with his gun, satisfied to hear the whirr of a quail or partridge, to get a glimpse of the game and an occasional shot.

A clear bright November morning saw us in a boggy brush, a favorite haunt of little Bob White. Fan soon roared and suddenly froze in his tracks, when *whirr, whirr*, up sprang a bevy of about fifteen full-grown birds, out of which two fell to the report of our guns. A wounded one dropped some distance away and was speedily found and pointed by Fan. It was my fortune or rather misfortune to drop her dead within about 5yds. from where she got up by a snapshot, but so bldly mangled that she was hardly fit to be taken home. Right here I made up my mind never to use a 12-bore close-choke for brush shooting again; and I have since used a very light 14-bore Clabrough, moderate choke, with just as much success, and have the pleasure besides of securing my game in nice presentable shape instead of being torn out of recognition.

Having marked some of the birds down we went to the bank for a chat, rest and smoke. While there I suddenly noticed Fanny, lying at her master's feet, act in what I thought a very queer manner, turning her head from one side to the other, then holding it rigidly. Fearing she would take a fit, which I had seen begin in a similar way, I called Uncle's attention to it. He turned, glanced at her, grabbed his gun and exclaimed, "Fit! why, boy, she is on a point." He told her to go ahead, which she did very cautiously, and sure enough she pointed the bird not ten feet from where we were talking and laughing and carrying on. I need not to mention that the bird did not fly very far after she got up, as Uncle never misses (if he can help it).

I have never seen a dog, a mere puppy, work the way Fanny did; hunting all day, she never flushed a single bird, and kept right on close to us in the brush, hunted carefully and thoroughly. She was very sensitive, the least change of expression in her master's commands would instantly be noticed by her. Her actions and the way she would turn around and look from one to the other with her true brown eyes seemed to say, "Why don't you get to your place?"

With varying success we hunted for three days; we did not get any great big bags to brag of, but we had a royal good time which will linger in our memory for years to come.

The unwonted exercise told on us, and on our way going home the last day Jack said, "Boys, this is the last time I will be with you." How true it did come. Scarcely a few months afterward at the terrible hotel collapse at Hartford he was killed, and my heart never ached so much in all my life as when I pressed my hand on his forehead and said, "Good bye" to my old true friend Jack forever. AUGUST.

BAY SNIPE SHOOTING.

A TELEGRAM from our game keeper at Currituck, dated April 21, saying "Bay snipe have arrived," reminded us of the fun we had last spring and fall, so we dropped our pens and paper, said to our trusted partners and clerks, "We'll bring you a great bunch of graybacks," and away we drove to the Martin's Point Gun Club.

This club is a new one, situated about twenty miles south of the pleasant summer and winter resort, Virginia Beach, and is, as we think some bags we have made will attest, the finest bay snipe grounds on the face of the earth. Sept. 15, 1889, two of our members, Messrs. Taylor and White, shot 440 golden plover, yellowlegs, graybacks, willets, curlew and grass plover, between 7 A. M. and 1 P. M., with two guns. August 1, 1889, Messrs. Camp, Todd and White bagged 520 of the same kind of birds with three guns. We think for recent dates these bags will be hard to beat. But wait until we tell you about this April 23 hunt, which is much earlier than we generally go for bay snipe. Having packed in our handbags just as few articles as it is possible to navigate with, we are driven to the Virginia Beach depot at 6 A. M.

Richard B. was the life of the party, and the cause of some amusing little incidents which we will relate. When we landed at the club, after a pleasant drive along the Atlantic—with an occasional shot at a plover, a little experience with a 12lb. bluefish near Station No. 16, in which case the victory was not to the fish—we found what we were led to hope for, that game was abundant and easy to shoot. Getting out our tin decoys each man selects a sandhill, sets out his decoys and begins to build a blind. But neither one of the four of us succeed, for winter yellowlegs and graybacks were flying in every direction. G. W. T. is the first man heard from. A flock of four big winters came down among his decoys, but the powder was bad and none of them remained. Saying to him in a fearless sort of way, "Twedle-dee-dee," they go straight to Dick. Now while "Richard is himself," on the banks of Gloucester River in Ware county, among the quail, he had never shot yellowlegs before, but George had. But the battle raged until sunset, and the air smelt strong of powder. We bagged 83 large winter yellowlegs, a few graybacks and some sickle-bill curlew. Going to the club house we find smoking hot the 12lb. monument of Joshua's determination, with sixteen fat yellowlegs. At 8:30 we were asleep.

The blinds are only a few hundred yards from the house, and a brisk walk of ten minutes puts each man in his blind ready for business. It was just as our hopeful and ever encouraging friend Joshua had predicted; the birds were there; and although I have had some little experience in spring shooting and a little in other seasons, I think I never enjoyed it more than this one day and the next morning. The flight were nearly all large winter yellowlegs, and were just as fat as I ever saw them in September and October. Joshua sat dreamily watching his decoys, occasionally singing his song of welcome, which must sound sweetly to the ear of every

yellowleg, for there was never one known to pass his blind and not give him a shot. When four big, fat, handsome fellows swoop down there are two reports from his 10-gauge Greener, and none of them are left to tell their tale of woe. He had hardly time to reload, when down came a flock of ten graybacks and alight among his decoys. With that cool, calm determination of a man who knows he can do it every time, he takes deliberate aim and fires. This was a case of "no shot," or that was the tale he told us, at any rate no harm came to the graybacks.

By this time, 6 A. M., every man had gotten down to business. The sight to the eye of a sportsman was cheering indeed. They just came to our decoys fast enough to keep us doing something all the time, either shooting, gathering our dead birds, or setting them out for decoys, which we have found by experience adds very much to this kind of shooting. The bird should have a stick, say 18in. long, stuck in his mouth, the other end in the ground; and it should be made to stand on tip toe, so that if there is a little breeze blowing the wings will flutter slightly, which gives it a life-like appearance. Billie C. is an old hunter. We never see his smiling countenance, but we are reminded of the many pleasant hunts we have had with him. He is a very industrious young man, and thinks he must constantly be doing something. He can kill more birds in one day at the Virginia Club in Norfolk than any man we know.

Returning to the club for dinner, we count up and find we have bagged 270 winter yellowlegs and graybacks, with a sprinkling of golden plover and curlew.

We have not many cartridges left, and Dick must return to town the next morning. We concluded that Billy and I should shoot an hour or two and then drive up to the depot for the early train. We bagged fifty-one winter yellowlegs before breakfast, and were soon on our journey home.

The duck shooting has not been as good here this season as usual, on account of the extremely warm winter; but we had some very good duck shooting in March, and killed more geese and swans than ever before. It has not been an unusual thing to kill fifteen or twenty swan in one day's shooting, and one of our men killed sixteen swan on the 22d day of March, which is later than we ever knew them to stay in Currituck before this season. There are two or three shares for sale in this club now, and if the reader is fond of this kind of sport he will do well to consult Mr. J. B. White, of Norfolk, Va., about these grounds.

We shall return to the club next week for a few days, and expect fine shooting, as the winds and weather are favorable.

To make our last trip more enjoyable we carried with us a freezer, and although some of our birds were four days old when we received them at Norfolk, they were as perfect as when they were first shot. This freezer is a simple one and a perfect success. It is a new whisky barrel, with a zinc or iron pipe 8in. in diameter running from top to bottom, with a patent drip, so all waste water may escape but no hot air can enter. Fill this pipe with ice and salt, with a cap on top of the pipe. Pack birds around the pipe, double head the barrel, and they are good for four days certain. JOSH.

INCREASING FISH AND GAME IN MASSACHUSETTS.—President Edward A. Samuels presided at one of the most enthusiastic meetings held during the season by the Massachusetts Fish and Game Protective Association, at Hotel Thorndike, Boston, May 8. Some 125 lovers of the rod and gun sat down to an excellent dinner, after which the subject of stocking Massachusetts with fish and game was very fully discussed. The committee on game importation made a very excellent report of what has been done this season, and are making extensive arrangements for continuing the work. Already twenty-seven lots of live quail, besides four lots of the Arizona mountain quail have been let loose. The Association is receiving applications for grain for these birds to feed upon from farmers in different localities, many of whom are planting fields of it specially for them, showing that not only sportsmen but farmers upon whose lands the birds feed are becoming interested, and see the importance of protecting them. Very encouraging letters were read from different sections, stating that many of the birds let loose have been seen, and that they were thriving, and promising to see that they are protected. A very liberal offer was received from the editor of one of our leading sporting papers, offering the Association 3,000 brook trout with which to stock some of our streams, and our committee will probably make the proper arrangements to accept this kind offer. The following gentlemen were elected members: Clifford R. Weld, Chas. F. Rice, W. N. Lockwood, A. E. Felch, Frank C. Childs, E. T. Milton and Herbert M. Howes. Four new names were proposed for membership. The Association now has on its books 400 members, having added over 150 new names during the past year.—RICHARD O. HARDING, Sec'y.

CARTWRIGHT.—Among our visitors last week was Mr. T. T. Cartwright, well known as an expert rifle shot, and lately connected with the Whitney Safety Fire Arms Co. He has severed his connection with that company and is now identified with the American Arms Co., of Boston. They are now putting on the market two new fire arms, one the Whitmore hammerless doublebarrel shotgun, and a revolver called the American Arms Co. safety hammerless revolver. The company has been reorganized and intend to push the sale of these arms vigorously. Mr. Cartwright will represent them on the road, and is now on his way West to visit the trade and meet the boys at the tournaments. He reports favorable criticism from the dealers already seen on the merits of the new arms. It is probable that the company will change the location of their factory and offices, making a long jump to Alabama, where flattering offers have been made them to settle.

ERIE, Pa.—At a recent meeting of the Presque Isle Gun Club, the officers elected for the year were: President, Jas. Heydrick; Vice-President, Geo. Russell; Captain and Secretary, Wm. Siegel; Treasurer, Chas. Siegel; Trustees, Russell, Abell and Siegel. The club is in good condition, but it lacks support from the sporting people in this beautiful city. We are thoroughly organized and will come "down hard" on three of the businessmen in this city for breaking certain game laws. Will let you know when we do it.—HEY.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 5.—In my letter of last week, and I do not know but in earlier writings, I have spoken of the duck season for Illinois as closing May 1. It formerly did so, two weeks later than Indiana; but under the present law closes April 15, the same date as that of the Indiana law. I hardly dare profess being able to keep track of the Illinois game law in all its phosphorescent gleams of wisdom, and it isn't always easy to determine the date of a law by the way it is observed, but April 15 is correct, I am credibly informed, and I see it so printed. Shooters will please put back all the ducks they have killed since then.

May 9.—The shooting for the season is over, as well as the season for shooting. There are a few scattered snipe lingering in parts of the country, but their numbers do not amount to anything. Henry Kleinman found about a half dozen over on the Little Calumet marsh this week, but they were about the last. I saw two snipe get up on a wet meadow back of Blue Island Junction this morning as the railway train passed by. The snipe are pretty much all mated before this. These birds seem to have been scattered all over the State of Iowa this spring, and were killed within the village limits in a number of the smaller towns. Weather has lately been much drier in that State, and it is probable the year will be an average good one for prairie chickens. Iowa has had four years of dry weather. It may be that this fact and the supposed extinction of the prairie chicken in many sections have had something to do with the slight increase of the bird in many localities where it has not been hunted or seen for a long time. For instance, there are a few coveys of chickens almost certain for this year on some farms in Jasper county, near the center of the State, where no one has thought of going hunting for them for eight or ten years at least. This was once a grand chicken country, but the market shooters cleaned it out. It is remarkable how a few birds will hang about the old haunts, and how these, if left undisturbed, will multiply into fair numbers in a few years.

The parts of Iowa that had the greatest overflow this year had very good shooting, but the streams in the central part of the State have for the most part not yet been out of their banks. The ducks will breed on the Kankakee and Little Calumet, in Indiana and Illinois, in unusually large numbers. Henry Kleinman says that on his snipe hunt he found the Little Calumet marsh fairly full of ducks. Many of these will stay and not go further north at all. The feed has been remarkably good.

Grand Calumet Heights Club has raised \$600 to invest in duck feed, and quantities of feed, mostly corn, have already been put in on the big river. It is said by a member of that club that wild buckwheat would make a good feed and would do well in that country. The members of this club wished to procure some dozens of quail for the purpose of stocking these grounds, which lie among the sandhills on the lake shore near the foot of the lake. It is very much a question whether the birds would remain there, but it would do no hurt to try. The small yacht which was wrecked and came ashore on Grand Calumet beach some weeks ago, will be purchased by the club and rescued from the sand that is rapidly covering her. She belonged to Chicago parties.

Mr. John Grey, of the Cumberland Club, is reviling his bad luck at not finding any snipe on Cumberland Marsh this spring. On his last hunt he only got three jacksnipe. He says he left the marsh full of ducks, however.

The uses of a good sporting journal are manifold. For instance, soon after the appearance of the number having the account of the little snipe hunt near Shelby, I find at my desk a gentleman who wishes full instructions on that country as a new shooting ground for himself. As a result of these he has his boats, etc., sent down to that neighborhood, and will henceforward shoot in that neighborhood whenever he shoots at all. Results, the purchase of a good many railway tickets, the payment of board at the hotel, the hiring of pushers, etc., for all of which the newspapers ought to have, but perhaps never will have, full credit.

It is pleasing to give the further information that John Gillespie still continues to improve slowly in health, and the boys hope to see him out all right for the State tournament. E. Hough.

THE NEW YORK ASSOCIATION.—The last meeting of the New York Association for the Protection of Game, for this season, was held last Monday evening at Pinard's in this city. A very important letter from Chief Game Warden Drew was read announcing the fact that the net fishermen who were defeated in the highest court of the State, were about to take the case to the Supreme Court of the United States. He stated that in order to meet this unusual expense to fight this matter, he would be obliged to ask the assistance of the various clubs and anglers generally. The Society for the Protection of Game voted \$250 for this purpose and passed a resolution urging every club in the State to help Mr. Drew in this matter. Mr. Thos. N. Cuthbert, the treasurer of the association, will be glad to receive subscriptions. If the illegal netters win this suit it will put an end to all endeavors to stop unlawful netting. Messrs. E. S. Auchincloss and Dean Sage were elected members of the association. The Hon. Robt. B. Roosevelt, president of the club, was elected to act as one of the commission to codify the game laws under the authority of the new law recently approved by the Governor.

THE NEBRASKA FLIGHT.—Edgar, Neb., May 9.—*Editor Forest and Stream:* Our hunters have been having plenty of good shooting for some time. First came ducks and geese in large numbers, and then about three weeks ago the annual flight of the Eskimo curlew (*Numenius borealis*) commenced. The birds have been in great abundance this season. At first they were poor, but later were very fat and fine; they are leaving now. Edgar appears to be in the center of a small piece of country in which they light, and they do not appear to visit other parts of the State. Snipe shooting has also been good.—H.

NEW YORK GAME SEASONS.—Of the new laws enacted, Chap. 91 makes Sept. 1 to Jan. 1 the open season for ruffed grouse and woodcock, and forbids shipping these birds from the Forest Preserve, save when accompanied by the owner. Chap. 94 relates to Cortland county and makes stringent provision against killing game birds for market. The open season for ruffed grouse and woodcock is made Sept. 1 to Jan. 1.

AN AMERICAN IN AFRICA.—London, April 29.—*Editor Forest and Stream:* Our Mr. Rowland Ward thought you would like to know that Mr. Aston Chanler, of New York, has recently returned from a shooting expedition in East Africa, including Mount Kilimanjaro and Masailand, where he met with some excellent sport. All the trophies are now in the hands of Mr. Rowland Ward, of Piccadilly, London, for the purpose of mounting, and when finished will be sent to New York. Mr. Chanler went right round Mount Kilimanjaro. There have been large bags of game had lately in these parts.—ROWLAND WARD & CO.

W. R. SCHAEFER & SONS.—A reorganization of this well-known and old-established gun house has just occurred, caused by the withdrawal of Richard F. Schaefer. The business will be continued as heretofore at the same address, 61 Elm street, Boston, by W. R. Schaefer and J. F. K. Schaefer, under the old firm name of W. R. Schaefer & Sons.

NEW YORK GAME LEGISLATION.

THE final adjournment of the New York Legislature took place at noon on Friday, May 9. The bills relating to forestry and game introduced during the session were disposed of as follows at the hour of adjournment:

NOT PASSED.

Senator Sloan.—To authorize the Forestry Commission to rent to parties who wish to be in the woods, five-acre lots for a period not to exceed five years. This was to form a good police force for the woods.

Assemblyman Husted.—To establish a commission of the Adirondack Park consisting of five members, residents of the State, to be appointed by the Governor and confirmed by the Senate. The term of office is five years. This bill was not passed because Senator Sloan wished the Forest Commission to undertake the work instead of a new commission.

Assemblyman Nixon.—To appoint a commission to examine the Adirondack forests for the purpose of designating what lands, if any, shall be taken for a State park, and making an appropriation for the expenses of the same; to decide what is for the best interests of the State; to locate the park and to serve without pay. All State, county and town officials are to furnish whatever information is wished. \$25,000 appropriated for expenses.

IN THE GOVERNOR'S HANDS.

Senator Sloan.—To amend the act in relation to the collection of taxes on the lands of non-residents so that within two years of the sale the occupant must give notice to the Comptroller that he is an occupant in order to hold his claim.

SIGNED BY THE GOVERNOR.

Chapter 11. Senator Sloan.—To amend the law of 1885 establishing a Forestry Commission so as to secure payment of \$1 a day to those who help extinguish forest fires, and also to make the law more explicit.

Chapter 37. Senator Sloan.—To authorize the purchase of lands located within such counties as include the forest preserve. The Forest Commission may buy lands at not to exceed \$1.50 per acre. Lands may be appraised by not to exceed three appraisers, who shall be paid not more than \$5 a day each. \$25,000 appropriated.

Chapter 123. Senator Sloan.—To amend Section 983 of the code of civil procedure, so as to provide that in an action where the people of the State are a party to recover a penalty for trespass upon the lands of the forest preserve the action may be tried in a county adjoining the county where the cause of action arose, or in the county where the principal office of the State officer, State Commission or Commissioner interested in the determination of the action or in whose behalf the action was instituted is located.

Assemblyman Curtis.—Amending the Forestry Commission act so as to include the towns of Altona and Dannemora in Clinton county from its provisions.

A joint resolution was passed, in line with Gov. Hill's message on the Adirondack Park and the passage of Chapter 37, noted above, in order to prepare the way for such a park.

GAME LAWS.—NOT PASSED.

Senator Coggeshall.—To shorten the time of hounding to thirty days.

Senator Coggeshall.—The general bird bill of last year relating to woodcock and other game.

Senator McCann.—To make the close season for quail or partridges from Jan. 15 to Nov. 15; and for hare or rabbit from Jan. 15 to Nov. 15.

Senator McCann.—To make the close season for quail, partridge, hare or rabbit in Queens and Suffolk counties from Jan. 15 to Nov. 15.

Senator Sloan.—Amending the Cayuga county Lake Ontario fishing act of 1889 so that it will not be lawful to kill or catch any fish except minnows, eels, suckers, bullheads and pickerel in what is known as the pond, immediately east of Fair Haven Bay, or in Sodus Creek, within two miles of its mouth, except by hook and line; and making it lawful to have in possession, eels, suckers, bullheads and pickerel taken contrary to the act.

Senator Chase.—To make the close season for woodcock Jan. 1 to Sept. 1.

Senator Emerson.—To allow fishing for suckers, bullheads and pickerel with nets and fykes and shooting and spearing the same through the ice and catching the same in any of the streams in Warren county, except Lakes George, Schroon and Long Pond.

Senator Linson.—To provide that no person, resident or non-resident of either of the counties of Ulster, Greene, Dutchess, Delaware, Chemung, Columbia or Orange, shall catch, take or kill in any manner, within the limits of either of said counties, any woodcock, quail, hare or rabbit, squirrel, ruffed grouse, moulton called partridge, snipe, plover, rail or wild duck, trout, black bass, Oswego bass or German carp, for the purpose of selling or marketing the same, or for any fee, hire or reward, or for the promise of either of such, from another, for the catching, taking or killing any of said birds, fish or game, nor shall any person, firm, company or corporation, market, sell, or have in possession for sale, or offer to sell or dispose of, in any manner directly or indirectly, either in or out of said counties, any of the said birds, fish or game, caught, taken or killed within the limits of either of said counties.

Senator Fassett.—To prohibit the killing in Chemung county of any wild duck, quail, woodcock, snipe or partridge for market or sale.

Senator Hawkins.—To change from the first ten to the first five days of October the time of hounding in the counties of Queens and Suffolk.

Assemblyman Hitt.—To amend the laws relating to fish in the St. Lawrence River and Lake Ontario adjacent to Jefferson county.

Assemblyman Peck.—To prohibit the hounding of deer in all parts of the State.

Assemblyman Stevens.—To prohibit the possession of speckled trout, etc., taken by nets; the possession of nets is evidence of guilt. Vetoed by the Governor.

Assemblyman Lane.—A compromise bill between the fishermen and the anglers of Jefferson county bordering on Lake Ontario.

Assemblyman Page.—To forbid the taking of fish in the Hudson River in any other way than by angling.

Assemblyman Dempsey.—To shorten the time of hounding deer to 30 days, all the month of September; to forbid hounding female deer, and to forbid hounding without a permit.

Assemblyman Johnson.—To provide that nothing in the laws for the prevention of cruelty to animals shall prohibit the coursing of hares with greyhounds by sportsmen's clubs.

Assemblyman Pierson.—To cede the interest of the State in lands under water to Smithtown, Suffolk county, but not to interfere with the rights of owners of oyster beds.

Assemblyman O'Connor.—To constitute a commission to codify the game laws, to consist of five members; the first is the chief fish and game protector, the second a member of the Commissioners of Fisheries selected by themselves, the fourth a member of the New York State Association for the Protection of Fish and Game, selected by themselves, and the fifth a member of the New York City Association, selected in the same way.

Assemblyman Crawford.—To allow deer to be hunted during August, September and October, and with dogs between Sept. 10 and Oct. 10.

Assemblyman Treadway (from the Fish Commission).—To prohibit the taking of shad in the Hudson River by net between sunset of Saturday to sunrise on Monday from March 15 to June 15.

Assemblyman Treadway (from the Fish Commission).—To prohibit the catching of salmon except from March 1 to Aug. 15; and then none of less than 3 lbs. shall be caught.

Assemblyman Treadway (from the Fish Commission).—To protect shad and game fish in the Delaware River; to prohibit the use of nets.

Assemblyman Bridges.—To strike out from Section 8 of Chapter 534 of the Laws of 1879 the prohibition against the killing of hares and rabbits.

Assemblyman Lane.—To exempt Bonaparte Lake, Lewis county, from the general law forbidding fishing with nets for bullheads, suckers and eels, in the months of November and December.

Assemblyman Stevens.—To provide that sign-boards to protect private parks or waters must be placed not more than one-fourth mile apart and at least two shall be placed on the boundaries of any land or water used as a private park; and such property shall be enclosed by an effective fence.

Assemblyman Rose.—To permit the hunting of deer in Sullivan county with dogs during October and November, and at no other time.

Assemblyman Barton.—To allow the catching of bass in Brant Lake July 1 instead of Aug. 1, so as to make this lake uniform with other lakes in that vicinity; vetoed by the Governor.

Assemblyman Johnson.—To provide that any person seizing any pound, fyke or other nets, may deliver the same to the most convenient town clerk, who shall destroy the same and make affidavit of such destruction to the person making such delivery; the latter shall then make a sworn statement as to the time and place of the seizure; and for his work he shall be entitled to a bounty of \$10.

Assemblyman Stevens.—To amend the law of 1889 so as to allow fishing for bullheads with nets in the outlet of Cayuga Lake between July 1 and May 15.

Assemblyman Cornell.—To amend the law of 1888 regarding the appointment of fish and game protectors so that the chief game protector shall have his headquarters in the office of the Commissioner of Fisheries in the city of New York.

Assemblyman Nolan.—To amend the general game act of 1879 so as to add Albany, Rensselaer, Columbia and Green counties to Oneida and Delaware counties, where deer are counted and killed, sold, exposed for sale or had in possession between Jan. 1 and Sept. 1.

Assemblyman DePeyster.—To protect partridge, meadow lark, snipe, plover, woodcock, quail, hare or rabbit, squirrel, rail or wild duck, so that no person shall kill these birds or sell them in or out of said counties, any of the said counties, any of the said counties, Dutchess, Orange, Ulster, Green, Columbia or Delaware counties.

Assemblyman Rice.—To provide that no person or persons, either resident or non-resident, of the counties of Dutchess, Orange, Ulster, Greene, Columbia, Delaware, Sullivan, Schoharie or either of them, shall take or kill in any manner, within the limits of said counties, or either of them, any woodcock, quail, hare or squirrel, ruffed grouse (except snipe), partridge, meadow lark, snipe, plover, rail or wild duck, for the purpose of selling or marketing the same, or for any fee, hire, or reward from another for the taking or killing any of said birds or game for such other person; nor shall any person, persons, company or corporation, market, sell, or have in possession for sale, or offer to sell or dispose in any manner, directly or indirectly, except than by absolute gift, either in or out of said counties, any of the said mentioned birds or game, taken or killed within the limits of said counties.

Assemblyman Gardiner (similar to Senator Linson's above).—Relating to the protection of game in certain counties.

Assemblyman Currier.—To allow the supervisors of Erie county to protect duck and fish in all the waters of the county except that part of Niagara River controlled by the State. Vetoed by the Governor.

Assemblyman Pierson.—To protect shell fisheries in the waters of the South Bay, in the county of Suffolk, and to repeal chapter 234 of the laws of 1870.

Assemblyman Nolan.—To make the close season for squirrels from Feb. 1 to Sept. 1.

Assemblyman Kurth.—For the better protection of shellfish upon their natural beds and the planting of oysters upon lands under water within the jurisdiction of Kings county, and among other provisions prohibits the gathering of oysters with dredges, drag or rake by other than hand power.

Assemblyman Guybord.—To forbid the taking of lake shad by net from Lake Champlain north of Chimney Point, Essex county, between March 15 and June 15; each offense to be fined \$50.

Assemblyman Johnson.—To allow the catching of wall-eyed pike in Oneida Lake at any season of the year.

Assemblyman Crawford.—To exempt from the anti-net fishing laws a tract in Oswego county lying between the southerly part of Little Sandy or North Pond and its outlet in the town of Sandy Creek.

Assemblyman Lane.—To amend the Jefferson county act of 1886 so as to prevent any kind of fishing except by hook and line (not including minnows for bait to sell) or net in or out of Henderson Bay or from the St. Lawrence River between Tibbitt's Point and the St. Lawrence county line or from any inland waters of Jefferson county.

Assemblyman Gardiner.—To strike Columbia county from the prohibition relative to catching black bass between Jan. 1 and July 1.

Assemblyman Johnson.—To amend the fish and game protector laws, so that the Court may, in its discretion, change the place of trial.

Assemblyman Pierson.—To make the open season for deer from Aug. 15 to Nov. 1, and to permit hounding from Sept. 1 to Oct. 10.

The great mortality among game bills was owing to the vetoes by the Governor, in one of which he stated that the Commission created by the laws of this year is compelled to make its report in January next, until which time such legislation as was proposed by the several vetoed bills could easily be deferred.

IN THE GOVERNOR'S HANDS.

Senator Cantor.—To protect fish in the waters of Jamaica Bay, in Kings and Queens counties, by prohibiting the use of any seine, purse net, drift net, fyke net or pound, or net or nets of any other description; use of any other appliance for the catching of menhaden or any other fish, except rod, hook and line.

Assemblyman Townsend.—To allow any five parties to incorporate as an ichthyological society. This bill reached the Governor last year, but was not signed by him.

Assemblyman Townsend.—To protect fish in the waters of Jamaica Bay, Queens county, by providing that it shall not be lawful by day or night to put, place, draw or in any manner use any purse net, pound, weir or other device (except hook and line) for the capture of menhaden or other fish.

SIGNED BY THE GOVERNOR.

Chapter 54. Assemblyman Peck.—To protect the game in Cortland county, so as to prevent the killing of partridges and quail for sale in market; but these birds may be killed for the hunter's own use. This is the only bill that became a law for any particular county.

Chapter 90. Assemblyman Stevens.—To prohibit the killing or shipment of partridge, prairie chickens and woodcock, between Jan. 1 and Sept. 1.

Chapter 99. Senator Coggeshall and Assemblyman Gardiner.—To provide for a Commission to revise and codify the laws of this State for the protection and preservation of fish and shellfish, as follows: That the Attorney-General, the County Attorney, shall select from among his Deputy Attorney-Generals one member; the Commissioners of Fisheries shall select from among their number one; and the New York Society for the Protection of Game, shall select from their membership one; and the three persons so elected shall constitute the said commission. Each member of the Commission shall have \$3 for each day's actual necessary expenses, \$500 is appropriated. Under this law, Richard U. Sherman has been appointed by the Commissioners of Fisheries, E. G. Whitaker by the Attorney-General and R. B. Roosevelt by the Game Society. It is said that Assemblyman Stevens, of Franklin county, will probably be clerk of the Commission.

Chapter 208. Assemblyman Lane.—To amend the laws relating to the taking of any kind of domestic animal, peacefully traveling on any highway in charge of any person, notice may be served upon the owner to kill him.

Chapter 245. Assemblyman Peck.—To repeal the Mase dog law of 1889, which increased the tax on dogs.

Chapter 308. Senator Hawkins.—To forbid the taking of oysters in the night or between June 1 and Sept. 1, and also the use of dredges.

A resolution, offered by Assemblyman Crawford, passed the Assembly, requesting the Attorney-General to furnish the Assembly with his opinion on what constitutes the "waters of this State," as mentioned in the various laws for protecting game and fish, as distinguished from waters belonging to individual associations, and especially as to the status of waters covering land upon which taxes are paid, and whether water can be taken for public use without compensation to the owners.

Antelope and Deer of America. By J. D. Caton. Price \$2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price \$1.50. Shore Birds. Price 15 cents. Woodcraft. By "Ness-muk." Price \$1. Trajectories of Hunting Rifles. Price 50 cents. Wild Fowl Shooting; see advertisement.

THE YELLOWSTONE PARK.

THE Yellowstone National Park, the Rocky Mountain realm of the northwest part of Wyoming, the wildest and most interesting of its people, seems to be in danger of defacement and delinquency by a speculators' railroad project.

No railroad should be permitted to enter the Yellowstone Park. But the Public Lands Committee of Congress has been led, it is said, to decide upon a report, which, while defining the limits and boundaries of this wonderful domain—limits which have not been hitherto accurately defined—also permits a right of way to a railway as a theme devised by speculators, whose corporation does not expect to build any railway, but to sell the right to some other corporation.

This scheme should be squelched by Congress. A railroad through the Yellowstone Park would be a defacement and delinquency of the one great domain which the nation has set apart for the enjoyment of its wild beauty by the people generally. The desire to have a common count, to keep it a wild and natural domain; a veritable fairyland of wonders; a resort for the American people, and the most interesting place which tourists from other lands can visit. Up to the present time its boundaries have not been exactly determined. Bills have been passed in the Senate, in two or three recent years, but no precise and accurate boundaries for this unique mountain domain have ever been defined by the action of Congress. Both the House and the Senate Public Lands Committee now have a bill, which not only defines the limits of this wild and wonderful mountain park, but provides for its interests in the near coming years; for the Yellowstone Park is soon to take its place among the world's wonders—indeed it has not already reached one of the highest places in that select company. But the committee has permitted a set of conscienceless speculators to mar their report by inserting a provision for the construction of a speculators' railroad through the Park.

The setting up of a luncheon shop and hot sausage stall in the chapter-house of Westminster Abbey would not be a greater desecration.

It would be too bad—it would be a national shame, to grant, in this final bill of definitions, a charter to a set of conscienceless speculators to build a railroad through the midst of the mountain realm. It is the very wildness of the Yellowstone Park which constitutes, and is to constitute, its chief charm. It is too elevated a field for other uses; its purpose, as designed by nature, would seem to point out this mountainous region in "the Rockies" as a domain to be preserved for the pleasure of tourists and visitors.

Unfavorable to have in the United States one such place, which, unfavorable to farming or manufacturing enterprises, "fills the bill" as a health and pleasure-giving resort. The Yellowstone Park does this. No other country possesses such a domain as this great section of mountains and vales, and natural wonders. It takes a fortnight to a month for the visitor to see it fully and get a true idea of it. It extends from the 44th to the 45th parallel of latitude, and longitudinally east and west, from the 107th meridian to a point beyond the 111th. Its borders will be accurately defined in this new bill from the Public Lands Committee.

The elevation of this large domain is in a general way, as compared with the level of the sea, about that of the summit of Mount Washington, or about 6,300ft. In some places the mountains reach heights of 11,000 or 12,000ft.—nearly equal to the higher peaks of the Rockies and the Alps. But the general elevation is such that taken in connection with the latitude, will forever unfit this wild and picturesque realm for agricultural purposes. Its evident natural use is just what the country has chosen it for—a wild and picturesque resort for the people. Its air, in that saddleback region between the oceans, and so far removed from either sea, is dry and invigorating; in July and August it is delightful.

Through this wild and picturesque realm, the wonder of all tourists, a speculative corporation, calling itself the Montana Mineral Railway, is permitted by the committee's report to lay its tracks. It is said the vote in committee was very close—the speculators gaining their point by a majority of one. They should have been beaten and their plan rejected unanimously. No railway should be permitted in the National Park. What makes this permission contained in the committee's report, particularly abominable is the fact that it is tacked on to a bill which is professedly drawn to benefit the whole people. The corporation which has secured by such a close vote in committee the recommendation to Congress to grant this right to invade the domain of this mountain park, does not intend to build any railway, but to sell at a big profit its franchise to some other corporation who will, if Congressmen were as well informed on the subject as they should be—and as honest guardians of the public interest as they are expected to be—no such franchise as this would be voted, no matter what the committee may report.

FOREST AND STREAM, a good publication, is true to the public interest on this, as on other subjects. That journal has this earnest protest against this scheme:

"Those who wish to obtain such a franchise should ask Congress the privilege they desire fairly and squarely on the merits of their proposition. They should not try to smuggle it through as a rider to a good bill.

"To grant a right of way to a railway to run through the National Park is to destroy it. Should such a right be granted to one road, a similar right cannot be denied to another. There will be a race between corporations to reach points of interest in the Park, and the result will be gridironed with tracks, the disastrous fire will destroy the pine forests which clothe the mountain sides, springs will dry up, the great reservoirs, like the Yellowstone Lake, will no longer supply waters to fill the mighty rivers which now irrigate the plains of Montana, Dakota, Idaho, Oregon and Washington.

Last Saturday, in the House, was devoted to the eulogies of the late Senator William W. Windley, who was an ardent advocate of the National Park. Three years ago his eloquence defeated, by a vote of 169 to 70, a bill granting a franchise to a railway to run through the National Park. If the dead statesman could speak to-day, all his great influence and all his superb eloquence would be used to defeat the amendment which has been added to the Park bill by the Public Lands Committee. We ask each member of the House to give his vote for the kind of amendment which is now proposed, to pass the Park bill as it came from the Senate."—*Hartford Daily Times*, May 1.

Sea and River Fishing.

NOTES FROM CAPE COD.

THE harbor of Woods Holl has been full of small sea herring (*Clupea harengus*) all winter—a thing I never saw before. The name "sperling" is applied to them by nearly all the fishermen. Codfish have come in quite abundantly this spring, both small and large. Some are caught every day in the fish traps about Woods Holl. From Quisset to Cuttyhunk they are caught in fish traps and lobster pots. In Vineyard Sound they are getting them in the same way from Falmouth Heights to Quicks Hole. This is something entirely new. In a little funnel bass trap on Nonamasset, belonging to Capt. Spindle, on Saturday, May 3, the first day they hauled, twenty-three large cod were taken. May 5 they got fifteen. May 6 they had eight, the traps in Quisset Harbor had one each, and the lobstermen brought in some from their pots. The fishermen about Woods Holl think these must be fish that were hatched here by the Fish Commission. It is a new experience to catch cod along shore in fish traps. Never before since traps were put in has this been known to occur; but once in a great while they would catch a logy or sick cod. Those that are taken now are very nice plump fish weighing from 5 to 15lbs. each. I am trying to get some of the fishermen here to try them with hook and line. Other fish have not come along yet to any extent. We are getting plenty of lobster eggs. From April 16 to May 6 I have collected upward of 3,500,000 of them.

White wing coots, or scoters, have not begun to fly yet; they come along about May 15. The winter has been so mild that they did not come in to feed.

V. N. EDWARDS.

WOODS HOLL, Mass., May 6.

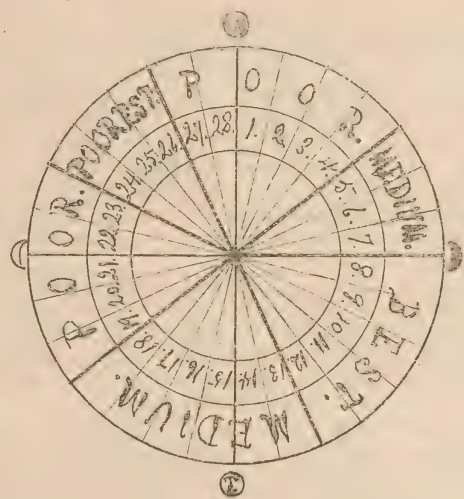

THE MOON'S EFFECT ON FISHING.

N the fall of 1888, a friend and myself were relating to each other the noteworthy incidents which had occurred in our respective angling careers, and among the numerous anecdotes and some fish stories, I asked my friend the following question: "How do you account for the varying success of anglers, and of the same angler at various times?" He looked at me as though surprised at such a curious question, but said that he thought it was due to luck, or chance, or good fortune. I then said that although luck may have some influence on the success of an angler, I thought it was due to a more substantial cause. This cause I told him I thought to be the moon; and I also said I thought the moon must in some unknown way influence the number of fishes; but beyond this, as I had only looked superficially into the question, I could give him no information. However, it was from this conversation that I determined to investigate the relation existing between the moon and salt-water fishes.

I therefore devoted a considerable portion of this past season, beginning with early spring and ending late in November, to salt-water angling, and, as is usual with anglers, have met with varying success.

I shall have very little or nothing to say of season, winds, rain, storms, tides, hot or cold waves, kinds of bait, etc., except as they influence what I have to say in reference to the moon. The effect of each upon the different species of fishes varies so much, and is so well known to practical anglers, that it would be fruitless for me to write of them.

But now we come to a very important question: In what quarter is the moon? Upon the answer of this question will depend the weight of your basket in going to and coming from your fishing resort. Thus, if you go angling at a time when the phase of the moon is unfavorable you are apt to bring home your basket very light. On the other hand, if the phase of the moon is favorable, you probably will have as many fish as you can comfortably carry.

I have divided the success with which an angler may meet into the best, medium and poor; and have discovered a corresponding phase of the moon for each. These various phases, together with their degree of success, are the following:

1. The best success will be met with on those days between the first quarter of the moon and four or five days after this period.

2. Medium success will be met with two or three days before the first quarter and that period of time intervening between the four or five days following the first quarter and two or three days before the last quarter.

3. Poor success will be met with from the two or three days before the last quarter up to the two or three days preceding the first quarter.

Evidently there is a cycle, beginning at or soon after the first quarter of the moon, when we have the best fishing, this passing into fair fishing, this into poor, then fair again, and finally getting back to the starting point. This cycle occupies a period of about four weeks, in two weeks of which we have good, including the best fishing, and this is succeeded by two weeks of comparatively poor fishing.

The fishes seem to increase in number from the new moon up to the first quarter; they then remain about stationary in number for four or five days and they then begin to decrease, until they seem to be fewest two or three days prior to the new moon.

In order to bring out the above apparently cloudy points more clearly and forcibly, I have introduced the above diagram, representing a lunar month of twenty-eight days and the interval between the quarters of the moon occupying a period of seven days. This is not exact for each month, but it is approximately correct and will serve my purpose. The diagram is simple and needs, I think, very little explanation. The four quarters of the moon are represented opposite the horizontal and perpendicular lines. The numbers, as well as the spaces in which they are printed, represent days, and not days of the month. The success with which the angler will meet is printed between two dark oblique lines.

There are exceptions to the above, but I have found them to be due, more particularly, to outside influences. For example, I may cite that in striped bass angling, a northeasterly storm after raging for two or three days, will increase the number of fishes the day or two following it. If this storm happens to come on those days which I have classed under medium success, you will catch more fish than you would ordinarily in this same period. But, if it comes on those days which I have classed under poor success, I have found that its favorable influence upon the number of fishes, as compared with the former period of time, is only slightly marked. On the other hand, a similar storm occurring during the weakish season, would, for a day or two following, decrease the number of fishes. It is also well-known that during the hot weather of the summer months, the fishes very often take the bait much more freely at night or early morning, than during the daytime. Stage of the

tide also has its influence, varying not only with each species of fish, but also with each and every angling resort. I could mention a number of other examples, but these will suffice to show what I mean by outside influences.

There is one other point which I have noticed, and this is, that as the season opens for each species of the salt-water fishes they first appear at or near the first quarter of the moon; and conversely, that as the season ends they finally disappear between the last quarter and new moon.

There are certain deductions to be drawn from the above observations:

1. That there is a direct or indirect relation from week to week and from day to day between the moon and the number of fishes. I say direct or indirect because I think the height of the tide, as it varies from day to day, has some influence upon this subject; and inasmuch as the tides are caused by the moon, this relation is direct as regards the moon, and indirect as regards the height of the tide.

2. That the state of the weather, etc., has a certain influence upon the number of fishes.

3. That the angler can calculate as to when he will meet, barring outside influences, with the best success.

4. That if the angler proposes to spend one or two weeks at a fishing resort, which is situated at some distance from his home—say Florida, or one of the striped bass clubs, or any one of the numerous fishing resorts along the coast—it will be to his advantage to arrive at his destination two or three days before the first quarter of the moon. Thus he will arrive just prior to the days when he may expect the best success.

5. I have seen it stated that there is, in addition to the spring and fall runs, a summer run of striped bass. This is true, and corresponds with my observations. This run will commence two or three days prior to the first quarter of the moon, and continue for from ten to fourteen days; and as this phase of the moon occurs either the latter part of June or early part of July, it has been termed a summer run.

6. Incidentally, I may mention that what I have said in reference to the fishes also may be applied to the common edible or blue crab (*Callinectes hastatus* Ordway).

In closing, I may say that my observations have been confined entirely to salt-water angling; but I have had enough experience in lake, pond and river angling to convince me that this same influence is at work upon the fresh as well as the salt-water fishes. This latter statement I cannot verify, except so far as memory goes; and I remember that in some weeks I had first-class or fair success, while in other weeks it was poor. This part of the subject deserves careful investigation.

Finally, there is one other question which I should like very much to see answered, and this is: In what manner does the moon influence the fishes that it should cause them to vary in number? It undoubtedly is through the tide, but how? Perhaps some of my readers can answer?

EDWIN DUDLEY SMITH, M.D.

NEW YORK.

RANDOM CASTS.

AS a rule, your tackle will suffer more during the close seasons than when in actual use, simply because you fail to give the little time necessary to have the repairs made when you return from your outing. A dollar spent in the fall for this purpose will save two in the spring. And don't put your flies away without something to keep the moth out, or when next needed there will probably be nothing but the bare hooks.

The manner in which our food fishes are wasted by the menhaden fishermen is a crying shame, and every one who has the welfare of the poor at heart should do his share toward getting the National Government to restrict their methods. Fish will never be cheap food until something is done to prevent these corporations from taking everything that comes to their huge nets and turning the catch into fertilizers.

The expensive enameled silk line is only necessary to facilitate casting the fly; when fishing where the fish run large and more than 25yds. it's likely to be needed, splice on 50 or 100yds. of nine-thread linen line behind the enameled one. In Florida the channel bass of large size takes the fly, and when fast to one of 15 or 20lbs. considerable line will be found necessary to capture him on a trout rod.

When fishing a salmon pool to clear out the trout, don't use a light leader on your trout rod; I was unfortunate enough to see a big salmon break away after having played him for upward of half an hour, by not knowing any better at the time.

In most of the mountain streams of New York and Pennsylvania better success may be had both as regards the size and quantity of trout taken, if flies tied on Nos. 14 and 16 hooks were more used than of those generally sold for the purpose in the tackle stores. Attach them to a drawn gut leader. BIG REEL.

BROOK TROUT IN PENNSYLVANIA.—During the first week of fishing, beginning April 15, in Bowman's Creek, Messrs. Anderson and Heilman, of Pittston, caught some very large trout, the smallest 12in. and the largest 16in. long. This was one of the nicest catches made on this stream for years. They began fishing near Crosby's and fished down to Evans's mills, using tandem hooks and minnows for bait. The arrangement of the hooks was devised by themselves, and will be understood. A minnow about 1 1/2 in. long, is fastened by passing the first hook into the mouth, out at the gill-opening, and striking the barb through the body at the base of the dorsal fin. Big trout cannot easily escape from this rig. In Fishing Creek a Wilkesbarre party of four caught 80lbs. in the second week of the open season. The Bushkill, reached from Cresco and five or six miles of driving, is well spoken of at present. Broadhead's Creek, about one mile from Henryville (Delaware, Lackawanna & Western R. R.) is also very productive. Trout are more abundant and larger than for many years. The Tobyhanna ought to give a good account of itself, for there has been no logging and no trouble from ice. My own outings recently have been spent on the Wapwallopen, where the returns were fairly good. The black gnat proved to be the most successful early fly, with cowdung and black-hackle good seconds.—C. M. B. (Wilkesbarre, Pa., May 7).

TROUT AT SYLVAN LAKE.

"TROUT or no trout," this was a serious question. Before long, if our map is true, the lake would be before us and upon its shores we would encamp for a week. Should salt pork and beans be our ration or should we return at nightfall, after a day's tramping or riding, to find an appetizing odor of trout to greet us. It may seem a very material way to put it, but to us at that time it was a very real and very pertinent question, and would not be put aside.

For hours our wearied pack train and our no less weary selves had climbed and vaulted, and stumbled and plunged through uncounted acres of fallen timber. Ever shifting, ever turning and seeking new outlets from its blind labyrinths, thick grown with young pines, a rising generation who were replacing the past. At last, wearied and baffled to desperation, we had reached a steep bank down which we tumultuously plunged to the bottom below, then we forced our horses through thick growths of willow, so dense that as one expressed it, "he could not see his horse's ears, and so reached at last the opposite hillside where we found a better trail. And now we climbed to reach the alpine valley, hid far up in the mighty range above us, in whose depths reposed a lake, Sylvan by name and also, we hoped, by nature. And on and upward, steadily hour by hour we climbed. Below us, through the cañon, ran the stream, which grew steadily smaller as one by one we crossed its tributaries, coming down the side valleys.

Sometimes our winding way led us down and across the brook, where our horses stopped to take long draughts, while we looked at the elk tracks deeply marked at the crossings. Then on and upward again toward a tall brown mountain, whose snow-patched sides cut a rugged silhouette against the sky. Presently we crossed a little opening and up started two black-tailed does, pretty, graceful creatures, who stood with outstretched ears and big round wondering eyes as our train filed along. Away they went, but presently curiosity became stronger than fear, and they came back to watch us; and so we left them peering from the bushes a hundred yards away. And now we ride on through the woods, then through a vast open meadow, checkered with patches of willows beside the murmuring brook, with here and there a beaver dam. The valley is now nearly level, we are almost at the top of the divide, the lake cannot be far away. We enter the sunlit aisles of the woods. Up here it is an alpine springtime, the air is heavy with the fragrance of innumerable wild flowers, the green moss springs under the feet of our horses, the air is fresh, balmy and delightful, a sense of joy and peace steals over us. Now we see a little hill rising in the open pine woods, we reach the top of it, it is an old glacial moraine; dimly through the trees on either side of the narrow valley the tall mountains rise, and we can almost feel the cool wind from their snow-patched brows. Arrived at the top of the hill, a silver shining gleams through the trees before us—the lake at last.

We ride down to the bank, and a fairy scene opens. The lake stretches away for half a mile, with a width of several hundred yards. On all sides a splendid open pine forest comes down to within a few feet of its banks. There is no brush, no fallen timber, no decay anywhere, all is fresh, green and delightful. Nor is there any shore, for on all sides from the foot of the trees runs into the water a fine, soft turf of grass, running back in several places into little meadows of a rich green. Through one of these an icy cold brook runs into the lake, fed by the snows on the mountain far above. The lake is full, the clear, cold water rises into the greensward around it; truly it is an ideal spot, the bright water, the green grass, the tall forest around it and the background of mighty mountains; had art improved upon nature it could not have been better. But was it the play of Hamlet with Hamlet left out—did it contain trout? This was the question that kept chasing through our minds and rose to our lips as we stole glances at its shining surface, riding through the woods to the meadow at the upper end. Suddenly, as if in answer to our question, I saw a silvery form dart from the water, hang for a fraction of a second in the air, and fall back with a musical splash. It did hold trout, and now camp cannot be made too soon.

Hastily we rode out into the meadow, the mules are unpacked, our horses unsaddled under a great pine, and the freed animals are rolling with delight in the soft green grass. Our tents are pitched, the beds unrolled therein, our baggage stored, and while this is going on the cook is making his fire and getting his grate ready and firewood collected under a tree near the water's edge.

And now the time of action patiently waited for has arrived, and unscrewing the brass case, the rod is brought forth, mounted and rigged. Before choosing a cast of flies I glance out at the lake. The sun is now far down in the west, and the shadows of the woods and mountains are beginning to creep across the water, a colder breath is in the air, of the myriad insect life that danced a short time ago in the sunlit air, many are falling, chilled, to a watery grave, the moths, children of the night, are beginning to flutter along the surface of the lake. Innumerable dimples are spreading here and there; a constant succession of splashes with now and then the figure of a trout in air attest the fact that the fish are at their evening meal. I see nothing that indicates the presence of any monsters, why should I, the lake is but a little one after all. I choose a coachman, that old reliable, for my stretcher, and a yellow-may for the dropper, both on No. 10 hooks, and walking round toward a point I commence casting. After two or three casts I see a sunken log to my right and about 30ft. from shore. The water is about 4ft. deep. I cast over it, and immediately the stretcher is taken with a fierce rush. After a brief fight I take a half-pound trout ashore. Another cast and another trout, a little smaller, and another, and still another, as fast as may be, until six lie on the shore, when they slacken. I walk down a few feet to a little point, and here, without moving, I take about a dozen, running from a quarter to half a pound, as fast as the fly can be thrown. At this point the cook shouts that he wants the fish for supper; so reluctantly I gather up the spoils and return to camp, and they are soon in the pan. How many trout we ate that night I shall not relate, however, we had enough, and while eating—our table not 15ft. from the water's edge—we beheld a sight that would have warmed the cockles of your hearts, ye patient fishers of our much-skinned Eastern streams and lakes. It was just toward dusk, a great flight of moths were out, and in every direction the lake was boiling with leaping

fish. I could not resist the sight, and hastily bolting the last mouthfuls I made for that point again, accompanied by Provo, who would land my fish and take a lesson in the art. And here for a brief time till dark I cast and caught, and cast and caught till satisfied, and we then returned to our camp-fire.

As the enthusiasm ran so high that night and we would be here a week, I foresaw we would soon have more fish on hand than could be consumed, and so I suggested to our packers that the next day they should build a fish corral, into which our prizes could be conveyed alive and from which we could take them as needed and release the surplus at our departure. This notion tickled them mightily—horses and cows and sheep they had impounded, but fish were a novelty.

The next day Provo and I took a long trip, climbing the mountain facing our camp; on our return toward evening the corral had been built, the men had been fishing all day with flies I gave them, using slender poles cut in the forest for rods. There were already a goodly number of speckled fellows swimming round in the corral and now and then rubbing their noses against the stakes and looking up as if wondering what in the world they were doing there. None were above half a pound in weight and very few under a quarter, and this average obtained among all those we caught during our week's stay in this delightful spot.

We had hot trout for supper that night—we had had them cold for dinner, some of those that were hot at breakfast—and we decided they were better hot than cold, though we thought it well to eat them cold, as we enjoyed the hot ones more. This rule established, the spectre of bacon that had pursued us to this point sank to rest in the frying pan, where it aided the trout to cook, and not once for that three week's trip did it arise again. And at the end of three weeks, when we had eaten trout three times every day, we still voted trout were better than bacon, which proves what very good trout they were.

After supper, as the fish were rising all over the lake as before, Provo and I took the rod and went down to the little point, and here, after catching a half dozen all too quickly I gave the rod to him, and he started in for his first lesson in fly-casting. He proved a very apt beginner and was highly interested, as indeed what beginner would not be? no matter whether his casts were good or bad, when they were nearly every one attended by a rise. And this also showed that striking properly is a beginner's chief difficulty, as although so many rose to his flies he hooked very few. However, he caught a fair number, which along with mine were carried back in the bucket and placed in the corral, and expressed himself as highly pleased at the sport.

And this experience we repeated every evening, limiting our number to six each. We tried experiments also, and to make it all the more difficult to catch these six, which always happened too quickly in the vast number of rises one received, I chose delicate flies, English midges, tied on No. 20 hooks. When the little hooks got a fair chance, however, they held like iron, and no more fish escaped them than from the larger sizes.

Once here, also, I saw a curious sight which will interest anglers who argue on the insensibility to pain question. In a tiny little bay, where the limpid water was about a foot in depth, we saw from the bank above a large trout slowly circling round, and now and then rising in a languid way to suck in some unwary insect. Provo stole around in the forest fringe and crept down the bank behind a little tree, while I remained in the gallery, so to speak, to watch the action on the stage. After a cast or two the trout woke up, and took the fly cast gently out at him with a sudden and savage rush, very different indeed from his former method of feeding. There was a fierce struggle on the water top for a moment, but Provo was somewhat excited and a little too eager, and broke the hold of the hook. The trout started round in circles and went back to his former station. From the gallery he could be seen plainly, as if in air, and I directed Provo to cast again. This he did with the same result as before—a fierce struggle and the hook was torn out. At a third attempt the trout was finally landed, with his mouth torn and bleeding. There was no possibility of any mistake in all this, for the fish was in plain sight during the whole performance. Seems like insensibility to pain to me.

Finally the day of departure from this charming spot arrived all too soon. The tents were struck, the mules packed, the horses saddled, and we were ready to depart. Before leaving we went down and pulled up the stakes of the corral and a crowd of wondering trout swam slowly in schools out into the lake. Curious tales they must have had to tell, and I suppose they are still wondering.

PERCYVAL.

How to Catch Big Trout.—A veteran Wilkesbarre (Pa.) angler tells the following incident of his own experience: "Several years ago Ernest and I took the train to Tobyhanna station on a fishing trip. While on the way to the stream we met an elegant gentleman, all rigged out with fine split-bamboo rod, velvet suit, fly-book, creel, landing net and everything as bright as a new pin. He showed us his catch, which included a beautiful trout fully 18in. long and weighing over 2lbs. With the fullest details he related the history of its capture after a struggle lasting a half hour. His sensations when the net encircled its glorious prize were duly set forth. Of course we congratulated him on his superb success. Two or three days later I landed a very nice trout from the same stream, some distance below where we met the skillful angler with the immaculate outfit, and I remarked to Ernest, 'That's a fine trout.' At this moment a boy who lives in the neighborhood, overhearing my remark said, 'Why, mister, he ain't no touch to the fish my brother caught here a few days ago.' 'How big was it?' 'Why, it was more than 18in. and weighed over 2lbs., and a blamed fool from New York came along and gave him a five dollar bill for it.'"

PENOBSCOT SALMON.—Bangor, Me., May 12.—The Penobscot River is at flood now. Will be good fishing at the pools as soon as water commences falling, the middle or last of the week. Many fish are seen jumping in the stream below the dam. Water too foul for fishing.—S.

To Salmon Anglers.—T. J. CONROY, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—Ad.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 9.—Fishing news remains mostly in the future so far, especially for trout. Cold weather and heavy rains and even five inches of snow within the past week, have kept back the trout season pretty much all over northern Wisconsin. News of this kind prevented Mr. C. S. Burton, of the Kankakee, and Fred C. Donald, General Passenger Agent of the Chicago & Atlantic, from a sample run up the Milwaukee & Northern to either Floodwood, Witch Lake, the Paint or the Fence River country. In this trip the writer was to have joined and the start was to have been to-night, but that is all off, for it would not be worth while to go. The streams are very high and muddy all over the country now, and Mr. Taberner, General Agent of the M. & N., who is just back from a trip through that country, says it would be best to wait a week or two before going in. There is a very strong sporting element among the officials of that road. Mr. C. F. Dutton, General Manager, and Mr. W. B. Sheardown, General Passenger Agent, are also very ardent anglers, and just now can't sit still, they want to go trout fishing so bad. I believe I mentioned Mr. Dutton's catch of 400 trout on the Pike last season, and this season he claims he has a spot located where he is going to break all previous records.

The Witch Lake country is no longer a secret, for that water was fished pretty well last summer. Mr. Sheardown took one trout there which weighed 3½lbs. Another was caught weighing 5½lbs. These big trout are irregular in their humor and were taken on live bait. There have come down stories of some big trout taken on the Fence this spring, but I do not know where, and no one claims that the season has fairly begun yet.

I have not heard from the Middle Inlet and Ellis Junction country that I visited last summer, but presume that a good many trout will be taken in the inlets of Noquebay, in the Peshtigo and in the Thunder River country. There should be good fly-fishing in the big rapids of the Peshtigo, not far from Ellis Junction, as soon as the water gets right. The trout there go as high as 3 and 4lbs., as I can testify; yet only a favored few know this stream favorably, and you will hear all through that country that there are "no trout in the Peshtigo." Some folks up there would like it generally believed that there are no trout in any of that region. They want 'em all themselves.

I should say that the officials of the M. & N. R. R. were somewhat disturbed last summer by the assertion that the conductors on their road were buying trout from market fishers along the line. They made an investigation, and say that while some of the conductors may buy trout for their own use or for friends, they feel confident that not one of them has done so for gain. For the "train butchers" they are not answerable and do not answer. A number of men in that country told me they never had any trouble in selling all the trout they could catch, that the conductors and news agents would buy them, etc., etc. The management of this one road has this spring planted 2,000,000 brook trout and 1,500,000 rainbow trout in the streams along their line. In view of this fact, and of the sportsmanlike character of the head men, it is very highly improbable that they would allow a trout-selling scheme for money to be carried on along their road for any great length of time. I was told by the local fishermen that they often sold on the train baskets of 6, 8, or 12lbs., or all they could catch, "big and little." I trust that the result of the assertion and its investigation will be a cessation of such stories if they are merely stories, and of the facts if they are facts, and it is safe to say that no regular employee of the road will give color to either the one or the other in the future at least. That is too grand a country to be abused.

Mr. Fred Taylor and a party of friends, among whom I presume will be big Joe Arrowsmith, the C. & A. conductor, will start for their old grounds on the head of the Little Oconto about the 20th. They go to Ellis Junction and take wagons, nearly forty miles across. It is a drive over a very beautiful country for the most part, as I myself can testify. These gentlemen will probably kill 2,000 to 3,000 trout, or at least they usually have done so there.

Mr. C. D. Gammon and his friends, Mr. Cribben and others, expect to start about the 20th for a mascalonge trip of a week or so probably to Vieux Desert. When they came back last year they had about thirty of these tremendous fish.

Two Wisconsin Central men went out from Milwaukee two weeks ago to some place up that road, near Waupaca, I heard, and got forty trout in a day. I hear mysterious stories also of a swamp on the White River, Wisconsin, where 125 beautiful trout were taken by one party this spring, and of another lot of eighteen trout shipped to Chicago from there, of which every fish was over 3lbs. Great Scott!

It is very probable that the bass fishing reported by Mr. Ed Howard as being good at Fox Lake is spawning-bed fishing, and it is to be hoped that our anglers will wait awhile before they go up after bass. Large quantities of bass are taken from the spawning grounds annually in the Fox Lake district, as these fish will often snap at anything that comes near them at that season. The feat of taking fifty or sixty bass by one boat in May is not, therefore, anything to be particularly proud of. Better wait till June or July at any rate, and then try for the bass in the pockets of Grass Lake, or along the channel. Last year the bass were not done spawning even in late July, and this year one need hardly expect an earlier season, as the weather is unspeakably rainy, cold and generally abominable. To-day it is like a bad sample of November.

A correspondent writes me from Kalkaskia, Mich., that a good many trout are being taken in the streams about there, and that within 10 miles of that point there is good bass fishing. The east shore of Lake Michigan is in many part, wild and unsettled, and offers good territory to the angler. Mr. Britton, division superintendent of the B. & O. here, tells me of a whole township over there which had only one inhabitant. There was a nice lake there which the State stocked about ten years ago with landlocked salmon, and this man was appointed a warden to see that no one came there and fished for these new fish. He watched it, and so far as known, nobody else ever fished there. He just sat down by the lake and in course of time caught out and sold about all the landlocked salmon there were in there, he drawing a salary all the time. A warden like that ought to succeed in life.

I was out in Ohio this week, and inquired about the

fishing in the old stream Skunk River, near Newton, where I squandered a good deal of time when I was a boy. It seems that low water and persistent seining in the past have about done for the fishing in that river. One string of about a dozen bass and wall-eyed pike had been taken near the "Four Forks." I heard of a lake about 17 miles below Newton, which lies on the land of a farmer who has not allowed it to be seined. There were a great many bass there last year, and it is thought that a few favored anglers will have some good fun there this season as soon as the law is out. Small-mouthed bass used to run up the Skunk River in good numbers. Years ago mascalonge were taken there of very large size. These were not caught very often, but were nearly always over 20lbs. in weight. Several of these fish were taken in the deep water between Colfax and the old Reed's mill, near the Slaughter coal mines; others were found in the "Hickory Bend," and several were hooked or taken in the Four Forks deep water. The old settlers thought that these big fish all came up together years ago in a season of exceptionally high water. Skunk River would always have been a good fishing stream if it had been treated right, and the Iowa Fish Commission can find no better one to restock with bass and pike, for most of the old lawless practices along it have died of themselves. The stream, indeed, ought to be restocked from Colfax down to Reasnor at least, between the two branches of the Rock Island road. There are no dams now in that reach of water.

Spirit Lake and Okeboji will this summer claim an unusually large amount of summer tourist and angling travel. Black bass fishing there, I am told, is not so very good. "White bass," perch, pike, wall-eyed pike and the usual run of inland lake fish are still numerous.

The country through Illinois and Iowa is now beautiful in the extreme. The rolling hills are of a lovely green and the trees along the streams are in full and fragrant blossom. The leaves on the oak trees are "bigger than a squirrel's ear," and that is a sign that bass will bite.

The other day my father and I wanted to go out fishing and couldn't, so we took out the rods and going out on the hill began practicing bait-casting on the grass, using a lead sinker for a bait. My fox-terrier Gem was for some time an interested spectator of this sport, and at length, evidently divining the principle of the thing, she concluded to take a hand in it. Catching up one of the heavy sinkers as it came bumping in over the grass, she made off with it at full speed, holding on with a tenacity which nothing but a fox-terrier can imitate. The "play" that followed was about as severe, I imagine, as that particular bass rod or its handler had ever known. It is now established that water is not in the least essential to fishing. One needs only a good bass rod and a "dead game" fox-terrier, and if the latter is as good a one as mine, he can land a mascalonge about as easily.

E. HOUGH.

ANGLING IN CANADA.

THE story that I have to tell treats of the grounds of the Tourilli Fish and Game Club of Canada. This club is the immediate result of the association of Commodore J. U. Gregory and Mr. George Van Felson, of Quebec, and of Mr. E. A. Panet, M. P. for St. Raymond, of the Province of Quebec. These gentlemen secured certain grounds, including lakes and rivers, teeming with brook trout and winninish, and abounding with moose, caribou, ruffed grouse and ducks. The charter members include the following gentlemen: President, J. U. Gregory, Quebec; Vice-President, E. A. Panet, St. Raymond; Secretary, Geo. Van Felson, Quebec; Treasurer, Alex. Lavin, Quebec. Committee of Management: Dr. E. A. Lewis, Brooklyn; Hon. Smith P. Glover, Sandy Hook, Conn.; Richard S. Harvey, New York, N.Y. The remaining members being: J. H. Botterill, Quebec; A. G. Demers, Quebec; C. H. Carrier, Lewis; James H. Work, New York; W. S. Downs, Birmingham, Conn.; John W. Masson, New York; Dr. W. H. Thomson, New Haven, Conn.; W. L. Bennett, New Haven, Conn. Last season I made a trip to these grounds in company with my friend the Commodore, and our journey began in the parlor car of the Quebec & Lake St. John express train. We were soon on our way to St. Raymond, our destination, thirty-six miles from Quebec. We passed the foaming waters of the famed Jacques Cartier River and beautiful Lake St. Joseph, twenty-one miles in circumference, and bordered by the Laurentian Range. It is a favorite summer resort. "Very fine black bass are found there," said the Commodore, as we passed a pretty sheet of water called Lake Sergeant. It was a vision only, and soon out of sight. The Commodore having collected his traps now seemed to await some important event, and it came, as a most picturesque spot suddenly attracted our attention. Here are mountains of peculiar shape and distribution; two beautiful streams meander through a pretty mountain village with its neat and cosy cottages and handsome Norman church, all uniting to form a picture never to be forgotten; it was St. Raymond.

We no sooner reach the platform than the sun-bronzed features of our friend Edward greet us, and after vigorous shaking of hands and much talk, we find ourselves perched on the seat of a Canadian buckboard. A pleasant drive over 15 miles of good carriage road is greatly enjoyed and then the last house, that of Ferdinand Godin, is reached. He is the Tourilli F. and G. Club guardian, and having presented our permits, he welcomes us to the limits. At our feet rush the waters of the St. Anne, and a beautiful pool is at a distance of 50ft. from the house. It is well stocked with speckled beauties, the rise frequently, making desperate leaps at some insect which tempts their ravenous appetites. The club is to build its club house at this spot. The next morning our provisions, tents, etc., having been stowed away in the Gaspé canoes, we set out for the Upper St. Anne. Paddles are soon discarded and poling is the order of the day, as the river is a succession of rapids and short pools. A whoop from the Commodore announces the fact that these pools contain numbers of fine trout. His flies have barely touched the water when a splash tells us that a contest with a plucky fish has begun. The gamy victim fights desperately, but in such hands is sure to be landed a prize, the excitement runs high, as at each pool we have a repetition of the scene.

The best pools we fished to the mouth of the Tourilli River were "Godins," the "Leaning Birch," the "Island," the "Big Rock," the "Spring," the "Grande" and "Carriers." The latter is certainly one of the most remarkable in Canada and has a record of a 6½lb. *Salmo fontinalis*.

nalis. Our catch here was most satisfactory, as may be imagined when I say that our catch consisted of 2 fish of 5lbs., 5 of 4½lbs., 2 of 3½lbs., and a number from 3lbs. down, all with a clean fly, no bait being needed on any of these waters of the St. Anne.

Our next move was to the forks of juncture of the St. Anne and Tourilli. From the latter the club takes its name, it being an Indian name meaning rushing waters.

Our guides dashed the canoes boldly through the turbulent waters, and our rods were laid aside, for we were kept busy helping the canoe men in their efforts to mount the rapids. One mile of the exciting work and we reach the Tourilli Falls, one of the prettiest sights imaginable. The falls consist of a succession of cascades, at the bottom of which lies a most tempting pool. Our success here was most satisfactory, and though we did not break its record of a 7lb. *Salmo fontinalis*, we touched the scale at 4½lbs., and friend Edward lost his enameled silk line. Above the falls we did not go, but I know the sport to be good, for some 20 lakes are tributary to this river, and when we make a trail they will be quite accessible. A continuous shooting of rapids brought us once more to the St. Anne. The most tempting boulders and each of the 5 or 6 pools have increased our stock of fish considerably, and like true sportsmen we resign our rods and contemplate the scenery as we travel up stream and soon enter the discharge of Lake Cimon. A good trail here brought us to lakes Evangeline and Cimon. We found them to be swarming with trout averaging ½lb. weight, and my advice to members is to visit these lakes by all means, as every good cast tempts a victim. A chain of lakes known to be excellent are further on, but not yet open.

Returning to the main river we take the trail to the head of the big rapid, the canoe making good headway by the river with baggage only. As the rise is almost imperceptible the walk is a pleasant one, and one hour brings us to the Mauvaise Riviere. Being well fitted with suitable wading shoes, we tried a little wading to refresh ourselves and while away time, awaiting the arrival of our canoe; the stream is 25ft. broad and affords good fishing. We soon came to a halt, however, as we reached the foot of the mountain, 1,100ft. high, down the side of which dashes the stream in a number of falls and cascades. The headwaters of this stream is a chain of five lakes, better reached by Lake Cimon.

Walking back we were greeted by our guides, who took us across to the Lake Jambon trail. A stiff walk of three-quarters of a mile brings us 1,000ft. above the St. Anne; 100ft. below us lies a lovely sheet of water, Lake Jambon, six miles in circumference; the water is of a greenish hue and so remarkably clear as to enable us to see the bottom at a depth of 30 to 40ft.; the lake is very deep and cold.

We found good boats awaiting us, and soon were skimming over its waters. One can well imagine the quality of fish we got, and certainly they are not to be surpassed on this continent, as in all these waters nothing but brook trout are found. What sport we enjoyed when alluring these beauties, but on account of the remarkable clearness of the water most careful and artistic casting is required; when a flash of silver was to be seen darting toward the tempting fly, it was visible at 30ft. distant. The cast is not in vain, and quicker than lightning your line is spinning off your reel, the sport has begun, and you imagine a monster has hold of your line, so vigorous is a 2½lb. fish in this water. The average for Lake Jambon on this trip was 1½lbs. They are known to run as large as 4lbs., but none larger have been captured here.

Our next move was toward Little Jambon, a lake as large but not so deep as the big lake. It is swarming with fish averaging ½lb. weight. It was here that the crowning event of our journey took place when Edward and I, having imprudently stood up in our birch bark canoe, upset, were immersed rather suddenly and had to swim for our lives. We lost \$50 worth of tackle, but did not leave our carcasses for the fish to feed upon. The good old Commodore gave us a jovial lecture that evening about fishing on Sundays. At the head of this lake is a trail leading to seven other lakes running toward the head of the Tourilli. Going back to the St. Anne, with rods mounted, we head upstream. A lovely pool is before us, and I captured a 5-pound trout by casting under the low overhanging boughs which line its banks. Several pools are crossed, when a mountain of great height looms up in the distance. It is the Fale Tourte—Pigeon's Breast—2,500ft. above the river, and much resembling Cape Trinity of the Saguenay, its perpendicular side of rock overlooking Markham's Pool, which is soon reached, and the most celebrated trout pool in Canada is before us. An inscription on a tree informed us that it had been visited for the first time on July 8, 1859, by Captain Markham, Royal Artillery. His wonderful catch was described, and many other records were there. Though we got nothing that day, our average for twenty-four fish next day was over 3lbs., and might have continued, but we were satisfied.

Three miles further up the river we come to the St. Anne, or Seven Falls. A sudden bend of the river and they are before you, the stream tumbling down 2,500ft. of almost perpendicular mountain in a succession of falls, varying from 70 to 120ft. in height and about 80ft. wide. A wall of rock, void of all vegetation, rises on either side and a pool 5ft. in diameter ends these falls, it is almost round and is the work of centuries; two enormous pillars of rock 200ft. high and barely 6ft. apart form the entrance, and are called the "Gates." Between them is an enormous boulder, against which the water dashes with tremendous force.

Under the ledges of rock in the small pool we caught five fish, one, weighing 7lbs., was the prize of friend Edward, and on account of the tremendous current, it required careful handling and took out 75yds. of line before it was landed in a small pool outside the Gates. Col. John Panet, my friend's father, has a record of a 9lbs. *Salmo fontinalis* taken here.

A short distance below we found the trail to the head of the falls, here a chain of 15 lakes were crossed in birch bark canoes. All these lakes were full of trout, giving us much sport. The largest of these lakes, St. Anne, is 3½ miles long, the carries between them being short.

This being the height of land, it is level for several miles. It is a good hunting ground and abounds in large game. It is the watershed from which flow the Chicoumimi, Metabetchouan, Batiscan, Jacques Cartier, Little Saguenay, Tourilli and St. Anne rivers, each running in a different direction. It is the feeding ground of moose,

caribou and other game, the bush being low and marshy. Game was seen all over the limits that we crossed and we ascertained that many a fine buck has ended his days quite close to the guardian's house.

Our return trip now commenced in earnest. Our destination was Lake St. John, the home of the winninish, the king of the game fish, a fresh water salmon that yields not to his salt-water brother in his fierceness of play. The train speeds on towards the Peribonca. At Lake Edward a long stop is called. A pleasant time may be had here by a fisherman who does not care for hardships, as the lake is not 20ft. from the hotel, and good sport is generally to be had with the fly, and always with bait or troll. At Lake St. John we make preparations to cross the lake to the mouth of the Grand Peribonca. It, as well as the Little Peribonca, have become Tourilli Club's limits, and so we have made up our minds to go over them and find what we have and what we have not. As we expect to have some grand sport with the landlocked salmon, the Commodore good-naturedly entertains us with his experience at the Grande Décharge, of which he was formerly a part owner.

The mouth of the Grand Peribonca being entered, a short sail of one mile distance brings us to the mouth of the Little Peribonca, a stream a half mile wide at this point. To give an idea of the extent of this Peribonca I will merely state that it is nearly two miles broad at its mouth, 50 miles up it is fully one mile wide, and continues so for over 150 miles, the entire length being about 300 miles. We found these rivers to be very grand as far as sight-seeing is concerned, and as for fly-fishing, why we got enough of it to satisfy the most ardent angler. Our guides informed us that fly-fishing is good on the river's whole length, as well as all its tributaries and lakes. This fact leads me to believe the Peribonca to be the feeder of Lake St. John's enormous supply of winninish. A hatching station is to be placed at the mouth of the river.

FONTINALIS.

QUEBEC, April 20.

ANGLING NOTES.

THE time has now arrived when the fly-fisherman will have his inning. The cold, rainy weather and high water, such as we usually have during the first few weeks of the trouting season, and which are so favorable to those who use the slimy crawling worm, have departed, and the soft balmy air, laden with the sweetest perfume of thousands of wild flowers and apple blossoms woos the angler to the wild mountain stream, where he can forget the noise and turmoil of the dusty city and cast his flies with a good chance of success.

Making all due allowance for "fish stories," the reports of the catches of trout throughout the county is most encouraging; the trout seem to be very plentiful and of excellent size, showing the wisdom of the 6-inch law in those States where it obtains.

The slaughter of baby trout for count is out of fashion, and now the man who brags of killing his hundreds of fingerlings in so many hours and minutes is no longer a subject of admiration, but rather finds himself pounced upon by all true anglers. The killing of half a dozen big trout is much more creditable to the fisherman, and it is the size and not the number that marks the expert.

We are often asked what combination of flies is best to use at this season of the year. This is a difficult question to answer, unless one can first see the stream and note the color and conditions of the water. In a general way we would advise the use of three flies entirely different, say, for instance, a brown-hen, a queen-of-the-water and a Cahill. If the trout show a preference for one or the other, the angler can fish with two or three alike. The sizes used on the streams of the Middle States are Nos. 8, 10 and 12 Sproat. Should the water happen to be high and discolored, bright flies on a No. 8 hook will do the best work; but if low and clear, 10 or 12 will be found the better sizes and they should be quiet in color. With the latter size the lightest weight leaders obtainable and as long as the rod will allow. That is with a rod 10ft. in length or over, one should fish with a 9ft. leader, but if the rod is shorter, use leaders in proportion. It is better to carry a small short-handled landing net hung on a button under the back of one's collar; many a good fish is lost for want of this precaution and many a good rod ruined by trying to lift out a big fish.

The angler should take care of his fish after he has caught them. It is discreditable to fetch back a lot of sun and wind dried trout, all curled up and stiff. Put a handful of grass or ferns in the bottom of the creel and kill the fish as soon as caught, by hitting them a sharp blow on the back of the head. If the weather is hot, clean the morning's catch at noon, and every few hours dip the creel in the stream. The best way to keep trout to take home is as follows: Clean them thoroughly, taking care to remove the gills and the blood under the back bone, wipe dry inside and out, but do not wash them, sprinkle them inside with black pepper, but on no account use salt. Pack in cool, fresh grass and keep them in the shade. If ice is used it should be put in a tin can or at least at the bottom of the creel, for it spoils the flavor of trout to have them soaking in water.

The best stream fishing we know of is to be found at White Cloud, Mich. Easily reached by railroad from Grand Rapids. Excellent trout and grayling fishing can be obtained here with fair accommodations.

Col. Alfred J. Hobbs, of Bridgeport, Conn., recently caught a female trout full of ripe spawn, which flowed freely when he took the fish off of the fly.

A 10lbs. salmon was taken in the Hackensack River, N. J., last week, with a net unfortunately. Some seven or eight years ago a lucky angler killed one in the upper waters of this river while fly-fishing for black bass.

Weakfish have made their appearance at Gifford's.

EARLY WEAKFISH.—At Fitzgerald's, Giffords, Staten Island, the first weakfish were taken May 4. The average weight of the fish caught was 1lb.

MAINE TROUT SEASON.

THE Maine trout season has opened in good earnest. The ice went out of Rangeley Lake on the 9th and out of Moosehead on the same day. Rangeley was clear ten days later than last year, but three or four days earlier than the average. An extensive thaw, with the melting snows, started the ice in the lakes and came very near starting some of the dams. The lakes below Rangeley, in the Androscoggin chain, were a day or two later about clearing; but the clearing of Rangeley started the sportsmen, and since that time the rod and reel exodus has been considerable. The first gentleman to be on the wing was Edgar W. Curtis, a prominent Meriden, Conn., merchant. He started for the Upper Dam on the 7th. He has had wonderful success on the lake in previous seasons, and he is bound to be in season this year. The Tuttle party left Boston on Saturday for Lake Point Cottage, Rangeley Lake. This party is a long-time one, and has generally started as soon as the ice has left that lake. Among the prominent business men included are Mr. R. A. Tuttle, a Boston commission merchant; Mr. C. F. Hutchins, of the wool firm of Hutchins & Kitchen; Mr. K. M. Gillmore, of Somerville; Henry Miliken, of Deering, Milliken & Co., Portland, Me.; Peter Reid of New York; Moses Worthen, also of New York, and O. H. Sampson, of the same city.

Col. H. T. Rockwell, of Rockwell & Churchill, printers; John A. Lowell, the well known lithographer and lithographic printer, and H. A. Priest, of Priest, Page & Company, all of Boston, will make up a part of the Priest party, soon to start for Rangeley. C. W. Loring will follow some time next week. C. C. Basset, of the well-known fishing tackle firm of Geo. C. Appleton & Company, with Mr. G. M. Smalley, will start for an extended trip in the Rangeleys, about May 20. Mr. Basset goes largely to see the country and get acquainted. Mr. E. G. Partridge, of Boston, will start for the Maine lakes on Wednesday of this week. Mark Hollingsworth, the Boston artist, an old-time fisherman at the Upper Dam, will take up his tackle again for that point some time this week. C. A. Hill will start for Moosehead on May 20. The Dennison party, including Mr. Henry B. Dennison, of the Dennison Tag Company; F. A. Kennedy, of the Kennedy Cracker Works, of Cambridge, and R. C. Donner, President of the Broadway National Bank, is soon to start for the Grand Lake Stream for landlocked salmon fishing. Mr. C. F. Rice, of the Atlantic Avenue Electric Light Works, and Mr. Amidown are soon to start for Moosehead. Another party of prominent Boston merchants and business men will leave for Moosehead about May 20. This party includes H. M. Stephenson, a Boston architect of prominence; Calvin Austin, general agent of the Boston & Bangor Steamship Company; Grenville Austin, with Howard W. Spurr & Company; George C. Moore, a North Chelmsford manufacturer, and Harry Moore, of the Boston grain trade, who is not wholly unknown to the readers of the FOREST AND STREAM, in the way of moose and deer stories. Harry Gardner, of Smith, Hogg & Gardner, with a party, will leave for the Rangeleys about May 21. The above are among the many who are going a-fishing after the manner of the good old St. Peter, though they are more the fishers of men while at home.

The interest in the Maine lakes is greater than ever this year, if possible, and the big catches will soon be in order, though cold weather, snow on the woods and naked trees will greet the "early birds" at this sport. Later the fly fishermen will be in the wing. They will find green trees, with all the beauties of springtime, and what if an occasional mosquito and black fly comes to mar the comfort of the sportsman, he is more than compensated by what he sees and feels in the woods and at the waters. If it were all of fishing to fish then we would start early; nay, we would arm ourselves with one-half of the money it costs to go into the Maine woods and tie ourselves to the fresh fish market and purchase ten times as many fish as it would be possible to catch, and with these we would make all of our friends happy with a string. But, alas, for the woods and the waters! where the cares of the city and of business or profession are forgotten for a brief season.

SPECIAL.

SALMON AS BAIT FOR CODFISH.

Editor Forest and Stream:

Your correspondent "Big Reel" has been so awfully and horribly shocked by the "utter depravity of the fellow" who fished for salmon with codfish bait, as shown in one of his "Random Casts" published in to-day's issue, that I can't resist the temptation to shock him again—I hope not fatally, for I rather enjoy his casts, but just enough to make him squirm a little. I've had lots of fun in my time by shocking some companion of the angle, one in particular, a "genial fellow," whose name I will not, unless forced so to do in due course of law, reveal, by fishing from the same boat and by the same brook bank with good fat worms, and catching trout—nice ones, and lots of them—while he pursued a course of calisthenics with his fly-rod, the exercise and the pleasures of hope being his only reward. The shock never affected his appetite, and he ate his full share of those foully deceived speckled and fried beauties without a murmur of protest.

If catching salmon with codfish stamps a man as "utterly depraved," what epithet is left to crush into the veriest atom the blanked person who not only has, but would again if he got the chance, caught codfish with salmon for bait? Is the English language sufficiently copious to do justice to that man, this man—me?

I'll tell you about it, and in advance will say that the adventure has upon many occasions saved me from all necessity of drawing upon my imagination, in the manner which is commonly supposed to be held in common by fish story tellers and Ananias. The true history of an hour's work off Killisnoo, in Alaska, has on these occasions frequently earned for me a first-class reputation as one of the aforesaid.

It was as I have said in Alaska. I was sitting in the stern sheets of my gig. Dick Willoughby sat in the bow. I call him "Dick" and am thus familiar with him because he had not at that period arisen to heights of fame as "Professor Willoughby," the discoverer, photographer and describer of a mystic marble city at times visible among the glaciers of Glacier Bay. It was while on the cruise of the Favorite, fully described in your columns years ago. We were fishing for halibut. Dick, than whom no man knew more of the peculiarities of the

Siwash and his country, or of prospecting, or lovemaking to klootchmen, or of running a dance-house, had among his good points a fondness for fishing; and while the Favorite was anchored in Killisnoo Harbor offered to take me to a bank near by where the wild halibut was tame, so tame that there was hardly any sport in catching him. So we went, and within three miles of the little steamer and within half a mile of the shore we anchored in seven fathoms and went to fishing. Had we been provided with an automatic apparatus that would lower our hooks to the bottom and immediately haul them up again, we would have had better fun, for then we could have simply looked on and not got ourselves wet. The bottom must have been paved three or four deep with chicken halibut, weighing from 15 to 30 lbs.

Pretty soon Dick proposed a fishing match with me for a large wager. If I remember aright it was 500 shares in the Silver Island Mine, worth at that time an indefinite price. We had just discovered and located the mine and posted our claim notice. It is worth now—anything it will bring. The terms of our match were: Each to fish with two lines. Each to have an assistant. Each to bring his fish to the surface and hold him there until the assistant, who while waiting had baited the other hook, had hooked the fish with the gaff. We were to fish just one hour.

At the end of the hour time was called and Dick was pronounced the winner. He had caught twenty-four and I but twenty fish, whose weights we estimated at about 20 lbs. each, or over 800 lbs. of fish.

The bait we used was salmon—red fleshed, beautiful, lordly kings of fishes, etc., and we got our bait on the spot. While we were halibutting, the men, of whom we had two or three besides our assistants, were fishing for salmon. Their apparatus was that commonly used by the Indians, being duck-shaped buoys, to the under surface of which were fastened lines about 4 ft. or 6 ft. long, the hook baited with a herring; the buoys were fitted with lines so that they could float some little distance from the boat. While we were catching the halibut the sailors caught seven salmon weighing from 5 to 10 lbs. each. We used nearly two of them for bait.

The herring with which we caught the salmon, with which we caught the halibut, were thus obtained: About half-way to the shore a fleet of canoes was herring fishing. The crews were provided with poles, into one end of which a lot of sharp nails were driven at an angle. The herring were running abundantly. The Siwash would thrust his pole down about 3 or 4 ft., jerk it back, "jiggling" (the step has not, as "Big Reel" says, been a long one), and at every jig up came from one to half a dozen herring. I bought of one of the canoes a bucket full for a codfish hook, and had three pounds of them left when through fishing.

Now for the point. While catching these halibut, we both got now and then, as the boat swung over a rocky patch, a codfish.

So there's my confession.

PISECO.

Fishculture.

NEW YORK FISH COMMISSION.

THE eighteenth report of the Commissioners of Fisheries of New York contains many items of general interest. The distribution of fish eggs and fry during the year ending Sept. 30, 1889, was 31,489,638, representing chiefly fishes of the salmon, cod and bass families. The output of the Caldon hatchery was over 13,000,000 and of the Cold Spring Harbor nearly 10,000,000. The planting of yearling trout was begun. Most of the applications for fry were for waters in the Adirondacks and Catskills. Plenty of evidence was obtained of the success of artificial propagation. The management of Mr. Drew as chief protector of game and fishes is highly complimented. Attention is called to the necessity of codifying the conflicting and contradictory game laws. Through the efforts of the oyster protector, Joseph W. Merrett, the injuries from deposits of refuse and acids from oil refineries upon oyster beds has been mainly stopped; but the gas companies continue to pollute the waters for the want of efficient law to prevent it.

The Commissioners have examined the waters of the Adirondack region, and have instituted a thorough exploration of Lake Ronkonkoma and the Great Ponds of Southampton, Long Island, by Professor Dean and Mr. Fred Mather. The illustrated report of this examination is extremely interesting and valuable.

The present policy of the Commission to send fish fry to all persons who apply for them to stock public waters and will pay the transportation seems to them unjust. Fish for public waters should be deposited at public expense. A car is asked for to distribute eggs and fry, and would undoubtedly prove a profitable investment.

The Commissioners recommend the passage of a law to prevent the destruction of young salmon under the mistaken belief that they are trout. The shad and the game fish of the Delaware also require protection.

An appropriation of \$41,500 is estimated to be needed for the current year.

In addition to the usual reports forming part of the appendix to that of the Commissioners will be found a revised account of the Adirondack fishes by Mr. Mather, a report of the investigations by Prof. Dean and Mr. Mather, amendments to the game and fish laws and a copy of the previously existing laws. The list of the Fish Commissioners of the United States and Canada might have been improved by reference to the columns of FOREST AND STREAM.

The Kennel.

FIXTURES.

DOG SHOWS.

June 3 to 6.—The Cincinnati Kennel Club's Fourth Annual Show, at Cincinnati, O. Geo. H. Hill, Superintendent.
Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.
Sept. 15 to 18.—International Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exhibition at Toronto, Canada. H. J. Hill, Secretary.
Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman.
Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.
Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. O. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.
Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

ENGLISH FIELD TRIALS.

THE National field trials of England were run near Shrewsbury April 22 to 25.

POINTER PUPPY STAKES.

There were 23 starters in the Pointer Puppy Stakes. The winners were:

First, Rev. W. J. Richardson's liver and white Rompish, 13 mos. (Molton Banker—Milton Ringlet).
Second, Mr. Hayward-Lonsdale's liver and white Tyke, 11 mos. (Ightfield Dick—Perdita).
Third, Mr. Scratton's lemon and white Nephtys, 13 mos. (Gough—Nannie).
Fourth, Mr. J. Bishop's liver and white Brave Duke of Salop, 15 mos. (Brave Duke of Wellington—Juno).

SETTER PUPPY STAKES.

There were the same number of starters, 22, in the Setter Puppy Stakes. The winners were:

First, Messrs. Bullard & Turner's white and liver Devonshire Daisy, 14 mos. (Prince Rupert II.—Devonshire Fan).
Second, Sir R. Sutton's lemon and white Benham Jewell, 10 mos. (Bradford Ben—Minnie).
Equal third, Mr. A. P. Hayward-Lonsdale's black and white Phoeniss and Ian, 14 mos. (Woodhill Bruce—Lucy).

ACTON REYNALD STAKES.

There were 14 starters in the Acton Reynald Stake, 9 setters and 5 pointers. The winning pointers were:

First, Baron Oscar Dickson's liver and white Rustem, 2 yrs. 11 mos. (Sussex Don—Ringlet).
Reserve, Messrs. F. C. Lowe and A. Bertrand's Belle des Bordes, 6 yrs. 1 mo. (Young Bang—Polly).
The winning setter was Mr. R. L. Purcell Llewellyn's lemon and white Satin Bondhu, 1 yr. 8 mo. (Dashing Bondhu—Duchess Placid).

Absolute winner, Satin Bondhu. Second best of both breeds, Belle des Bordes.

CLOVERLY STAKES.

There were 9 brace that started in the Cloverly stakes. The winners were:

First, Mr. F. Bibby's liver and white English setters Randolph, 4 yrs. (Tory II.—Border Nell) and Sabot, 3 yrs. 10 mos. (Slap Bang—Fleet).
Second, Col. C. J. Jones's lemon and white pointers Polly Jones, 1 yr. 3 mos. (Carlo—Jenny Jones) and Jenny Jones, 6 yrs. 5 mos. (Young Dick—Di Vernon).

THE KENNEL CLUB FIELD TRIALS.

The annual field trials of the English Kennel Club were run near Savernake, April 29 to May 1. There were twenty-six starters for the Derby, sixteen pointers and ten setters. The winning pointers were:

First, Mr. Barclay Field's liver and white dog Fordcombe Luck, 1 yr. (Gough—Larkspur).
Second, Mr. F. Warde's liver and white dog Kent Pear, 1 yr. 2 mos. (Taw—Kent Fairy).
Third, Mr. E. C. Norrish's liver and white bitch Sandford Lark, 1 yr. (Saddleback—Whim).

The winning setters were:

First, Mr. T. Lauder's black, white and tan bitch Sweep the Green, 1 yr. (Monk of Furness—Kate Auburn).
Second, Messrs. Bullard & Turner's white and liver bitch Devonshire Daisy, 14 mos. (Prince Rupert II.—Devonshire Fan).
Third, Mr. C. C. Ellis's Irish setter bitch Dartrey, 1 yr. 3 mos. (Dan Moriarty—Mac's Little Nell).
Absolute winner, Fordcombe Luck.

THE ALL-AGED STAKES.

There were twelve starters for the All-Aged Stakes. The winners were:

First, Messrs. F. C. Lowe & A. Bertrand's liver and white pointer bitch Belle des Bordes, 6 yrs. 1 mo. (Young Bang—Polly).
Second, Mr. T. Lauder's black and white English setter dog Earl of Moira (Jock—Little Bess).
Third, Sir T. Lennard's liver and white pointer dog Polites (Priam—Duchess).
Fourth, Messrs. Bullard & Turner's liver and white pointer dog Devonshire Nero (Molton Baron—The Village Star).

THE NATIONAL BEAGLE CLUB.

MELROSE, Mass., May 7.—Editor Forest and Stream: I would like to extend through the columns of FOREST AND STREAM an earnest invitation to all interested in the running, breeding and exhibiting of beagles to join the National Beagle Club, a club formed for the improvement of the breed both in the field and on the bench. All who join us will assist in advancing their favorites to the front rank of sporting dogs, where by nature they belong, and being members they can compete for the valuable silver and other special prizes that have been offered for our first semi-annual field trials, which will be run some time next October or November. We have placed our initiation fee and dues so low that every owner of a beagle cannot afford to omit joining and sending some of his dogs to our trials. Any information regarding the club can be had by writing to the Secretary.

CONSTITUTION.

ARTICLE I.

This association shall be known as and called The National Beagle Club.

ARTICLE II.

The object of the club shall be to promote improvement in the field and on the bench of the beagle hound in America.

ARTICLE III.

Sec. 1. Applications for membership to the club must be presented in writing to the secretary, signed by at least two members of the club and the secretary, referred to the executive committee for investigation, to be balloted for at the next meeting.

Sec. 2. A person to be a member must be recorded in a book provided for the purpose by the secretary. The date of his becoming a member, also the time of his ceasing to be such, shall be recorded.

Sec. 3. Any member can resign from the club by sending his resignation to the president or secretary in writing, and upon the acceptance of such all his interests in the property of the club ceases from the date of such resignation.

Sec. 4. Any member whose dues shall remain unpaid for two months after the same have become due shall cease to be a member and forfeit to the club all claims and benefits to which he would have been entitled as a member; provided that the executive committee may consider his case, and upon sufficient cause shown reinstate him to membership upon payment of his dues.

Sec. 5. Any member acting contrary to the provisions of the constitution or in violation of the by-laws or rules of the club, or in any way that may tend to the injury or destruction of the club, or neglecting his duty as an officer or a member, or being convicted of crime in a court of justice, may be expelled, and shall forfeit to the club all moneys paid, all property, claims and benefits to which he would have been entitled as a member of the club.

Sec. 6. A member can be expelled only by a vote in favor of his expulsion of two-thirds of its members after thirty days' notice has been given to him personally of the charges against him, when action shall be taken thereon by a vote.

ARTICLE IV.

Sec. 1. The officers of the club shall consist of a president, three vice-presidents, a secretary-treasurer and an executive committee, said committee to consist of the above-named officers and three active members chosen by the club.

NEW ORLEANS, May 4.—To-day has been a very busy one in the handsome new clubhouse of the Metropolitan, and the sound of the rifle has been heard all day. Several hundred were present during the day, and the interest in the contest was well maintained all day, and as will be seen by the score the result was in doubt almost to the end. The highest possible score for an individual in a single round was 65, and the highest possible individual total was 325. In his fifth round Capt. T. B. McNeely made a 65, which was the only one made during the day. Captain McNeely's total for the 5 rounds was 309, which was also the best of the day. Geo. B. Adams, of the Endeavors, made the first bullseye in the contest:

CANADIAN RIFLEMEN.—The Allan Rifle Association held their first practice of the season on Saturday afternoon, May 3, there being a large turnout of the members. Although the weather was anything but favorable for rifle shooting, still a few good scores were made. According to the rules of the association, no score under 60 points is published. Following are the scores, Snider rifle, 7 shots at each range:

	200yds.	500yds.	600yds.	Total.
John H Kniffen.....	28	31	26	85
William Harp.....	29	27	28	84
W B Sanson.....	29	25	20	74

George Banks.....	26	14	20	60
A D Crooks.....	31	16	13	60

The first practice of the Cumberland Rifle Association, the shooting organization lately formed by members of the Royal Grenadiers, was held on Saturday afternoon, May 3, at the garrison common. About 100 members were present at the butts, out of which number some 25 participated in the shooting. The ranges shot over were 200, 500 and 600yds. The atmospheric conditions were not as favorable as they might have been, a strong unsteady wind blowing all the time. Much interest was manifested in the competition. Several of the officers of the regiment were present and encouraged the contestants. Col. J. B. Boyd, of the First Colorado U. S. Cavalry, was a spectator and participant, and succeeded in making a creditable score. Owing to the shooting point at the 600yds. range being in an unfinished state many of the competitors were unable to complete their scores. Appended is a score of the first six who finished the series:

	200yds.	500yds.	600yds.	Total.
Wm Towers.....	24	22	13	59

J Davis.....	23	25	28	76
W J Urquhart.....	23	34	25	82

May 6.—The members of the Cumberland Rifle Association, who met on the garrison commons to-day, failed to obtain any high scores, although the greatest interest was manifested in combating the unfavorable condition of the atmosphere. The following were the highest scores:

	200yds.	500yds.	600yds.	Total.
S Mitchell.....	32	20	24	76
J Davis.....	30	24	22	76
W J Mowat.....	27	24	22	73

M Curtis.....	22	23	16	61

SAN FRANCISCO, May 4.—The thirty-eighth annual festival of the San Francisco Schutzen Club was held to-day at Shell Mound Park. The weather was good and fully 3,000 people were in attendance. The committee having the affair in charge had arranged an interesting programme, and everything passed off pleasantly. The most interesting feature of the exercises was the rifle contest. There are many crack shots in the club, and they did themselves great credit as the range. About \$250 in cash prizes was given to aspiring sharpshooters with scores as follows: G Helm..... 98 Nait Smith..... 90 F Altinger..... 84 J Etschig..... 85 C Meyer..... 88 J Strout..... 84 H B Brown..... 81 M Marione..... 88 F Becker..... 82 W Glendman..... 82 H Heath..... 88 P Beber..... 82 W McLaughlin..... 92 K Wertheimer..... 88 P Jacoby..... 82 Capt F Kubne..... 91 O Burmister..... 87 A Utisch..... 81 A Johnson..... 91 R Fackling..... 86 F Miller..... 81 A Stricker..... 91 H Flori..... 85 F Beckman..... 81 Dr T Rodgers..... 91 B Famael..... 85 F Khelein..... 81 Capt Klein..... 91 M Marione..... 88 J Kellog..... 79

Prizes were awarded for the first and last bullseye. The first bullseye in the morning, W. Glendman; last bullseye in the afternoon, Geo. Helm. The five highest tickets for the day were shot by Geo. Helm.

TURTLE BAY, New York, May 9.—At the regular weekly shoot of the Turtle Bay Rifle Club Thursday evening, May 8, at the club's range, 640 E. 54th St., the following scores were made out of a possible 300 points: G. B. Vanter 258, A. Straub 270, J. Ochs 262, C. H. Plate 259, H. W. Steffen 248, F. Erickson 242, T. Fitzpatrick 218, J. Goerlitz 209, H. W. STEFFEN, Sec'y.

MARION, N. J., May 7.—The brisk atmosphere of this afternoon made the members of the Marion Rifle Club feel at home on their range, and they kept exercising themselves at the butts until their shoulders felt somewhat sore, due to the recalcitrancy (kick) of the firearms. The work accomplished may be classed as medium, the following scores being made on the 25-ring target at 200yds. distance: J. Autenreith 208, Wm. Webber 197, H. Hoersch 182, L. P. Hansen 183, J. Bauman 187, J. Speicher 182, W. Sutton 168, G. C. Parker 160, C. Reuch 157, J. Diehl 134, and T. Stiff 139.

ENCOURAGING MARKSMEN.—The Dominion Government has decided to grant free ammunition to the teams who enter the Canadian Military Rifle League, and any corps who may wish to enter may do so yet by telegraphing the secretary, to enable him to forward their score sheets. There are 42 teams entered to date, and the first match is on May 17.

HAMILTON, May 9.—At the annual meeting of the Victoria Rifle Association the following officers were re-elected: Major J. J. Mason, President; Lieut.-Col. J. M. Gibson, Past President; Major McLaren, First Vice-President; Capt. E. G. Zealand, Second Vice-President; Albert Pain, Secretary-Treasurer; Managing Committee—Capt. J. Adam, Capt. F. B. Ross, W. M. Goodwin, W. H. Clarke and P. T. Robertson.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

May 14-16.—A. S. A. Tournament, St. Louis, Mo.
May 21-23.—A. S. A. Tournament, Kansas City, Mo.
May 27.—Tolley's Sixth Trap-Shooting Contest, Grand All-Day Shoot on new grounds, Catskill, N. Y. Sec'y, E. Tolley, Sec'y.
May 28-30.—S. A. Tournament, Minneapolis, Minn.
May 30.—First Annual Tournament of the Waverly Rod and Gun Club at Waverly, N. Y. H. C. Clapp, Sec'y.
June 9-13.—New York State Association Tournament, at Lyons, N. Y. W. S. Gavitt, Sec'y.
June 10-13.—Thirtieth Annual Convention and Tournament of the Iowa State Association for the Protection of Fish and Game, at Davenport, Iowa. J. W. Howard, Secretary.
June 17-20.—Tournament Rocky Mountain Sportsmen's Association, at Cheyenne, Wyo. W. E. Ostrander, Sec'y, Denver, Colo.
Aug. 18-23.—Third Annual Keystone Tournament, at Corry, Pa.
Sept. 9-12.—Cincinnati, O.—A. Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World, Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse, Wm. E. Limberg, Sec'y.

MINNEAPOLIS TOURNAMENT.

MINNEAPOLIS, Minn., May 8.—The monthly sweepstakes tournament, held by the Minneapolis Gun Club, was fairly well attended and the scores made were good:

Match 1, at 10 single Perorias:		Match 2, at 5 singles and 3 pairs blue rocks:	
Bennett.....	8	Whitcomb.....	7
Harrison.....	8	Goosman.....	7
Cutter.....	8	Hamline.....	7
Ensign.....	8	Lawrence.....	8
Warwick.....	7	Cummings.....	8
Pratt.....	8	Jones.....	9

Bennett and Harrison won third on shoot-off, Burke fourth on shoot-off.

Match 2, at 5 singles and 3 pairs blue rocks:		Match 3, at 15 single Perorias:	
Bennett.....	5	Whitcomb.....	8
Harrison.....	5	Catamaran.....	13
Cutter.....	9	Hamline.....	13
Osmer.....	10	Lawrence.....	13
Dalton.....	7	Ensign.....	12

Catamaran third on shoot-off, Pratt fourth on shoot-off.

Match 3, at 15 single Perorias:		Match 4, at 10 singles and 2 pairs Perorias:	
Bennett.....	10	Whitcomb.....	10
Harrison.....	15	Goosman.....	10
Cutter.....	10	Hamline.....	10
Osmer.....	15	Lawrence.....	10
Dalton.....	10	Ensign.....	10

Burke and Newton third on shoot-off.

Match 4, at 10 singles and 2 pairs Perorias:		Match 5, at 15 single blue rocks:	
Bennett.....	12	Jacoby.....	6
Harrison.....	5	Richter.....	6
Cutter.....	12	M F Kennedy.....	4

Hansen and E. Ingram, of the Hudson, won first and third gold medals and L. P. Hansen, of the Excelsiors, won second. Of the cash prizes F. G. Kittredge and L. P. Hansen, of the Excelsiors, won first and second, respectively. F. G. Kittredge

CORINTHIAN NAVY.—The board of managers of this association will shortly be called upon to admit a new squadron. Steps are now being taken to form a Middle Long Island Sound Squadron, with territory extending up about the Thimble and down to orwalk. The regatta committee will shortly issue a circular to the members, giving full directions regarding the regatta and where they will be held. Eight good events are promised. Mrs. Thos. G. Clapham has presented a silk flag to the navy, the same to be contested for on May 31. The flag goes to the boat which makes the best run from New Rochelle to Cold Spring. Time allowance will be given. Mr. Philip C. Sies has been appointed a member of the regatta committee. The following gentlemen are proposed for membership: L. A. Clark, Henry B. Mitchell, W. H. Smithers.

NEW YACHTS.—Among the additions to our list is a new cutter, 30ft. l.w. 1.10ft. beam and 7ft. draft, with 6 ton iron keel, built for F. E. Barnes, of New York, by J. B. Loring, Rockland, Me., from a design by Z. S. Crocker. Her name is *Canta*. A catboat from Mr. Burgess's designs is building at Camden, N. J., for a member of the Quaker City Y. C., by J. J. Beckett. She will be 31ft. 9in. over all, 28ft. 3in. l.w. 1.1, 12ft. beam, 4ft. draft, with lead keel.

CANARIE Y. C.—The Canarie Y. C. has been incorporated with the following officers: Com., D. J. Brinsley; Vice-Com., F. J. Kallenbach; Sec'y, C. E. L. Hinrichs, Jr.; Treas., A. H. Ackerman; Meas., H. T. Rigby. Executive Committee, I. F. Fisher, James Surples, W. P. C. Nimmerman, Eugene K. Karr, J. R. Walker.

ANOTHER YACHT FOR THE MORGAN SQUADRON.—Captain Harry Craven and his crew arrived at Southampton on Saturday to take charge of the steam yacht *Sans Pareil*, just purchased by Mr. Morgan from the Duke of Sutherland.

KNICKERBOCKER Y. C.—At 4 P. M. on May 10 Com. Rousseau fired a gun and declared the season open, a dinner following in the evening. The club has a large fleet now in commission off Port Morris.

SHARK.—Dr. Morton Prince's 30-footer, launched last summer, is now being modernized by a reduction of her forefoot, increased draft and, and the shifting of lead to after part of keel.

THE NAVAL RESERVE.—On May 1 the first company of the Massachusetts Battalion was organized, and since then three more companies have been made up.

ELECTRA, steam yacht, with Com. Gerry and family on board, has been on a cruise to Charleston and Southern ports, returning to New York this week.

MINERVA, cutter, after a week on the ways at Lawley's, sailed for New York on May 10 under her trysail, reaching New York on May 13.

AVENEL.—The name of the steam yacht *Narod* has just been changed as above for her new owner, J. H. Hanan.

UVIRA.—Mr. Jas. Frazer's new 42ft. cutter has been under way at Southampton, and will sail shortly for Halifax.

SEAWANHAKA C. Y. C.—The fourth regular meeting will be held on May 17 at the club house.

GENONE, schr., will be coppered this year.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

WAR CANOES ON THE DELAWARE.

THE Red Dragon C. C. held the last smoker for the season on May 5. An invitation was extended to the Park Island Canoe Association to smoke and discuss with us the question of a Delaware River meet for A. C. A. men this season.

They arrived on Saturday evening on the steamer *Edwin Forrest*, bringing with them their war canoe *Wah-wah-tah-se*, and were met at the dock by the Red Dragon.

Soon there was presented to the passengers on the ferryboats, the rare and novel spectacle of two mammoth canoes riding over the numerous swells with surprising ease and buoyancy. One steamer passed quite close and hurled an enormous comber, over which they rode so lightly as not to ship a drop of water. These large canoes prove themselves to be excellent sea boats.

The evening passed very pleasantly with the usual round of music, speeches and canoe talk. A collation was served in the new dining-room, our latest acquisition.

Ex-Secretary Carter arrived in the evening, bringing with him Messrs. Wilkin, Dunnell and Brokaw of the Brooklyn C. C., the intention being to cruise part of the way home in the war canoe and to show the Brooklyn canoeists our camping ground at Delanco, it having been suggested as a future site for the Atlantic Division meet.

The start was made from the club house under the most favorable conditions, but soon the angry clouds did gather, and when only one mile from our destination the rain did fall with a vengeance.

The *Wah-wahs* found shelter in a hospitable boat house, but the Dragons splashed for Delanco, where one of the members has a summer residence. When this was reached the rain had ceased, and we were rejoined by the missing craft, the crew of which had been very much refreshed by a light lunch provided by the hospitable boatmen—one pie for fifteen.

Here, much to the regret of all, Mr. Dunnell was obliged to take the train for New York, and was escorted across the river in the *Wah-wah*.

When the boys returned dinner was served in as near genuine camp style as possible under roof. The afternoon was spent very pleasantly inspecting the camp grounds, etc. The time for parting came only too soon, the Trentons to take the steamer and the Dragons to paddle to their separate destinations. This we believe is the first time that two such canoes have cruised in company.

By a strange coincidence they are painted the same color, gray within and red without. The distance from the club house to Delanco is about 15 miles, and was covered each way in less than 2 hours, using an easy stroke.

The Delaware River meet will be held July 4 to 7. An invitation is extended to all A. C. A. men to attend.

MAX.

PASSAIC RIVER MEET.

THE canoe clubs of the Passaic River will hold their fourth annual meet on Newark Bay near Bayonne, the same camp grounds as in 1888. The meet will begin on Thursday, May 23, and continue over Sunday, the races being on Friday and Saturday. An invitation is extended to all canoeists. The programme is as follows:

- Event 1. Sailing (record), 4½ miles.
- Event 2. Sailing and paddling combined (record), 3 miles, one-half mile alternately.
- Event 3. Paddling (record), 1 mile.
- Event 4. Paddling, juniors, 1 mile.
- Event 5. Sailing, juniors, 4½ miles.
- Event 6. Sailing, maneuvering, ¼ miles.
- Event 7. Sailing, upset, ¼ mile, no special appliances allowed.
- Event 8. Sailing, unclassified, 4½ miles; will start five minutes after Event 7.
- Event 9. Paddling, tandem, 1 mile; canoes must be 30in. beam or over.
- Event 10. Paddling, any canoe, 1 mile.
- Event 11. Paddling, upset, ¼ mile.

A. C. A. rules to govern all races. The committee reserve the right to change this programme at any time. Notice of races will be posted on the camp bulletin at least one hour before the race is called. First race to be called at 9:30 A. M., May 30. First and second prizes will be awarded in all races where three or more start. Any member of the associated canoe clubs of the Passaic river who makes the highest number of points in the three record events will be awarded the perpetual trophy cup for the ensuing year. Points only to count from the members of the Passaic clubs. The officers of the meet are as follows: Wm. J. Stewart, chairman; A. S. Pennington, Sec'y-Treas.; Paterson, N. J. Camp Committee, W. H. Hillier (chairman), R. W. Strachan, Robert H. Peebles. Regatta Committee, C. V. Schuyler (chairman), Dr. F. W. Kitchell, R. M. Hobart.

A junior is one who prior to Jan. 1, 1890, has not been awarded a first prize in a similar event.

A. C. A. EASTERN DIVISION.

THE Eastern Division Meet will be held on May 30, 31 and June 1, at Willow Dale. The camp site will be located in a grove on the shores of Tyng's Pond, two miles long by one-half mile wide, situated on the bank of the Passaic river, and reached by electric cars running half-hourly. The grove is owned by the railroad, is fenced in and will be devoted to the exclusive use of the canoeists during the meet, thus insuring the usual camp privacy. At a quarter mile from camp is a dining-hall, where meals will be furnished at \$1 per day, and free transportation to and from camp will be furnished to those who desire. The lake will permit of a good mile and a half trike being laid out, with quiet water for paddling. All boats and duffle should be sent to Lowell, in care of purser early in the week, and will be transported to and from the camp free of charge. Lowell can be reached by both divisions of B. & M., by the Old Colony, connecting with Albany at Framingham, and by the Stony Brook, connecting with Fitchburg at Ayer Junction. Members are invited to come to camp Thursday night and remain until Monday if possible.

Races will be sailed on Friday and Saturday; the regular events occurring on Saturday as far as possible. Facilities for holding the camp promise to be unusually good, and it is hoped that the meet may be the largest ever held by the Division.

An early reply is requested, stating how many men will be present from each club, and whether they will make use of the tents.

Tents can be furnished in the camp at cost for those who desire to rent them, if notice is received beforehand.

Application blanks are inclosed, and members are requested to send in the names of any one desiring membership.

PROGRAMME OF RACES.

Regatta Committee: Fred T. Walsh, Lowell; J. W. Cartwright, Jr., Boston; Jas. Craddock, South Boston.

Regular Events.—1. Paddling, half mile straightaway. 2. Combined paddling and sailing, 4½ miles. 3. Sailing, 4½ miles, unlimited. 4. Tandem, double blade. 5. Tandem, single blade. 6. Paddling in fours. 7. Sailing upset. 8. Maneuvering race, 9. Tandem paddling, standing, single blade. 10. Novice race, 11. Three entries, unlimited.

Other Events.—1. Visitors' race, 4½ miles, sailing, unlimited (Prize to be offered by Vespers). 2. Consolation, sailing, 3 miles. 3. Paddling, any man, any boat.

A. C. A. rules to govern. Replies to be sent to purser. R. F. BRAZER, Purser. J. ARTHUR GAGE, Vice-Com. E. D. A. C. A. 47 Central Street, Lowell, Mass., May 1.

LAKE ST. LOUIS C. C.—The annual cruise of the Lake St. Louis C. C. will take place, as usual, on the Queen's Birthday and following day. The route chosen is the same as taken in 1885, from Huntington, on the Chateaugay River, to Lachine, about sixty miles. This river is full of rapids and broken mill dams, and these features are particularly attractive for canoeists who paddle. Arrangements have been made for a concert at Huntington on Friday night. Sixty-four members of the club have already asked for car space for canoes, and I believe this will be the largest gathering ever seen of a single club for a cruise. Canoeing is booming on Lake St. Louis this year, and we hope to see a good representation of A. C. A. men at the Northern meet this year at Lake of Two Mountains.

GALT C. C.—*Editor Forest and Stream*: Last week the annual meeting of the Galt C. C. was held, and the following officers were elected for the ensuing year: Com., W. J. Millican; Rear-Com., J. H. MacGregor; Treas., Geo. M. Gibbs; Sec'y, Harry F. MacKendrick; Committee, C. E. H. Warnock, Chas. Turnbull, John N. MacKendrick. The club has now about seventy-five members and thirty canoe owners (with more to follow), and a good club house. A regatta will be given on June 13, open to all amateur canoeists. A. C. A. rules to govern. There will be \$100 worth of prizes given, and several noted canoeists have already entered.—CHUM.

A. C. A. MEMBERSHIP.—Eastern Division: Robert E. Westcott, Joseph F. Talbot, Thomas Talbot, Josiah C. Norcross, Edward P. Quinlan, J. Nelson Dennis, Andrew G. Swapp, Edward Martin, Frederick P. Marble, James Bayles, Henry Salmon, Geo. E. Lull, Arthur D. Prince, Stephen T. Whittier, Arthur W. Sherman, Lowell, Mass. (Vesper Boat Club); George E. W. Armstrong, J. W. PINE CREEK, Pa.—*Editor Forest and Stream*: A party of six of the Athens C. C. would like to take a cruise down Pine Creek, starting at Gaines, Tioga county, Pa., and running into the West Branch of the Susquehanna. Can any of the readers of the *FOREST AND STREAM* give us information about this stream? We expect to start about the last of July, and may run as far as Harrisburg.—W. K. PARK (Athens, Pa.).

A. C. A. REGATTA PROGRAMME.—Buffalo, May 5.—*Editor Forest and Stream*: Please state that on the A. C. A. regatta programme, event No. 14, paddling, club fours, any canoe, the words "any canoe" means any canoe not over 16ft. long, with a beam of not over 30in. for that length, which is the maximum size under the A. C. A. rules.—EDWIN L. FRENCH, Chairman.

ANSWERS TO CORRESPONDENTS.

CASHE, Windsor, N. C., will please send his address. O. C.—You will probably do more wisely if you go in for a new gun, instead of trying to patch up the old shabby one.

S. L. F. L. Harpers, Ill.—There are no rifle competitions held at the tournaments of the American Shooting Association.

E. E. T. Scranton, Ia.—Can you inform me as to a method to capture blackbirds alive to be used for shooting matches? Ans. We presume that when they are flocking in the fall they could be baited and caught with a clap-net, as wild pigeons are taken.

E. H., Tucson, Arizona.—A. B. C. and D shoot at 12 birds each, American rules. A kills 11, B 11, C 9, and D 6. How should the money be divided? Ans. The rules prescribe that all shooting shall be class shooting unless otherwise stated. A and B divide first or shoot off for it; C takes second and D third.

C. M. W., Providence, R. I.—Will you kindly recommend me to some place in the Maritime Provinces (New Brunswick preferred) where I can obtain good fishing? If possible I should like to obtain a good guide and go into the woods. Ans. Write to Mr. Edward Jack, Fredericton, N. B., for particulars of fishing on the Big Tracadie.

G. A. D., Eureka, Cal.—Will you kindly inform me as to what part of Africa now contains the greatest abundance of large game? Ans. There is abundance of game in the region between Zanzibar and the Massai country. See note in our Shot columns to-day; and review in issue of March 27 of the book "East Africa and its Big Game" by Capt. Willoughby.

A. D. W., New York.—Kindly answer in your first issue, whether a party fishing for trout in a public running stream in New York State, can be put off or sued for trespass if he keeps in the bed of the stream while fishing; reaching said stream by a public road and leaving by same. Take for granted that the stream has been posted, forbidding fishing, and has at different times been stocked by the State. Ans. The subject of riparian rights is so complicated, that an opinion can hardly be based on the statement of facts here given. We do not understand what is meant by a "public running stream." Proprietorship of land usually extends to the middle of the stream bounding it, and this proprietorship carries with it the right to keep off trespassers. The fact that the stream was stocked by the State would have no bearing on the question.

BEECHAM'S PILLS cure sick headache.—A. D.

MANUFACTURER OF
Fishing Tackle

Manufacturer of the Celebrated Vom Hofe Reel. ESTABLISHED 1867.

Inclose 25 cents in stamps for the most complete illustrated 128-page catalogue published. This
amount may be deducted from first purchase of one dollar and over. Mention this paper.

When a sportsman finds anything which adds to his
pleasure, without increasing his labor, he wants all his
brother hunters and anglers to know of it and share
with him the newly discovered "helper."

**WHAT WE CLAIM FOR
The Automatic Reel.**

FIRST.—It will wind up the line a hundred times
as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the
angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other
reel.

FIFTH.—It will prevent tips, lines and snells
from being broken by large fish.

SIXTH.—It enables the angler, and makes it
desirable, to use lighter tackle.

These claims have been substantiated by the
most skillful fishermen in America and Europe.

THE BEST IN THE WORLD.

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black
bass; No. 1, black bass; No. 2, bass and pickerel; No. 3,
muscallonge, salmon trout and bluefish. It is guaran-
teed to catch bass when all other baits fail. It effects a
great saving in minnows, on account of the protection
afforded by its peculiar construction, one minnow hav-
ing been known to catch twenty-five bass before it was
rendered useless. For sale by all dealers and by the
manufacturer. Send for circular and price list.

Cloth, pp. 229. Price \$1.50.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORÊTS.

PAR M. ANTONIN ROUSSET.

Translated by

REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

Book Publishing.

Possessing peculiar facilities for publishing new books on field sports, adventure, travel, and open air life, the Forest and Stream Publishing Company begs to invite the attention of authors to its book department. Correspondence solicited and estimates furnished.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

Charles Daly Automatic Hammerless.

Made under DEELEY'S PATENT, the strongest and simplest, equal in every particular to any other AUTOMATIC HAMMERLESS costing DOUBLE the price. No. 150, price \$175. No. 250, Diamond Quality, price \$275. Charles Daly Hammerless, \$100 to \$225.

Charles Daly Three-Barrel Gun.

Shotgun Sizes

10, 12 & 16-BORE.

Length of Barrel,
28 to 30 Inch.

Rifle Sizes

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS.

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$6 per year; \$2.50 for six months. Address all communications

A WESTERN NUMBER.

The issue of June 12 will be a Western Number. It will be brimful of good things picturing sport with rod and gun in the Great West.

TROUT.

THE trout season is now at its best; and reports that have reached us from many sections agree that the present season is the best one for many years. Lucky is he who can snatch a few days from business cares, and to visit the old familiar scenes of his childhood, and again wander along the banks of the well-remembered streamlet in quest of the shy beauties that lurk in its depths. With what ardent hope is the fly cast upon the bosom of each well-known pool; and as the eager rise is followed by successful strike, what satisfaction fills the heart. Truly one moment like this is worth all the year of routine life.

The past two winters have been remarkably favorable for the increase and preservation of trout life; and many streams, especially the smaller ones, that had been nearly depleted, now teem with an abundance of young fish; and if these infants are properly protected, coming seasons will amply repay in increased sport far more than the trifling cost and self-denial entailed in preserving them. "Spare the fingerlings" has ever been the watchword of the FOREST AND STREAM; and we are pleased to note that "fishing for count" is no longer tolerated by the angler who makes any pretensions to be a master of the gentle craft; and it is sincerely to be hoped that the slaughter of the innocents will soon cease altogether. Eight solid ounces of gleaming gold and brown at the end of one's line gallantly fighting with frantic desperation for life and liberty are worth ten times, nay a hundred times more than are eighty ounces represented by

as many little fellows that have not the strength to cause that electric thrill so dear to the angler's heart, nor to stir a single nerve. For the sake of glorious sport in the future then, spare the little ones; and in after years they will rise and you—or some brother angler—will indeed be blessed.

JOHN ELLIOTT CURRAN.

IN FOREST AND STREAM of Nov. 17, 1887, was published a paper entitled "Maid of Beech," which was marked for the rich poetic fancy which ran through it, and for the suggestiveness of its compact sentences. Subsequent and very recent allusions to it, and inquiry concerning its author, have proved that it was given by the more thoughtful of our readers a degree of attention not often accorded to the ephemeral literature of the weekly press. The pen that wrote that paper has now been laid aside forever. A life of creditable literary work was closed, and the promise of yet brighter achievements was blighted, when John Elliott Curran died at his home in Englewood, N. J., last Sabbath.

Born at Utica, N. Y., May 25, 1848, he entered Yale in 1866. While at college he was known as an athlete, and also as a thoughtful writer. He rowed on the freshman crew against Harvard and was an adept in all sports that called for the exercise of manly strength. His taste for writing was manifested even as an undergraduate by essays and sketches contributed to the *Yale Literary Magazine*, the oldest and best of the college periodicals.

After his graduation in 1870, Mr. Curran spent a year in Europe, and then returning entered the Columbia Law School. After his admission to the bar he practiced law in New York for a number of years, but gradually abandoned his profession and turned his attention more and more to writing, contributing many short stories to *Harper's*, *Scribner's* and the *Century*. He wrote a successful novel, "Miss Frances Merley," which was published by a Boston firm, and received high encomiums from the press. But it was not only as a writer of fiction that Mr. Curran was known. He had devoted much careful study to social problems, and had written a number of thoughtful essays upon the questions of the day. His was a philosophic mind; it is believed by those who knew him most intimately that had his life been spared the world at large would have been benefited by the results of his riper years. But over against the unfulfilled promise of a future, however bright that promise may have been, set the actual life that a man has lived. For the influence of such a life as that of John Elliott Curran—whether it be long or brief—the world is better. He was a man of singular honesty of character. When he had once made up his mind as to what he ought to do, no consideration could swerve him one hair's breadth from his course. From the standpoint of material success this rugged honesty sometimes stood in his way. His desire to do exact justice to all made him slow to criticize or condemn any one unless he knew all the circumstances of the case. His nature, as known to those most intimate with him, was most gentle and tender. He had the broadest possible sympathy for humanity at large, and the widest charity for the erring and the unfortunate.

NATIONAL GAME LEGISLATION.

ATTENTION was directed in these columns the other day to the recent decision of the United States Supreme Court relating to the Iowa prohibition law. The decision was in the case of a Kansas firm, which had sent barrels and sealed cases of beer into Iowa, and there offered the beer for sale in its original unopened barrels and cases. The beer was seized under the Iowa liquor prohibition law. The dealers contended that the beer was an article of inter-State commerce, and as such could not be legislated upon by a State. The case was carried up to Washington, and the court of last resort sustained the contention of the dealers. The Supreme Court said that the beer which had been so imported from one State into another was an article of inter-State commerce and that it remained such until the receptacles having been opened it was merged in the common property of the citizens of the State. The Constitution of the United States vests in Congress the exclusive power to regulate inter-State commerce; and accordingly the Supreme Court ruled that Iowa had no authority to forbid the sale of liquors nor of any other commodities

so long as they remained articles of inter-State commerce. The right to import from one State into another carries with it the right to offer for sale. A former ruling of like effect was made by the Supreme Court in March, 1888, in an Illinois case, in these words:

It is easier to think that the right of importation from abroad and of transportation from one State to another, includes, by necessary implication, the right of the importer to sell in unbroken packages at the place where the transit terminates: for the very purpose and motive of that branch of commerce which consists in transportation, is that other and consequent act of commerce which consists in the sale and exchange of the commodities transported. Such, indeed, was the point decided in the case of *Brown v. Maryland*, 12 Wheat. 419, as to foreign commerce, with the express statement in the opinion of Chief Justice Marshall, that the conclusion would be the same in a case of commerce among the States.

Now, as we pointed out the other day, it is quite plain that the principles here laid down must apply with equal force to those game animals and fish, which by being transported from one State to another become articles of inter-State commerce. Most States prescribe that in the close season for its own game no game at all shall be sold, no matter whether killed within its own boundaries or in another State. Such laws are held to be essential to effective game protection. But if the Supreme Court ruling is to prevail, it is clear that game and fish dealers may lawfully sell at any time of the year and all through the close season, game and fish imported from other States and retained in its original packages. If the sale of such game is to be stopped this can be accomplished only by a national law of direct specific application or one generally exempting from the operations of the inter-State commerce law such articles as are the subject of State legislation under the police power.

A bill of specific application to liquors only has been introduced in the House by Congressman Boutelle, to add to the Inter-State Commerce Act this amendment:

That nothing contained in this Act shall be construed to authorize the sale or traffic in intoxicating liquors in any State contrary to the laws thereof.

A similar amendment substituting "game or fish" in place of "intoxicating liquors" would remedy the present weak point in game legislation.

A bill introduced by Senator Wilson of Iowa, favorably reported by the Committee on Inter-State Commerce, and now under discussion in the Senate, is more comprehensive. It is entitled, "A Bill to Protect the States in the Exercise of their Police Powers," and provides:

That any article of commerce, the manufacture or sale of which is prohibited within any State by the laws thereof, in the exercise of its police powers, shall not be transported or conveyed into such State from any other State, Territory, District of Columbia, or foreign country, by any railroad company, express company, or other common carrier; but this shall not be held to prohibit the transportation of such articles of commerce as aforesaid to persons in such State authorized by the laws thereof to receive the same, or through such State as aforesaid prohibiting the sale or manufacture thereof to any other State or Territory in which such manufacture or sale is not prohibited.

As the enactment of game laws are within the police powers of a State, this bill, if it shall become a law, will have a direct bearing to uphold the statutes forbidding the sale of imported game in the close season.

SNAP SHOTS.

THE recently organized Indiana State Fish and Game Protective Association will hold its first mid-summer meet at Cedar Beach, June 25 to 27, under the management of the Cedar Beach Club. It will be a combination affair, with a regatta, a fly-casting tournament and other attractions. One contest which will be watched with breathless interest by the doctors of angling ethics will be a fishing match between the Cedar Beach Club bait-fishermen and the Indianapolis Fly-Fishermen's Club, to determine which mode is the most potent with the bass of Turkey Lake. Secretary Jesse T. Blair and President W. T. Dennis evidently set great store by this event, and have issued formal subpoenas to fish commissioners and others, believers and unbelievers in fly-fishing:

It appears that the question of the right of a Legislature to declare illegally set nets public nuisances and to provide for their summary destruction as such, without due process of law, is not yet settled. In the New York case it was recently decided by the Court of Appeals that the law was constitutional and could be enforced. The announcement is now made that the case will be carried up to the Supreme Court of the United States for final

adjudication. State Game Protector Drew, who is the defendant, appeals for financial aid to carry the case through. Fish protective associations can do no more good than to sustain the protector by contributing such funds as may be necessary. Practical experience has demonstrated that fishing nets and fish conservation cannot go together; and unless nets are to be classed as public nuisances and treated as such, they cannot be regulated by any executive machinery as yet devised. Upon the outcome of this suit there will in large measure depend the efficient protection of the food fish supply. The principles involved are of general application in all States where laws similar to that of New York are in force.

In his letter relating to the America's cup race, published in our yachting columns to-day, Lord Dunraven has redeemed his blunder of silence last season, and has stated plainly a number of specific objections to the so-called third deed of gift. These objections are the same in substance as those made by the opponents of the deed in this country; but they are far more important in that, coming from such a source, they cannot be quietly ignored, but must be recognized and answered in some way by the New York Yacht Club. When the objections have been disposed of the next task for the sponsors of the new deed will be to answer to American yachtsmen for their breach of trust, and for the injury done to yachting by the locking 'up' of the premier trophy of the world by means of conditions which are both unfair and impracticable.

Mr. W. T. Hornaday, superintendent of the National Zoological Park at Washington, has tendered his resignation of that office to the Secretary of the Smithsonian Institution, to take effect June 15. Mr. Langley has accepted Mr. Hornaday's resignation in a flattering letter, and the latter will remove next month to Buffalo, N. Y. Since the inception of the Zoological Park Mr. Hornaday has been deeply interested in it and has worked for it with unflagging energy, contributing much to the success of the enterprise. Mr. Hornaday's energy and push made him a valuable man, and his loss will be severely felt in Washington.

The new book, "With Fly-Rod and Camera," will be ready next Monday. In our notice already made we have spoken of the scope and character of this work, notable for the profusion and character of its illustrations. It has been an open secret among the friends of the author, Mr. Edward A. Samuels, of Boston, that he has been for several years collecting materials for this book; but we predict for them and for the public a genuine surprise when they realize the success attained in so vividly picturing the phases of angling life.

Another organization has been added to the list of those which propose to care for the Adirondack forests. It is the Adirondack Park Association, with headquarters in this city and these officers: Pres., Dr. Alfred Loomis; Vice-Pres., John Claffin; Sec., Martin Burk; Treas., Charles E. Coon.

The Senate has delayed to pass the bill to protect fish in the Potomac River. The subject is now under consideration in the House. In the meantime the destruction of shad and black bass is shameful, even the down-river fishermen are howling for protection of spawning beds.

A 22-pound Atlantic salmon caught at Gloucester, New Jersey, was presented to Commissioner McDonald yesterday, May 21, by Mr. Thompson; and being a royal representative of its race, the Commissioner has sent it to the President.

The Sportsman Tourist.

SLIDE ROCK FROM MANY MOUNTAINS.

VI.—A TALE OF BLOOD.

IT is not pleasant to witness a tragedy. To have taken part in one is horrible. This horror is intensified when the victims are mothers and children. And yet, perhaps, it were better that such a tragedy should be complete: that death should embrace all the members of the family, rather than that a part should have fallen before the destroyer, while others survived to mourn their lost ones.

I suppose that every criminal has an excuse for his misdeeds and can justify them to himself, on one pretext or another. The burglar may plead that he was driven to housebreaking by actual starvation, or that he needed the plunder for the purpose of making some special investment, or that his victim's house was so badly protected that no one could have resisted the temptation to enter it. The criminal's excuse may be a very flimsy one, but it serves his purpose.

I have been the chief actor in a bloody tragedy, and like other guilty persons, I have an excuse for my dark deed. A strong pen has already sketched in general terms the outline of a hunt in which four white goats, two mothers and two kids, were killed by me in about forty-five seconds, and has indicated the reason for this wholesale slaughter. It remains for me to fill in this outline with the details which shall make up the picture. In some ways the occurrence was rather remarkable.

Two or three years ago the directors of a great museum, who know that I am a goat hunter, applied to me for a series of properly prepared skins of this animal, from which to set up a mounted group of white goats. I had been informed that what were especially desired were a monster male, two females and two young ones—in short, a family. I had made vigorous efforts to supply these desiderata, and besides my own hunting, had employed men who live the year round in a goat country and who frequently hunt the animals, to look out for and secure the desired specimens. Through the efforts of one of these men the large male had been procured, but the kids were still wanting. I was becoming discouraged.

In order that the unities might be preserved, it was essential that all the individuals to be brought together in the group should be killed at the same season of the year. Nothing could be more ridiculous than to have the different members of this family group wear the coats of different seasons. A male in the summer pelage guarding a band in which the females should wear a January coat, while the kids were of the size and in the dress of early autumn, would excite the mirth of the hunter and would bring discredit on the museum where such an incongruous group was on exhibition. The difficulty of obtaining the specimens was therefore not the only one to be overcome. They must be secured at approximately the same season of the year.

After my friend, resisting all my persuasions to accompany me, had sent me off with Chinook Tom, we set out to approach the game. At that time we had seen only two goats, and these were 600 or 700 yds. above us, on the mountain side across the creek. To approach them it was necessary to go up the stream, cross it and then to clamber almost as far above them as they were now above us. Then working along the mountain side, until we were directly above, we could creep down to a low shoulder beneath which they were lying. From that point it was thought that we could get a shot. After following up the valley half a mile, we plunged down the steep hillside, crushed our way through the brush in the creek bed and began the ascent on the other side. The slope of the mountain was extremely sharp, and the ground smooth and slippery with long dead grass. Fire had passed over it and dead burned sticks lay upon the hillside, and added to the difficulty of climbing. Tom's moccasin-shod toes clung to the steep slope with a tenacity that I greatly envied, while my stiffer shoes slipped and sprawled, and noisily hit against the rocks and trees, in a way that must have been quite as annoying to my companion as it was to me.

At length, after many pauses for breath, the weary climb was over, and we passed out of the timber far above the goats. We could see them, still lying in the same place, on the other side of a wide ravine, thick with dead timber, standing and fallen, which we must cross before we could descend to a point from which we could shoot. At the foot of a high cliff we stopped for a moment to rest. We had hardly seated ourselves when we saw two other goats come running out of the timber below those which were lying down. These two I at once recognized as a female and kid. Climbing steadily up the slope they soon joined the two which were lying down. These rose to their feet, and for a few moments all four stood looking out over the valley below them; then they turned and began to clamber up the hill. At first, when the second pair of goats made their appearance, I had supposed that they had come up from water, and would lie down with the others; but it was now evident that they had been alarmed by something in the valley, and that all four were about to seek the heights for safety. They clambered up the side of the ravine until they had reached the shoulder from which I had hoped to shoot, and then, turning to the right, passed out of sight behind it, taking a course which led toward some vertical cliffs, which we had noticed from the other side of the stream.

As soon as they were out of sight, Tom and I started across the ravine after them. To pass this was tiresome work, for the timber was very thick. And this, with the underbrush and the slippery rocks, made our progress slow and noisy. The footing was uncertain and the labor of constantly stepping over logs severe. Having crossed, we kept down the other side until we reached the shoulder beyond which the goats disappeared. Here we found their tracks, and followed them along the narrow ledges of the cliffs, under low-growing pines whose roots were thrust deep in the crevices of the rocks, and over steep rock faces where the footing was very precarious. It was only now and then that tracks could be seen, for the trail along which the game was passing was so stony that often their feet left no imprint. Occasionally, however, a foot mark would be seen, or a fragment of rock freshly turned from its bed would indicate the passage of some animal. In the excitement of the moment I gave no thought to the difficulties of the way, but later, after we had returned to the horses, and I looked back at these cliffs, it seemed impossible that any creature except a goat, a mountain sheep or a bird should have passed along them.

We had followed the scattered traces for perhaps half a mile, occasionally clambering up or down the cliff to look into some little pocket in the rocks, which might possibly harbor our game, when on a bit of soft ground we saw the tracks of several goats, and felt sure that our band was still before us. A few moments later Tom, who was a little in advance, suddenly threw himself flat on the ground and excitedly whispered, "You see um? Shoot." I could see through a thick tree that overhung the trail a dim white shape, which could only be a goat, but I could not tell whether the animal's head or tail was toward me, nor whether it saw us or not. Tom was so excited, however, that I felt bound to shoot. He wriggled about on the ground and kept whispering, "You shoot. You shoot." So, though I could not myself see any necessity for haste, I took it for granted that the case was urgent. It was manifestly useless to fire through a mass of branches at a shadow, and I noiselessly scrambled up on a mass of rock lying above the trail. From this point I found among the branches of the tree an opening, through which I could get a clear view of a patch of white hair about three inches in diameter. At this patch I fired, and as the smoke cleared away I saw that the white shadow had disappeared.

Springing forward 15 or 20 ft., I passed the tree and had a clear view of the trail ahead. On a great rock, which was dotted with blood, stood a white goat with its head up and expressing in its attitude more alertness than I had ever before seen in an animal of this species.

At the foot of the rock on the down hill side, standing on the slide rock of a little ravine, was another goat wounded, with its head down. These two, both old ones, were the only goats in sight. Of course, immediately after my shot I had slipped another cartridge into my gun, and the instant that I sprang into the open, the old rifle jumped to the shoulder and a ball tore through the heart of the goat on the rock. It half reared, fell over backward near its wounded companion and went rolling down the hill over the slide rock. At the sound of the shot a kid, hitherto hidden behind the great rock, sprang into view on a lesser pinnacle. Again the fatal crack rang out, the kid sprang outward and downward, and tumbled over and over down the hill after its mother.

While all this was going on, Tom had appeared on the scene and was dancing about on a point of rock near me like—to use a vulgar but expressive phrase—a hen on a hot griddle. Little whoops and chuckles of delight sounded from him, and now, as he saw the wounded goat at the foot of the rock, which until this moment had seemingly been too dazed to do anything, begin to hobble off, he called out, "Shoot um again." It seemed unnecessary to do this, for I could see that the first ball had ranged lengthwise through the body; but I neither wished to lose the animal nor to follow it far, so I shot it again, and it joined the procession, which I could see out of the corner of my eye still tumbling over and over down the hillside.

But the end was not yet. Just as the last shot echoed among the crags, there dashed down the trail and into view about a point of rocks, another kid, which had apparently started at the first alarm to climb the hill, but, finding itself alone, had come back to look for its mother, running to meet its death. It came bounding along from rock to rock, with head erect, and quick, springy motions, resembling in its actions a mountain sheep far more than a sluggish goat. It ran quite close to me, and with a feeling of pity for the poor thing I killed it. There were no more.

Although so long in the telling, the time which elapsed between my first shot and my last was probably not more than a minute, perhaps even less, for I had loaded and fired as rapidly as possible, and there was always something in sight to shoot at.

To convey any adequate motion of Tom's enthusiasm and delight is quite beyond my powers. He danced, and gurgled and crowed like a delighted infant. For a little while articulate speech seemed to fail him, and he could only whoop and chuckle, and sing, and pat me on the shoulder. At last, however, he burst forth in praise of my shooting and of my gun:

"Oh you, Huyu, huyu good shoot. Get 'em all. O skookum mushket. Good for goosly bear;" and many other enthusiastic words.

As a matter of fact, I had done no good shooting. At that distance, and with the opportunities I had had, it would have been disgraceful to fail to kill as many of this little band as I had wished to. Tom, however, was probably accustomed only to guiding young men whose feelings overcame them at the sight of game, and who shiver and tremble when they put their cheeks down against the stocks of their rifles. Such young men require to be braced and supported before they can hit anything. Then they hit their game usually in the foot or in the ear, and sometimes even in the body. This last is rare. Tom's dealings I fancied had been with hunters of this class, and I was confirmed in this conclusion by a remark which he made that night in camp when he was detailing to the packers and other Indians about the fire the events of the day. He concluded his story by saying:

"Helo nika nannitch white man allee same." (I have not seen a white man like him).

After all the goats had rolled down the hill out of sight, I turned to the beaming Tom and asked him how many there had been. He replied that he thought there had been three; I told him that I imagined that there were four, but the whole thing had taken place so quickly that only a general impression of the number remained on my mind. The readiest way to learn how many there were was clearly to follow down the blood-stained ravine and count them. This we did, finding one old goat about half way down, and near the bottom in one pile three more. When they were counted there was more rejoicing from Tom, who was evidently well pleased with his white man.

To get the animals down to the creek bed, where we could take their skins off, did not occupy much time, and it was only 11 o'clock when we sat down to smoke a pipe before beginning this work. As each animal had to be measured with exactness, and the skins removed with peculiar care, this task took us about three hours; so that it was nearly 4 o'clock before we had packed the loads on the horses and started for camp.

Yo.

ANTOINE BISSETTE'S LETTERS.

III.

M'sieu Fores' Strim:

W'en M'sieu Mumpsin was read in FORES' STRIM 'baout all dat man's brag, how it been shot dem leetly bird dey call it evelin groosik, Ah 'll beegin for tink 'f Ah 'll can' mek masef disteenguish for mek some colleck, me.

Ah 'll rember Ah 'll took a notice w'en Ah chawp de hwood for seekty-five cent a cord (dat was too cheaps, an' Ah do' know what poor mans goin' comin' to), dar was gre' deal of leetly bird, cheekledee an' cardy bird an' hwoodpeckit, come all raoun' me every day.

He was all of it veree shoobly an' he kan o' was be some company of me w'en Ah was all lone on de hwood, mebbly not see somebodee all day, 'cep' dog barkin' 'way off or probly man hollerin' way off.

But w'en mans goin' for makesome colleck, he ant gat no deeff'ence haow moch bird was be shocible, honly it was more easier for mek colleck an' be some science.

Nex' morny, w'en Ah 'll go on de hwood, same tam Ah 'll took mah haxe, mah pail provishin dat was veree comfortably wheder you goin' chawp or mek some colleck, Ah 'll took mah gawn (Ah 'll goin' tole you hees name of it w'en you tole me de bes' kan for call it. N. B., not a bean, M'sieu Mumpsin say dat letters meant—dat was privately).

Ah 'll ant mos' more as gat to mah chawpin' 'fore more as feefy, probly forty chickledee come all raoun' of me, some close of mah head, some on top limb of it, some hangin' on it wid hees back bottom up, an' all of it seeng-in' 'Chio-le-dee-dee, same he was glad for see me.

An' dey was four, fave, ten. Ah guess, cardy bird

come, walkin' hees tail top en' of it, daown tree an' say *Kyank-yank-yank* through hees nose of it jus' lak dey was leetly Yankee, tol' me "good mornin'."

But Ah' can't help it, Ah' 'll was be work for science to-day.

So Ah' 'll scratler lot of crumb bread an' fat meat Ah' can' heat, for dat bird sem Ah' done before Ah' was a science colleck, an' it ant be great many while 'fore lot of it come for heat hees deenay jus' sem as hees usual.

Den was de tam for some colleck.

Ah' 'll pant mah kan o' gawn raght on de long of de row, an' "Poong!" Ah' 'll swept mos' all of it. What Ah' 'll ant swept ant mos' on'stan' what was be mean, dey ant know of de science man biffore, an' tink it was acciden' probly. An' 'fore Ah' 'll gat load mah gawn, he 'll come back for hees deenay.

Den Ah' 'll shot gin an' keel mos' all of it.

What Ah' 'll ant keel was beegin for fan' aout Ah' was science, an' he 'll all flewed away an' de hwood be all steel, no nowse of some bird nowhere 'cep' beeg black hwoodpeckit chawp mos' loud Ah' do, way off, and holler "Keyak! keyak!" but he 'll ant come for de-vote heesef for science.

Den Ah' 'll beegin for peek up mah colleck an' Ah' 'll gat mah pail full of it, full, full up.

Den Ah' 'll beegin for chawp, an' mek it all de nowse, "Pluck! pluck!" an' de chip flew lak flock of bird, till de tree beegin for tumble, an' squeal, an' groaned, an' "sweesh—whoom!" down he come.

Dey ant no bird come for be company of me, 'cep' blue-jay stan' off on tree an' scol' worse as mah mudder-law, an' be jus' baout so good company. It ant no fun for me visit mah mudder-law when he 'll come see mah fam'ly, an' Ah' ant never go see it for invite, 'cep' w'en mah fam'ly goin' growed leetly bigger evree year.

W'en Ah' 'll chawp all day an' pile meh cord so Ah' won't cheat mahsef, an' dey ant no chickledee an' cardy bird visit me same he 'll used to, Ah' beegin for feel kan' o' lonesick, mos' w'en Ah' 'll buil' fires and seet daown for heat mah deenay for not have any of it come for heat 'long to me. Mos' all dead, de res' of it 'fraid.

Den Ah' beegin for feel what mans has got for suffer w'en he deevote heesef of science.

Ah' 'll mos' wish Ah' 'll ant deevote, but Ah' 'll stiff mah top lip, an' Ah' 'll swell mah breas' for t'ink Ah' was professor horn jollity.

Fore Ah' 'll gat mah deenay choke in me, dey was four fave chickledee ant been dar' fore, come for see me, but Ah' 'll ant feel 'f Ah' want shot it.

Wal, sah, naow Ah' 'll mek all dat colleck, Ah' 'll ant know what for do wid it.

Ah' can' stuff it up, Ursule say he can' stuff it up. 'F he was some turkey or some goose, he'll know haow stuff it up wid onion an' crumb bread so he mek water in you maouth for smell it.

Ah' 'll tried for skin him, but he look more as if cat heat it as anyting.

'F Ah' can hexchange all mah pailful specimans, jus' in de meat, Ah' b'lieve dey call'd it, wid some oder pro-fessy, for qua'ter dollar, Ah' 'll was willin'.

'F Ah' 'll can do dat, Ah' 'll ant b'lieve bird in han' was wors' two in bush, as Ah' 'll hear it say. Ah' 'll radder had all dat bird in de bush as handle twice of it.

Ah' 'll radder colleck some moosarat, me, dat Ah' can stuff wid steek or mud-turkey, dat Ah' can stuff where Ah' know.

You' frien', ANTOINE BISSETTE.

SCRIPPOS—Ah' wish you tol' dat Louis Frenchman what gat hees haoum eat up of wolfs, haow Ah' was do w'en Ah' leeve in Can'da. Ah' guess he be glad for save it so.

Ah' 'll goin' tol' you.

Ah' 'll rub mah dog wid red pepper, sometam, an' w'en wolfs gat hol' of it he sneeze heesef loose raght off an' den sneeze heesef to death mos'. Nex' tam he see mah dog, he ant want tase of it.

One tam Ah' 'll tie skin of hell hog on mah dog, an' w'en wolfs took fus' bite dat was 'nough. It was very satisfy kan' o' meat, de meat of dog, dress wid sauce piquant de hell hog.

Ah' wish Ah' could visit of dat Louis. Ah' pre-sume Ah' can' on'stan' heem verree well w'en he try for talk Angleesh, 'cause dey ant be many Frenchmans can ever learn for spik it so preffek as Ah' was; but Ah' 'll ant freegit mah natif languaish, an' probly Ah' can tol' heems sometings.

Ah' been leeve in de Unity State more as forty year, Ah' 'll know godd deal w'en Ah' come in it, an' Ah' been learn sometings everee year sin' Ah' 'll come.

Ant it probly Ah' can' tol' sometings, hein? A. B.

ANGOSTURA.—II.

MORNING dawned cloudy and moist, much to our satisfaction. We were almost half way down from the rare, cool air of the tableland to the tropical coast, and had been dreading the hot sun. But the cold snap along the Gulf had condensed oceans of moist air, and the gray, foggy clouds came tumbling in unbroken procession over the hills.

The house, like nearly all the Mexican structures, is built around a court, this one being some 40yds. square. Along the front, which is eastward, runs a broad corridor, upon which we stepped out, hunter like, to look at the weather. We were called in by a servant to our morning coffee, where we were met by Don Luis. He is a rather slender young man with a bright, frank look that wins one's regard at once. With a manner much simpler than is usual for a Mexican he cordially informed us that we were in "our house," and must feel and act accordingly. We saw no reason afterward to think that he meant any less than he said. The conversation naturally drifted to the subject of game, and we heard enough to make our nerves tingle. Plenty of deer, turkey, sandhill cranes, coyotes, and an occasional lion (panther, of course), while as for ducks and quail, why, the woods were full of them.

Breakfast over, it was decided to give the ducks the first round. While the Doctor and I were quietly investigating among the servants, clerk, mayor domo, etc., of whom a number had assembled about the corridor and in front of the steps, as to where were the best places, how far it was, and such other particulars, the coach came rolling around to the door. Duck hunting in a coach! We consented, though with some fear of being demoralized. Mr. C. had no shotgun, and Don Luis, though he had a magnificent Manton muzzleloader, is a devotee of the rifle. Of these he has quite a collection, a fine Ballard target, .32-40 a Wesson .22, a half-dozen Winches-

ters, one of them sighted for his personal use, and Winchester and Remington carbines enough to arm quite a little troop of men if necessary, as it has sometimes been.

Giving his Winchester to Mr. C. (he must figure as Don Ramon hereafter) we were in and bowling down the slope to the ducking ground. A little stream coming from higher grounds is divided up as it crosses the fields into various irrigating ditches. These make their way through a brushy flat between the upper and lower fields. In these flats they spread out into a series of little lakes and ponds, flanked with good brush cover and full of vegetable foods. These were almost covered with ducks of various kinds. They were not used to shotguns, and when we opened up on them they flew around in a sort of dazed way, while we just gave our Mexican friends a little show of what kind of a combination a "gringo" and a breechloading shotgun is. It was fun to see the ducks tumble, but more to see the satisfaction of our host. As we had neither boat, boots, nor dog, I was wondering how we were going to secure those of our victims that were in the water, when I saw one of the three or four men who had followed us on horseback ride his pony into the shallow water after the game. The pony pointed dead quite well, but a wing-tipped baldpate rattled him a good deal. Well, "there are more ways of killing a dog, etc." Come to Mexico to see odd things. But who ever thought of hunting ducks with a man on a pony for a retriever? The Mexican rule for hunting, as for most things, is never do anything that your man can do for you. The abundance and cheapness of human labor here is a thing that is a constant wonder to a Northerner. After we had about emptied our shell pockets, and had covered the floor of the coach with an assortment of baldpates, shovellers, teal—greenwing and cinnamon—sprig-tails and a redhead or two, the rest took the hint and left. It being some time till noon, we got into the carriage for a drive down into the cypress and cedar grove. On our way our host showed us a lovely little waterfall, where the clear and beautiful water plunges to a level some 20ft. lower. He spoke of fish, and as I did not recognize the Indian word he gave me to indicate the kind, my mind peopled the foaming pool with gamy trout or fierce black bass (I knew, on the authority of FOREST AND STREAM that there are no trout in Mexico), but it was hard to look into the clear water and believe it. Imagine my astonishment, not to say disgust, to find later that the water is barely fit to drink and the only fish it contains is the mud cat! As a Mexican would say, *Que barbaridad!*

Ah, but that *sabinal* (cypress grove)! We plunged into an old woods road, where the white cedar boughs swept our coach windows, and the great cypress locked arms high overhead, *testudine facto* against the weapons of old Sol. I had hardly seen a decent tree since I summered among the grand pines of El Dorado county, California. The soul of the woodsman born rose up within me. It was not vainly said,

"The groves were God's first temples."

Leaving the coach we took our guns for a little tramp, warned to be on the lookout for either deer or turkey. We saw neither, but abundant indications of both. But we had a glorious walk. Each had a guide, as it is easy to lose oneself in the thick wood. I managed to get away from mine, though. Lose me in such a place as that? Not much. Next day a horseback party, visiting the place to see a wonderful double-trunk tree, saw a magnificent flock of turkeys just where we left our carriage, but had no guns adequate for the occasion. That tree was a good deal of a curiosity. The two trunks were perfectly united by a cross-piece at the height of about thirty feet, though some fifteen feet apart at the ground. It was a very old cypress, and had been recently burned and killed. Don Luis gave a queer account of the burning. A peon found wild bees in the hollow, and in climbing for the honey fell and was killed. His family in childish resentment, and thinking there was something diabolical in such a tree anyhow, set fire to it.

At dinner Don Luis apologized for what he considered slender fare by saying that his cook was away on a visit and that he had ordered a calf butchered, but that the hacienda *padre* had interfered as it was Lent. Of course we were all sure that there would be no lack of meat, and there wasn't. But it was mostly meat of that same calf, for a little extra pressure overruled the dignity of the church.

In the afternoon we went after deer. At a certain place they were in the habit of coming down from the hills into the green barley. There were plenty of tracks around.

The Doctor stationed himself to watch, while Don Luis and I finding that we agreed in considering that sort of hunting irksome, started on a tramp. He is the first Mexican gentleman I have found who will take his rifle in hand and "foot it" after game. He is a capital shot, too. President Diaz is said to be a famous walker. The customary style here, however, is to wait for men to drive the deer by a stand. I stretched my legs over some 7 or 8 miles of good honest mountain walking, but saw nothing but a skunk, which I shot out of spite and to hear my gun crack. One deer was seen by Don Luis and I heard one on my return after dark.

Don Luis was our driver, and going across the ditches of the field one of our horses balked. The man who can handle a balky horse, after dark, when he is hungry and there is no road, and keep his temper, deserves a little extra attention. This he succeeded in doing, so far as we could see. (There are not many "cuss words" in Spanish, however.) Our outrider hooked his ever-present rope around the coach tongue and with his wiry little black pony "yanked" us out of the ditch, and then we went booming home.

This is enough this time. Besides, FOREST AND STREAM has just come, and who could expect one to sit here spinning my yarn with it right under my nose? AZTEC.

Antelope and Deer of America. By J. D. Caton. Price \$2.50. *Wing and Glass Ball Shooting with the Rifle.* By W. C. Bliss. Price 50 cents. *Rifle, Rod and Gun in California.* By T. S. Van Dyke. Price \$1.50. *Shore Birds.* Price 15 cents. *Woodcraft.* By "Nessmuk." Price \$1. *Trajectories of Hunting Rifles.* Price 50 cents. *Wild Fowl Shooting;* see advertisement.

FOREST AND STREAM, Box 2,833, N. Y. city, has descriptive illustrated circulars of W. B. Leonard's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

Natural History.

A CURIOUS GROUSE DRUMMING.

SCHENECTADY, N. Y.—On one occasion while out shooting in Clifton Park I fired at a grouse, which fell to the ground and fluttered over it for some distance, but before I could reach him the bird rose again, and flying high, disappeared over the tops of the trees in the woods. Pursuing, I looked the ground well over, but was unable to find him. It so happened that two or three days after this occurrence I was again on the same ground, and remembering the wounded grouse, went in search of him. I had not gone far, when I heard a grouse drum; and moving cautiously, I finally got behind an old moss-covered stonefall that ran through the woods. I had often, when out hunting, heard grouse drum, but had never seen one perform the act; and I was very desirous to do so. After a while he drummed again, and I moved along the fence nearer, having by this time got his bearings. Upon looking over the wall I saw the bird standing on what I supposed to be a stone about five or six inches in height. After he had drummed he pecked at the supposed stone, and then bobbed his head and tail up alternately, the latter being spread out. Then he jumped off the object and walked in a wide circle around it, after the manner of the turkey cock, with wings lowered. After an interval he got on the stone again and drummed and performed as before. About this time something alarmed the drummer and he disappeared into the covert.

Upon going to the spot where he had drummed I was astonished to find what I supposed a stone to be a dead male grouse. Upon it the drummer had stood and drummed, and about it he had paraded as described. The dead bird had one shot only through his head. It was the same I had shot a couple of days before, which had flown here and fallen dead.

I have read that the drumming of the ruffed grouse is a demonstration of love and courtship, but from this incident I conclude it is also either one of rivalry and triumph, or sounding a knell or requiem of a departed mate or friend. DORR.

A NEW BIOLOGICAL LABORATORY.

THE Brooklyn Institute Laboratory of Biological Research, located at Cold Spring Harbor, Long Island, announces its first season to open July 7 and continue eight weeks. This promises to become one of the most effective organizations of its kind, springing into existence, as it does, with a strong board of managers, presided over by Mr. E. G. Blackford, a staff of lecturers of more than national reputation, a location scarcely surpassed on the coast, and the free use of the fine buildings and grounds of the New York Fish Commission. There will be a bountiful supply of pure water from the Cold Springs and salt water will be pumped from the harbor into a stone reservoir from which it flows into the laboratory. All the apparatus and appliances for general biological work are provided, and boats, nets, dredges, a steam launch, and other means of collecting are at hand. The main laboratory room is 36ft. wide, 65ft. long, and amply lighted.

Dr. Bashford Dean is the director of the station, and Prof. Franklin W. Hooper, secretary of the Brooklyn Institute, will answer applications for admission as students. The course of biology includes instruction in the use of the microscope, photography and photomicrography, and field work. The tuition fee is \$24, and the cost of board and room will be from \$8 to \$10 per week.

There is a great field for institutions of this kind, and we wish they might be greatly increased in numbers. The amount of knowledge we have of the life histories of most of our common marine animals is pitifully small. It is noteworthy in the case of the fishes that until a species becomes the subject of fishcultural operations scarcely anything is known of it except its scientific name, its relationships, and, perhaps, the limits of its range. The laboratory of the Brooklyn Institute, originating under most favorable auspices and exhibiting exceptional strength, will doubtless achieve eminent success.

IN THE SONORA COUNTRY.

BARRANCA, Sonora, Mexico.—The Yasui Indians we have here in Sonora are a fine race of savages as savages go; they are tall, stout, and the fact that the Mexican Government has been trying to conquer them for the past hundred years and has always failed proves them good fighters above the average. Uncle Sam tries to keep his wards temperate, but there are no restrictions here, and a Yasui loves his muscal and buys it whenever he can get money. The squaws and bucks get drunk together on a perfect equality, and stay drunk until the money is all gone. Muscal is distilled from the root of the alooe; and if well made is equal to whisky. It is generally written "fiery mescal," but if well made is not at all fiery.

The poor Mexican here is several grades above the Indian, but he cares not for luxuries nor fine furniture; a hovel, with dirt floor and roof that never keeps out water, is good enough. One room is all he wants; and the pig, the burro and the chickens share that, making themselves familiar and poking their noses into any water or food that the room may contain. No chair, bedstead nor table graces the room; and beans and tortillas with a little jerked beef are all they have to eat. That is satisfactory if a man buys it himself, but if you hire him, including his grub, he becomes very fastidious in short order, and wants coffee, sugar and everything good.

Game is not abundant here, but there are plenty of jack rabbits, a few quail, a few doves, and some small deer in the hills close by. Hunting is unpleasant because of the thorny brush and cactus of all sorts and kinds, that compel one to go very carefully. A bird dog is of no use.

Last night while four of us were sitting around a card table, a large tarantula in the clutch of a tarantula hawk fell in the center of the table, and had a great battle, the hawk finally killing his antagonist. That is one of the beauties of the country, having a tarantula, scorpion or centipede drop on to you from the roof or crawl into your blankets. There are lots of other equally beautiful things in this country, but I haven't time to enumerate, so *audios!* ONEUNG.

THE ALBATROSS AT HOME.

THE poet Coleridge declared he had good authority in old Shewlocke's voyages for all the natural details of his masterpiece "The Ancient Mariner," and that only the supernatural features were fanciful. I am inclined to think, however, that he indulged a poet's license, or else that his authority misled him, when he placed his immortal albatross amid the frozen terrors of the Antarctic pole.

The ice was here, the ice was there,
The ice was all around;
It cracked and growled, and roared and howled,
Like noises in a swound!
At length did cross an albatross,
Through the fog it came;
As if it had been a Christian soul,
We hailed it in God's name.

Coleridge's albatross, in fact, had several peculiar habits which ordinary albatrosses, according to my observation, at least, do not possess. For instance:

In mist or cloud, on mast or shroud,
It perched for vespers nine;
While all the night, through fog smoke white,
Glimmered the white moonshine.

There are two palpable blunders in this stanza. The albatross cannot possibly perch on mast or shroud or anything else. It is not a perching bird at all but is so awkward and ungainly on its great, flat, webbed feet that it can scarcely maintain its footing on a ship's deck. The integument of the feet is so tender, too, that it is very quickly injured by contact with the planking, and when an albatross is caught with hook and line, it is necessary to lay down a table cloth or some other soft material for the bird to stand on if the feet are to be preserved, as they often are, for making tobacco pouches. Secondly, the albatross has no nocturnal habits, but when night falls it quits the ship which it has followed all day, and vanishes into the mystery of darkness and distance that shrouds the face of the deep in southern latitudes. Sailors have a belief, which they fondly cherish, as they do many other improbable or impossible theories, that the albatross sleeps upon the wing. That, however, is a mere delusion. I have spent many a moonlight night on deck in the South Sea, and have always been a very close observer of the birds; but I never saw any albatrosses about much after sundown. Where they do sleep cannot readily be explained, for they are often seen in great numbers around a ship toward sundown, at an immense distance from any land and where the water is too rough for them to rest upon it. Strange as it may seem, albatrosses are easily drowned. I have many times seen them brought on board after a long pull in a rough sea, actually at the point of death from drowning, and they are then easily killed without ruffling their plumage, by a slight pressure from the knee on their breast. Sometimes they have strength enough left to vomit a huge volume of salt water and oil, which, running all over the clean deck, leaves it stained and greasy for a long time; and then they may recover their breath and give their captors a severe struggle; but if not, they are quickly disposed of, and they sometimes die right out, of their own accord. So, they cannot stand the spray, if they alight on the water in a rough sea, but they either keep on the lee of the waves or else take to flight again as speedily as possible, and remain on the wing for hours and hours together. I think their ordinary habit must be to seek for some island or rock every night; for they fly at such a marvellous pace that the fact of their being several degrees away from any land a little before sundown need not prevent their reaching an asylum at an early hour in the evening. A bird which can calmly soar round and round a steamer running fifteen knots an hour, with scarcely a perceptible movement of its wings, would not be much put out by having to fly home to bed two or three hundred miles.

In calm weather and warm latitudes albatrosses certainly sleep on the water, not from necessity but from choice. I have often been up at sunrise, within sight of land, and seen vast flocks of sea birds fast asleep on the motionless surface of the ocean, with their heads tucked under their wings, and among them were numbers of albatrosses, distinguishable by their great size and snowy plumage.

If, therefore, Coleridge was wrong about the albatross perching and about its being a regular attendant at vespers, he may also have been wrong about its frequenting the frozen regions. I was once as far south as 62°, quite among the ice for weeks together in the summer time, but we lost the albatrosses before we saw any ice, and though we were always on the lookout for natural objects of interest, we saw them no more until we were again in clear water.

And a good south wind sprung up behind;
The albatross did follow,
And every day, for food or play,
Came to the mariner's holla!

The home of the albatross, in short, is not at the antarctic, but considerably to the north of it. All the albatrosses in existence probably come from a very small area comprised in two or three isolated groups of islands or rocks, the chief of which are the Antipodes Islands, the Crozets and Tristan D'Acunha. A British ship, called the Strathmore, was wrecked some years ago at the Crozets, and a large number of her passengers and crew lived for many months on those desolate islands. They ate albatross flesh and albatross eggs; they dressed in albatross skins, and they slept on albatross feathers. Whether they would have eventually learned to fly and swim like albatrosses was not proven, but when they were rescued they looked very much like albatrosses, and as for the smell—well!

But the place to see albatrosses in the greatest numbers and under the most favorable conditions, is at the Antipodes Islands. This remote group, which is one of many uninhabited scraps of land far out in the ocean that are included in the political boundaries of New Zealand, is called Antipodes because it is almost exactly antipodal to London. It is as nearly as may be 180° east or west of London, and it is as far south of the equator as London is north of the equator. When it is noon in London it is midnight at the Antipodes Islands, and vice versa. The longest day in London is the shortest day at the Antipodes Islands, and when it is midwinter there it is midsummer in London. To complete the coincidence, the area of the Antipodes Islands is pretty much the same as

that of London. The population, moreover, is as dense in one place as in the other, though of a very different character. If there are five millions of human beings in the modern Babylon, there must surely be five millions of seals, penguins and albatrosses in the Antipodes Islands.

The New Zealand Government have a humane and sensible practice of maintaining depots of provisions, blankets, matches and other necessities, on all the outlying islands of the colony where there is a possibility of shipwreck occurring and castaways needing supplies; and once or twice a year they send a steam yacht, or lighthouse tender, the Stella, to visit these lonely spots for the purpose of rescuing any poor wretches who may be sojourning there, and of inspecting or renewing the depots. Many lives have been saved by this means, and even where there is no such sensational romance of the sea, a trip in the Stella is one of the most agreeable and interesting that could be imagined. Starting from Bluff Harbor, the southernmost part of the Middle Island, the Antipodes are nearly eleven degrees to the eastward, about five days' steady steaming, with a short stop at one or two intervening islets. The first appearance of the Antipodes is very pleasing—and very deceptive. The land rises boldly from the ocean to a height of 400 or 500 ft. and gives the impression of being covered with bright green turf, while in parts there seem to be chalk cliffs or snow drifts.

As the yacht approaches the islands, however, and cautiously feels her way among the reefs that lie off the only landing place, they are seen to consist entirely of rocks very rugged at the top, but cut into terraces and smoothed on the surface lower down by the wash of the ocean during no one knows how many ages. The islands are undoubtedly volcanic in their origin and have evidently been uplifted from the sea by a succession of earthquakes or other causes in comparatively recent times. Thus the terraces which were formerly awash are now high above the surf, though in stormy weather the spray still dashes over them. The green appearance is given not by turf, but by long, dark marine grasses and thick mats of seaweed, while the white patches on the cliffs are caused by the droppings of innumerable sea fowl during many centuries. The higher rocks, which tower precipitously above the terraces, are honeycombed with caves and holes made in the first instance no doubt by the bubbling and cracking of the liquid lava and scoria when the islands were upheaved by some tremendous eruption from the bottom of the sea, but since hollowed out and rounded and smoothed by the countless myriads of birds which crowd them like the inmates of an east-side tenement house.

The moment you step ashore on the Antipodes and climb up on the terraces, you discover that there is not a dry spot below the rocky cliffs, but that the whole area is slippery and sloppy, with clear pools at every step, and water dripping or flowing in all directions. It rains there more than half the year, and when it is not raining the moisture from the surf keeps the place in a constant state of sop. This just suits the creatures that congregate there. The seals think it a perfect paradise. Hundreds of them are to be seen flopping awkwardly about on the rocks, or lying in heaps on the terraces, basking in the sun, while among them, and perfectly indifferent to their presence, are thousands of albatrosses and penguins of all sizes and ages, occupying every available standing place, or sitting on their eggs among the sea weeds, or gravely paddling in the shallow pools. The rocks above are simply alive with seagulls, petrels and cormorants; but the albatrosses and penguins alone appear to share the terraces or sloping hillsides with the seals.

The wandering albatross, *Diomedea exulans*, so called by Linnaeus in fanciful allusion to the lost sailors of Diomedes, is the largest of all sea fowl and, indeed, one of the largest birds in the world. It often measures 4 feet from beak to tail, and specimens have been obtained measuring 17 feet across the wings. I have myself seen many measuring 14 feet across, but a more usual measurement is about 12 feet. Any one who has only seen the albatross soaring in the air with its vast pinions outstretched like the sails of a windmill, or resting gracefully on the surface of the sea, is disappointed by the first sight of the bird on land. It looks curiously short and stumpy, rather suggestive of a very fat goose, and its enormous beak, with a great sharp hook on the end of the upper mandible, seems out of all proportion to the rest of the bird. It recalls ludicrously the figure of the dodo, the extinct, gigantic bird of Mauritius. The stupendous wings, in fact, are so closely folded against the body that while they give the albatross a bulky appearance, they altogether belie its real character as a bird of unequalled power of flight.

The birds and beasts at the Antipodes Islands are so unaccustomed to human beings that they display not the slightest fear nor any other emotion. The albatrosses will even allow themselves to be lifted off the nest with no more decided demonstration than spreading out their great webbed feet or opening their huge gaping beak and reaching round for a bite. If they do get hold of your arm they give you an ugly nip, for the sharp point of the hook at the end of the upper mandible goes through a thick oilskin and coat-sleeve easily. But the birds are by no means vicious and offer little resistance to being bound round the wings and body with rope yarns and carried on board the steamer, where they are placed on wet sails under a netting on the fore deck.

I had often read that the albatross lays only one egg and hatches that out before it lays another, but after seeing it at home I find it hard to believe. The number of eggs on the Antipodes Islands is marvelous, and certainly the birds sit not one, or two, or three, but on dozens. That is to say, they hatch their eggs in common as many other birds are known to do, and I should say there are many more eggs than birds. They are a bluish white, rather rough on the surface and about as large as a swan's egg.

The young albatrosses are most comical little creatures, covered with dusky down, which has a curled or frizzled appearance, not unlike a little negro's wool, only much softer; and their great goggle eyes and huge, wide open beaks, always craving for food, give them a singular look of juvenile voracity and alertness. Numberless attempts have been made to take them half-fledged and rear them in captivity, but they invariably die. Penguins, on the other hand, are easily reared and domesticated, and make very pretty and amusing pets.

The flesh of the albatross, like that of all other sea fowl within my experience, not excepting even the fetid cormorant, is perfectly eatable and wholesome and not at all unpalatable, if only the precaution is observed of skinning the bird the moment it is killed, before the rank oil which lies at the roots of the feathers can permeate the body. It is brown in color and very glutinous, like the knuckle end of a leg of mutton, and it has a peculiar flavor like that of a larded chicken, that is to say it has a dash of bacon. The eggs are very rich and strong, not very pleasant to eat, till you get used to them, but unsurpassed for cookery or omelettes. The long, slender wing bones make excellent pipe stems, for which they are commonly used in the colonies, and even in England. They "color" dark brown or black, and polish just as well as the meerscham bowl itself.

The most valuable part of the albatross, however, is its plumage. The neck, breast and belly are snow white, shading delicately into gray and dusky brown at the sides and back, and the feathers are so curled and elastic that the skin with the plumage on it, is an inch or an inch and a half thick. No finer material can be got for muffs, cuffs, collarettes, capes or the trimming or lining of cloaks and robes. It is very light, yet exceedingly warm, while for appearance its dove-like smoothness and purity cannot be excelled. It has the advantage too, of being very durable, the natural oil of the bird preserving the skin and feathers for many years, while the characteristic musky odor is easily overcome by camphor. It is a wonder that some enterprising furrier or modiste does not set the fashion of wearing albatross plumage and send to Antipodes or the Crozets for a season's supply. There would be money in it, not only by its novelty but by its usefulness. At the same time, I hope it will not be done, because if once the skin of the albatross acquired a commercial value and the ruthless hand of fashion were laid on its smooth white neck, the poor bird would soon be driven from its secluded haunts and might even be in danger of extermination.

May the day be far distant when the trader shall invade the home of the albatross or the pot-hunter disturb its ancient, solitary reign. EDWARD WAKEFIELD.

SOME ENEMIES OF GAME.

THE wastes of nature, as they may be justly called, are enormous. Myriads of living things seem to be brought into life for the sole purpose of becoming the prey of useless vermin, and more perish in embryo. This is especially true of game, both fish and birds.

A correspondent (page 237) mentions the otter, and desires some information about its habits. About thirty years ago, when in the Lake Superior region, otters were abundant and hundreds were trapped for the fur—then very valuable—in the numerous streams, which abounded with speckled trout. The otter feeds largely on fish, which he takes as they lie in the deep pools. I had an opportunity once of witnessing his manner of feeding. I was watching a shoal of trout at the bottom of a steep rock on the bank of a river through the clear water, when an otter floated down the stream along the bottom until he reached the fish, when he seized one and swam to the bank, up which he crawled, and then devoured his prey. I was perfectly still, and he evidently missed seeing or noticing me. He then quietly sunk down along the bank above the rock, and repeated his performance, after which he disappeared in a hole in the bank. The place where he came out of the water was a well-worn path, an "otter slide," as it is called by trappers. I had a man then trapping fur on the Escanaba River, and I sent him to the place, a rock well known to fishermen there as a sure place to get a few fish; and he caught the fellow. Otters feed all day long. It was a little before sundown when I saw this one. One was shot a few days ago in one of my mill ponds here in the afternoon as he was swimming along the bank. This animal destroys more fish than any other enemy.

The mink is another destructive pest to fish, but more so to ducks, while both he and the otter will take frogs. One mink killed forty-two ducks last year on one of my ponds, when I trapped him with the forty-third. There is no better bait for a mink or an otter than a freshly-caught trout. Pheasants and partridges (quail) are killed in great numbers by the wily, cruel mink, which mutilates its prey in an abominable manner, tearing the heads and necks to the bone and leaving them to perish slowly and miserably. It is very destructive to poultry, young and old, as well as to game; but not more so than the sly possum.

The ways of this creature are remarkable. One made a disturbance in my poultry house one night, but on search I found nothing. I closed the small door, however, and in the morning I found the beast curled up in a hen's nest hiding for all he was worth. This animal kills many game birds. Very frequently I find the feathers where a pheasant has been eaten. A trap set there and baited with a dead chicken or a piece of "gamy" meat invariably catches a possum. He will kill and partly devour a grown turkey, while a couple of half-grown ones will disappear from a brood in a night, the feathers and head being left as the possum's card with his compliments. Coons are mischievous in the same way, but in this dense wilderness, where my next neighbor on one side is four miles away in an air line, I have captured a dozen possums for each single coon.

A few weeks ago I planted several thousand eggs of the rainbow trout in a small shallow gravelly-bottomed brook. A mink was seen soon after picking up the eggs, and I succeeded in shooting him while busy at the mischief. What proportion of game animals survives these and other numerous enemies? Counting the prolificacy of the trout in the streams, it was probable that not more than one-tenth of the eggs produce fish, while a still smaller proportion of birds are hatched from the nests and come to maturity.

Last season seventeen nests of the quail (partridge) were found in one of my hayfields of seven or eight acres. These nests were the second brood, for I flushed a covey of very young birds that were sitting around one nest, and had seen several very young birds, like bumble bees in the grass, some weeks previously. Hay is cut late in July or in August here. But for all these nests and young, mature birds are not so plentiful here as I have found them in New Jersey, a dozen miles from New York city. Minks, possums, snakes, hawks, owls, consume vast numbers of the eggs and young birds, while the fish disappear in equal proportion. H. STEWART.

HIGHLANDS, N. C.

GOLDEN PLOVER.—Scranton, Ia., May 10.—The golden plover are just leaving us. They are going north to their breeding grounds. These birds have made an unusually long stay with us, as the first ones were seen about March 25. They have also been much more numerous than usual. Although it has been a very dry season, they are in excellent condition; in fact, the fattest I have ever seen. These birds are generally very wild, especially on cold days. It is only on very warm days that the hunter can have any success among them. Not very many have been killed, as there is as yet not much interest taken in them. A few of the members of our sporting association have made pretty good bags, among others the writer, who bagged 23 in about an hour. Jacksnipe have been very scarce this season, few have been killed. Angling is the order of the day, and several fine strings of black bass have been taken.—E. E. F.

LIVE ANTELOPES FOR PARKS.—Cimarron, Kan., May 4.—*Editor Forest and Stream:* I think I can furnish any one who wants antelope for a park or zoological garden with fawns at \$30 a pair, well-boxed separately and delivered at the express office at this place on or about Oct. 1. I am busy and cannot afford to catch fawns and take care of them four months till they can eat hay, at those figures, but I can find some claim holders that will undertake the job. The postmaster tells me he has received several letters inquiring about fawns and wishing to buy. I can probably procure five or ten pair. I know one boy who is protecting eleven head on his father's claim, six does heavy with fawn, four bucks and one dry doe. He promises to catch the kids and raise them.—W. J. DIXON.

EVENING GROSBEEK IN NEW HAMPSHIRE.—*Editor Forest and Stream:* A handsome evening grosbeak (*Coccothraustes vespertina*) was captured by Mr. T. Edward Bishop in Frances town, N. H., March 27, 1890. The bird was a male, in perfect plumage, and when killed was accompanied by a female, which escaped. Frances town is in Hillsborough county, in the southern part of the State, and some twelve miles north of Milford, where Mr. Melzer secured the first specimen of this species that was reported in the *FOREST AND STREAM* last winter.—W. W. COLBURN (Springfield, Mass., May 10).

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the *FOREST AND STREAM* Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 16, May 30.
POLSOM 10 and 12, Sept. 20.	REMINGTON 12, Dec. 5, Feb. 6.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 26.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 10.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WHITSEY SAFETY 12, March 6.
LEFEVER 12, March 13.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

DUCKING REMINISCENCES.

TWO-NIGHT a little book lies open by my side, the contents of which show the result of many pleasant days spent in the open air. It is my game record book, and this evening I have been running it over, each different page bringing to mind some pleasant, though not invariably successful, expedition. Under date of March 20, 1886, an entry is made which calls to memory an incident in my ducking career which it affords me great pleasure to relate to the many readers of the *FOREST AND STREAM*.

Spring made its appearance very abruptly that year, for one evening about dusk in the early part of March, after a thaw of two or three days' duration, I strolled down to the lake, distant about half a mile and which was yet covered with its icy mantle, to find that a mighty disturbance was taking place. A gentle wind was blowing from the south and the whole ice field was in motion. Already borne on by that resistless power, the ice had been forced back several feet upon the banks, carrying with it heavy layers of sand and earth. The air was filled with a medley of sounds. The creaking and grinding of the oncoming mass mingling with the muffled reverberations from further out in the lake. As I stand watching the awe-inspiring work of nature (not so much in reverential fear, perhaps, as in wonder regarding the probable length of time that would elapse before the ducks would be among us), away up in the now darkened sky I hear that vibrating sound so gladly welcomed by the hunter after the long, eventful winter, viz., the sound of ducks' wings in rapid motion. A heavy mist is falling, despite which I stand there upon the bank in the fast gathering gloom, long enough to count twenty or more flocks of ducks as they wing their way overhead, and as I make my way homeward a mallard crosses the road just ahead of me. I hear him quack, and although my eyes cannot pierce the mist and darkness, that mellow note comes to my ears like a promise to be fulfilled at no future day. From a marshy pond hard by, thickly bordered by hickories, sounds an answer to the call, and with a responsive note there comes a gentle swish followed by vociferous quackings and chucklings as the resting birds welcome the fresh arrival. As I turn in the gate leading to the house, a jacksnipe pitches by, flying low down and ever and anon uttering the derisive little note of his. I enter the house with a quickened pulse and after loading a couple of dozen shells turn in for the night, but not to rest, as phantom ducks besiege my dreams.

The morning of March 20 dawns upon a cloudy and threatening sky. The scudding gray clouds are driven by a strong N.W. wind, and a few flakes of snow come sifting by, but it is just the morning for ducks, and by 9 o'clock a well-muffled party of three might have been seen driving in the direction of Bark River, which was to be the scene of the day's campaign, and which lies some six or seven miles to the southward.

Our party consisted of A. A. E. (better known among the fraternity as "Old Baldy"), L. J. S. and the writer, and as we jog along the muddy roads our eyes are continually gladdened by the sight of numerous flocks of ducks high up in the air. At 10:30 we are unloading our boats on the river bank, or rather where the river bank

should have been, for the melting snows and the heavy rains during the past few days have raised the usually tranquil stream to overflow its banks, and to-day instead of a placid stream coursing its way between narrow banks there is a sea of tossing water in places half a mile wide, out of which protrudes here and there a haystack or a clump of battered willows. As we unload our boats we note a flock of mallards sitting out of shot among the willows, the males with their glossy green heads erect and ever on the alert for danger. Looking closer one could see the dusky forms of the females as they swam about among their more gorgeously colored mates, or paused for a moment to snatch a mouthful as it came drifting by. We launch our boats about a quarter of a mile north of where the Northwestern Railroad track crosses the highway, and leaving word with the man to call for us at dusk, drop down the river, the writer in the advance. Some twenty rods behind him came L. J. S., while still further back the rear is brought up by "Old Baldy." In this order we pass by the first bridge and under the second one, around the timbers and abutments of which the muddy waters eddied and swirled. Huge ice cakes came floating down the stream, only to be broken in pieces as they came in contact with the massive piles under the track. Using great care the bridge is safely passed, although there is scanty room to use the paddle, which has to be dropped and the hands used in place, pushing from one timber to another.

We drop down past the Big Slough and Poplar Point, and as the river broadens out we see numbers of ducks, bluebills, whistlewings, redheads and butterballs, flock after flock. Running the bow of my boat into the bank for a moment I lay down my poling paddle, taking in its place a shorter blade; then with gun balanced across my shell box, I push off. There is a broad bend ahead, and as the point is neared I hug the reed-grown bank closely, for there certainly must be a flock feeding in the shelter of the cove. Cautiously and with scarce a ripple the sharp bow of my boat rounds the point, and there sure enough is a fine flock of bluebills diving and feeding, now submerged under water to appear a moment later with a mouthful from the soft bottom, their glossy black heads and light backs in beautiful contrast glistening with moisture. They are so close that I can plainly distinguish the bright yellow eyes of the males as they sit now motionless upon the surface of the water with necks distended regarding the approaching boat and its occupant with the inquisitiveness which sometimes characterizes this variety of waterfowl. The current bears me onward, and now the paddle is noiselessly dropped and the gun taken up in its place. Just as the flock (their curiosity having changed to fear) springs from the water the 10-gauge deals out death and destruction. Hastily slipping in a couple of fine shot shells I knock over two cripples that are trying to gain the cover of the bank. I hear several reports behind me, and know that the balance of the flock have gone up past the boys. Just here I see coming like a ball down through the center of the channel a male golden-eye. A beautiful bird he is in his full coat of black and white plumage. As he comes opposite a first suspicion of danger crosses his mind and he swerves suddenly to the right, but too late, as my right cuts him down. There is a heavy splash, the yellow feet flap the water spasmodically for a moment, and then he quietly drops down and joins the four dead bluebills below me. These are picked up, and I proceed down stream, frequently getting a shot as some sharp bend in the river is turned. Most of the birds fly up stream toward the boys, and their rapid shots are borne to my ears by the strong wind. Looking across the barren stretch of fire-blackened marsh away up stream half a mile or more, I can see "Old Baldy" tossing out his decoys from a little point, and putting up his blind. Some 40 rods above me L. J. S. is also setting out his fleet, so not wishing to locate too near the others, I pole further down the stream.

Now before me lies a long stretch of the river running in a southerly direction. I have just rounded the point and am wondering where to make a stand, when I see a flock of twenty or more bluebills coming up the stream toward me. Obedient to a turn of the paddle, my boat lies close against the boggy shore, and I crouch low, thinking to get a raking shot as the flock passes. But in this I am doomed to disappointment, for the flock leaves the river channel when within twenty rods of where I am lying, and turning abruptly to the right passes on across the marsh. Close behind them comes a second flock, and yet another, all flying nearly in the same track.

Thinking this a good omen, I hastily drop down the river and set out my decoys a few rods below the point where the preceding flocks had turned off only a minute before. The banks are devoid of cover save for a few straggling wisps of marsh grass, but pulling my boat up on the shore, I prop it up on its edge and scatter an armful of hay taken from a stack conveniently by over the bottom and sides, and my blind is complete. Of course on a calm sunshiny day this sort of cover would not have answered at all, but on this occasion it served the purpose admirably, as the birds were flying low and were not cautious. I am hardly behind my imprudent blind, with shell box open, when the flight begins. Down the river through the mist I see a small bunch of bluebills coming. They are making slow progress against the wind, and do not see the decoys until within a few rods of them. Without an instant's hesitation they sail in and bow their wings over the open space I have left in the center of my flock. Two drop to my shot and the balance of them pass on up stream. During the next half hour there is a brisk flight, and when it slackens I push out and pick up a dozen bluebills and goldeneyes. Several other dead birds were carried away by the drifting ice, which closed in around them before I could get to where they lay.

In the hour following I have time to eat my lunch and load a few shells, as my supply of the latter is running low. Presently the wind veers around into the west, and a drizzling rain begins to fall. Happening to look down the river through the air, heavy with moisture, I see a pair of large ducks beating up wind that cause me to make sure there is no mistake. Now I catch a side view of them, and all doubts are settled. They are canvasbacks, but will they come to my decoys? Alas for human hopes! When within twenty rods of me they leave the river channel and strike the marsh. Straight for the blind of L. J. S. they fly, and every instant I expect to see that worthy raise to salute them. Now they are directly opposite, and it is just at this point that I see

the cause of S.'s silence, for way back out of shot in the stunted and blackened marsh, whither he has gone in search of a dead bird, crouches a familiar figure, which is now making frenzied demonstrations indicative of anger and despair. Onward the coveted pair of birds wing their flight, and are soon out of harm's way, as they do not offer to stop at the stand of our venerable friend on the way up. About 4 o'clock we have one more little flight, and for a few minutes the sky is darkened with birds. Bluebills and goldeneyes, butterballs and mergansers, all in indescribable confusion. First I would have a shot over the decoys, then a bunch carried by the wind would swing in behind me over the marsh. Looking around to follow their motions, birds would drop in and light with the decoys.

This only lasted a few minutes, and as soon as there came a lull as dusk was approaching I picked up my decoys (no light undertaking in the teeth of a driving wind), and making everything as snug as possible in my little boat, now heavily overloaded, I start on my way back up the stream. I find L. J. S. in the act of winding up his last decoy, and together we pole up to the blind of our chaperon, whom we find in readiness to depart. Before us is a long stretch of river and slowly we work up against the current. The fine sleet that has fallen for the last hour is beginning to make itself felt through our clothing. At last we near the railroad bridge, and what follows I feel quite sure the wrinkled and relentless hand of time will never wholly erase from my memory. It is growing dusk, and we are numb from our long struggle up the stream, facing the biting sleet and wind. The strong dark current comes gurgling and rushing along among the timbers and butments of the bridge as we approach it. Fearing a collision with the other boats on the further side, I follow up the east bank in order to pass under above the others. Unmindful of any particular danger I draw near the low lying timbers of the bridge under which the shadows of night have long since fallen. The black rushing current seems to warn me back, as using my utmost strength I force my heavily loaded boat into the vortex. I can hear the exclamations of the "boys" as they are passing under below me where the current is much slower, but have no time to speculate on the subject they are discussing, as my entire attention is required in my own behalf. I am only fairly in the whirlpool when, regardless of my most vigorous strokes, the bow swings around and wedges itself under a projecting brace, and despite my utmost efforts the stern swings around and follows the example set by the bow; a wave ripples in over the undecked side of my frail craft, and a second one, larger than the first, gurgles in after it.

Thinking by lightening my load somewhat I might possibly get out of my embarrassing position without a wetting, I called aloud to the boys in mild and deliberate accents, "Gentlemen I shall need a little help," but at this point an incomer, hitherto unseen, suddenly envelops me, and with a lurch my craft unceremoniously settles under the water, carrying me with it. As the muddy waters, chilled by their contact with the floating ice, close in around me and penetrate my clothing, I draw a shuddering sigh and add, so the story goes, "and — quick, too." I settle to the shoulders in that rushing flood, then grasping the 10-gauge in one hand and a railroad tie with the other I struggle a moment before finding a foothold. Finally I manage to lay my gun across the ties and next to crawl up between, and at last stand there in the dim and uncertain light, dripping from head to foot and with chattering teeth. My first move is to empty the water out of my boots, and while I am doing this my companions are rescuing such of my outfit as did not sink. While they are engaged in this work of mercy, I can hear their smothered bursts of laughter, which, through consideration for my feelings, I presume was not intended for my ears. My boat, lightened of all weight, now drifts out from under the bridge and is hauled up on the bank and turned over.

The boys both suggest going to a neighboring house for a change of clothing, but I say nay, and stepping into my boat I pole across the marsh toward our landing place, distant half a mile or more. The others follow more leisurely, being loaded down with my paraphernalia in addition to their own. About half the distance is gone over, when suddenly I see a bunch of bluebills bearing down upon me. I have just time to drop the paddle and grasp my gun, when they are directly overhead and passing like a whirlwind. Scarce realizing what I will do, chilled through and through as I am, I throw the gun to my shoulder and fire one barrel standing on my feet. The recoil nearly throws me overboard, but recovering myself I look back in time to see two bluebills in the act of striking the water a few rods from my companions. Leaving the retrieving to them, I continue on my way and am soon at the landing place. There the team is waiting for us, and by the time the boys get ashore I have my blood in something like a state of circulation. In a few minutes we are loaded up and on our way home. Ah! but those were long miles; and as the team jogged along the heavy roads I trotted behind the wagon weighted down in my soaking garments, but preferring this to a shivering ride upon the seat. At last the welcome home lights appear, and making a hasty division of our bag of over fifty birds, I bid the boys good night and am soon in the midst of a hot bath. Then comes a light supper, a toast by the fire, and I turn in for the night to get up the following morning none the worse for my little adventure except in pocket, as a large part of my outfit found a watery grave there that night under the old railroad bridge or floated off down the stream with the ice cakes.

GREENHEAD.

THE TEXAS TURKEY RECORD.—Jayton, Kent County, Texas, May 9.—Seeing that "T. J. S.," of Beeville, had killed 3 sandhill cranes and that "H. M. D.," of Piedros Negros, goes him one better with 3 turkeys, I have but to say, that my son, a lad of fourteen years, killed 3 big gobblers at one shot, with an old muzzleloader, but a good gun. They were on the run at the time and were shot within 75 yds. of the house.—J. W. A.

"SPORT."—Minneapolis, Minn.—I recently saw on the cover of a fine catalogue of sportsmen's goods issued by a Chicago house a spirited (?) picture of a dude sportsman in correct regalia, standing in a boat handled by a guide, pumping lead into a swimming deer apparently 20 ft. from the boat. What noble ideas of sport those dealers must have!—W. W. L.

NATIONAL GAME LEGISLATION.

Editor Forest and Stream:

The theory upon which this Government was administered from 1800 to 1860 was that the States should do nothing for the people that the people could do for themselves, and the general Government should do nothing for the States that the States could do for themselves. A year or two ago FOREST AND STREAM urged State legislation to prevent spring duck shooting, in order to save the remnant of that rapidly disappearing game fowl. The writer suggested at the time that Congressional aid should be invoked, and the reply was that Congress could do nothing, lacking constitutional power. I was not convinced, if silenced.

Since that time by study and inquiry I have been still further convinced that the suggestion then made was a good one. Congress has the power to legislate on the subject, and it is the only power that can do so effectually. Concerted action on the part of the States is impracticable, for many reasons. In sections of the country where pot-shooting in spring is carried on, State laws would not be enforced on account of public sentiment. A law of Congress could and would be enforced. Laws embodying the same principle are now on our statute books, and have been affirmed by our highest courts. Such an act as is here asked for would certainly "promote the public good."

Suppose FOREST AND STREAM calls for the opinion of some of our public men. President Harrison is fond of duck shooting, ex-President Cleveland is a genuine sportsman, and ex-Attorney-General Garland is fond of rod and gun; so is Senator Vest, Congressman Bynum, of Indiana, and there are many others.

If spring duck shooting is not soon stopped there will be no fall duck shooting. Something should be done, and that speedily. If not grown weary in the good work, I hope FOREST AND STREAM will take the matter up and agitate it until the desired result is accomplished. Large bodies move slowly. It requires a vast deal to move the great American people, but when once put in motion public sentiment is all powerful. J. P. APPELGATE.

NEW ALBANY, IND.

THE ELUSIVE CARIBOU.

Editor Forest and Stream:

I notice that a correspondent of your paper in describing his caribou hunt speaks of locating the herds of caribou beforehand, and on seeing a caribou at 2 P. M. held his fire for the next day, so as to give his friends a chance. Now, as I know a man who was equally generous, I am prompted to tell my story.

It was perhaps Dec. 10 some eight or nine years ago, and just at dusk, that I struck the shore of Lake Parmacheene and made a bee-line for the light in the window of Camp Caribou. My errand was to make my friend John Danforth a little visit, and if he was agreeable to the idea, take a little turn over around the boundary range of mountains to see what we could see for "hair," and I had come fully prepared.

Soon after leaving the shore of the lake I came to tracks made by animals, which I soon made out to be caribou. There were a great many, and sometimes for rods it would feel to my feet as though I was going through a farmer's barnyard instead of friend John's usually spotless front yard. The tracks reached up to within a half mile of the camp, and I naturally thought that John must have had some fun, and that caribou meat would be in order for supper, which after an all day's hard tramp with rifle and pack did not taste bad in my imagination.

I was soon in the camp shaking hands with Bill Whittemore, glad to see him, but disappointed as could be to learn that John had gone down river three days before for a two weeks' trip. After the first gush of disappointment had passed, I said, "Well, Bill, it can't be helped; and now if you want to cheer me up and make me feel first-rate, you want to slice me off a piece of sirloin, about as large as a horse's upper lip, from the fattest caribou that you've got hung up on the island."

"I hain't got no caribou hung up," said Bill. "The deuce you haven't!" said I. "Ain't they plenty enough or haven't you got firearms enough?" looking from Bill to the corner where stood two Winchester and two Ballard rifles and a double-barrel shotgun.

"Yes," said Bill, "firearms enough and caribou enough. Five of them on the lake here yesterday all day long, but I didn't disturb them. I thought I'd let them hang around till John got back."

"Well, Bill, you are the most considerate man for your employer that I ever heard of; but I guess that if you have no objections we will play that John has come, in the morning, and if there are any caribou hanging around we will see what we can do for them."

Bill had no objection to this plan, so early in the morning I started out with my rifle and a biscuit in my pocket. I soon found where the game had left the lake and taken a zigzag course up the Moose Brook valley, feeding for a while as they went. Soon the tracks drew together, and then in single file they seemed to take a direct line to the east. I followed them till well into the afternoon without coming to a place where they had lain down or stopped to feed, and it was an hour after dark before I got back to camp. Then I related to Bill what I knew about caribou hanging around; and I would advise, if any one wants caribou, to use the old bear hunter's phrase, to "take them when they are around," for they are rovers, liable to start up, either in storm or sunshine, and go for miles without making a halt, and often, like the Indian's otter, they are "here to-day, to-morrow nowhere."

CAMP BEMIS, ME.

F. C. BARKER.

"Cap Lock" writes of the memories suggested by a recent illustration of the caribou in these columns: "My mind reverted back to the day I bagged my last specimen of this noble game from a drove of three. Not as might have been expected was he the leader but the spokesman of this little band. The night preceding had been stormy, snow falling to a depth of twelve inches. The trail was struck fresh and was followed slowly for three hours, when game was sighted at fifty yards, leading off to the right hand, from a moss-covered dry spruce top. A low bleat was given and the pack instantly halted, throwing up their heads as they turned them towards me, with ears erect to catch the sound. Now was the golden opportunity. There they all stood with

glistering white snow for a background. Could artist ask for more in order to take an instantaneous photograph of the group? That picture lasts in memory yet."

CHICAGO AND THE WEST.

CHICAGO, Ill., May 17.—No shooting news now except that of the trap. On the whole the season has been good. Even at the present date the Kankakee and all other northern Indiana streams are very high, and all altogether out of the banks.

Mr. J. W. McCauley, of this city, is lately back from a three months winter trip in the mountains of New Mexico, and has been benefited so much in health by the trip that his friends did not know him. Mr. McCauley killed one black bear and made a very fine collection of birds which he has had mounted, and among which were specimens of the white swan, pelican, night heron, glossy ibis, etc. His parties also killed wildcats and wolves. The Springer (N. M.) Rod and Gun Club has, according to this gentleman, the finest preserves for all kinds of hunting there is on earth. Mr. Charles Springer alone has 47,000 acres under fence. Mr. Robert Steep, of Springer, Mr. William Gibson, of Las Vegas, and many others, seem to linger, in the mind of the Chicago man, as examples of that rare and generous product of nature, the genuine sportsman.

I was talking with Abe Kleinman the other day, and he says that the ducks, especially the mallards, never went south of Illinois all this winter, or at least the bulk of the flight did not. Abe says that this is more often the case than is generally supposed, the birds clinging along the warm and sheltered streams all winter. Knowing something about this Abe has just bought about 200 acres of marsh in the lower part of the State, and will start a little preserve for himself. The ducks stayed in that section about all winter this year.

I was around at Billy Mussey's place the other day and heard of a story there which I commend to ardent talkers on gun topics. It seems that one Mr. Eddie Price frequents Mr. Mussey's resort habitually, and he is habitually unable to hear any one tell a bigger story than he can. On a late occasion the boys were talking about close shooting guns, and among them they had some pretty good gun stories. But after they were all done Eddie remarked:

"Why, that's nothing. Say, I used to have a gun that shot closer'n that. Say, that gun was a muzzleloader, and I only shot an ounce of shot in her. One day I was in my blind, and a mallard drawed in over the decoys, and made me a pretty close shot. I just waited till he got in pretty well over the decoys, an' then I let him have it."

"Well, what of that? Did you get him?"

"No. Lost 'im."

"How'd that happen?"

"Why, you see, that gun shot so close I filled him so blamed full of shot he sunk, and so I didn't get 'im. Some guns shoot almost too close. Say—" E. HOUGH.

METROPOLITAN, Mich.—On May 8, a man came into the office and reported that a bear had been seen four nights in succession at Kirby's camp. He said the bear was a large one and came around every night. Within half an hour I had one of my No. 30 bear traps in a sack and a .45-90 Winchester on my shoulder, and started for the depot. I took the train eight miles down the road; the conductor being promised a quarter bear, kindly stopped the train and let me off in a cedar swamp. Shouldering my trap and gun, I had seven miles to walk on a pole trail to Kirby's camp. Before I got there, considerable of the enthusiasm had oozed out of me and the last drop was lost completely, when on arriving at the camp I was informed by the foreman that the only bear seen was when one night a man had gone to the door and heard something run through the brush, which he thought might be a bear or deer, or some other animal. After making a careful examination of the ground for bear tracks and signs, I decided that there had been none around. However, I selected a suitable place and set the trap, baiting it with some spoiled whitefish which the cook gave me. After a hearty supper the foreman gave me part of his bed. The lights had not been out fifteen minutes before the porcupines made a raid on the camp. Some got on the roof and others gnawed at the door. Then a couple of owls held a long debate in a tree near by. I slept, and woke and listened for the bear several times, and at daylight I was out to look at the trap, which I found just as I had left it the night before. After breakfast I put that trap into the sack again, threw it into the boat which was going up river in a day or two, took my gun and started for home, 15 miles. On the rock I saw eight porcupines, one deer and several partridge. But I was after bear and did not molest them. At 10:30 o'clock I reached home pretty tired and considerably wiser about bear stories. They are not nearly so plenty here this year as last spring. Some ten days ago I bought three cubs (two males and one female) of an Indian, and my children have them for pets. They weigh about 15 or 20 lbs. each. We feed them bread and milk, and in feeding each one must have a separate dish or there is a fight. Otherwise they are quiet, and will play and sleep together all in a bundle.—B. B.

KING DUCK IN THE GREAT LAKES.—Cleveland, O., May 12.—A fine male king duck (*Fuligula spectabilis* Linn.) was brought in yesterday, caught by the gill-nets in 55 ft. of water, twenty miles off shore. Within the last week six more of the long-tailed ducks (*Anas glacialis* Linn.) have been taken in the same manner and locality. The king duck is very rare along the chain of Great Lakes; this is the first specimen ever met with in this locality. May 17.—Day before yesterday seven long-tailed ducks were taken; to-day five more, also a fine specimen of the white-winged scoter. All these birds were taken at the usual depth, about 50 ft. In the case of the first lot of seven birds quite a flock must have been in the vicinity, as they were all taken in the same net over a stretch not exceeding 20 ft. The longtail, or "old wife," is a common bird during the winter along the Sault, Niagara and St. Claire rivers, where the rapid water is generally open. The scoter is rare at this point now, though years ago in their fall migration they and other sea ducks used to pass down the lake in tens of thousands, in flocks so large and well packed as to remind one of their famous resorts along the sea coast.—DR. E. STERLING.

SHORE BIRDS ON THE VIRGINIA COAST.—New York, May 14.—I have your favor of the 6th inst. in answer to mine of an earlier date in reference to woodcock and European widgeon. I beg to advise that I have just returned from a shooting trip to the Accomac Club at Wachapreague Inlet, Virginia, and perhaps it may be of interest to you to know that the curlew snipe are very plentiful there at the present time, also plover, calicobacks and dowitchers. If any of your readers should care to have a few days' good sport, they should go at once to Powellton by the N. Y., Phila. and Norfolk R. R., via Keller, Va. I am a reader and admirer of the FOREST AND STREAM, and I have enjoyed so much the reports of trips from other sporting friends, I thought I might do a little something in the way of reciprocation.—S. W. F.

THE PITTSBURGH QUAIL CASE.—Pittsburgh, Pa., May 16.—*Editor Forest and Stream:* The case of J. W. Hague, game warden of Pennsylvania, vs. Noamie Sassara, alias Noamie Jones, came up for trial in the Court of Quarter Sessions of Allegheny county. Defendant had pleaded "not guilty," but withdrew that plea and pleaded *non condente* to having in her possession twenty-five quail out of season, and was fined \$250 and costs. She had been found with 115 quail, but the warden did not insist upon the full penalty, and she promised to observe the law in the future. The warden's position met with general approval.—X.

WYOMING NON-RESIDENT HUNTING.—Mr. John G. Worth, of Cheyenne, Wyo., sends us a notice of a projected camping and hunting tour, which he contemplates making as a guide for a party of sportsmen from other parts of the country; but Mr. Worth does not inform us as to how he proposes to circumvent the law, which forbids game hunting by non-residents in that Territory. This is a point camp-hunt organizers cannot very well overlook.

AIMING THE GUN.—I am not a professional shooter, but have done a great deal of shooting with a shotgun for the last twenty-five years. It was nearly all wing shooting, mostly duck shooting, and I found I could kill more birds when I was sighting down over the barrels than I could otherwise. I see a great many sportsmen and some fine shots here, and the sportsman that gets the game is looking over his gun barrels for it.—G. M. W.

A CHANCE TO MAKE MONEY.—Mr. Editor: I bought one of Griffiths machines for plating with gold, silver or nickel, and it works to perfection. No sooner did people hear of it than I had more spoons, knives, forks and jewelry than I could plate in a month. The first week I cleared \$31.30, the first month 167.85, and I think by July first I will have \$1000 cash and give my farm considerable attention too. My daughter made \$27.40 cents in four days. Any person can get one of these machines by sending \$3 to W. H. Griffith & Co., Zanesville, O., or can obtain circulars by addressing them. You can learn to use the machine in an hour. As this is my first lucky streak I give my experience, hoping others may be benefited as much as I have been. Yours truly, M. O. MOREHEAD.—Adv.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adv.

Camp-Fire Flickerings.

"That reminds me."

303.

YER talkin' about nateral pictur's, but I reckon the one I once had beat anything you ever sat eyes on, or any one else. But I lost it, and it was the worst slap I ever had, knowin' as I do about the price some pictur's fetch.

In my young days I was mighty fond of hunting, and I would let go the plow tail when my hounds was yelpin' after a fox, and I could set under a hickory tree watchin' fur a squirrel half a day without complainin'. One day I told Sally—that was my wife—that I believed I'd shoulder old Tom and take a hunt. But the only thing I could get was a rabbit, after half a day's tramp. When I got home who should I see but a long-haired, crazy-looking coot of a feller settin' on the grass eatin' what Sally had give him for his dinner. She never turned a beggar away, but I never took any stock in tramps. As I came up he said, "How de do," like a gentleman, and I could tell by his way that he was nobody's fool, if he did look crazy-like.

"That's a fine hare you have," says he, "and it wouldn't make a bad picture. You'd better let me paint a likeness of him."

"You're a pictur' painter, hey?" says I.

"Yes, sir, I am an animal painter."

"Well," says I, "I've got a pictur' of game in the house that I don't reckon any one can beat," and so I went in and brought it out.

"Nonsense, neighbor," says he, "that is very inferior work. If you should see what I can do you will say I am right. Come, now, what will you give me to paint a picture of the hare, so natural that your dogs will bark at it?"

"I aint got nothin' to spend on pictur's," says I.

"Will you give me two dollars?" says he.

"No, I won't give you a dollar."

"Well," says he, "I'll make a bargain with you. I'll paint it, and if it suits you, you can have it for fifty cents. If it don't suit you, I'll keep it."

"I agree."

He had some materials, and at it he went. The way he drawed off that rabbit and slashed on the paint was jest boy's play. He'd pick up a little paint here and a little there off the board he held on his thumb, and almost before I knowed it he had a likeness of that dead rabbit hung up by the heels as true as very natur' itself.

As soon as he got it done I said, "Boss, here's your money." He pocketed it and away he went. After a while Squire Sikes came in. The Squire was a great man for pictur's, and when he sat eyes on it he said, "I declare! where did you get that?"

"Why?" says I.

"Well, sir, that's a wonderful imitation," says he.

"What'll you give me for it, Squire?" says I. H

studied a while—Squire was sharp, he was—and finally said, "I'll give you ten dollars."

Well, I was surprised, for I thought his offer was a big one, but I didn't let on that I thought so, for I knew he was good in a bargain and wouldn't offer more'n it was worth, so I told him I would think about it. After he left Sally and I took supper off the rabbit I had shot, and then sat down and looked at the picture till we got tired a lookin'. She said, laughin', that if it wasn't worth so much she might cook it for breakfast.

Well, I went to bed, and rabbits and dollars danced in my head all night. The first thing in the morning I sat it up and looked at it, and couldn't hardly get off to work. I was a mighty hot day. When I came home at night there was an awful smell in the house.

"What on airth smells so, Sally?" says I.

"I don't know," says she; "I've smelt something all the afternoon, and have hunted high and low. It must be a dead rat somewhere."

"Well," says I, "we've got to find out what it is, fur I won't eat any supper till we do."

So we looked and looked, but it was no use. After a while my wife says, "Maybe something has got behind the pictur', let me see."

So she went to it as it sat on the floor face to the wall, and would you believe me, it was the pictur' of that rabbit that had spiled, and was all fly-blown. But wasn't I sick! I never heard of any pictur' painted so natural as to spile in that way. Now if that painter had painted the rabbit settin' up as if he was alive and not hung him up by the heels as dead as a door nail, you wouldn't see Ben Stokes here with his breeches patched, but walkin' down Broadway with Jay Gould and the Vanderbilts. Talk about your Angelus—pshaw! it can't tech that rabbit pictur' fur nateral appearance.

WEST VIRGINIA.

Sea and River Fishing.

FISHING IN THE HOMOSASSA.

Editor Forest and Stream:

Possibly a few notes by the way in regard to fishing on the Gulf coast of Florida will not be inopportune at this time. If so, I will endeavor to give you a fair idea of what has been done and what is being done at two of the most notable fishing localities in this State, namely, Homosassa River and Sarasota Bay. Although I have cast a line in a good many Florida waters, this has been my first attempt in the waters named, and as both are perhaps less known to the fish-catching fraternity than they deserve to be, a word or two in regard to their special characteristics will not prove uninteresting to the readers of FOREST AND STREAM.

Homosassa was, until reached by railway, so inaccessible that none but ardent anglers ventured there, and of them only a comparative few. The river, which is a short one—being only nine miles in length—has long been noted for the number and variety of its fish products, and notably for the many that take the fly. Dr. Ferber I believe first drew sportsmen's attention to the fact, and who if I remember rightly communicated his knowledge and experience to FOREST AND STREAM several years ago, has furnished me with a full list of the fly-taking fish, or at least those taken by himself with that lure in the Homosassa. The list is as follows: 1, channel bass (spotted bass, redfish); 2, sea trout (*Cynoscion carolinensis*); 3, black bass (large-mouthed); 4, mangrove snapper; 5, golden roach; 6, sunfish; 7, bream (two varieties); 8, needlefish; 9, skipjack; 10, cavalli. In Sarasota Bay, Bowley's Creek and Homosassa River: 11, bluefish; 12, Spanish mackerel; 13, black grouper; 14, razor-back; 15, rovalli. (Dr. Trowbridge, in Bowley's Creek a small tarpon, 14 pounds, on the fly.)

A natural supposition would be that with such a lot of fly-taking fish in the river, the general tendency would be in the direction of that kind of fishing, or that still-fishing would assert its claim to recognition; but, with a few exceptions, such is not the case. A year or two since what is known as the "phantom minnow," a most murderous device for taking fish, was introduced, and since then it appears to have largely superseded all others, with the exception of the spoon or spinner, for which the large-mouthed black bass that abound in some of the tributaries of the Homosassa display a marked preference. Channel bass, sea trout, cavalli and a few others of the less notable varieties, are rarely fished for except with the phantom minnow, a style of angling, if it may be so called, popular with a great many of the visitors, because no great amount of skill is required to make captures. The fish unfortunate enough to make a strike for the phantom minnow must have extraordinary good luck if it succeeds in escaping. I have seen each of the three gangs of hooks fastened in various parts of the body of the same fish, thereby rendering it almost helpless, and its landing made to depend not upon skill, but upon the physical ability of the fisherman and the strength of his tackle. So completely are the fish sometimes fastened that from ten to fifteen minutes are required to release the hooks, and that is frequently possible only by cruelly cutting the captive. The lure referred to has nothing to commend it to the favorable consideration of fishermen save the simple fact that if a fish is inveigled, its capture is next thing to a dead certainty.

The use of this phantom lure of course implies trolling, which, from the peculiarities of the river, must be done by rowing, and unless you have a guide who is familiar with the habits and habitats of the fish to be trolled for, your experience will be as unsatisfactory as was mine when, from necessity, I was compelled to accept the services of a guide who knew little or nothing of the river, or sit on the hotel porch and nurse my wrath. The upshot of that day's fishing was a beggarly account of some half dozen small and inferior fish, while those who were more fortunate in the matter of guides came in with creditable catches. One gentleman on the day preceding took with a trolling spoon eighty-six black bass, which ranged in weight from 4½ lbs. down to 1½ lbs. He made his catch in what is known as Price Creek, a sort of tributary of the Homosassa, a couple of miles in length and varying from fifty to seventy-five yards in width; with a few deep places in which, at times, still-fishing is said to be very fine. That catch was intended to beat any former record, and in that respect was a success. It was made with a steel rod armed with a tarpum reel;

the gentleman effecting it, on being asked how he managed to land so many active fish in so short a time—about five hours—remarked that he "just yanked them in." Up to that time he was the champion in the black bass department. Whether his record was subsequently beaten I have not learned. It was not during my stay. I tried trolling and still-fishing in the same creek three days thereafter, my companion, a lady, succeeding in getting only a single strike, which resulted in the severing of her line and the loss of her spoon. For my part, I was forced to content myself with a single heavy strike, which completely demoralized my phantom minnow.

On that special occasion I could not plead ignorant guidance, for I had for my boatman the most experienced fisherman on the river, and every advantage was taken of his experience. The other boats came in with better showing, but none of an unusual character. It was what was called an "off day," which was in some degree comforting to me.

Better success attended the two other days I devoted to fishing. Our boat came in with a fair share of spoils, though they were all made with the troll. Still-fishing again proving abortive, we took some fine channel bass, a number of good-sized cavalli and sea trout, together with a garfish some 4 or 5 ft. in length, which was captured by my companion. These garfish are ugly things to handle, and as the river literally abounds with them, and they take the troll readily, they are sources of much annoyance.

During our stay of five days only two small sheephead were brought in. Various theories accounting for their remarkable scarcity were offered, but none that were accepted as generally satisfactory. The time was, and not very long since either, when sheephead were the most plentiful fish in the Homosassa, and in point of size out-ranked all others taken in Florida waters. The largest weighed 23 lbs. and others of less, but still unusual weights have been taken there. Of late years, however, sheephead in the Homosassa appear to have diminished in size as well as numbers, though at times they are said to be very plentiful. A long talk with Dr. Ferber, whom I subsequently met at Sarasota, satisfied me that the fish products of that river had materially decreased, a fact which he attributes largely to net-fishing, though I saw none of it. Fifteen years ago the Homosassa literally swarmed with fish. This is attested by the evidence of such true sportsmen as Dr. Ferber, Dr. Trowbridge, Jos. Wilcox, Henry C. Ford and others with whom I have conversed on the subject. There are still a good many fish taken in it, but unless the statements of those who fished it fifteen years ago are exaggerations the numbers of to-day will not compare with those of earlier days.

There have always been and still are tarpum in the Homosassa. A number have been seen this winter, but as far as I could learn none have been captured, though several fishermen have baited and cast for them. A gentleman named Hunt, who took half a dozen cavalli with the fly, tried tarpum fishing, but without success, though he succeeded in taking a 7 ft. alligator with a putrid mud hen.

The most notable catch during our stay, as far as size was concerned, was a channel bass weighing 33 lbs. The captor was a Mr. Hunt, of Brooklyn, who landed it with a light rod in the Gulf near the mouth of the river. He was naturally very proud of his achievement, celebrating it by having the big fish converted into chowder, and inviting all the guests to partake, forgetting that a channel bass of such size would naturally be coarse in flesh and strong withal.

In conclusion, whether the cold weather affected fishing in the Homosassa, or whether their comparative scarcity was due to some other cause not stated, are points I do not feel competent to settle and shall therefore not discuss. I would like to give the fishing there another trial, and with some more sportsmanlike lure than a "phantom minnow."

A. M. S.

SARASOTA, Florida, March 24.

THE COLOR OF TROUT.

I HAVE caught trout from Lake Megantic, in Quebec, to Georgian Bay. I have seen them in every color of water from sky blue to sea brown and coffee color. I have taken them on the swift Megantic, the still swifter Windsor and in the dark brown-colored waters of Red Chalk Lake, one of a group near the Lake of Bays in Muskoka Territory. The first difference in color I ever noted in trout was on Windsor River. There you can hook the goldenflesh, the whiteflesh and the still deeper flesh-colored trout, as rich in color as any salmon. The whiteflesh in that stream is much paler on the surface than the goldenflesh, and the salmon-colored flesh variety is almost a black-brown on the surface. In Windsor River he is small, and in the course of my travels I traced him to a dark stream that comes from an alder bog with springs of cold water that bubble up in many places and find their way into the river. Red Chalk Lake, so called, is one of two; the other is Clear Chalk Lake, and the waters in the latter very much resemble those of Lake Huron. It has no inlet above its surface, and in many places you can see to a depth of 20 to 30 or more feet. Clear Lake has in it speckled trout of the real silver-bellied, golden-meated variety: they weigh from 4 to 2½ lbs., and are capital fighters. It also has a grayling that weighs up to 4 and 5 lbs., and his meat is of the same color, but a little lighter; his back is gray, his belly is like polished silver, and he is the gamiest fish of his inches I ever hooked; the best panfish in my humble opinion that ever came from the hands of a beneficent Providence. He takes a fly with all the vim of a speckled trout. He will take bait, and rises to the troll in a form to gladden the heart of any hungry fisherman. He spawns in May and November; but while this is a true description of these two species of the trout in Clear Lake, it would not apply to Red Chalk Lake at all. Then the color of the grayling is darker outside by many shades and the same inside, while the change of color in the speckled trout is simply wonderful. I have never, so far, caught a silver-belly of either species in this lake, but I have caught dark seal brown speckled trout, and the spots were about the color of carmine, while the meat inside is as red as any salmon.

CLEVELAND, Ohio.

S. S. MCC.

TO SALMON ANGLERS.—T. J. Conroy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—Ad.

PUNTA RASSA TARPON RECORD.

THIS list comprises the fish recorded at the Tarpon House, Punta Rassa, Florida, for the season of 1889 to May 8:

ANGLING NOTES.—Upward of twenty brook trout were recently taken in the Brandywine, Pa., by an angler familiar with the stream. A catch of twenty-nine silver trout was taken at Conshohocken, Pa., by Mr. Charles Vogel about the middle of April. He found them elegant game fish of fine edible qualities. Croppies were seen in small numbers in the Susquehanna and Tide Water canal at Havre de Grace, Md., last year. Now they are more plentiful; specimens 10 in. long are not uncommon, and everybody is delighted with the new fish. How it got into the canal is a pleasant mystery.—GEORGE H. MOORE.

YOUNG SHAD IN RIVERS.—We have recently stated that small shad sometimes enter rivers in the spring and are probably destroyed by fine-meshed seines used for the capture of alewives, from which they are not readily distinguished. In our issue of May 1 we recorded a case of this kind. Now we have learned, through the reports of Mr. S. G. Worth to the Commissioner of Fisheries, that young shad have been observed on three occasions recently at Fort Washington, Maryland, in the Potomac River. A specimen selected for preservation measured only 5 in. in length, yet it was caught in one of the seines of the common pattern.

ANGLERS' ASSOCIATION OF THE ST. LAWRENCE RIVER.—W. H. Thompson, Secretary of the Anglers' Association of the St. Lawrence River, organized a raid on the netters in the river and succeeded in capturing twenty-nine nets, four of which were large trap-nets and one a large seine. Hon. H. H. Warner, President of the Association, loaned his beautiful steam yacht for the occasion.

SILKWORM GUT.

FEW people outside of angling circles seem to know what the gut used by fishing tackle manufacturers to shell hook and flies with, and to make leaders or casting lines of, is really made from. Some believe it to be catgut, while others believe it is taken from the intestines of fish, and many who have given the matter considerable attention have very erroneous ideas on the subject. Even the various works on angling have published articles that are far from correct.

We therefore take pleasure in calling the attention of all those of our readers interested in this subject to the excellent and exhaustive article just published in the last supplement of "Appleton's American Encyclopedia," written by Mr. Chas. F. Imbrie, of the old fishing tackle firm of Abbey & Imbrie. Mr. Imbrie has given the matter careful attention, and having long been identified with the manufacture of silkworm gut, is well able to describe the process from beginning to end. We quote the following extracts from his paper and regret that we have not space to publish the whole article:

"The province of Murcia, Spain, has always enjoyed a practical monopoly of the manufacture of silk-worm gut. Though the industry is small, it has long attracted the attention of silk culturists all over the world. Gut is still made in Sicily; but the quality of the Sicilian product is invariably poor, and as it can therefore compete only with the very lowest grades of the Spanish article, it is hardly possible that there can ever be a profit to the manufacturers. Silk culturists in China, Japan, France, Italy and the United States, have done their best to produce a marketable quality of silk-worm gut; but they have never succeeded, unless the fortuitous manufacture of a few strands of a fair quality can be considered success. In the United States, China and Japan, a long, heavy gut has frequently been made; but in no instance has the strand had the tensile power of much lighter Spanish gut. The numerous and invariable failures to produce a good quality of it outside of Murcia force the conclusion that there are unique conditions favorable to its manufacture there, and insurmountable objects to its manufacture elsewhere.

"When the worms are quite ready to spin, not an hour before or after, they are thrown into a tub half filled with a strong mixture of vinegar and water. This kills them instantly. They are left in this pickle about twelve hours—generally over one night. This gives a consistency to the silk-bags, of which there are two in each worm. The next morning the worms are taken out of pickle and broken in two, cross-wise. The gut sacks are, with a little experience, easily removed. Each of the sacks is taken at either end, while it is soft, and stretched as far as it will go. If the pickle is strong, the gut is to a certain extent shorter and thicker; if it is weak, the gut is longer and thinner. If it is too strong, the gut pulls out crooked and lumpy and cracked; if it is too weak, the gut has not enough consistency to draw out. When the gut is stretched out as far as it will go, it is thrown on the floor, and the extreme ends almost immediately curl up. The gut is covered with a thin filament called carne, or flesh. Toward the end of the day the gut is washed in pure water and hung up where a current of air will pass through and dry it. When it is thoroughly dry the strands are tied in bundles of from 5,000 to 10,000, and in this state it is sold by weight to those who prepare it for the market.

"The quality of gut is determined chiefly by its freshness, color and roundness. The freshness can generally be determined by the fuzzy end. If this is a clean, clear white, and not parched, the gut is probably new. The color of the gut itself should be a pearly white, without the faintest tinge of yellow, and should be very lustrous. The roundness can be determined by the eye and touch. The hank should be slightly twisted toward the sunlight (not any artificial light), and this will generally bring out the "flecks" or flat dead white spots, which reduce the quality. By passing the second finger and thumb up and down a strand, any roughness or flatness will instantly be felt. The rough strands of good gut are never worth more than three-quarters what the round ones are, and are sometimes worth only half. There should not be over 15 per cent. of rough strands, and the gut is unusually good if there are not more than 7 per cent. of rough strands. It is customary for tackle-makers to stain gut before using it. When the gut is stained it should be what is known as "mist color;" that is, it should be the color of clouds (without any rainbow tints). There should not be the faintest tinge of blue or green. Gut appears smaller after it is stained, though it is if anything larger. Before attempting to knot gut it should be soaked in pure water. Thirty minutes should render regular gut pliable, forty minutes will soften padron, maraña should be soaked at least an hour, and double thick maraña not less than three hours. Hebra will require six hours."

CANADIAN SALMON LEASES.

THE following letter, for copy of which we are indebted to Mr. Henry P. Wells, is self-explanatory. Its publication has been delayed, but we put it on record as a part of the history of the case. Mr. M. Duhaud is the Commissioner of Crown Lands for the Province of Quebec; Mr. E. E. Tache the Assistant Commissioner:

QUEBEC, March 21, 1890.—*Henry P. Wells, Esq., New York:* SIR—The Honorable M. Duhaud, C. C. L., directs me to tender you his best thanks for your substantial article "Canadian Fishing Leases," which he has read in the edition of FOREST AND STREAM of the 18th inst. As regards the protest of the Federal Government, the Commissioner authorizes me to say, for the information of all whom it may concern, that the Government of the Province of Quebec hold themselves responsible for the leases of fishing privileges issued by the Commissioner of Crown Lands. Herein inclosed is a copy of the resolutions introduced to the House of Assembly by the Honorable the Prime Minister, in connection with our pro-

vincial inland waters. I have the honor to be, sir, your most obedient servant, E. E. TACHE, Asst. Com. C. L.

The resolutions are as follows: "Resolved, 1. That this House deems it its duty to assert, in the most solemn manner possible, the rights of the Province of Quebec to the fish in the rivers and lakes aforesaid, which right it has, possesses and enjoys in virtue of the British North America Act, of the decision of the Supreme Court in *Regina vs. Robertson* and of the above-mentioned Provincial acts.

"2. That this House hopes that the Executive of the Province will take all constitutional and legal means to resist such encroachment of the Federal authorities upon the rights of the Provinces, and to remove the uneasiness which the Order in Council of the 26th December last and the subsequent proceedings of the Federal authorities might cause to the free and complete enjoyment of such fishing rights."

NEW ENGLAND TROUT AND SALMON.

STILL the trout parties are in order, and it seems as though the interest was never nearly as great. Saturday morning the railway stations were actually thronged with persons bearing fishing rods. At the stations of the Boston and Maine over thirty rod cases were counted at the departure of the 9 A. M. train. On Monday morning there were eleven rod cases at the Eastern Division at the same hour. The fishing parties are numerous, and they are starting every day. But thus far the results have been disappointing. Very high water has been encountered on most of the Maine lakes and streams. At Moosehead the water has been two feet higher than it should have been for several days,

1, Female Moth and Eggs (*Bombyx mori*), produces about 200 eggs. 2, Worm 3 days old. 3, Worm 7 days old. 4, Worm 14 days old. 5, Worm 21 days old. 6, Worm 28 days old. 7, Worm 42 days old, and quite ripe for drawing or spinning. 8, Gut-sack, there being two in each worm.

with the result that very few trout had been taken up to Saturday night. Indeed, some of the sportsmen who were the first to be off when the ice left, have come home in disgust. But others who have started later and who can afford to stay until the waters subside, are pretty sure of good luck. Neither are there any reports of good catches yet from the Rangeley waters. There are many Boston gentlemen absent at these waters, and others will follow this week. It now looks as though the later fishermen will be the more fortunate this year. Cold and rainy weather is not conducive to comfort in the early springtime, neither does it bring trout in abundance. The Stevens camp party, the owners of Campe Vive Vale, at the Narrows, Richardson Lake, will start in a day or two, and from them there will be likely to be reports of good catches. Last year Mr. Shattuck, of that party, landed a 9lb. brook trout.

The reports from the trout streams in this State continue to excite the wonder of everybody. More than double the usual number and weight of trout are being taken this year. Rev. Mr. Jaynes, of Newton, who is a lover of the woods, the stream and the rod, fished the trout streams of the Cape last week with remarkably good luck. He made a score of 30 in one day, with 13lbs. his largest. Even the streams of little Rhode Island are panning out more trout than usual. Mr. E. M. Gillam, commercial editor of the *Boston Advertiser*, and Mr. Fottler, statistical clerk at the Chamber of Commerce, took a trouting trip down to Providence on Saturday. Their point of destination was East Greenwich, where the Saturday before the gentleman who was to guide them had taken 19 trout from one stream. They reached the fishing ground late in the afternoon, in the midst of a scalding sun, and hence their score was poor, though a couple of 1lb. trout were taken among a lot of smaller ones. They consider the trip not a bad one, since they left Boston about noon and were back again before 12 P. M.

Reports from the salmon fishing at Bangor are not encouraging, and it begins to be given up as an off season. Several Boston gentlemen tried the salmon there last week, but without success. Still sportsmen continue to try the pools day after day, and a few salmon are caught. The discussion of this salmon question has led to a novel bet between two enthusiastic salmon fishermen of Bangor. One bets the other that he can land him with an ordinary salmon rod, reel, fly-hook and line. The sportsman to play fish is to swim in the water, with the hook attached to a belt around his body, and in spite of all his swimming the sportsman with the rod in hand is to tire him out and to bring him to the net. The length of the line is to be limited to 100yds. If the swimmer breaks the line or the rod by fair means he wins. If he is drawn to the boat despite his efforts, the handler of the rod wins. The hook is attached to his back by means of the strap, and he is not to touch it with his hands. He is said to be an expert swimmer, while the fisherman is also expert with the rod and reel. The contest is to take place as soon as the water is warm enough, in the river opposite the salmon club house.

SPECIAL.

DINGMAN'S FERRY, Pike Co., Pa., May 17.—Dr. Fulmer and two guests of the High Falls Hotel took seventy-three trout to-day from Dingman's Creek, between Beaver Dam and Fulmer Tannery, most of them measuring from ten inches upward. Our streams here are giving better sport than ever before.

KENTUCKY WATERS.

BEDFORD, Ky., May 2.—*Editor Forest and Stream:* The angling fever would be high here, but for the prevailing cold east wind. There are said to be more fish in the streams this spring than have been known for many years, owing, perhaps, to the mild winter and high waters. The fishing points most noted are Little Kentucky River, Corn Creek and Barebone, emptying into the Ohio in this county. The backwater in the first named extends nearly five miles from the Ohio. Angling is the prevailing mode in these waters, but in the Ohio large seines are used by the market fishermen. Black bass, yellow and blue cat, white perch, calico perch and some salmon are the kinds caught here. All these bite at minnows, and all except the bass and calico perch can be taken with angleworms or dead bait. For black bass, which, next to the salmon, is the best as well as the gamest fish in the list, the early fall season is the best. There have been, however, some fine catches already this spring. There is little said about fish laws here, for the reason that the streams cannot be successfully seined on account of the roughness of bottoms. Some are taken with set-nets and traps in violation of law. A bill is now pending before the Legislature for the better protection of fish and game, having the warden system as a feature. I have not heard it much discussed in the country, but the senator from this county is strongly opposed to it. I doubt whether such a law would be popular or effective, though the desire to better protect game and fish is increasing and would be better promoted than ever before. There is not a gun club in this county, though there are several successful and enthusiastic sportsmen.

TAYLORSVILLE, Ky., May 8.—But for the prevailing cold weather angling would be "all the rage" here now, the water is right and fish are plenty. This town—the county town—lies in the delta between Brashear's Creek and Salt River—the latter running through Spencer county near its center. Both streams afford fine sport. Beech and Crooked creeks also are large enough to harbor the finny tribe. If angling be too slow, an ample catch of blue or channel cat can be had any night by putting out a trot line at evening and "running" it in the morning. The kinds of fish caught are the same as I have mentioned heretofore. The people are becoming more in favor of the execution of the laws for protecting fish and game, and we may reasonably expect better sport in the future. There are a few good shots here who own well-bred dogs and good guns, and the game birds, quail exclusively, are generally thinned out by the end of the season in February. The city sportsman angler can reach this point by rail, get his boats and minnows here, and enjoy the blessings of good hotels, and if one stream be too muddy the other is apt to be right; and it would be hard to find a better place for a few days' angling.

A big fish pond is to be made near this town by a company of gentlemen as an investment. A charter was granted a few weeks ago, and it is proposed to purchase a tract of land which is favorable for the purpose. By erecting a dam a few feet high a pond of several acres can be made, and in a short time we may expect to see the work completed. It is expected to stock the pond with silver perch; and such other kinds as can be successfully raised in these waters. Besides the fish pond a preserve for game will be provided on the same ground. It is thought that when stocked the pond will pay a handsome percentage by charging each person a small price per day for the privilege of angling. It is hardly an experiment, as there are examples of the kind in other parts of the State. Ex-Senator Gilbert is the leading man in the project, and I am satisfied that a little exertion will secure success. There are already some private fish ponds in the county, which produce abundance of fish, especially German carp. Salt River is widely famous as the haven of unsuccessful candidates. To "go up Salt River" is to be defeated.

J. S. M.

ANGLING NOTES.

AN angler just returned from Maine states that there is considerable snow and ice about Moosehead Lake, and the water was entirely too high for good fishing. He had the good luck to kill a 20lbs. salmon at Bangor, but at that point he also had to give up fishing on account of high water. He thinks that between the sawdust and the nets the salmon on Penobscot are having a hard time of it.

From the Restigouche come reports of plenty of ice and snow yet, so that the fishing will be unusually late on that river. A letter just received from St. Stephen states that salmon are now being taken on the fly in the St. Croix River.

Trout fishing on the famous Beaverkill is excellent this spring. It was fairly good last summer, but a letter recently received states that it is better than it has been for the last ten years. The water there is rather high, but if we have no more heavy rains it will be at its best the last of this week.

The black bass anglers are getting ready for May 30; and judging from reports received the sport will be unusually good. The guides at Greenwood Lake and Lake Hopatcong expect a great many visitors on Memorial Day, and they are making preparations for an ample supply of bait and boats.

Old anglers say, "Put not your trust in splicing cuttyhunk or twisted lines of any kind to braided lines. The 'lay' of the twisted line runs down to the leader and is apt to twist it off close to the hook, and large fish have been lost in that way."

THE JAMAICA BAY BILL.—The bill passed by the New York Legislature respecting nets in Jamaica Bay has not been signed by Gov. Hill, and it is said that the Governor does not intend to sign it. A petition is in preparation urging him to give it his approval.

HINTS FOR SALMON ANGLERS.

TO the tyro salmon fisher no better advice can be given than to avoid prejudice and learn something from every guide you have. For instance, you will be almost universally told not to fish when it lightens and thunders. Don't believe it. Take a showery, squally summer day. After the heaviest peals of thunder and flashes of lightning, let the sun come out, cast your fly, and, if it is a good pool, the salmon will rise. If you have any doubt of this, go to the Restigouche Salmon Club and see the record of two fish killed on a July day in the midst of the most violent storm and vivid lightning and heavy thunder. On that day the writer killed two in the same storm about the same time, fifty miles higher up, in the heaviest thunder, lightning and rain, so thick you could not see where to cast.

When you fish a good pool, and the season and water suit and you know the fish are there, and they won't rise day after day, make up your mind it's your fault. Put a guard on at night and watch your pool, and the fish will rise when you try again. No man until he has cast a fly for a quarter of a century will believe what cunning a poacher has. Often the man you employ as guardian even will be in league with the poachers and worry your pool.

Never fish for a salmon so that he will have to rise at the fly in quiet water to take it in swift water. If you will examine all the places where they take the fly, you will find this rule holds. When the fish has been in fresh water a while he becomes lazy, and will not make the exertion to rush at a fly into swift water. He will, if you fish on either side of the swift current, take it the reverse way. If you cast to the right, he will take it on his left, and if you cast to the left, take it on his right. I know of men, Canadians, fishing twenty years, ignorant of this rule so necessary to follow.

PISCATOR.

RANDOM CASTS.

SALT PORK, beans, molasses, bread and tea, as prepared by the lumbermen, is a bill of fare not to be despised where hard tramping is the order of the day. You can travel further and over rougher country than on anything known to the culinary chefs of Delmonico's. Fancy additions to the meal may be necessary to tickle the palate, but they add nothing to the muscle-making and health-giving qualities of these great standbys of the wilderness.

Did you ever feel the peculiar sensation accompanying the first time of sleeping in a bedroom after returning from a trip of six or eight weeks in the woods, where the trees and rocks were nature's furniture? To me it seemed as if I should suffocate for want of air and room. And this only shows how quickly man accustoms himself to circumstances.

In pickerel fishing in New Jersey, where the fresh-water ponds are often within a mile or two of the sea, the salt-water minnow is the best of all baits. It is tougher on the hook than the fresh-water species and will stand abuse far better. I have kept them alive for five hours in nothing but a basket filled with wet sea salad. Of the many varieties that are to be found in the creeks and inlets, those having a golden tinge to their scales have proved the most attractive. The striped ones, however, are the longest lived.

For snapping mackerel hook the bait through the lips and pass the hook to and through the tail. If not done in this manner it will be bitten off close to the hook and then left. The fish always attack their prey from behind. With a light fly-rod much sport may be had, as they are very strong and gamy for their size. Occasionally a gaudy fly will capture them.

BIG REEL.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 17.—Lake Calumet has claimed one more victim for its long score. Two young men, Earnest Hudson and James Grant, upset a half mile from shore and the latter was drowned in the shallow but treacherous lake.

Messrs. Fargo, Shaler, Botsford, Douglas and Auger, all of the Gaylord Club, departed a week ago for some trout fishing on the club grounds of that favored organization. They should by this time have had some good trout fishing in the Pike, as there may have been a few warm days. Advices from the north say that the Republic and other streams near by in northern Wisconsin are very low, but the water is so cold the trout will not bite yet. There was three inches of snow there four days ago. The trout season seems unspeakably slow, and the suspense is something terrible. Most parties are postponing their dates. Charlie Burton has letters out in Wisconsin, whose replies he awaits breathlessly, but so far the man who wants a good lot of trout would better stay at home and wait a while.

I have often heard about there being "landlocked salmon" in Trout Lake, Wisconsin, and much surprise has been expressed that they should be found there, since this lake is out of the trout country, is south of the big divide and among the mascalonge waters. I never fished that country, but yesterday I hunted up Mr. Ryder, of the Lake Shore & Western R. R., who knows all about it, and asked him about these fish.

"They are not the landlocked salmon," said he, "but they are salmon trout landlocked. They are just the same fish as the big trout of the Great Lakes. They have been caught in Trout Lake weighing 23lbs., and a fish lighter than 4 or 5lbs. is rare. They bite a spoon."

There are bass in Trout Lake also. Mascalonge Lake, near by, is a good one for mascalonge, and the short river running up to Boulder Lake is alive with magnificent bass. That is a great country.

Mr. J. S. Cooper, an attorney of this city, soon starts on a journey for which the gods might envy him. He goes up the trail to Trout Lake, then all the way by water down the Manitowish River, through Alder, Rice and Manitowish lakes, then through Rest Lake and on down the river to the railway. He then makes a rail portage to the new Turtle River country, and goes on up north through those lakes. It is fish all the way.

I wish I were so constituted that I did not want to go fishing in every bit of new water I hear of. It makes me unhappy.

So far the mascalonge news remains mighty scarce. Except the 30-pounder that came down last week from the C. M. & St. P. Railway country, I have not heard of any mascalonge of consequence being taken. The "trout" or "landlocked salmon" are biting now at Trout Lake. They never bite at all except very early in the spring and very late in the fall. I have not heard any results from Crosby's place on Twin Lakes. This is summer resort weather with a vengeance.

The pickerel have been biting in the Grand Calumet River lately. Three rods took twenty-two fish two weeks ago to-day, and some were caught last week. The Grand Calumet is higher now than it has been for a long time. The in-shore winds seem to force the water through the sand strip which fences the mouth of that stream and so back it up.

The Little Calumet is said to have bass in it, and good ones, though I do not know of anything definite as to results in that stream. Away up in the flat country toward its head there is another confluent stream called Salt Creek. In this, so a farmer told me, there are sometimes bass. On the strength of this single assurance my friend, A. H. Harryman, and myself will to-day run down there about twenty or thirty miles and try to see what there is in the rumor and the creek. This will do to wet the lines anyhow, and avert an attack of congestive want-to-go-fishing. It is a shame not to go fishing when the very hooks in the box cry out against the delay.

Mr. Fred C. Donald informs me that an engineer on the C. & A. road often gets fine strings of small-mouthed bass with the fly, fishing the Tippecanoe River, Indiana, between the two crossings which that railway makes on that stream. I think it must be the Cedar Lake on the C. & A. where the Crown Point boys catch their bass. The other Cedar Lake I have heard of as not being so very good of late for bass, but perhaps I am wrong. I have never fished in either.

Billy Mussey and some friends will make their summer fishing trip on the lakes near Madison, Wis.

A party of which Mr. Babeuf is one starts soon for a trip up Mackinaw way.

Dr. Buechner is on his way to Coleman Lake and the Pike at the Gaylord Club.

Mr. Hawley, of insurance circles here, has had good fishing northwest of St. Paul this spring; and may lead a party of friends back there soon.

The weather to-day remains cold and raw, but it is brighter, and we hope for a warmer time before long. Until then we will have no good fishing in this country.

E. HOUGH.

[For "Ohio," in last week's fishing letter please read "Iowa."]

A NEW MINNESOTA ASSOCIATION.—At St. Paul was recently organized the Game and Fish Protective Association of Minnesota. The dues are \$2 a year, payable the first of June of each year, and the executive committee is empowered to levy assessments not exceeding \$2 per annum for special occasions. W. M. Brackett, Dr. J. B. Dunn, of Shakopee, and Sheriff Ege were prominent in arranging the organization. Pres., J. M. Regan; Cor.-Sec., W. P. Andrew; Rec.-Sec., F. H. Jones; Treas., W. M. Brackett; A. G. Strong and W. W. Leonard were elected vice-presidents from Minneapolis, the balance of the vice-presidents to be reported by the nominating committee at the next meeting. About thirty charter members were placed upon the roll, and there is every indication that the membership will reach large proportions. Sportsmen all over the State recognize the necessity for such an organization, and many state that they stand ready to help it with their time and money. From present indications there is room for hope that the game and fish of the State will be so protected in future that Minnesota will remain the paradise for sportsmen and fishermen that it has been in the past. The following resolution was unanimously adopted: *Resolved*, That this association invite the hearty co-operation of all organizations in this and adjoining States which are interested in the preservation of game and fish, and request their members to become members of this association. *Resolved*, That we recommend the organization of local clubs in all game and fish centers, where no club now exists, for the purpose of becoming auxiliary to this club in the work for which it is formed.

LAKE ERIE ANGLERS AND NETTERS.—Cleveland, Ohio, May 13.—Four wholesale companies are now engaged in the fisheries at this point. They employ a great number of gill nets, but as the warm weather advances the fish will move to the shore for spawning purposes. To meet them in time, pound nets are being set to the east and west of the city. Tons on tons of fish are being taken daily, composed mostly of pike perch, yellow perch and saugers, a few whitefish of goodly size and many herring. A half, at least, of the first mentioned are far below the suitable weight for market, selling for 75 cents per 100lbs., and must be a drug, as many are salted for want of ready sale while fresh. During the warm seasons, for many years off this port, a noticeable feature has been the swarms of small boats, carrying from five to twenty anglers each, engaged in this healthful recreation, which, at the present time, gives many a long string of fish and wholesome dinners. A large number of men, also, receive hand-ome returns in money from the hire of boats, fishing tackle and sale of bait. If this wholesale netting here be not soon restricted, within four or five years we will see this fishing entirely exhausted.—DR. E. STERLING.

WOODMONT CLUB.—Washington, D. C., May 14.—At the regular annual meeting of the Woodmont Rod and Gun Club, the following officers were elected for the ensuing year: Andrew McCallum, Pres.; Judge Jeremiah M. Wilson, Vice-Pres.; Dr. W. S. Harban, Sec'y-Treas.; A. R. Tichenor, Auditor. Executive Committee, Andrew McCallum, Jas. P. Willet, Dr. R. B. Donaldson, B. K. Plain and Dr. W. S. Harban.

J. B. Crook & Co., who have for more than fifty years catered to the wants of anglers all over this country, doing business at their well-known stand, 52 Fulton street, have just opened a new store at 1191 Broadway, to meet the demands of up-town customers. The new store is a large one and is well stocked with a general line of goods for sportsmen, not alone in fishing tackle, which is the firm's specialty, but in camping goods, traveling outfits and numerous other lines of general interest to those who delight in outdoor life.—ADV.

A LARGE JEWFSH.—A jewfish, 6ft. long and 6ft. in greatest girth, was recently caught by a fisherman at Port Tampa, Florida. This is said to be the largest one taken on the Gulf coast; its weight was 348lbs. Three fishes of the sea bass family are styled jewfish. One reaches a weight of 300lbs. and has been captured as far north as Block Island, but is uncommon in that latitude; this is the *Epinephelus nigritus* of Holbrook. The other, *Promicropus itaiara*, has the reputation of being the largest scaled fish in the Atlantic, attaining, in Cuban waters, according to Prof. Poey, the enormous weight of 600lbs. This jewfish is common in the Gulf of Mexico, and young examples, at rare intervals, find their way to northern waters near New York. There is a closely-related fish, *Stereolepis gigas*, of very great size, on the coast of California, to which the same name is applied; this species reaches a length of 5ft. As these giant fishes are voracious biters, anglers who seek them seldom fish for count.

A FINE DISPLAY OF TARPON, artistically mounted, is now to be seen at Mr. E. Vom Hofe's establishment, No. 95 Fulton street, New York. Mr. Vom Hofe has a peculiar way of treating this fish—a preparation which he alone knows of and uses, which faithfully preserves the silvery, sheeny tints exactly as seen in the live fish when jumping from the water. There are ten or eleven tarpon in this collection, varying from 70 to 150lbs. in weight. They will be on exhibition for a few days, and will then be sent to their respective owners. All visitors will be made welcome, and anglers should view this large collection.

LARGE PERCH AND PICKEREL.—More than one hundred years ago Blackbird Creek, Delaware, had a dam thrown across its head, and the pond thus formed became a famous fish preserve. Charles Vogel has lately received from that pond white perch said to weigh 9lbs. and pickerel weighing 21lbs. Mr. Vogel finds no difficulty in catching shad with a hook in all places where a dam stops the ascent of the fish to its spawning grounds.—GEO. H. H. MOORE (U. S. Fish Commission, Washington).

THAT IS SO.—The Booneville (N. Y.) *Herald* remarks: "The law prohibits the transportation of trout unless accompanied by the owner. It should also attach a penalty to offering speckled trout for sale, as many persons strip the small streams of all trout to sell in market. Trout fishing should be followed as a diversion, not a business."

MARYLAND.—Great Falls, Md., May 15.—The fishing here this season is very poor and no good catches have been made thus far. Black bass used to be plentiful, but are leaving the Potomac, owing, it is said, to the introduction of carp.—PATUXENT.

SPOTTED SHAD.—In the Delaware River and in the Susquehanna at Havre de Grace shad are showing an unusual number of black spots along the sides. Capt. Platt counted as many as thirty-five in some Delaware River specimens, and they covered the whole length of the body.—GEO. H. H. MOORE.

LAKE ST. JOHN.—There is no free fishing at Lake St. John, Quebec. Permits must be had through Mr. Beemer.

Fishculture.

WORK OF THE U. S. FISH COMMISSION.

THE hatchery at Gloucester, Mass., was closed May 7, after collecting 30,322,093 eggs of haddock, 47,556,000 of cod and 40,166,394 of pollock—a total of more than 118,000,000 eggs of staple fishes.

At the Woods Holl station the first cod eggs were taken Nov. 18, 1889, and the last Jan. 26, 1890. The fish were kept in live cars until their eggs were ripe; 8,545,722 eggs were collected from 91 gravid females and 102 males were employed in their fertilization. Sixty-seven per cent. of the eggs were successfully hatched. The improved McDonald tidal hatching box was the most satisfactory apparatus for this species. Mr. Richard Dana, who had charge of the cod hatching operations, reported that the winter was very favorable for cod work, the temperature ranging from 47 to 33deg. without sudden changes, and the water free from slime and sediment. Eggs, however, were scarce. Eggs transported to Woods Holl from the Gloucester station fared best in carboys. The period of incubation at Woods Holl varied from 107 to 696 hours; the average time was 557 hours, or about 15 days.

Two hundred thousand embryo cod placed in the aquarium did well for thirteen days, until the yolk sac was absorbed and then all of them died from starvation. Mr. Dana tried to feed them soft clams, crushed very fine, but they would not take them. 4,607,760 flatfish were developed at the station during the season.

The Delaware River shad hatching station to which we referred April 3, was ready for work May 10, and received the first eggs May 12, 2,950,000 were obtained from Capt. Platt, and 553,000 came from Rice's fishery, Howell's Cove. The season promises to extend through the first week in June. At Lackawaxen dam many thousands of shad have been caught. An average catch of 300 nightly is being made at Milford, where the river does not exceed 400ft. in width. At this place 50 fish were formerly counted a good catch. Farmers have united in buying nets, to secure the unusual luxury of a supply of shad. In size the fish are remarkably large, 8lbs. being not an uncommon weight. A reported capture, about 35 miles above Philadelphia, of a shad weighing 13½lbs. is vouched for by Mr. Henry C. Ford, President of the Pennsylvania Fish Commission.

The present abundance of shad in the Delaware is evidently due to the planting of fry in the upper waters of the river.

From our latest advices about the Fish Hawk and the new station have already handled about 35,000,000 eggs.

CONNECTICUT RIVER SHAD.—Game Warden A. C. Collins, of Hartford, made a raid Sunday, May 10, on the shad pounds at the mouth of the Connecticut River, in Long Island Sound. The law prescribes that the leaders which drive the fish into the pound, must be raised from 6 o'clock Saturday night to 6 o'clock Monday morning, so that the fish may have in that time an unobstructed passage up the river. Mr. Collins found that several of the pound men had raised false leaders, in the heart of the pounds, but kept down the real leaders which forced the fish into the heart. It was a cunning scheme. Mr. Collins discovered enough evidence to arrest six Saybrook fishermen; and they will be put through a course of sprouts.

AMERICAN FISHERIES SOCIETY MEETING.

TOLEDO, O., May 17.—*Editor Forest and Stream:* The nineteenth annual meeting of the American Fisheries Society, was held at Put-in-Bay, Wednesday and Thursday, May 14 and 15.

The attendance was quite large and much interest taken in the proceedings. Nearly all of the States were represented either by members or invited guests, and so good an impression was left upon the visitors that a majority of those present became members of the association. The meeting was called to order at 2 P. M., on the 14th, by Hon. Eugene Blackford, of New York city, the president of the society. Mr. Blackford's familiarity with the established rules and customs of parliamentary authority made him an ideal chairman. In the absence of F. W. Brown, of Philadelphia, the secretary, Hon. E. P. Doyle, of the New York Fish Commission, was elected secretary pro tem. The president gave a very interesting history of the doings of the association, briefly reviewing the work accomplished by the various departments of the Society. Hon. C. V. Osborn, chairman of Ohio Fish Commission, and Dr. James A. Henshall, Cincinnati, were appointed a committee to make a programme for the social entertainment of the members.

After hearing the reports from the secretary and treasurer and the election of many new members, Dr. Henshall read the programme as had been arranged by the committee for the reading of the papers. Fred Mather, New York, read the first paper, "The History of the American Fisheries Society and an Index." This report was a complete history of the association since its organization, and finished with great care and nicety of detail and read as if the author's soul was in the work. Hoyt Post, Michigan Fish Commission, choosing for his subject "The Sturgeon and Experiment in Hatching," introduced many new ideas, and in a business sort of way gave an elaborate history of this, at times considered one of the most important of our commercial fishes. Some of the Lake Erie fishermen who have had years' experience in the catching and handling this fish for the market joined in the discussion following the reading, and it was generally argued that the sturgeon do not feed upon the spawn of other fishes, but depend almost entirely upon the shellfish, principally the gastropods.

Dr. R. O. Sweeney, U. S. Fish Commission, Duluth station, who is a very graceful orator, and delights in pointed remarks or suggestions, was called upon to read his paper, "The Ciscoette," but owing to his haste in leaving the wilds of Minnesota, the Ciscoette "reposed in a pigeon hole at the station." The paper was read "by title," after which the good-natured Doctor gave a few of the principal points contained in the absent article, and then followed an interesting discussion.

Herschel Whitaker, president of the Michigan Fish Commission, is one of the brightest lights of the Society, always ready to answer any question relative to fish propagation or discuss the subjects of interest to the association. "The Experiments in the Impregnation of Pike-Perch Eggs" was his carefully prepared paper. Often, as he read, the points suggested other thoughts, and he became quite eloquent in the discussion.

An exceedingly interesting paper was read by Hon. Henry C. Ford, of Philadelphia, written jointly by John Gay and William P. Seal; subject, "Past and present aspect of fish-culture, with an inquiry of what may be done further to promote and develop this science." John H. Bissell, Detroit, Michigan, read by title "The Grayling," as also A. A. Hissman, "The Growth of Trout."

Dr. J. A. Henshall, Ohio Fish Commission, Cincinnati, was perfectly at home discussing "Fish Protection." His long experience and careful study of the black bass make him a revered authority. Hon. E. D. Potter, whose name is familiar to most readers of the FOREST AND STREAM and to persons engaged in fish propagation, read a most interesting paper to this Society on "The Origin of Artificial Hatching of Fishes in the United States." As this Society has for its principal object the propagation of fishes it was of deep interest to its members to learn from an eye witness about the first fish artificially propagated upon this continent. Therefore the Judge's paper was voted the most interesting and important ever read before the association. By permission we give the paper in full as read.

"There are but few persons now living besides myself, since the death of the lamented Dr. Garlick, who were present at the birth of the first fish artificially produced in America. It might be interesting to some of the gentlemen of this Society to hear some accounts of the first fish artificially propagated upon this continent. In the winter of 1855 an account was published in the *National Intelligencer*, of Washington, of the experience of two unlettered fishermen, Gehin and Remy, of the Vosges Mountains in Lorraine, then a province of France, in which they had succeeded in the incubation and hatching of a great number of fishes in that region. This account fell under the notice of Dr. Theodatus Garlick, of Cleveland, Ohio, who at once entered into the scheme of making experiments in the artificial propagation of the brook trout (*Salmo fontinalis*). A few miles from Cleveland was a deep ravine, through which passed a small cold stream fed by several cold springs issuing from the adjacent banks. Across this ravine was thrown a dam, raising a deep pond covering half an acre of ground. The next thing was to procure the parent fishes. An expedition was started to Port Stanley, in Canada, and another to Sault Ste. Marie, in Michigan, both of which were successful; procuring in all some fifty of good breeding size. These were placed in the pond in January, 1854. A breeding place was leveled off at the head of the pond, covered with gravel. I spent the season in Cleveland, and visited the pond with Dr. Garlick and found the fish doing well. About the first of November on visiting the pond we discovered two small trout making a spawning bed, and in the course of ten days the beds were covered with fish. The next thing was to prepare hatching facilities. A small cabin was erected over one of the largest springs, about ten feet square. There was over a dozen feet fall from the spring. These boxes were terraced from the spring down with a spill from one box to the other, guarded by a screen, filled about two-thirds full of fine gravel, and the hatchery was complete. I shall never forget the expression of the doctor's countenance as he lifted the first pair of gravid fish from the pool. The usual operation of stripping the first and fecundating the eggs was performed, and the eggs gently spread over the gravel in box number one, and the water was let on. In the same way the boxes were all filled and the work was done. Then a padlock was placed on the door and the doctor was happy. We visited the hatchery often to remove the unfecundated eggs, of which very few were found. On visiting the hatchery the latter part of January the eyes appeared in the eggs, and about the first of March, 1854, on visiting the work, there lay, prone on his side on his goodly bed, the first baby fish artificially propagated on this continent. Then followed the hatching until the boxes swarmed with young trout. Dr. Garlick soon after wrote a full account of his method, and the success attending his first experiment was widely circulated, and soon Seth Green, of New York; Samuel Wilnot, of Canada; Nelson C. Clark, of Michigan, and others, all making improvements on Dr. Garlick's process, until fish propagation has become a national industry, and fostered by adequate appropriations is furnishing cheap and wholesome food for millions of people."

The following are officers elected for ensuing year: President, Hon. Eugene G. Blackford, New York; Vice-President, Dr. James A. Henshall, Ohio; Treasurer, Hon. Henry C. Ford, Pennsylvania; Recording Secretary, Hon. E. P. Doyle, New York; Corresponding Secretary, Dr. T. H. Bean,

Washington, D. C.; Executive Committee, Hon. W. L. May, chairman, Fremont, Neb.; Hon. Herschel Whitaker, Detroit, Mich.; Hon. Calvert Spensley, Mineral Point, Wis.; Dr. H. H. Carey, Atlanta, Ga.; Dr. Wm. M. Hudson, Hartford, Conn.; Hon. Jas. V. Long, Pittsburg, Pa.; Dr. R. O. Sweeney, Duluth, Minn.

The twentieth annual meeting will be held in Washington, D. C. on the last Wednesday in May, 1891.

The general discussion throughout the meeting was indeed very interesting, particularly so as coming from experienced gentlemen, and for the good of the cause there should have been a short-hand reporter employed by the Society that the minutes might have been complete. G.

Another correspondent writes: On Thursday, the officers and executive committee visited the Pelee Island Club, where they were handsomely entertained by the President, Mr. Turner, and Mr. Marshall Field of Chicago. On Friday, by the invitation of Mr. Hosbrouck, a visit was made to the famous Castalia Creek, where they met the president of the Castalia Trout Club, Mr. Dollinger, and they were welcomed in hearty Ohio style. The visitors were each supplied with light trout tackle, and a couple of hours were spent quite pleasantly in casting the fly. After lunching with the club, a meeting of the Society was held, and a vote of thanks was passed to the Pelee Island and Castalia Trout clubs for the courtesies extended to the association. On motion of Commissioner Long of Pennsylvania, it was resolved that the Pelee Island Club, and the Castalia Trout Club be made honorary members of the American Fisheries Society.

DELAWARE RIVER FISHING.

Editor Forest and Stream:

The Susquehanna salmon (wall-eyed pike) are rapidly increasing in the Delaware. The first plant of 60 mature fish, brought from the Susquehanna River, was made in 1886 by the Pennsylvania Fish Commission; and 120 more were placed in the river in 1887 at Port Jervis and at Easton. The fish then weighed from 1½ to 4 lbs. each. During the past season numbers of wall-eyed pike were caught within a range of 100 miles that measured from 10 to 12 in. These evidently were the progeny of the two first plants.

In the spring of 1889, several millions of fry were brought from the United States Fish Commission station on Lake Erie and placed in the upper waters of the Delaware, and during the present season 2,000,000 more of fry, hatched by the Pennsylvania Fish Commission at the State fish hatchery at Erie from eggs furnished by the United States Fish Commission, were also deposited at favorable points on the river; 1,200 mature rock bass were deposited in the upper pools of the Delaware in 1887, and a good many fish of this species were taken during the summer of 1889 weighing about ½ lb. each, showing that they are doing well in their new habitat.

The upper Delaware, from Trenton to the New Jersey State line, is full of black bass. These fish are the result of stocking the river in 1870 with 200 mature bass brought from Lake Erie, through the liberality of several private gentlemen of Philadelphia. My informant tells me that on a trip from Trenton to Delaware Water Gap, a distance of seventy miles, last summer, he counted 168 boats fishing for black bass, and probably not more than one-third of the river was visible from the cars in that distance. A low estimate would place double that number of boats from Trenton to Hancock, a distance of 170 miles. Allowing an average of 10 lbs. to the boat, the total would be about 1,600 lbs. per day. This estimate is very low; and, supposing the market value is ten cents per pound, \$160 worth of bass are taken daily—a very moderate estimate of the value of the catch of this fish alone. In the vicinity of Egypt Mills, Pike county, a gentleman informs me that an average catch of 15 lbs. every day is not unusual. Very many large bass, from 3½ to 5½ lbs., are caught in the waters of the upper Delaware. No doubt this river is a better stream for black bass than the Susquehanna, and it is doubtful if there is a better river on the continent where this splendid game fish is to be found.

Herewith I send you a clipping from the *Times* of yesterday morning, noting the first arrest under a law passed by the Legislature last winter, forbidding the killing of "mamoose." "Bridgeton, N. J., May 11.—The first arrest under a law passed by the Legislature last winter, forbidding the killing of mamoose, was made last night by Fish Warden James Elkinton. Edward Willets, of Bridgeton, N. J., a Bay Side sturgeon fisherman, was arrested for killing eleven mammooses. The fine is \$10 for each offense. It is claimed that Willets has killed over one hundred of these young sturgeon." JOHN GAY.

GLOUCESTER, N. J., May 13.

ECHO LAKE, N. J.—Plainfield, N. J., May 13.—Ten thousand landlocked salmon trout fry have been deposited in Echo Lake near Branchville, between Westfield and Springfield, Union County. The young fish were obtained by Fish Wardens W. L. Force and E. P. Thorn of Plainfield from Fred Mather of the United States Fish Hatchery at Cold Spring Harbor, Long Island.

OHIO COMMISSION.—Governor Campbell has appointed Dr. Jas. A. Henshall, of Cincinnati, State Fish and Game Commissioner for five years, in place of Hon. John H. Lav, whose time has expired. This is one good man succeeding another. Dr. Henshall's ability and interest in this field are so well known that his appointment will be received with general satisfaction.

The Kennel.

FIXTURES.

DOG SHOWS.

June 3 to 6.—The Cincinnati Kennel Club's Fourth Annual Show, at Cincinnati, O. Geo. H. Hill, Superintendent.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 18.—International Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exhibition at Toronto, Canada. H. J. Hill, Secretary.

Sept. 23 to 25.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club, at T. M. Brunby, Secretary, Marietta, Ga.

ST. BERNARD IMPORTATION.—Toledo O., May 19.—The St. Bernard bitch Sunrise, bought of Mr. J. F. Smith, from whom we purchased Watch, has arrived in good condition. She is in whelp to Keeper. We are much pleased with her.—THE POAG KENNELS.

LOS ANGELES DOG SHOW.

[Special Report.]

THE second annual show of the Southern California Kennel Club was held in Los Angeles May 7-10, and has proved to be a very great success, both as to number of entries, quality of dogs shown and attendance. The club is to be congratulated upon having quite a handsome balance left over from the receipts, which is no doubt very gratifying to them. The hall was fairly crowded with visitors from the time of opening the doors on Tuesday morning until they were closed on Friday night. This is one of the peculiarities of the Los Angeles, give them a good show, no matter what kind, and they will patronize it liberally; a poor show of any kind and they will not go. This time they got their money's worth, and all were loud in their praise of it and the management. The officers of this club are live men and all are "hustlers." The president, Mr. H. T. Payne, is the right man for the position, and is a worker from morning till night. The secretary, Mr. E. K. Benchley, never seems to tire in his attentions to the exhibitors and the work in connection with his office, and the club has a treasure in him; in fact all the officers seem to think of nothing else nor be able to talk of anything but dogs and shows. The superintendent, Mr. H. W. Wilson, who, by the way, is well known to a very large number of the Eastern fanciers, and has been located in this city for about three years, is very popular with the boys here, and well he may be, for he is a hard worker in their interests and all are loud in their praise of him and his management of this show, and from personal observation I am sure he deserves all the praise and compliments they bestow on him. Mr. H. H. Briggs, of the San Francisco *Breeder and Sportsman*, officiated as judge, and to say he gave general satisfaction will only be voicing the verdict of the public at large. Mr. Briggs is a thorough dog man, and all his decisions were rendered with great deliberation and good judgment. Only in one instance do I differ from him. I think Mr. Briggs is very unlike most all other dog judges that I have ever met, in that he is an inveterate woman hater. The first question he asks the ring steward as each class is called is, Are any lady exhibitors in the class? If the answer is in the affirmative, what a sigh he draws. It can be heard amid the barking of the dogs clear across the hall. If a negative answer is given his brow immediately clears and his face puts on quite a pleasant look.

Now a few words about the show. This club gave their first show here in June of last year, and had at it about 80 dogs out of some 86 entries, I think, and what a lot these were! Some of them were very good of course, but they could be counted up on the fingers of one's hands. This year there were 136 entries with only two or three absent; and as to quality, well, I never saw such an improvement in this short space of time, and if it keeps on there will certainly be some of the finest and best dogs in the country right here in Los Angeles. It was one of the best little shows it has ever been my lot to attend.

Stafford dogs had four entries. Amado, a fairly good dog, was placed first; he is not looking as well as when shown last year, although he is considerable larger; in every other way he has fallen off. Richland Commodore, second, is a smaller dog, not so good in head. Turk, third prize, is only a very medium dog and was shown in very poor condition. In bitches Attella A., first, and Daisy, second, are small and not of any very great merit. Dog puppies only had one entry—Wodan, a very promising youngster, six months old, and was given first.

St. Bernards had only one representative, a bitch—Dido II.—and she is not of any account whatever, being very much under size, very snipy, poor in coat, and altogether a poor specimen. However, the judge considered her worthy of a first. I said the class only had one representative. I was mistaken. There was a dog puppy, a black and white one, that the judge refused to look at.

Newfoundlands had one entry, Ponto, a large curly dog, black, and this color was all he had to recommend him as a Newfoundland. The judge gave him a second.

Great Dane dogs had only one entry, Kaiser Wilhelm, a very small dog; in fact so small I think he would hardly tip the scales at 90 lbs., given second. In bitches a much better representative of the variety showed up in Christiana, and she secured a blue ribbon. A class was made for harlequin Danes and two faced the judge, Tiger and Clio. Each were given a first in their classes. There was nothing of a striking nature about either of them.

In deerhounds only one dog was shown, Captain, but he was worth twenty such ones as are generally met in shows of the size of this; in fact a better one would not be met in the very best of shows. He was shown in very bad condition, his coat being all matted and his general condition being very much against him. What a pity to let such people have a good dog when a cur would suit them better. He is a long, rangy, well-built dog, good body, stands on good legs and feet, one of the best heads I have ever seen, in fact fault could hardly be found with him in any point. He was given a blue ribbon as well as several specials.

Greyhound dogs had eight in the class, and they were nearly all good ones. Leo, given first, is a fawn dog of considerable merit. King, second, I would have placed first. He is a brindle, well made, stands on good legs and feet, a very nice head, good tail, body and chest, but was in poor condition. The rest of the winners were rightly placed. Bitches had two in the class, Wina and Topsy; rightly placed in this order by the judge. Bitch puppies had only one entry, Wano, given first.

Foxhound dogs had five entries. Some few of them were the English foxhounds, but the rest were of the American type. Of the latter they showed too much of the pointer breeding to suit me. First went to Melody, a white, black and tan dog; second to Nero, a red and white, third to Chase, a red dog. Bitches had five entries, and about the same quality as the dogs. First to Queen, second to Mollie, third to Music.

Pointer dogs over 55 lbs. the catalogue showed two entries, Kan Koo and Rush II. Kan Koo was transferred to class 25 (under 55 lbs.), and Billy V., entered in class 25, was transferred to the heavy weights; so this still made two in the heavy dogs. First went to Billy V., a lemon and white dog, and a grand good one, good head, well-made body, legs good, tail not very well carried, and perhaps a little long. Second to Rush II., a fairly good one, but not so good a one by considerable as the first dog, although of a cleaner and better color in my way of thinking—liver and white. Pointer dogs under 50 lbs. had three entries. Kan Koo, given first, is a very fine dog with the exception that he carries a bad tail; he is good in head, legs and feet, body nicely made, and he moves around just about right. I think he was justly entitled to first place. He is a liver and white dog. Strictly Business, placed second, is another good dog, lemon and white in color. Shot, placed third, is liver and white. In bitches over 50 lbs. four of them came in the ring, and first went to Queen Croxeth T. She is a very nice bitch, liver and white, well marked, with the best tail of any of the pointers; head not quite such a good one as Kan Koo's, but very fair; good body, legs and feet. She was rightly placed first. Gypsy, second, was shown with a litter of puppies, and of course was not in good form for the bench. She is a lemon and white. Third went to Amie, also a lemon and white. She was also shown with a litter of puppies. In bitches under 50 lbs. five came into the ring, Patti Croxeth T. was an easy winner. She is a well-formed bitch, color liver and white. Second went to Babbette, a liver and white ticked bitch. There were three dog puppies, first going to El Rio Rey, a very promising youngster, second to Strictly Business, shown in the aged class, and

third to Young Scout. Bitch puppies had but one entry, Susie Post, and she was given a blue ribbon.

English setter dogs came next with six in the class. Tom Payne, a black and white one, was placed first, and a grand good dog he is too, with some very fine blood in his veins. He is one of those good all-round dogs that one occasionally meets. He was out of condition as regards coat, but barring this was in very good form. Prince Charles, placed second, is another good dog, black, white and tan. Prince Alba was placed third. He may have been a good dog in his day; no doubt he was, but when a setter goes in the ring with a docked tail I do not see much to recommend him in my eyes. Did I own one and pretend to be a breeder I would look out and keep him at home, as the bench is no place for him. Bitches had four entries, with Princess Nellie Elgin in the first place, second to Los Angeles and third to Nellie K. These were not so good representatives of their class as the dogs. Dog puppies had only one entry, Prince Theo, a very ordinary one but given first. Bitch puppies had also only one entry, Jolly Fay, a promising youngster with some good breeding in her.

Irish setter dogs had three entries, and all of them got something, but Mike T. was an easy winner. He carries a good tail, has good legs and feet, but is not quite so good in head as some I have seen; ears well set and he was in the pink of condition. Taken altogether he is a grand, good dog. Don D., placed second, is a better headed dog, but is not so good on his legs, ears not well set, good in feather. Duke Alexis is only a very ordinary looking dog, and got all he was worth in a third. In bitches, Lady Elcho T. was an easy winner. She is a very fine bitch. Rosabelle, placed second, is as yet an undeveloped bitch, and no doubt will improve very much with age, but she will have to if shown in company such as Lady Elcho T. Dog puppies had only one entry, Shaun Rhue, a very nice youngster and given a first.

In Gordon setter dogs first went to Duke, second to Rover and third to Santa Anna. Bitches had four entries. First went to Lady Lufton, second to Princess Nell and third to Burton Lass. One bitch puppy was shown, Belle. I have not wasted much time on these, as after looking over the pointers, English and Irish setters, one feels a kind of a disappointment in seeing such a very ordinary lot as these Gordons were as a whole, nothing at all among them worthy of note. I do hope before the next show comes around some one will have enough public spirit to get a fairly good type of this variety.

Next come the spaniels, and really I do not think there is anything among the lot that is particularly worthy of any special mention. They all, as far as I noticed, were of the every-day quality, was going to say "good, bad and indifferent," but you can leave out the first word and it will be about right. A good thing came under my notice in this spaniel business. In the morning when the dogs were coming in I was standing near the superintendent. A dog came in, when the superintendent stepped up and asked the owner the number of his English setter puppy. The owner looked up with very great astonishment and contempt plainly marked on his countenance and replied that it was not an English setter puppy, but a Clumber spaniel. The superintendent with his usual courtesy immediately begged his pardon, and when this particular dog came into the ring it was led by a lady. Well, I told you before about Briggs and his horror for ladies. Well, he was in for it, so he consulted some of his friends immediately around the ring, and as a consequence he gave this dog first in the miscellaneous class, and a very good place it was to put it in.

Collies had only two entries, one dog and one bitch, but each of them worth twice as many as there were of the spaniels. Laddie is a grand dog, a little off in head, but good in coat, legs and tail, splendid frill, and altogether the best dog I have seen on the coast. Juno is a very nice little bitch, also a sable; a little small probably, but much better than I expected to see.

Bull-terriers, strange to say, had but one entry, and she was in the challenge class. She is a very fine one. If my memory serves me right she was imported by Mr. Varick and shown by him several times with considerable success East. However, she is now here and has been for a couple of years. Little Nell is a good one but she begins to show her age some. It is a pity there is nothing here to breed her to. She got first, also several specials for best non-sporting, and well she deserved it.

In fox-terrier dogs eight faced the judge, and I failed to see a rank bad one in the lot. Blenton Vesuvian, a nice dog, tail carried a little forward and legs just a little low in front, ears good and well carried, placed first. Regent Jack, second, is a little leggy, otherwise pretty near right. Blenton Shiner, also shown in puppy class, is not so good as either of the above, and he carries one very bad ear. I do not think he will ever make any great mark, at least not in the company it was in this time. In bitches five came into the ring, and if anything they were stronger than the dogs, at least a couple of them were. Golden Patch, shown with a litter only a few days old, was placed first, and a good one she is; ears well put on, possibly a little low in front, but not enough to be very faulty. Second went to Folly, another good one. Third to Tricksey. Dog puppies had only one entry, Blenton Shiner (shown in aged class). This time he got a blue ribbon. Bitch puppies had three entries, so each got something. First went to Golden Lily, second to Warren Truthful, and third to Clochette. Here again Mr. Briggs gets in his work as "a woman hater." Here was a nice little bitch with beautiful prick-ears shown by a lady, and he only gave her a third.

Pugs had four entries in dog and bitches. The dogs were nothing remarkable, but one of the bitches was very good. Following is a list of the

AWARDS.

MASTIFFS.—Dogs: 1st, Mrs. Dorothea Lummis's Amado; 2d, Capt. A. B. Anderson's Richmond; Commodore; 3d, A. J. Ellis's Turk. Bitches: 1st, Capt. A. B. Anderson's Atella A.; 2d, M. Short's Daisy. PUPPIES—Dogs: 1st, C. D. Willard's Wodan.

ST. BERNARDS.—ROUGH-COATED—Dogs: No entry. Bitches: 1st, Capt. A. B. Anderson's Dido II.

NEWFOUNDLANDS.—Dogs: 1st withheld; 2d, E. L. Medler's Ponto.

GREAT DANES.—Dogs: 1st withheld; 2d, Miss Keyes's Kaiser Wilhelm. Bitches: 1st, O. Schmidt's Christiana.

HARLEQUIN.—Dogs: 1st, Dr. W. LeMoine Wills's Tiger. Bitches: 1st, Dr. W. LeMoine Wills's Clio.

DEERHOUNDS.—Dogs: 1st, Mrs. James McLoughlin's Captain.

GREYHOUNDS.—Dogs: 1st, J. W. Gordon's Leo; 2d, H. Preston's King; 3d, R. Heaney's Spring. Reserve and high com., Valley Hunt Club's Victor and Raymond. Very high com., Dr. I. W. Hazelett's Dash. Bitches: 1st, C. F. Holder's Dina; 2d, Dr. I. W. Hazelett's Topsy. PUPPIES—Bitches: 1st, J. W. Gordon's Deno.

FOXHOUNDS.—Dogs: 1st, Valley Hunt Club's Melody; 2d and 3d, B. Davis's Moro and Chase. Bitches: 1st and 3d, Valley Hunt Club's Queen and Music; 2d, B. Davis's Mollie.

POINTERS.—LARGE—Dogs: 1st, R. T. Vandeventer's Billy V.; 2d, J. B. Mason's Ruth H. Bitches: 1st, A. B. Trueman's Queen Crox; 2d, 3d, 2d, S. D. Sanborn's Gypsy; 3d, S. A. Bennett's Zetta II. —SMALL—Dogs: 1st, E. K. Benchley's Kan Koo; 2d, Dr. I. W. Hazelett's Strictly Business; 3d, H. Schumacher's Shot. Bitches: 1st, A. B. Trueman's Patti Croxeth T.; 2d, M. E. Taber's Babbetta; 3d, E. K. Benchley's Amie. PUPPIES—Dogs: 1st, A. B. Anderson's El Rio Rey; 2d, Dr. I. W. Hazelett's Strictly Business. Bitches: 1st, A. B. Anderson's Susie Post.

ENGLISH SETTERS.—Dogs: 1st, J. F. Holbrook's Tom Payne; 2d, G. Fritz's Prince Charles; 3d, Mrs. J. A. Edmond's Prince Alba. Bitches: 1st, H. Rose's Princess Nellie Elgin; 2d, H. T. Payne's Los Angeles; 3d, T. Keefe's Nellie K. PUPPIES—Dogs: 1st, T. Bright's Prince Theo. Bitches: 1st, H. T. Payne's Jolly Fay.

IRISH SETTERS.—Dogs: 1st, A. B. Trueman's Mike H.; 2d, W. B. Davis's Don D.; 3d, E. B. Tuft's Duke Alexis. Bitches: 1st, A.

B. Trueman's Lady Elcho T.; 2d, E. J. Roy's Rosabelle. PUPPIES.—Dogs: 1st, E. J. Roy's Shaun Rhue.

GORDON SETTERS.—Dogs: 1st, B. A. Breaker's Duke; 2d, L. R. Darrow's Rover; 3d, West Coast Kennel's Santa Anna. Bitches: 1st, Mrs. Edwin Cawston's Lady Lufton; 2d, H. C. Katz's Princess Nell; 3d, J. J. Hanford's Burton Lass. Very high com., J. Macchelli's Nun. PUPPIES—Bitches: 1st, J. Rush's Belle.

IRISH WATER SPANIELS.—1st, J. C. Cline's Rose; 2d, T. Friese's Dick; 3d, G. Klotz's Barney.

COCKER SPANIELS.—Dogs: No entry. Bitches: 1st, withheld; 2d, G. H. Hamstad's Snowball. Puppies: 1st and 2d, J. Macchelli's Lad and Lass.

FIELD SPANIELS.—Dogs: No entry. Bitches: 1st, Capt. D. Wheeler's Chick; 2d, B. H. Heiman's Queen.

RETRIEVERS.—1st, C. Melligan's Roy; 2d, withheld; 3d, W. F. Nordholz's Major.

COLLIES.—Dogs: 1st, Capt. A. B. Anderson's Laddie. Bitches: 1st, Mrs. E. B. McVine's Juno.

BULL-TERRIERS.—CHALLENGE—1st, C. A. Barnes's Little Nell.

FOX-TERRIERS.—Dogs: 1st, C. A. Summer's Blenton Vestiv; 2d, Capt. A. B. Anderson's Regent Jack; 3d, J. B. Martin's Blenton Shiner. Very high com., Bolton & Chadwick's Rags and Tatters. Bitches: 1st and 3d, Capt. A. B. Anderson's Golden Patch and Tricksey; 2d, E. Malin's Folly. Very high com., R. Hart's Hart's Nannie. PUPPIES—Dogs: 1st, J. B. Martin's Blenton Shiner. Bitches: 1st, J. B. Martin's Golden Lily; 2d, C. A. Summer's Warten Truthful; 3d, D. McFarland's Clochette.

BLACK AND TAN TERRIERS.—1st, C. F. Manning's McGinty. **SCOTCH TERRIERS.**—1st, Capt. James's Monkey; 2d, C. S. Campbell-Johnson's Tatters; 3d, S. Tyler's Pepper. Puppies: 1st, Capt. James's Shorty.

TOY TERRIERS.—1st, J. Horner's Midget.

JAPANESE SPANIELS.—1st, Mrs. Alex. McBear's Frou Frou. **PUGS.**—Dogs: 1st, Capt. A. B. Anderson's Bobby; 2d, C. Krenpel's Mops. Bitches: 1st, Mrs. H. E. Blewend's Patti; 2d, C. Krenpel's Bella.

POMERANIANS.—1st, withheld; 2d, M. Fitzgerald's Fanny; 3d, Mrs. L. Short's Flossy.

Kennel cryhounds, Valley Hunt Club; foxhounds, the same; English setters, West Coast Kennel.

DOG TALK.

WE learn that Mr. Diffenderfer's offer of a piece of plate to be awarded at the first field trial of the National Beagle Club is only a forerunner, several prominent members having given us to understand that they will support a trial in more ways than one. We fail to see how a specialty club can do much toward the advancement of a breed on an annual membership payment of only \$2.00 (without the membership is very large), unless individual members open their hearts and purses.

The number of English setters scattered throughout the States is doubtless greater than that of the Irish and Gordon combined, and it is indeed singular that the breed has existed so long without a representative club. The interested parties that I have met signify their intention of being present at the meeting at the Quincy House, Boston, the 23d inst., and the prospect is that a club will be started with the largest charter membership of any specialty club. As the club will be a "national" one it would be well to make it true to its name. We would suggest that the object of the club should be to promote the improvement of the English setter in America, both on the bench and in the field; to define and publish a description of the true type and urge the adoption of such by breeders, competitors at field trials and bench shows as a standard by which all English setters should be judged; to suggest to all field trial associations and bench show committees the names of qualified and competent judges, and to offer prizes and plate to such as recognize the same.

New York will have to look to its laurels. Boston dog men are awakening. What with a Beagle Club, a Setter Club, a Kennel Club, a proposed Club Kennel and its extensive private kennels, it certainly is coming to the front.

Several prominent Dorchester (Mass.) men are about to start an extensive club kennel with a well-known handler to care for the dogs. Mr. F. W. Connelly is the originator of the scheme.

Mr. Jas. F. Hall, of the Fairhill Kennels, Philadelphia, will start for his former home in "Merrie England" on the 28th inst. on the S. S. Ohio. He will bring back with him on his return in the fall his St. Bernard bitch Lady Lowden, by champion Plinlimmon out of Lady Linton. As we remember her she is a rich orange in color, with grand head and muzzle, perfectly straight in limb, with good blaze and shadings, young but a little on the small order. This is a move in the right direction. We have a number of England's best stud dogs, but good brood bitches are very scarce.

The much talked of bull-terrier White Wonder has brought from the pen of Dr. A. J. Sewell an article in the English *Stock-Keeper* that we agree with perfectly. What reader would care to go around with a gun to attract his dog's attention with when he wished to call him. A dog that will not answer Dr. Sewell's tests, namely, a whistle and call from the lips of his beloved master, is practically deaf, and should be considered so by the judge and veterinary.

The reports of the Schipperke class at Boston show were very meagre. Having made a study of this interesting breed we wish to make a few comments on the judging. Rather late in the day, but it is never too late to mend a wrong. Midnight, the winner, is wide at base of ear, much too long and soft in coat, crooked in front. Darkness, second, is very thick in skull, short coat, not of proper texture, otherwise good. Pick, Jr., third, might be a little more narrow at base of the ear, coat is correct, being harsh, about an inch long the whole length of back, short at the sides and with considerable frill, straight in limbs. Othello, reserve, has the only correct ear in the lot, but is not right in texture of coat. The three winners are of three distinct types. The winners of third and reserve are the best by long odds. Midnight, the winner, shows considerable character in head, but back of his ears he is not a Schipperke. If the winner of either first or third is the proper type, then the winner of second is a nondescript. If a judge sticks to type we cannot complain, but for a man to place three types and the winner of third the best and most typical in the lot, is all wrong.

Mr. Richard Barry, of Peabody, Mass., denies the report that his St. Bernard bitch Dina is a "total wreck" from her premature whelping while en route from England.

Dr. J. Frank Perry ("Ashmont") has about abandoned the mastiff and is making a specialty of bulldogs. His Atossa, while being a fair show bitch, is what but few bull bitches are, i. e., a rare good brood bitch.

The anniversary banquet of the Massachusetts Kennel Club, at Cadet Hall, Lynn, May 13, was a decided success. Some forty members and their friends gathered around the heavily laden tables. The menu was excellent. After the cigars had been lighted a brief history of the club was given by the president, Mr. Robert Leslie. Mr. E. B. Sears, of Melrose, spoke in defense of the mastiff; Mr. T. O. Faxon, of Braintree, on the collie; Mr. F. L. Weston, of Medford, on the spaniel, and Mr. R. L. Newcombe, of Salem, on his "first and only love," the setter. The Winnepurkitt Quay-

tette entertained us with most excellent music, one of the pieces composed for the occasion was teeming with rich hits on dogs owned by several of the members present. The well-known reader, Mr. F. E. Hood, proved himself a master of his art by keeping the company in a continual "gale of laughter" whenever he arose from his chair. The committee on arrangements deserved special credit for their neat and tastily printed programme. At the special meeting of the club Mr. Robert Leslie was elected as delegate to the A. K. C. for the ensuing year. Mr. E. B. Sears resigned as a member of the bench show committee, and Mr. J. F. Williams was elected in his place. The club is in a prosperous condition financially and numerically, having forty-six members in good standing, and a "rousing big show" for next spring is the talk in Lynn at present.

Mr. W. H. Walton, proprietor of the High Rock Cocker Kennels, Lynn, Mass., is selling out all of his cocker spaniels preparatory to a trip across the Atlantic. He will sail in company with Mr. A. Russell Crowell, May 28 or June 4. His well-known stud dog Black Duck (Obo II., Althea) has been purchased by the Gordondale Kennels, Readville, Mass., and we understand the entire lot are sold or engaged.

Mr. Richard Barry's St. Bernard Kennel at Hartford will hereafter be known as the Homestead Kennels. Mr. Barry has some remarkably well bred stock, and we are pleased to hear of the flourishing condition of his kennel.

NAMQUOIT.

DOGS OF THE DAY.

JUST an hour too late to advise you, for your last issue, of Mr. Mitchell Harrison's new departure. I met that gentleman last Wednesday. To a man who has had about twelve years of daily newspaper work, a thing like that is the aggravating part of weekly journalism, for it becomes difficult to get any exclusive news. Not that in this particular case it would have been a "beat," but instances occur weekly where the "beat" is lost before the next issue comes out.

When I had the conversation with Mr. Harrison respecting the purchase of Christopher and his leaving him in England, I then made the remark that I didn't see why he might not keep a kennel of dogs there and bring them over for our brief show season and then send them back. From his reply I am certainly warranted in saying that the idea of doing such a thing had not been formed at that time, and it looks as if my remark must have set Mr. Harrison thinking, for within a month it has become an accomplished fact.

Mr. Harrison has bought out the Wellesbourne kennel of collies, owned by Mr. Charles, and made arrangements with that gentleman to take charge of and exhibit the dogs in England. In Mr. Charles, the proprietor of the Chestnut Hill Kennels has secured a most excellent representative, a man of experience with the breed, as his show record testifies, and who has also at all times stood high in the estimation of the "fancy." In the kennel are some promising youngsters, one of which I learn from a gentleman who was at the late Kennel Club show is one of the most promising young dogs yet brought out.

The possibilities of this move to our collie breeders can hardly be overestimated. Without being in any way aware of what Mr. Harrison's intentions may be, I presume that we shall see something of these dogs over here. Not till next spring, possibly, but we can wait till then, if we must. We then will have two grand opportunities, first to breed to them, and next to note the highest type of the breed in England. Those who cannot afford the first will be able to attain the second by visiting the shows they are exhibited at.

Since I referred a few weeks ago to the appearance of the A. K. C. Stud Book for 1889 I have received quite a number of letters regarding it, and some of my friends seem to think that I am responsible for some of its shortcomings. Perhaps I am, but I must draw attention to the fact that I was not appointed to the Stud Book committee until the February meeting of the A. K. C., and the volume just issued closed on Dec. 31. I admit that the printing of the book was not not done till I was a member of the Stud Book committee, and that there might be laxity on my part. I can see, for instance, that if in February all the members of the retiring Stud Book committee were replaced by new men there would be, if my first allegation is accepted, no committee in charge of the forthcoming Stud Book after that date. I am, however, the junior member of that committee, both Mr. Terry and Mr. Lewis having been re-elected, and the presumption is that they have not troubled me with matters they have had experience in. I will frankly say that I am not at all satisfied with occupying a position which is so purely nominal as the Stud Book committee seems to be. Some one must be directing the work, and I have had no say whatever in the matter.

That there is work to be done by the Stud Book Committee is self-evident after an inspection of the Stud Book just issued. A dog stud book is not only a record of pedigree, but of performances, and the preceding volumes of the series have been such. This one, however, ignores the records altogether, and merely inserts such information as was given at the time of entry. It is evident that nearly all of these entries were made before the dogs were shown, if they were shown at all, and the result is that as a record the book is valueless. Who is responsible for not continuing the system in vogue hitherto is a question which will probably be asked at the next meeting of the A. K. C. Records of winnings in England are not enough for an American stud book. What we want to do is to improve upon the English Stud Book, and not be a bad second, such as the one just issued is.

I have also had many mistakes pointed out to me, but I am fully aware after my five years' experience on the *American Kennel Register*, that perfect accuracy is impossible. The *Register* had this advantage, however, being a monthly. There was every opportunity to make the correction before the volume was completed and indexed. With the present annual Stud Book, however, a mistake must go uncorrected. All the more necessity, therefore, for the work of a committee when the matter goes to the printer, but so far as I am concerned I have had nothing whatever to do up to the present time as a committeeman.

Miss Whitney, in her report of the St. Bernards at New York, says: "Zara * * * called American-bred, because she was whelped soon after her dam arrived this side the Atlantic." If that is all, then she is not American-bred. The A. K. C. has got no further than that a bitch owned in this country may be sent to England and bred to a dog there, and that her progeny born here will be American-bred. That was the decision in the case of my dog Clipper, whose winning of an "American-bred" medal I protested, in order to get an A. K. C. decision on a subject on which there was a diversity of opinion.

The Beryl case has attracted much attention in England, and the editor of the *Stock-Keeper*, after asking Mr. Fred Hinks to say whether he sold the dog as a deaf one and receiving no reply, has addressed a letter to him, drawing attention to the request which appeared in the *Stock-Keeper*. Further than that, Mr. Sewell, the eminent veterinary sur-

geon, who is recognized authority on dogs in England, was applied to as to the proper test for deafness. His reply was as follows: "I should have the dog removed from the show to a quiet place, either a yard or a fair sized room, and then, if possible, get the owner to stand some few yards right behind him, and then call the dog by name or whistle. If either of these means did not succeed in attracting attention I would make use of a good loud whistle; this failing, I would try to attract attention by making a noise with a whip; this also failing, I should declare the dog deaf. I have sometimes tried a dog by letting off a pistol, taking, of course, care that the dog did not see the flash, but this is seldom necessary."

This is the reply of a practical man, not a theorist such as resorted to the gun test at Boston and turned a dog out which had a dried up blotch sore, as having mange. The tests given by Mr. Sewell are exactly in the line of my remarks of several weeks ago, when I said, "What is total deafness as contemplated by the rule? Is it not such a degree of deafness as prevents the dog being under control? Is it not that the dog's sense of hearing shall be acute enough to enable him to respond to a call?"

Before FOREST AND STREAM reached Philadelphia last week, but after it had gone to press, I met Mr. Mitchell Harrison, who advised me of the death of Roslyn Queen, the young bitch about whom I told the story of her several sales for \$2. The cause was distemper, an attack of which she died last December. Another of the Chestnut Hill Kennels' collies has gone, but in a pleasant way for her late owner. This is the young dog Roslyn Exile, first in puppy novice class at Boston. Senator Spooner's check for a good sum was the cause of his taking off.

Another collie sale which has just taken place is that of the young bitch Hera, by Strephon out of Juno II. The purchaser is General H. S. Huidekoper, for his brother, Edgar Huidekoper, of Meadville, Pa.

The pointer Sachem, "Beaufort's best son," has also changed owners, so I fancy Mr. Harrison is getting out of pointers, with which breed he has not had any such pleasant experience as with collies. Beaufort, it will be remembered, died very soon after he gave \$600 for him to Mr. Mason.

Mr. Louis A. Berger, of Langhorne, Pa., has cleared out his mastiffs in one lot to the Associated Fanciers. There were about ten of them, mostly puppies, by Clement out of the bitch Nell, second at Boston about three years ago, the dam being one of the lot as well.

Mr. Weiss, of Bethlehem, Pa., has purchased from Mr. Frank Hope a promising field spaniel puppy, by Glencairn out of Lady Daffodil, an imported bitch. This is a nice puppy, and it was not the seller's intention to part with him; but the price he asked was at once handed over and the spaniel had to change owners. This puppy looks like growing on into a prize winner.

Ayr show, which was opened on April 29, is now the record show of the Land of Cakes, there having been 1,200 entries. Collies mustered in great force, they being nearly one-fourth of the show. I notice that, not before it is needed, the *Fanciers' Gazette* suggests that if collie men don't look out they will have to provide classes for prick-eared collies. I know from experience that it takes very little to overstep the line. The bitch Hera, whose sale is noted above, was one of the most perfect eared youngsters I ever saw up to the time of the New York show of 1889. When she returned to her home the boys of the family invested in a pair of pigeons and erected the cote above Hera's kennel. There, while on chain, she would sit and watch the birds with head thrown back. The extra tilt sent the ears straight, and after a while they seemed up for good. By dint of persistent use of plaster one finally did assume a less glaring attitude, but the other is up for good.

I wonder how near all this manipulation of collies' and fox-terriers' ears is to faking. A well-known collie man said to me a few weeks ago, "I am certain they have a new wrinkle as to faking collies' ears in England. They are getting them so high, even breeding from prick-eared bitches to get them up, that I am convinced there is a bit of faking we haven't got the inside of yet." If there is any such thing going on I suppose it is the kennelman who is doing it, and quite unknown of course to the owners. So little do some English owners know about their dogs that it is surprising they know them at all.

Did it ever occur to our exhibitors that we allow the most bare-faced "faking" in our judging ring? We would laugh at German Hopkins holding down a pair of stiff ears, or at Jarrett holding up a pair of drops, but we look on complacently at Ben Lewis making four holes in the sawdust to put his pointer's feet in, pulling down his lip, chucking up his head and holding his stern out straight.

Mr. German Hopkins is, I suppose, back at the Blemton Kennels again by this time, as he left England on May 1. Rachel was left to be bred to Venio.

Mr. Sheffield, the Birmingham pug fancier, announces his intention of retiring, only retaining Stingo Sniffles and Set Set, which have earned a home with him till they go to the happy hunting grounds. Stingo Sniffles was quite at the top of the breed when I saw him in 1884.

Mr. C. D. Hughes has sold the beagle champion Lou to Mr. Wm. Rutter, Jr., of Lawrence, Mass. The price was high, but not more so than she is worth.

I learn that a show by the Washington Kennel Club is a certainty for next spring. As soon as the dates can be decided upon the fixture will be announced, but as the selection will depend upon how the other clubs choose dates we shall probably have to wait some months yet before we know any more than the above.

With Washington and Cleveland in the line in 1891, we will have some of the gaps filled up. How like unto the parable of the sower is the history of dog shows in this country!

Mr. J. D. Shotwell, secretary of the Collie Club, has forwarded me the following official communication: "In consequence of the small number of nominations for the second section of the Collie Club stakes, the executive committee, with the consent of those who made entries, have decided to declare the contest off and return the entry fees. In future there will be one grand competition for the various stakes, the dates of birth for the competing dogs being so arranged as to include a period of twelve months, say from July 1, 1889 to July 1, 1890 for the spring show of 1891, it being generally conceded that a 9mos. old collie is as good as one of 18mos. At the next meeting of the committee this point will be definitely settled and announced." By the way, Mr. Shotwell has changed his residence and is now to be addressed at 113 Highland avenue, Orange, N. J.

The gentlemen of the Massachusetts Kennel Club, of Lynn, have, in the words of the Hon. Bardwell Slore, been having a "b. o. t." On Tuesday of last week they met to celebrate the second anniversary of the birth of the club. Members

and guests to the number of thirty-five found places around the festive board, including such well known dog men as Robert Leslie, president of the club; E. L. Weston, T. C. Faxon, E. B. Sears, A. Russell Crowell, E. K. Hood and Secretary D. A. Williams. There were plenty of speechmakers and singing between whiles; the chorus of one of the original songs prepared for the occasion going as follows:

Then, men of Lynn, don't spare the tin,
Keep dogs of high renown;
Don't let it be said we're far from the head
As long as the world goes round.

A special meeting of the club was held before the dinner, and President Robert Leslie was appointed delegate to the A. K. C. Mr. Leslie will, I think, be found to be quite an important factor at the meeting of the A. K. C. to be held on Thursday of this week.

It is a pity that the committee will not give the semi-annual stakes a chance. The fault does not lie with the making of semi-annual stakes, but in not giving them a chance to fill. The only way to do this is to make them close early and awaken interest in the stakes through the press. This has never been done since the first sweepstakes, which was an unqualified success so far as entries were concerned, though some people have not ceased to blush at the mention of it. Now, however, a sweepstakes worth \$50 would be a big thing. Then deciding to hold the second section of the stakes this year at out-of-the-way Hempstead was enough to kill off entries. New York is the place and the only place to have them decided unless there is a convenient show held at about the right time. The decision in favor of Hempstead was made before we heard of Cincinnati at all, and that show would have done well enough; affording an equal chance for the Canadians as for Eastern men. I say now to the committee as I have said repeatedly to Mr. Shotwell, "the sweepstakes will never be successful until you close entries early." This must be done while there is yet uncertainty as to the future of the puppies, and three or four are entered to make sure of having the best engaged. When entries close a month before the decision is to be rendered then the best only is entered, and a man contributes \$5 in place of the \$15, \$20 or even \$25 he would have contributed four or five months before.

Mr. J. H. Winslow has had a bit of hard luck with a litter of pointer puppies by Graphic out of Golden Rod. There were eleven, but eight will never be champions, for they now wear wings, if such exist in dog paradise. Three remain on this mundane sphere to buoy up their owner with hopes of leading one out with a blue ribbon and an "I bred him-myself" smile of satisfaction.

I notice that Mr. Mayhew takes the same view that I do of the duties of the A. K. C. in regard to seeing that the rules are carried out at the various shows. Mr. Mayhew expresses surprise at what he finds out about the anomalous workings of the A. K. C. He ought to have been here three or four years ago to have seen how things were carried on. Comparing now with then it is almost hypercritical to find fault. Still I do agree with Mr. Mayhew that there is great laxity in not seeing that the rules are properly observed; and I further agree with him that the Westminster Kennel Club had no right to disqualify Belle of Woodbrook without objection being lodged as provided in the rules. We will probably know the rights of this case before the week is over.

Mr. Charles Chapman, a drawing-room ear conductor on the Lehigh Valley road, told me a peculiar thing that happened on his train a few weeks ago. He was on the day express from Suspension Bridge to Philadelphia, and it was evening as the train was coming along slowly for some siding (he gave me the name but I forget it). Suddenly a "pheasant" rose about twenty-five yards from the train and flew straight for it. Smash it went against one of the windows and came clean through into the car. Fortunately no one was on the seat by the way, but a gentleman opposite had his face cut by a piece of the flying glass. The "pheasant" fluttered to the bottom of the car, walked down the aisle and back again, apparently unconcerned, and then keeled over dead. Mr. Chapman tried to get the bird from the man who picked it up, but in his case findings were keepings.

The *Stock-Keeper*, just to hand, will be found to be more than usually interesting to American readers, as quite a number of purchases for this side are recorded.

The *Fanciers' Gazette* contains a copy of plagiarist Huscroft's alleged retraction of the Salisbury pedigree libel. Like his so-called apology to "Ashmont," it leaves Huscroft worse off than he was before. No apology has yet been seen from Mr. Millais for publishing Huscroft's repetition of the libel about three months ago—months after its falseness had been so clearly demonstrated. I should like to see Mr. Wade tear the falseness of this apology to pieces. He has all the facts at his fingers' ends to do it with. J. W.

RABBIT HUNTING ON CAPE COD.

THERE were four hunters in the party, and as they jogged along through the village in a double-seated wagon, drawn by an old black horse, there was nothing in their appearance to excite comment or interest. Yet sportsman or any lover of dogs would have taken a second look at the beagles, Peggy and Clyde, as they sat impatiently in B's lap. They are only puppies, not yet nine months old, but their beautiful eyes, long satin ears and strong, handsome bodies make them a pair hard to beat either in the field or on the bench.

Three of the hunters, L., B. and J., are ordinary every-day gunners, but the fourth member of the party, the Captain, does not come in that class. He stands by himself. He seldom gets a chance to hunt, as he is at sea most of the time, and so when an opportunity does come he makes the most of it. He intends to see the whole hunt, to be present at the start, follow the dogs and shoot the rabbit. If you put him on a stand you will be sure to find him somewhere else within three minutes; if he starts for a certain crossing place you will be sure he will go elsewhere, and if the dog in full cry are coming directly to you, and you stand expecting every instant to get a shot, you may be sure he will come dashing through the bushes, turn the rabbit back to the swamp and ask in surprise, "Why didn't he come out?"

As the party drive down the "nor'd lane" a light mist begins to fall, but that will only make the following better, and the horse is hurried along by B.'s house, where on the piazza sits Boz, the Irish setter, with a wistful look in his brown eyes as he watches the party out of sight.

After a ride of fifteen minutes through the scrub pines and oaks, the party get out at the edge of a cedar swamp not far from Long Pond. Here is a chance for a cotton-tail or a hare. J. stops to tie the horse, while B. puts the dogs in; at once they strike a cold track, and as they work it up disappear in the cedar. J., coming to the edge of the swamp, by accident kicks out a rabbit. The dogs are called, and with much difficulty Peggy is caught and put on the hot track; Clyde at once barks to her and the music begins. The swamp is almost impenetrable, and the young cedars growing closely together makes it impossible to see ten yards in any direction. J., L. and B. pick the best places along the edge of the swamp and hope for a snap shot; the Captain says he will stand by the big cedar tree, and at once disappears in the opposite direction. Meanwhile the rabbit has

gone through the swamp and is coming back. The quick, eager voices of the dogs sound nearer and nearer, and their beautiful notes ring out close upon the hunters and then die away in the distance. The underbrush has saved the rabbit, though he came close to B. Away he goes out of the swamp, on to the upland, under the pines, where he circles and twists and turns, now carrying the dogs almost out of hearing, again coming nearly to the swamp, and once more going back. The dogs are young and without much experience, but they cling to him nobly, and the Captain, panting and perspiring, keeps as near the dogs as he can. At last bunny enters the swamp again, and in a small thicket he dodges back and forth till the dogs are badly bothered. "If we had Jip now," says L., "we would get him. No rabbit could throw him off." But Jip—poor old dog—sleeps under the rose bushes in the garden now. However, the run isn't over yet; Peggy once more picks up the track, the rabbit shows himself for an instant at the edge of the swamp, and B. promptly knocks him over. Peggy is first in, closely followed by Clyde, and together they shake the first rabbit of the day. The run has lasted an hour and five minutes; the Captain has torn his overcoat and wet his feet, and he sits on a stump for a minute's rest he declares that "those little fellows can sail all around anything."

The hunters now take the horse, and after a short ride, put the dogs in at the edge of a round swamp. The beagles strike a cold track, work it around the swamp, carry it to the upland, where it grows warmer, and across a small field into the oaks that skirt the pond. The dogs work eagerly, first Clyde and then Peg is ahead, as they follow the track into a bull-brier thicket. Out jumps the cotton-tail, and as he crosses the road the Captain gives him both barrels—just to hail him, he afterward explains—but unharmed, he runs straight down the shore of the pond for a half mile or more, and the dogs' voices die out in the distance. Just as the party decide that the game has gone into the ground, they hear the dogs coming back. It is easy to cover all the ground between the pond and the road; the Captain gets the shot, and with the second barrel knocks the rabbit over as he crosses an opening after a fifteen minutes' run.

As the party walk down the road, Clyde takes a track which he quickly carries across a wood lot into a dense thicket, where he starts. Peggy at once joins him, and away they go, on the prettiest run of the day. Just here there are three swamps some distance apart, and about them many acres of large pines, with little or no underbrush. That cotton-tail was a traveler; he wasted no time in dodging, but led off from one swamp to another and ran in great circles through the woods. L. stood where he started, J. and B. chose paths at the edge of the largest swamp and the Captain was everywhere. Never did the voices of the dogs sound prettier than then, as they echoed and re-echoed under those grand trees; the high clear voice of Peggy, mingled with Clyde's lower, but not less melodious notes, made music which could not fail to please. For more than two hours, without a break, the beagles followed that rabbit, and then L. by a snap shot in the thicket killed him. It was a piece of work worthy of old dogs, and not even champion Frank Forrest, their sire, could have done better.

After a short rest the party follow the edge of the pond, and soon come to another swamp. As they go to leeward of it Peg stops, sniffs the breeze, and with head high in the air disappears in the bushes; a minute more and she has the rabbit going. The dogs work well, but the underbrush saves the cotton-tail, for none of the party see him, though he comes so near to B. and L. that they hear him. At last he goes into the ground and there they leave him.

The men now ride to the other side of the pond where there is a promising swamp. As B. goes to put the dogs in a rabbit jumps from a pile of brush at his feet; the dogs see him and away they go around the swamp, through the bull-briers, under the pines, back to the swamp, and then the rabbit, finding the pace too hot, takes to the water. The dogs are bothered, and the party starts for the wazon. "Stop! what is that?" "By Jove! it's Peggy." True enough, the little girl has crossed the swamp, swimming part of the way, picked up the rabbit on the opposite shore and now has him up in the pines. J. and the Captain hurry around the swamp, and by rare good luck the rabbit runs by J. and is neatly bowled over. That ends the hunt; both dogs and men are tired, and it is time to go home. The Captain declares he has run twenty miles. The old horse jogs slowly along toward the village and so the day ends. BRADLEY.

THE ENGLISH FIELD TRIALS.

THE third annual field trials of the English Pointer Club were run near Wrexham May 6 to 8. There were 25 that filled for the Pointer Puppy Stake and 15 for the All-Aged Stakes. The winning puppies were:

First, Col. C. J. Cotes's lemon and white bitch Polly Jones, 18mos. (Carlo—Jenny Jones).

Second, Mr. F. Warde's liver and white dog King Pear, 14mos. (Taw—Kent Fairy).

Third, Mr. Barclay Field's liver and white bitch Fordcombe Daisy, 1yr. (Lake—Dingle).

Fourth, Mr. A. Richards's liver and white dog Rapid Bang, 16mos. (Amor—Belle des Bordes).

ALL-AGED STAKES.

First, Mr. A. P. Heywood-Lonsdale's liver, white and ticked bitch Clío, January, 1887 (Plum—Cassandra).

Second, Mr. A. P. Heywood-Lonsdale's liver and white dog Lightfield Eaton, June, 1889 (lightfield Dick—Bess).

Third, Baron Oscar Dickson's liver and white dog Rusten, March, 1889 (Sussex Don—Ringlet).

Fourth, Messrs. F. C. Lowe and A. Bertrand's liver and white bitch Belle des Bordes, 6yrs. 2mos. (Young Bang—Polly).

THE FRIENDSHIP OF A DOG.—Have you ever been so fortunate as to have the friendship of a dog? The feeling of love and friendship is attributed usually to human beings alone, but any one who has ever been loved by a dog will bear me out in the statement that there is no tenderer devotion than his, no deeper affection or more unselfish attachment. He obeys like a child, defends like a tiger, is happy when you are happy and miserable when you are sad. Look at him as he lies there at your feet while you read your evening paper. He watches every motion with those steadfast, beautiful eyes. He is on the alert for any order you may give, sensitive to your slightest movement. You go away and leave him, he waits patiently your return. A long separation breaks his heart. He even refuses food and is restless and unhappy until your face smiles down upon him again. And when you meet once more with what uncheeked enthusiasm, what frank and innocent delight he greets you! Suppose misfortune overtakes your pathway, friends forsake you at the lowering of the cloud, you may be in disgrace with all the world, but your dog still loves, still trusts, still abides in friendship as firm as the everlasting hills. You can never be quite forsaken while he lives. Oh, this is something worth the having, is it not? Do you think the earth holds any reasoning friendship half so noble, so fine or so pure as the unreasoning affection of your dog.—Mrs. Carrie M. Ogilvie in the *Saturday Review*.

THE NATIONAL FIELD TRIALS.—We have received from Mr. Edward Armstrong the last portion of his report of the National Field Trials, run last month at Shrewsbury, Eng. The first portion has not yet come to hand, but we hope to receive it in time for publication next week.

Rifle and Trap Shooting.

RANGE AND GALLERY.

TOURNAMENT AT NEW ORLEANS.

NEW ORLEANS, May 11.—A large number of people, principally marksmen and those delighting in the practice of hitting the bullseye, gathered yesterday morning at the rifle range at the Metropolitan Club on Royal street, where the tournament was in progress. Considerable interest was manifested by the members of the competing teams, and some good shooting was the result as shown by the following scores:

The following parties are in the lead for the championship of the State of Louisiana: John Christian 610, Jules Lambou 505, Capt. L. B. McNeely 606, M. Toepfer 601, Wm. North 599, H. Bouck 598, H. Severeance 587, M. A. Hodge, Expectation team, 65; M. A. Hodge, Actual team, 63. The tournament will not be continued next Sunday on account of the Volkfest.

BOSTON, May 17.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day. The shooting conditions were good, except a changeable wind from 8 to 8 o'clock. A good attendance of riflemen made the shooting lively. Mr. Foster won the bronze membership badge. The spring meeting of this association is to be held July 14, 16 and 17, with a large list of valuable prizes. Following are the scores made to-day, distance 200yds., Standard American target:

C. H. Eastman.....75	H. Severeance.....80	W. Charles.....80
C. S. Sydney.....73	F. Bowman.....72

SCHUTZENPILGRIMS.—The New York Central Schuetzen Corps, which will start for the great international shooting festival on June 3, held a farewell meeting and banquet at its rooms, 341 West Forty-seventh street, on the evening of May 14. Capt. George Liburg presided and responded to the toast to "The Corps." Ex-Capt. C. F. Gennrich answered the toast to "The European Trip." Ex-Capt. Otis, Henry Kröger and J. Dux also spoke. About 200 members and wives of members were present. The plans for the coming trip to Berlin were talked over at length at the meeting before the banquet. Thirty-five members of the corps with their families will sail on the Fulda at 6 o'clock on the morning of June 3. Their departure will be celebrated by a big all-day German picnic in Hoboken, and they will be accompanied by Sandy Hook by some 500 of their comrades and friends on the steamboat St. John. On July 3 they will meet the representatives of the New York and the New York City Schuetzen Corps in Hanover and proceed directly to Berlin, where they will enter the Unter den Linden through the Brandenburg Thor, march down to the palace with American, German and Society colors flying, and will there listen to a little speech of welcome by Emperor William. Afterward they will march to the City Hall, hear an address from Mayor von Forckenbeck, and leave their flags. On the evening of July 4 the Independent Schuetzen Corps will give a patriotic banquet at the Kaiserhof, the best hotel in Berlin, and on the evening of July 5 the other three corps will have a monster open air reception in Kroll's Garden, near the Tiergarten, Berlin's Central Park. The shooting festival will last from July 6 to 13. The New York Central Schuetzen Corps, as well as the other three New York corps, will contribute their share toward the \$20,000 worth of prizes to be distributed at the end of the festival.

NEW YORK RIFLE CLUB.—At the last meeting of the New York Rifle Club it was decided to hold an outdoor club shoot at Creedmoor in the future and preparations for a new programme of the summer season were begun. Some of the members misunderstood the meaning of the proposed change and went to Creedmoor instead of to Wissel's Park, Cypress Hill, L. I., yesterday. The only two marksmen who put in an appearance at the 200yds. range were T. J. Dolan, the crack shot of the club, and Major G. Shortley, who has also a very enviable record. Both gentlemen made scores of 83, Shortley using a 300 yd. target and Dolan a 200 yd. target. The other scores were below 85 points out of a possible 100, on the American Standard target, the two enthusiasts continuing the contest until after 6 o'clock without being able to break the tie. The scores:

T J Dolan.....9 9 9 9 8 8 9 9 7 8-85	
George Shortley.....10 7 9 9 8 8 7 9 8 7-85	

SAN FRANCISCO, May 11.—The rifle range at Shell Mound was patronized to-day. Besides the Schuetzen Verein, several companies of the National Guard held practice and medal shoots. The Nationals, an independent rifle club, composed of members of companies C and G, First Infantry, were at the butts early in the day, and made some unusually high scores. The club is divided into four classes. The scores in to-day's contest were as follows: Champion class: C. Myer 48, F. Young 46, J. Klein 44, A. Johnson 44. First class: O. F. Peterson 42, W. Alexander 41, H. H. H. 40, E. Sinton 40. Second class: F. A. Bayre 43, J. Humbill 40, J. Parnelle 38, Y. Dodd 33. Third class: C. Sparrow 39, C. Gilbert 38, W. McNeil 35, J. Morton 36. Fourth class: J. D. Munsfeld 38, W. S. Jones 35, L. H. McKee 38, G. J. Betty 30.

NEW YORK PISTOL CLUB.—The formation of a new club in this city is underway. Mr. Henry Stahl, a well-known marksman, and Mr. A. P. Hunt, being the promoters. The club will be composed principally of professional and business men, a number of gentlemen having already signified their intention of joining the new organization. The headquarters of the club will probably be at the gallery of the Zettler Rifle Club, 331 Bowery, where a pistol range is now in course of construction. A plan of a constitution and by-laws has been drawn up and will be submitted at a meeting to be called in the near future. The club will probably shoot a club match during the summer season, and a band cap match later on. From the standing of the gentlemen who will enroll their names on the list of membership it is expected that the prizes will be both handsome and valuable.

ORILLIA, Ont., May 13.—At the monthly shooting competition of the Orillia Off-hand Rifle Association, the scores were as follows, 10 shots each range: George Whitten 66, L. Day 49, E. Housey 59, J. Fortier 79, A. Paine 72, W. H. Hammond 92, C. Fortier 78, T. Millicamp 79, W. Hane 81, W. Wood 92, A. Harvie 82, C. Wood 80, J. P. Sparling 77, W. McDonald 81. Owing to the inclement weather at the 300yds range Mr. Hammond took the cup, which is competed for monthly. The cup was presented by Mr. Thomsen, of the Long Ford Lumber Co.

TORONTO, May 13.—There was a good attendance at the Cumberland Rifle Association practice on the garrison common to-day. The changeable light and wind was just what was desired, and afforded a splendid opportunity for the younger shots to gain experience. The following were the top scores, 7 shots per range: Wm. Mowatt 84, W. G. Fowler 81, J. Davis 77, J. Dent 76, J. Bruce 75, J. Mildred 74, D. Spence 67, J. Maddox 67.

PHILADELPHIA, May 16.—William Talbot, Edward Betson and Daniel Delaney, of the Frankford Gun Club, met Stephen Hothersall, B. Bradbury and Wm. Bradbury, of the Kensington Rifle Club, this evening, at the latter's room, in a challenge rifle target shoot. The conditions were: 38ft. range, 1/4in. target, 10 shots per man, scratches not counted. The result was a victory for the Kensington team by 7 points.

THE TRAP.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

May 21-23.—A. S. A. Tournament, Kansas City, Mo.
May 23-24.—Claremont Shooting Association Two-Day Tournament. First day live birds, second day blunderbuck targets.
May 27.—Tolley's Sixth Trap-Shooting Contest. Grand All-Day Shoot on new grounds, at Catskill, N. Y. Geo. F. Tolley, Sec'y.
May 28-30.—A. S. A. Tournament, Minneapolis, Minn.
May 30.—First Annual Tournament of the Waverly Rod and Gun Club, at Waverly, N. Y. H. C. Clapp, Sec'y.
June 9-13.—New York State Association Tournament, at Lyons, N. Y. W. S. Cavill, Sec'y.
June 10-13.—Thirtieth Annual Convention and Tournament of the Iowa State Association for the Protection of Fish and Game, at Davenport, Iowa. J. W. Howard, Secretary.
June 17-20.—Tournament Rocky Mountain Sportsmen's Association, at Cheyenne, Wyo. W. E. Ostrander, Sec'y, Denver, Colo.
Aug. 13-23.—Third Annual Keystone Tournament, at Corry, Pa. Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the world. Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse. Wm. E. Limberg, Sec'y.

MASSACHUSETTS RIFLE ASSOCIATION.

BOSTON, May 14.—The shotgun enthusiasts, who form a large portion, have already begun the members of the Massachusetts Rifle Association, for to-day they opened a series of matches. The new match is called the Diamond Pin match, for the reason that the first four prizes are handsome scarfpins set with diamonds, rubies and sapphires. In all there are 24 prizes, of an aggregate value of \$335, and in addition a handsome gold medal is offered for the highest aggregate in the 17 competitions. The match will be shot on alternate Wednesdays, viz.: May 23, June 10 and 23, July 11 and 25, Aug. 6 and 20, Sept. 3 and 17, Oct. 15 and 29, Nov. 12 and 26, Dec. 10 and 24. The Massachusetts Rifle Association will in addition to the regular practice and sweepstakes matches, offer for competition of all shotgun shooters the prizes named below under the following conditions:

Match to be known as the Diamond Pin match. Total number of competitions 17; entrance fee, 25 cents each day; score to consist of 20 Keystone targets and 5 pairs Standard targets; sweepstakes optional. Choice of prizes to be won on the aggregate of each competitor's score, taken in the order made as follows: 1st, 2d, 3d and 4th choice, on 15 scores; 5th, 6th, 7th and 8th choice, on 14 scores; 9th and 10th choice, on 13 scores; 11th and 12th choice, on 12 scores; 13th, 14th and 15th choice, on 11 scores; 16th and 17th choice, on 10 scores; 18th and 19th choice, on 9 scores; 20th and 21st choice, on 8 scores; 22d and 23d choice, on 7 scores; 24th choice, on 6 scores. A gold champion medal, to the competitor making the highest aggregate in the total number of competitions. Ties to be shot off at 10 single Keystone targets and 5 pairs of Standard targets. Competitors to have choice of prizes in the order of the aggregate of their scores. No competitor, except the one winning the champion medal, can win more than one prize. The competitor winning the champion medal in any competition will have and vouch for it until the next competition, when it must be delivered to the secretary, at the office of the Association at the range.

The weather conditions to-day were fair, and the shooting was excellent—notably so in the case of Mr. Gale, who easily led all single birds and 8 birds out of 5 pairs on 15 scores, and 19 and 20 single birds and 8 birds out of 5 pairs on 14 scores, and read with interest by those who appreciate fine work with the shotgun.

Diamond Pin match, 20 single Keystone targets and 5 pairs Standard targets:

Gale.....111011111111111111-19	11 10 11 11 10-8-27

STATEN ISLAND, N. Y.—The match between the Leonia and Spring Hill gun clubs took place on the Leonia's grounds at Staten Island on Saturday, May 17. The conditions were teams of 3-30 Ligovsky clay birds each, 5 traps, Association rules to govern. The visiting team lost by 9 birds. Considering that they were handicapped as at Blaueville, the Spring Hill marksmen had always shot at muskrocks, their record was quite good. The highest score of the shoot was made by Mr. Welch, a remarkably quick shot, who broke 23 and missed 3. The total scores were as follows: 30 birds shot at were: Leonia—Beam 23, Banta 23 Gladwin 23, Welch 23, Goisser 22, total 116. Spring Hill—Hathaway 22, Pearson 21, Bogart 22, Simpson 25, Allen 16, total 107.

LONG BRANCH, May 17.—The regular weekly shoot of the Central Gun Club took place to-day. The sport began with the shooting up of scores at blunderbuck targets for the Daly & Price gold badge. F. Beale, J. Van Dyke and P. Daly, Jr., broke 6 out of 10. Morris 7 out of 10. W. R. Joline 11 out of 20. E. E. Taber and Wm. C. Price 9 out of 10. A sweepstake at 25 blunderbuck followed. F. Beale and Taber each broke 23. W. C. Price 21, E. W. Price 20, J. Van Dyke 19, G. C. Cunniff 14, and Chas. Morris 12.

THE OLD MAN'S COON DOG.—Bob H. is a stable keeper up in New Hampshire. Bob is also quite a coon hunter and keeps a pair of coon dogs, which he thinks are not to be beat. One night some parties caught a fine large coon alive and brought it to Bob's stable and put it in a barrel. Bob brought out the dogs to show what they would do with Mr. Coon. The barrel was turned down on the side and one of the dogs told to take him out. The coon was not in the mood to come out just then, and Zin got the worst of it and could not take him out. Old Zack was brought up and told to take him out, and in went his head. The coon was there and after a desperate tussle the dog gave up the job as a bad one. The crowd here became jubilant over the defeat of Bob's dogs. Just then Farmer H. comes along and asks, "What's the matter?" On being told he said, "That 'er dog of mine can take him out," pointing to a cross between a shepherd and just dog for the other part. "Bet you \$50 he can't," says Bob. "I guess I can kiver that; put up the pictures," the old man says, and to Bob's astonishment out came the greenbacks. The money was put in a third party's hands. On time being called farmer H. takes his dog by the collar and head and backs him into the barrel. When he comes in contact with the coon the coon just fastens to the dog's rear. With a howl of astonishment the dog gives a jump, and out comes Mr. Coon before he knows what's up. The dog turns on him, and before he gets over his astonishment he is a gone coon. "Well, I never squal, old man," says Bob. "The money is yours. But I'll be banged if there ain't more than one way to get a coon out of a barrel."—COON.

NATIONAL GREYHOUND CLUB.—Following is a list of the officers of the National Greyhound Club, elected to serve until the annual meeting to be held July 1: President, Mr. N. Q. Pope; Vice-Presidents, Messrs. L. C. Whitton, N. Rowe, D. C. Luce, M. Phiste and Dr. Q. Van Hummel; Secretary, Mr. H. W. Huntington; Treasurer, Mr. L. M. Bate; Board of Directors, the officers above named and Messrs. J. H. Watson, C. L. Griffith, Dr. F. Hanshaw, W. B. Growtage and C. D. Webber. Following are the committees appointed: Admission of Members, Messrs. Huntington, Phiste and H. W. Lacy; Pedigrees, Messrs. J. H. Watson, C. S. Wixon, H. C. Lowe, J. E. Mayer and W. Wade; Publication, Messrs. L. C. Whitton, C. D. Webber and L. N. Bate; Entertainment, Messrs. C. L. Griffith, D. C. Luce and W. B. Growtage.—H. W. HUNTINGTON, Secretary.

Tramore, Red Irish setter dog, whelped Nov. 2, 1899, by O'Donovan Rossa out of Lulu IV., by Glendyne Kennels, Bristol, R. I., to Wm. McNeil, Winslow, Arizona Territory.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book of extraordinary interest to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

teams from the Dayton Gun Club and the Freehold Gun and Rifle Club, came off yesterday on the grounds of the latter, and resulted in a victory for the home club by the score of 145 to 131.

Just here an interesting question arose as to the course we should steer, Homer declaring it should be more to the west, and Bert that it should be more to the south. I had my own views, however, and as events proved, was about right. Homer was sent forward as lookout and Bert kept up a noisy, if not melodious, shouting on the fog horn.

Yachting Goods.

SYRACUSE, N. Y., Oct. 14, 1889.
H. M. Sprague, Boat Builder, Parishville, N. Y.:
DEAR SIR—I can hardly say on paper how well I like your boats, and your Patent Rubber Improvement is just the thing, at least that is the way I find it by use of two of your boats the last summer on the river by all my family, and any boat that can stand the hard usage a boat gets with six or eight children in and out of same two months in summer every hour of day and have the boats stand the wear, is good enough and better than words.

Respectfully, S. B. MERRILL.

Now is your chance to buy a **Sprague Patent Rubber-Packed Boat**. Over fifty now ready for immediate delivery, from 10 to 16 ft. Over 60 in use giving perfect satisfaction; wherever known and used they are the established favorite. I am determined to have them placed before sportsmen more generally. Don't fail to send 2-cent stamp for 1890 catalogue. Address

Specialties: Eng. Pheasants, Partridge, etc.; also Pheasant eggs. E. B. WOODWARD, Commission Merchant, 174 Chambers street, New York.

FOR SALE.—A SINGLE BARREL EXPRESS rifle, .450 gauge, by Alex Henry, of London and Edinburgh, in oak and leather case, with shells, etc. All in first rate order. A high class weapon. Apply by letter to DR. C. M. DOUGLAS, Lakefield, Ont.

LIVE WHITE HARES (*Lepus Americanus*), captured and properly boxed and delivered to express in Bethel, Me., in good condition on receipt of orders and remittances at \$3 per pair. Refer to Hon. H. O. Stanley, Dixfield, Me., Fish and Game Commissioner. J. G. RICH, Bethel, Me. dec16,4t

For Sale.

To Sportsmen & Fishing Clubs.

FOR SALE.

One of the Thousand Islands, St. Lawrence River. This island is located about 2 1/2 to 3 miles below the town of Alexandria Bay, the headquarters of the Thousand Islands, and where all supplies can be obtained. It is located on the American side and quite close to the celebrated fishing and ducking waters of Goose Bay. The island contains about 7 or 8 acres and is thickly covered with trees of different kinds, including oak, birch, pine, etc., and has a beautiful little bay running into it, making a splendid safe harbor for yachts, skiffs, etc. There is a good summer house of 6 or 10 rooms, also an ice house with cooling room and a boat house in the bay. This island is one of the best locations for a summer home to be found in this country, and is one of the most attractive locations for the summer outing of a club in the United States. This is an exceptional opportunity for such a club. Reason for selling, owner has no further use for it. This island could be occupied this season. The island is well known and described on maps. Further particulars can be obtained from CORNWALL BROS., Alexandria Bay, N. Y., or from E. K. STEPHENSON, Lewis Block, Pittsburgh, Pa.

TROUT FOR SALE.

YEARLINGS of the Brook Trout, Brown Trout and California Trout.

EGGS AND FRY

OF THE SAME IN SEASON.

SALMON FISHING FOR SALE.—A VALUABLE salmon right, beautiful river, well furnished. Address R., care FOREST AND STREAM, may15,3t

Chester White, Berkshire and Poland China Pigs, fine setter dogs, Scotch Collies, Foxhounds and Beagles, Sheep and Poultry, bred and for sale by W. GIBBONS & CO., West Chester, Chester Co., Pa. Send stamp for circular and price list. dec13,6m

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black bass; No. 1, black bass; No. 2, bass and pickerel; No. 3, muscalonge, salmon trout and bluefish. It is guaranteed to catch bass when all other baits fail. It effects a great saving in minnows, on account of the protection afforded by its peculiar construction, one minnow having been known to catch twenty-five bass before it was rendered useless. For sale by all dealers and by the manufacturer. Send for circular and price list.

J. B. WISE, Watertown N. Y.

Salmon Fishing in Canada.

We have now received our entire stock of Forrest & Son's Salmon Fly, Rods, Reels, Casting Lines, etc., etc. We have everything in Fishing Tackle for the successful capture of Salmon and Trout in Canadian waters. American anglers can obtain outfits from us far below New York prices. We make a specialty of salmon tackle. We have salmon flies from No. 3-0 single to No. 3-6 double. We also have a large assortment of Heavy single gut Salmon Casts. A complete stock of firearms and every variety of Sporting Goods. Send for illustrated catalogues. T. W. BOYD & SON, 1641 Notre Dame St., Montreal, Que.

BASE BALL

Rules, Lawn Tennis, Croquet, Racquets, Quoits, Foot Ball, La Crosse, Polo and Curling complete in one book. Price by mail only 25 cents.

Complete Game Laws for Western States and Territories and National Association.

Gun Club Rules.

In neat pamphlet, pocket size. Price by mail 25 cents. Address

Fishing Tackle,

COMBINATION WOOD RODS.

Communications regarding fishing cheerfully and promptly answered.

— 85 Germain Street, Saint John, N. B.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers: Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 183 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

A WESTERN NUMBER.

The issue of June 12 will be a Western Number. It will be brimful of good things picturing sport with rod and gun in the Great West.

OLD STORIES RETOLD.

THERE is a well recognized tendency among tellers of old stories, to rehabilitate their tales and give them an air of truthfulness, by assigning them to some familiar locality or fastening them upon some individual known to possess the traits of character they illustrate. Thus, many of the old stories about dogs and dog owners are periodically revamped and retold with circumstantiality of name and place and date, like the story told in England of a guardsman who evaded the dog-muzzling law by fastening the muzzle on to the dog (but on its tail), the same thing being related in this country of Ben Butler. There is that venerable legend, related in all the ancient English works on sporting, of the faithful pointer or setter, as the case happened to be, which pointed its game, and the sportsman not coming, remained steadfastly on point, to be discovered long afterward a skeleton, still faithfully pointing the bones of the covey of birds. This very yarn, as familiar as Aesop's fables, has within the last year been told in the Providence, R. I., Journal, of a pointer dog "Leo," owned by a well-known sportsman of Providence, and by the Atlanta, Ga., Constitution, of a white pointer, owned by the father of Capt. W. W. Lawson, a famous hunter of Burke county, Ga.

We received the other day a copy of the Des Moines News, in which Judge Kavanagh, of that city, who is well known to be a dog fancier, is credited with having one day returned home with a covered basket on his arm; to be met at the door by his mother, who was told: "Mother, I have just made \$25 the easiest you ever saw."

Of course the good lady wanted to know how and he said 'I have just bought a \$35 dog for \$10, and here he is,' pulling from the basket a bull puppy to the disgust of his mother, who detests all kinds of dogs." This will be recognized as an old story which has been current for years and years, and has probably been told of every prominent dog lover in every county in the Union. Judge Kavanagh belongs to a vast army of men who have made equally advantageous dog trades.

Very many of the "good stories" of hunting and fishing are told over and over again, each locality having its particular "sporting character" of whom or by whom the tale is related. An amusing illustration of this recently came to notice. It was the story of the man who, while hoeing corn or cradling wheat, saw the big buck in the field, chased it and captured it floundering in a snow drift. There came to the FOREST AND STREAM not long ago a version of this story, sent us by a Kinsman, Ohio, contributor; the hero being "Uncle Charlie Kellogg," who was said to have captured the buck in a hay field in July, in the eastern part of Ohio. A day or two after the receipt of this communication came another from an Ithaca, N. Y., correspondent, written on the same day, and relating the same story of a certain "Uncle Dick E.," a Forty-Niner of that town. Subsequent correspondence developed the fact that each of these men had told and retold this tale, each one making himself its hero. If the census takers should note all the old sportsmen in this country who have captured big bucks in July snow drifts, the regiment of them would perhaps outnumber the surviving veterans of the Mexican War.

THE COMMISSIONER CAN STAND IT.

THE New York Press has recently made a rabid political attack on U. S. Fish Commissioner McDonald, which will excite for him the sympathy of all who have kept track of the Fish Commission's work in recent years. Much of what is said by the Press is true, but is so put that it has all the effect of falsehood. The Commissioner is bitterly attacked because under his rule expenses are much larger than they were in the past under Professor Baird, but nothing is said of the fact that the work done at present is vastly greater than formerly. It is stated that the Commissioner has doubled his force, but it is not stated that more men are constantly needed to run a Commission of which more and more service is demanded by the people.

Besides statements which are true, the Press makes many that are false, and the whole article bears every evidence of having been concocted in the interest of the bill before the Senate to turn over the Fish Commission to the Agricultural Department, and to make it a bureau of political rewards for hangers on of Congressmen and Senators.

The people of the country are perfectly capable of judging whether this most efficient Commission ought to be used for political purposes. If they do not wish it to be so used, let them speak out all over the country as they have already done on the Massachusetts coast and along the Great Lakes.

SNAP SHOTS.

TO the tarpon record given in our issue of last week may now be added the further score of Mr. Thomas J. Falls, of this city, who between May 8, the last date given, and May 15, took sixteen more fish. His total score for the season was sixty-eight fish, weighing 6,975 lbs. The first twenty fish were caught successively, none being lost; and the entire catch was made with rod and reel and without assistance except in gaffing. This marks the change in tarpon fishing within a comparatively brief period. It was only a few years ago that "Al Fresco" and others were expressing doubt about the probability of capturing these fish with rod and reel, and were offering to pay the traveling expenses of any one who would accomplish the feat. From that primitive stage tarpon fishing has now developed into a competition for big scores, individual fishermen taking as many as three, four and five fish in a day. Tarpon fishing is no longer a novelty; but it is a form of angling which is most decidedly growing in popularity.

At a meeting of the Appalachian Club in Boston last Saturday a movement was discussed looking to the purchase, for public possession, of parts of the picturesque New England coast. Mr. J. B. Harrison pointed out that

very soon there would be a continuous town all along the New England coast, where all the cliffs and beaches having been taken up for cottages and hotels, the public is even now practically shut out. It must be conceded that there is good reason for this view; no one understands that more clearly than the man with the gun, who has been wont in years past to range these beaches unimpeded, but now finds his passage barred by trespass notices. The same holds true of much of the Atlantic coast. Hardly a week goes by without press announcements of enterprises undertaken by capitalists and syndicates to "improve" shore properties, and convert present wastes into summer or winter resorts. Between the hotel resorts, private cottagers and shooting club preserves, the area of free country is annually diminishing, and the available coast shooting grounds are becoming beautifully less. Meanwhile there is no flagging of interest in shore-bird gunning and wildfowl shooting; and judging from the growth of clubs to take up game grounds, and the eagerness with which membership in these clubs is sought, it is evidently believed to be a case where every man should act on the principle of "save himself who can." A Norfolk correspondent wrote the other day of a club on the Virginia coast, where the members enjoyed unusual sport with the bay snipe. His paper was published in our issue of May 15; on May 17 he had received, from readers of the article, fifty-four letters about it, most of them from persons who wished to join the club. This country of ours is so large, that at first thought it appears ridiculous to talk about there being little available free shooting territory left, but on the other hand, when the situation is examined, the free grounds are found to have diminished to an alarming degree.

William N. Steele, of Clayton, N. Y., was for several years a State game protector, whose special district was the St. Lawrence River and adjoining Lake Ontario waters. His services as game protector were far from satisfactory to the officers of the Anglers' Association of the St. Lawrence River, under whose direction he largely worked, and he was discharged. Recently Steele was arrested for illegally using nets in Eel Bay, and after a trial lasting nearly a week was convicted and sentenced to pay a fine of \$25 and to be incarcerated in the county jail for fifty days. In case the fine of \$25 is not paid, he is to serve twenty-five days longer. The secretary of the Anglers' Association, Mr. W. H. Thompson, of Alexandria Bay, N. Y., has shown very great and commendable zeal during the past winter in seizing nets illegally set in the St. Lawrence River, and particularly in the arrest and conviction of this man Steele. In the last seizure of nets made by the Anglers' Association about ten days ago it was found that the nets were filled with pike, bass and muscalonge; thousands of small fish had become entangled in the meshes of the nets and were destroyed. The larger fish were replaced in the river. Owing to the vigilance exercised by the officers of the Anglers' Association in destroying nets placed in the river, it is believed that legitimate fishing this summer with rod and line will be better than it has been for very many years past.

An "original package" game case came up in Pittsburgh, Pa., last Monday. William Wilkinson was on trial for having sold quail out of season. His counsel proved that the quail had been lawfully killed in Missouri, and had been brought into Pennsylvania in their original packages. The plea was not accepted by the judge, Ewing, who refused to be governed by the United States Supreme Court decision; and Wilkinson was convicted. The Wilson Senate bill, of which note was made last week, has been so amended as to apply only to liquors. In the absence of any specific or general exception by which the sale of imported game would be forbidden in the several States, such a plea as that of the Pittsburgh dealer would, we presume, hold good, unless the judge should share the opinion of Judge Ewing that the Supreme Court decision was wrong, and refuse to accept it.

We have taken occasion in times past to commend the sensible and praiseworthy stand taken by the Western railroads which instruct their freight agents carefully to observe the laws respecting killing and shipment of game. The Union Pacific system has just sent out a circular to its agents directing attention to the Wyoming law of 1880, which forbids shipping large game or its hides on horses. When freight and baggage managers thus work in co-operation with game law enforcement, the problem is in large measure solved.

The Sportsman Tourist.

THE BRIDAL TOUR OF THE KENNEDYS.

WHEN the question arose as to where we should go, Henry strongly urged our going off without having any particular place in view. He said it would give so much more zest to the journey. Furthermore, that if our honeymoon was to be an epitome of our future, while we should seek for pleasure and good, we should not hope to fix in advance the precise place we should find them in. Nevertheless I could hardly wait until the train had started until I said:

"Now, Henry Kennedy, where are we going?"

They were almost the first words I, his wedded wife, had spoken to him. He looked straight at me for a great many seconds, as though feeling the weight of the question; but retained his composure and said that we were going to Pueblo, Colorado. I could not help thinking that, for a person who had started away from home without any knowledge of his destination, the manner of its acquirement since had been mysterious, to say the least.

"Of course," he said in explanation, "there had to be some initial objective point."

"But of all the initial objective points on earth, why Pueblo?" I exclaimed.

"My dear," evidently sighting white-caps, "why not? It lies directly in our way, and, besides, it is accessible by rail."

It is needless to remark that this excited sarcasm, which in turn drew out such arguments in favor of Pueblo as, that there was nothing in the Constitution of the United States prohibiting our going there. Meanwhile, our train moved rapidly westward. Once, when we were rolling along over the beautiful prairies of Kansas, our books lying unheeded in our laps, he turned and asked me if I had in my trunk an old dress that I did not care anything about. Thunder-struck, I replied that I had not.

I do not attempt to explain all of his sayings at such times. It is sufficient to say that he cultivated an air of mystery and that when I pressed him to be more lucid, he smiled benignantly, and surreptitiously pressed me back. Furthermore, I was tired out, and was glad to luxuriate in the consciousness that my wedding things had been pretty, and that I hadn't any more work to do, and that it would be all right, even if we were going to Pueblo.

It was very warm there, but the thick walls of the hotel kept out the heat, and we found it very endurable. When we were freed from the dust of travel and I had rested a while, we had our luncheon, after which we walked down into the business part of the city, as Henry said, to do some shopping. He made the following purchases:

1 butcher knife,	3 small tin buckets,
1 hatchet,	1 bread pan,
1 ax,	1 camp-stove (price \$1.75),
5 lbs. nails,	6 ft. stovepipe,
1 lb. copper wire,	1 small coffee pot,
2 tin wash basins,	1 large coffee pot,
1 can opener,	2 folding chairs,
6 tin cups,	2 milk pans,
6 tin plates,	100 ft. 1/2 in. rope,
2 frying pans,	1 set of tent poles and pins.
2 wooden pails,	

And then, as the truth began to dawn upon me, he walked me across the street to a grocery store, where he purchased:

25 lbs. flour,	2 lbs. hoarhound candy,
10 lbs. corn meal,	1 salt sack,
1/2 box crackers,	1 box pepper,
1 can baking powder,	1 box mustard,
1 doz. boxes matches,	1 bottle pickles,
2 doz. candles,	1 sack potatoes,
2 candlesticks,	5 lbs. onions,
1 strip of boneless bacon,	5 cans tomatoes,
1 ham,	5 cans corn,
5 lbs. coffee,	5 cans peaches,
1 lb. tea,	5 cans Boston baked beans,
10 lbs. sugar,	5 cans corned beef,
1 can maple syrup,	12 lbs. butter.

These were sent over to the hardware store and the people there packed them securely and hauled them to the depot. The kind service we received at this store, the Pueblo Hardware Company, is deserving of mention. And, however strange it may seem, it is one of the very pleasing memories of our trip.

Henry said that the other things were in his trunks.

We strolled back to the hotel through the then much cooler streets in time for dinner, the last formal repast we sat down to for many a day. We were awakened at two o'clock in the morning to take the Denver & Rio Grande train for Wagon Wheel Gap. The narrow gauge sleeping cars on this road are marvels of comfort and commodity. We were rather surprised not to find ourselves riding single file. Before the train started, Henry left me for a moment, coming back with the comforting assurance that all our things were in the baggage car. When we arose in time for breakfast the next morning, the train was doggedly pushing its way up into the mountains. It had been delayed in the night and stopped at a wayside hotel reached by a plank walk across an irrigated mountain field; and it seemed very much like a picnic party of ladies and gentlemen, who tripped and danced along by the grass and clear water. Every one of us ate what we could get and was satisfied, and then, returning to the train, the gentlemen smoked and fraternized, while the ladies betook themselves to the open doors and windows, lifting up their faces gratefully to the mountains as they ushered them into their peaceful shades.

After crossing one range of mountains and rounding the wonderful Mule-Shoe Curve, we descended into a hot sage brush plain through which we traveled several hours until, at Alamosa, we took the branch road winding up the narrow and tortuous cañon of the Rio Grande. But we were getting past our dinner hour and my head began to ache severely; and when, at three o'clock, we arrived at our journey's end, I was too sick to eat. Here again we were met with kindness from the Franklins, who kept the only hotel and, indeed, the only house there exclusive of the depot buildings and the Springs. They hastily prepared dinner for my husband and a cup of tea for me, and then provided us with a man and wagon to haul our things and us to our camping ground. We climbed up on top of the first load, and when we had driven about a half mile down the river to a little mountain-encircled meadow, Henry said, "This is the place. Drive over near the bank, between those two trees and the bushes. We will camp there."

When they had unloaded the wagon, Henry brought

out from one of his trunks a bed tick which the driver took back with him. I had wondered at my husband's bringing two trunks; but he now opened one of them and took out: One 12x14 wall tent, one rubber blanket, sheets and pillow cases, two rubber pillows, three pairs of wooden blankets. The other things he said he would unpack in the morning.

Then it began to rain.

The partner of my joys and sorrows brought me a gossamer and an umbrella, perched me on top of my trunk with all my precious wedding things in it, shut the bedding up in the other trunk, and then laughed at me. I couldn't help thinking it was not connubial in him. He then proceeded to pitch the tent, calling on me for assistance at the critical stage, which showed that he could not have gotten on without me, and which restored my self respect. And when the tent gradually shaped itself into a shelter, my courage came back. Then the rain stopped, and the wagon returned with the remainder of the boxes and with the tick, now filled to extravagant rotundity with fine mountain hay. Spreading the rubber blanket in one corner of the tent, they placed the mattress upon it, carried the trunks and boxes in and ranged them on the other side, and then the driver left us alone. Next came the twilight, and, before I knew it, the bed was all made, with the clothes turned down, showing the tempting little pillows and the white home-like sheets, a drink of clear water brought from the river, the tent flaps closed for the night against the cold, the candles burning cheerily, casting fantastic shadows against the white walls, and we were laughing at the odd experience of using trunks for dressing tables. The lights were put out, and soon the sound of the turbulent river hard by had sung us to sleep.

When I awoke, the sun was shining and I could see Henry building a fire in the stove on the grass outside. He brought me a basin of water, soap and towels, and then began preparations for breakfast. When I was dressed, I helped him. He baked a pan of biscuit in the oven of the stove while I fried some potatoes and breakfast bacon on top, and when they were sufficiently advanced, he made some coffee. It was really delicious and was made in this wise. He put a rather liberal quantity of ground coffee in the small coffee pot, held it over the fire until it began to "roast," and then poured boiling water over it from a large coffee pot, covering it up tight and wrapping a towel around the lid so that none of the aroma escaped. We ate breakfast on one of the boxes: Hot biscuits and butter, fried potatoes, bacon and coffee.

My headache was all gone, and, in a few moments, so was our breakfast. I got out some writing materials and wrote a letter to mamma, and Henry went to work fixing up. I almost forgot to state that in his trunks were also three jars of raspberry jam, two jars of cherry preserves, two jars of plum preserves, six glasses of jelly, all home made by his housekeeper, plated knives, forks and spoons, napkins, dish towels, etc., etc., a roll of light ducking, fishing tackle, 10-gauge shotgun, .45-75 Winchester, rubber boots, photograph outfit, books.

It was two or three days before we were entirely settled, but most of the heavy work was done by four o'clock that day. Then Henry began jointing up his rod and said he couldn't keep away from the stream any longer (and, indeed, now that I know trout fishing, I wonder that he kept away so long). We went to the bridge just above our tent, from which a man had been fishing all afternoon. But we did not fish any there. We went down under it, and in a few moments, as soon as his cast got straightened out, my husband caught enough for dinner. They were small ones, but he said the man on the bridge was visible and scared the larger ones away.

What a dinner we had! Trout, stewed tomatoes, potatoes, jelly, biscuit, fruit cake and coffee.

Then we began to look around us a little. In front, as I have stated, came the river. Rising from its opposite bank was a cliff of dull and many-hued rock, so high that it seemed to overhang the whole valley. Behind us, the meadow stretched in a semi-circle from the river, above the bridge, around the base of the mountains to a point half a mile below, where the mountain crowded it into the stream again. Near our tent were two pine trees, so nearly alike that some one, looking at a photograph of them, said we had jarred the camera and taken the tree in duplicate. Along the margin of the stream, further down, was a thicket, within which was our canvas bathroom. The old stage road ran through the center of the meadow. Some fallen trees near by furnished an abundance of fire wood. Some dead trees out there gave a weird appearance as the twilight stole over the scene.

There was a sawmill up in the mountains and we soon made arrangements for some boards, with which we built a "summer kitchen" to the tent. It consisted of a frame work supporting a roof; two sides of the frame were boarded half way up, and upon them were other boards placed flatwise, forming two tables. The third side, as well as the upper parts of the other two sides, were made of canvas, arranged so as to let down at night or in rainy weather, and left open in the day time or in pleasant weather. The stove stood in one corner, the pipe going through a hole in the roof, and held fireproof with a sheet of tin with a hole through it the size of the pipe. Shelves were made just under the roof. Henry's steamer trunk was placed on edge and served admirably for a cupboard. A hammock was swung between two stumps outside. When it rained, or at night when it was cold, our tent and kitchen were made almost uncomfortably warm by our brave little stove, even though water, left standing outside, froze over. And many an evening we sat beside it, with our candles gaily sputtering, while we read aloud. It seems to me that whatever happens, I shall never forget those evenings in our tent before our fierce little fire, when we read "Lorna Doone" together.

When we were settled comfortably, we went a fishing. Down through the meadow, where the wooded slope of the mountain and the stage road came together to the bank of the river, we joined our rods, and my husband began to teach me to fish with the fly. But I soon noticed that he grew abstracted and seemed to take on the rather dual nature and deportment of a man seeking to do his duty by his ignorant family, and a man after fish. Gradually the latter man predominated. He became intensely alive to every eddy and whirl of the river and intensely dead to me. The flies at the end of his leader circled about his head and rode off on the waves, not so much in response to any physical force as to the mesmeric spell cast over them by the dreamy motions of his rod. Once the water gave an unusual gulp in a still place under a

rock, and I could see that my husband's attitude became more spellbound. The enslaved and obedient flies took wing, circled far back over our heads and then dropped on the dry rock. And then, whether from the sag of the line or the spell they were under, they began to move down into the water, and, in an instant, had fallen into the placid pool as gently as a snowflake touches the earth. There was another gulp, a quick motion, and the line straightened far out into the river, the rod curved into the segment of a circle, the point dipping toward the water in quick, successive jerks.

For the time being I had lost my husband.

"Now, Elizabeth," he said, when the brief struggle was ended, "you must catch one." Noble, ingenuous Henry! The flies had a strong tendency to climb trees, but, when they did fall into the water, it was amusing to see them float quickly past me, in their bedraggled holiday dresses. And all of a sudden, I know not how, the water gurgled and startled me and I raised my hand, and something began to invite me, by means of a rapid series of pulls, to come out and ride on the dancing waves. But my husband!

"Gad Zooks!" (from Lorna Doone) "you've got him. Don't let him get away. Let it go. Keep it stretched tight. I'll turn the reel for you. Not too hard. Whew! He's coming, and he's no slouch of a trout either. Good for you!" And the fish was landed.

I grieve to say that at some past time, some evil-minded person has taught my husband an undignified and exaggerated movement from the ballet; and he executed it at that time in all its wicked abandon.

Mr. Franklin had very good horses and we took many rides and drives up and down the stage road. This road is an especially attractive feature of the place. Below the Gap, where the mountains are close to the river, it extends along their slopes, now descending to the bank of the rocky stream, now making its rugged way up its heavily wooded sides, or winding through some thicket of quaking aspens. Above the Gap, the mountains generously stand aside and make room for miles and miles of level grass land, through which the river seems to have taken its own course. Here and there tributary runs and rivulets come down through the gorges. Away off to the west are snow-covered mountains. We drove up there once as far as the Devil's Gate, two huge buttresses of rock on either side of one of these gorges. There was a large camping party near there from one of the prairie States. They had their tents arranged in streets, employed three cooks, a teamster and stenographer, which latter personage, we understood, was kept busy writing fish stories back to Kansas. When we were eating our luncheon beside a limpid brook that came down from the mountains, we heard voices at intervals above us; and presently two ladies from the camp came down with some raspberries. Part of our luncheon that day consisted of two jam tarts, baked by Henry for the occasion, that deserve to go down in history. When they had been eaten, and while my husband meditatively smoked his cigar, he said that two deep and enduring red marks had been made in the calendars of our lives by the simple agency of those tarts, and that, hereafter, nothing would so touch his stern and manly nature as the tender thoughtfulness that might suggest tarts of like material and workmanship for birthdays and Fourth of July's. That his suggestion for an emblem of domestic happiness would be a bronze statue of a woman of otherwise average capability holding out a jam tart to an appreciative and intelligent family.

[TO BE CONCLUDED.]

ANGOSTURA.—III.

MY scramble in the mountains gave me a good appetite for sleep, but as my blood was up for a deer I left my watch and matches handy. One lesson more than all others has been impressed on me in my deer-hunting experience, and that is the necessity of getting out in the early morning. A late and rather heavy supper facilitated my waking, and I was a little ashamed to find I had disturbed Don Ramon by scraping a match at 8 o'clock. He smiled indulgently at my eagerness, smoked a cigarette and was off again. So was I, but at 5 I woke "for good." Don Luis slumbered on peacefully in the next room. He can have a deer hunt when he feels like it, but such occasions are not every day affairs with me. Still I didn't feel quite like getting up and striking out alone, and so waited as patiently as I could. Nobody else was in a hurry, however. We had our breakfast leisurely and rolled away in the coach about 8 o'clock for a hunt in the cedar and cypress grove. In less than half an hour all left the coach in a beautiful park-like opening and started out four guns strong, each man followed by a servant and guide. Don Ramon doesn't like to walk. A little tramp the day before had laid him up, and he and Mrs. E. were going riding. The fourth rifle was a dangerous-looking muzzle-loader in the hands of Don Apolinario, a sort of *Fidus Achates* of Don Luis.

It looked to me like flying in the face of probability to expect to find deer afoot at that hour of the day, so I gave my rifle to my man and took my shotgun to be prepared for turkey. I had in one barrel a load of the heaviest buckshot I could obtain, but as they chambered five in a 12-gauge chokebore I didn't consider them very dangerous for deer. We had scarcely separated when I heard four shots in the direction of my companions. As proved afterward they were scarcely out of sight of the coach when the sharp eyes of Don Apolinario discovered two deer lying almost hidden in the grass. Giving Don Luis the shot the latter failed to score, but as the deer started in different directions each one took a running shot. One of them, a rather large spike buck, went by Dr. E. on the jump, and by a luck snapper shot from his Colt's carbine he downed it. He had never before seen a wild deer. It proved to have been hard hit by one of the previous shots, Don Luis's final, probably. I stood waiting during this fusillade, ready to intercept whatever came my way, but nothing came. Presently my man and I went on. We had made our way through the dense thickets and across lovely glades for about fifteen minutes, when as I turned a corner in a path there stood a handsome doe not more than thirty steps from me. We were put in communication by an invisible electricity; I stopped, she started. But I couldn't resist the temptation as she bounded from the path to let drive through the low-hanging cedar boughs, and down she went in a heap. But on the instant she was up, and waving her white flag defiantly dashed away. I consoled myself that she wasn't much hurt, or that flag wouldn't have floated so gaily. It was

Natural History.

CANADA GROUSE IN CAPTIVITY.

Editor Forest and Stream:

Having had some experience with Canada grouse in captivity, I will attempt a description of their habits.

These birds are not plentiful in any part of this Province. They are chiefly found scattered through the central part, which is a barren rocky district, thinly settled and abounds with rivers, lakes and swamps. These swamps are usually covered with a thick growth of fir, spruce and hackmatack, which constitutes the chief part of the birds' food, especially in winter.

I began my experiments in domesticating these birds, in order to procure a few sets of their eggs, as it is almost impossible to find the nests while the birds are at liberty. With this object in view, I built a pen of strips of boards, 8 in. wide, leaving space between them for the admission of light. I then gave out word that I wanted a number of these birds and the price I would pay for them. It was not long before a bird was brought, but it was a male and my chances for eggs were not very much increased by its receipt. Not long after this, however, a man brought me three females. This was in September, 1885. The question to be solved then was how to feed them, which I soon learned was rather a difficult matter, as two of them sickened and died within three weeks from the time I got them. When I found they were ailing I tried every means I could think of to restore them to health, but without avail. I did not get discouraged by this loss, however, but had them replaced by others as soon as I could get them, which was not long, as I had offered a liberal price. Through the winter I lost several, while, at the same time, a few were coming in; and when the nesting season came I had three females and one male.

During this time I had made every effort to determine what was necessary to the health of these birds, what was their proper food, etc. I carefully examined the contents of the crops of specimens sent me to be mounted. In this way, and by introducing different kinds of food, I learned what was most suitable for them, and so completely was I successful that for a long time I have lost but very few, and when I do lose one now it is through neglect on my part, which sometimes occurs, as my other duties keep me away from them for a time.

The birds are caught by means of a long slim pole with a noose of soft twine at the end. They are usually found perched on a limb, where they will sit as motionless as though they were a part of the tree, usually with the neck stretched out at full length. At such times, if very slowly and carefully approached, they will remain in this position until the fatal noose is dropped over their head. Then with a slight pull the bird is brought struggling to the ground, the noose is then taken off and the bird is placed in a covered basket carried for the purpose.

In describing the pen in which these birds are kept I ought to have said that I cut spruce treetops, and stand them up in this inclosure, which gives it the appearance of a natural forest. These spruce tops I replace from time to time in order to keep them fresh. Not only are these treetops useful in ornamenting the pen, but if the right kind of spruce is used it supplies one of the chief articles of their bill of fare, and also affords the birds convenient roosting places. In summer I have a spot in the center covered with green grass, and in this is a small stream of water led in from the water pipes, which appears like a little spring bubbling up out of the ground, adding to the beauty of the place as well as constantly supplying the birds with good fresh water.

I can assure you that this makes a pleasant place to sit for an hour or two on a hot summer's day. I have sometimes taken a small table, a chair and my pen and paper, or some reading matter, and spent many pleasant hours among the birds. They are so tame they will often fly upon the table, or on my shoulder, and not show the least fear.

When a bird is first caught and placed in this inclosure it is quite shy, and keeps hidden away among the spruce limbs for several days, only coming out occasionally long enough to feed; but as soon as it grows bolder, and in a few weeks will come and eat with the rest as the food is put down for them.

As the nesting season approaches I prepare suitable places for them by placing spruce boughs in such a way as to form cozy little shelters where the birds will be pretty well concealed from view. I then gather up some old dry leaves and grass and scatter it about on the ground near where I have prepared a place for the nest. The bird pays no attention to this until she wants to lay. She will then select one of these places, and after scratching a deep, cup-shaped place in the ground, deposits in it her eggs. When the hen is on the nest she is continually making a kind of cooing sound, a sound that I have never heard them make on any other occasion. If there should be sufficient material within easy reach of the nest the bird will sometimes cover the eggs up, but not in all cases.

No nesting material is taken to the nest until after three or four eggs are laid. After this number has been deposited the hen, after laying an egg, and while leaving the nest, will pick up straws, grass and leaves, or whatever suitable material is at hand, and throw it backward over her back as she leaves the nest, and by the time the set is complete quite a quantity of this litter is collected about the nest. She will then sit in her nest and reach out and gather in the nesting material and place it about her, and when completed the nest is very deep and nicely bordered with grass and leaves.

So strong is the habit or instinct formed of throwing the nesting materials over their backs that they will sometimes throw it away from the nest, instead of toward it, as the hen will sometimes follow a trail of material that will turn her right about so that her head is toward the nest, but all the time she will continue to throw what she picks up over her back. This, of course, is throwing the material away from the nest. Discovering her mistake, she will then "right about face" and pick up the same material that an instant before was being thrown away, and throw it over her back again toward the nest.

The way they will steal eggs from one another would do credit to a London pickpocket. Two hens had their nests near together, perhaps two feet apart, and as each hen laid every other day, one nest would be vacant while the other would be occupied. The hen that laid last would not go away until she had stolen the nest egg from

the other nest and placed it in her own. I once saw a hen attempt to steal an egg from another nest that was twenty feet away. She worked faithfully at it for half an hour or more, but did not succeed in moving the coveted egg more than about eight feet, it being uphill. The egg so frequently got away from her and rolled back a foot or more each time that she at last got disgusted and gave up the task. I had no fear of getting the sets mixed, as each was so different from every other, in color and shape.

On going to the pen one evening I found one of the hens on the nest, and I knew she was beginning to sit, as all the others had gone to roost. Slipping my hand under her I found three eggs, the nest egg, the one just laid and the one stolen from the other nest. I picked two of them up and held them before her, when she all at once placed her bill over the one held between my thumb and forefinger and tried to pull it out of my hand; I did not let her have it, however, and she immediately stepped up on the side of the nest and placing her bill over the remaining egg, drew it up out of the nest and pushed it back under her out of sight, as much as to say "You have two, and that is all you can have." I must confess that it was with great reluctance that I took these eggs from her, she pleaded so hard for them.

Any one who has only seen eggs of the Canada grouse after they have laid in the nest till the whole set is complete, can have no idea of the beauty of a fresh-laid egg. I have now in my collection about eighty of these eggs, all perfect specimens.

The male bird begins to strut in March. I remember very well the first time I saw one strutting. I had obtained the bird in the fall, and he used to sit about bunched up almost in a round ball as the female did, until one morning, when I went to feed them I found him strutting. His attitude was so different that one would scarcely know it was the same bird. I went in the house and told my wife to come and see him, remarking that whether the females laid any eggs or not I was well paid by this sight for all my trouble. I was so interested in seeing him strut that I had the photographer bring his camera in and take some stereoscopic views of him while strutting. I have some on hand now and can supply any one who may want one.

I will describe, as nearly as I can, his conduct and attitude while strutting. The tail stands almost erect, the wings are slightly raised from the body and a little drooped, the head is still well up and the feathers of the throat and breast are raised and standing out in regular rows which press the feathers of the nape and hind neck well back, forming a smooth kind of cape on the back of the neck. This smooth cape contrasts beautifully with the ruffled black and white feathers of the throat and fore breast. The red comb over each eye is enlarged until the two nearly meet over the top of the head. This comb the bird is able to enlarge or reduce at will, and while he is strutting the expanded tail is moved from side to side. The two center feathers do not move, but each side expands and contracts alternately with each step as the bird walks. This movement of the tail produces a peculiar rustling, like that of silk. This attitude gives him a very dignified and even conceited air. He tries to attract attention in every possible way, by flying from the ground up on a perch and back to the ground, making all the noise he can in doing so. Then he will thump some hard substance with his bill. I have had him fly up on my shoulder and thump my collar. At this season he is very bold and will scarcely keep enough out of the way to avoid being stepped on. He will sometimes sit with his breast almost touching the earth, his feathers erect as in strutting and making peculiar nodding and circular motions of the head from side to side; he will remain in this position two or three minutes at a time. He is a most beautiful bird and shows by his actions that he is perfectly aware of the fact.

As the spring and summer advances the food given these Canada grouse must be changed with the season, and it is only with a perfect knowledge of their wants, and with constant care that they can be safely carried through the heat of summer and the molting season.

In the nesting season the females are very quarrelsome, and at this time more than two or three cannot be kept in the same pen, but in July they may be all turned together again, and they will agree very well until the following March.

I have always attributed the scarcity of the Canada grouse in the haunts of the ruffed grouse to the fact that they were more exposed to gunners, and as they are quite tame compared with the latter, they would stand but little chance of escape. This I still think is true as far as it goes, but an incident occurred a short time ago among my birds that leads me to believe there is still another cause. That is, the male ruffed grouse kills the male Canada grouse. Last fall a boy brought me a male ruffed grouse, and I put him in the pen with the others. All went well until a short time ago, when the Canada grouse began strutting, he then seemed to think he had charge of the whole place and should run it to suit himself. The ruffed grouse seemed to be very much in his way, he tried every means in his power to get up a row with him, but the stranger tried to avoid him, that is, he would walk away rather than quarrel. This did not seem to satisfy the smaller bird, and he went on teasing until one day he came to grief. The ruffed grouse turned on him, and judging from the appearance of things when I went in, he made very short work of him, for he lay dead under a bush, badly torn up, while his antagonist had scarcely a ruffled feather. This is the second one I have lost in this way, and it is my opinion that instances like this occur in their native wilds when they come in contact with each other in the nesting season. The ruffed grouse still lives and is doing well.

In August last I put a pair of golden pheasants in the pen with the partridges. They agree very well. I have seen the whole flock feeding on a little piece of board a foot square. The female pheasant died early in the fall, from what cause I do not know, but the male bird is doing well, and is in fine plumage. He has no protection from the cold and storms of the winter other than that provided by the slat pen before mentioned, from which, when the snow became too deep, I used to shovel it out to give them a better chance to feed and walk about. Although we have had a very cold winter, the thermometer often falling several degrees below zero, he did not even freeze his long slim toes, which I think shows conclusively that he is a much hardier bird than many suppose.

WATSON L. BISHOP,

KENTVILLE, N. S.

impossible to follow the tracks far; there was no blood. Convinced at length that the deer were up, though it was long past their accustomed hour, I took my rifle. Within a little while, upon stepping cautiously into the edge of an open grass-plot, recently burnt over, I saw standing broadside on another magnificent doe. As I coolly brought my rifle up, she as coolly stared at me. Accustomed to shooting in the rare clear air of the mountains and being "fooled" as to distance, I deliberately miscalculated and overshot. The deer gave a bound unhurt into the bushes, when I saw glimpses also of a companion making off. That shot sticks me yet. I could not have been persuaded it was possible, and can scarcely believe it now. On an easy shot I usually aim for the spinal column, a shot there downs the animal on the spot; I thought I was shooting from 125 to 150 yds.; it was about 75. I had aimed so high on the body that there was no margin for my miscalculation. A misty morning in a thick wood gives very different conditions for estimating distance, from those of the clear open mountain atmosphere of Mexico and the West. The rule of "Yo," as stated in his "Record of Nineteen Shots," is a pretty good one I believe, i. e., take only near shots. I have been rather lucky at long shots, however.

Tired and hungry, but pleased over the Doctor's "maiden" deer, we drove back for dinner. Entering the wood at about 9 o'clock the party had seen eight deer, supposing that none were seen twice. I never saw a lovelier place for the morning still-hunter, the best and most satisfactory among all the modes of deer killing.

A great army of sandhill cranes that had been down in the field feeding came to their nooning at a large pond in the field back of the house. This is an unnaturally shy bird. We drew in the coach behind a little wooded hill, and dismounting crept up among the trees. We found them quite out of range, but plainly visible, standing tall and in ranks like an army. Trying our guns at some mud hens a little later we found the distance nearly four hundred yards; yet they showed uneasiness as soon as they saw us, and soon flew, while we were debating the chances of a shot. Next morning one of the men got near them while feeding, and clipped both wings of a fine fellow with a rifle ball. He brought him in alive, and the proud bird stalked around the court as if upon his native soil, as from his name I suppose he was. We like game at our house, and consider ourselves fair judges of it, and it was unanimously decided that this specimen of *Grus mexicana* was the best dish that ever graced our table. When I go to Angostura again I am going to "lay for him," and not out of mere curiosity.

That evening we watched for deer at a beautiful laguna, but saw none. Don Ramon and Mrs. E., excited by our morning's experience, went to watch near where I saw my second deer in the forenoon. They saw no deer, but the turkeys flew into the trees near them as it was growing dark. Don Ramon wanted a shot at them, and to get it had to cross a little stream that Mrs. E. couldn't conveniently cross. They had just seen the track of a lion (panther), a small one the guide said, "about the size of Monarca" (a huge mastiff), and Mrs. E.'s courage suddenly vanished. She raised such an outcry calling Don Ramon that the turkeys took themselves off, as did probably the lion, if he was anywhere near.

Next day was Sunday, and not wishing to obtrude my conscientious scruples against shooting, I decided on a little stratagem. Reasoning that by thoroughly tiring out the whole party nobody would want to go out, I advocated with much enthusiasm a fishing party after supper. Away we went, therefore, followed and preceded by a whole cavalcade of attendants, one of them lighting us with a piece of tarred rope, which filled the air with a sweet resinous odor. Fires were lighted, hooks and lines rigged, and we fished with about two-ounce weights just below a roaring cataract. Don Luis yanked out one catfish of about a pound and a half after faithful waiting. The rest of us got nothing but the romance of the trip.

As I had calculated, all was quiet Sunday morning. After a late breakfast we all took a ride on horseback. A ladies' saddle had been found for Mrs. E., who was the first lady who had been on the place for sixteen years, and probably the first American one ever there, and handsome mounts were provided for the rest of us. The attendants were legion. If you wanted to mount, a man had your horse ready and held the stirrup (if you would let him). They would take anything out of your hands which you were carrying, and no matter when or where you dismounted the ever present *mozo* was at your horse's head in an instant to take charge of him for any time, long or short. It was a novel sensation, but not as disagreeable as some might imagine. The sun had come out veiling her splendor a little behind high cirrus clouds, and the breeze blew sweet and cool from the Gulf. We visited a banana orchard, and though the trees were brown from a recent frost we felt ourselves in the tropics as we stood under their huge spreading leaves. Great clusters of fruit just beginning to ripen hung on some of them. One of these was added to our *impedimenta*, as Don Luis said they would ripen as well off as on the tree.

He was determined we should not go away without fish, and so had ordered some dynamite to be exploded in the pond where we fished the night before. Considering the kind of fish and that the pool was only one of hundreds I didn't insist on my protest. Few were secured there, but a cartridge in another pool resulted in some 25 lbs. or more, mostly of about a pound in weight. Fresh fish are rare, we enjoyed even the plebeian *pinelodus*.

At dinner that day they brought in on a huge earthen tray the head entire of the bullock that had been killed, roasted under ground. It was the very quintessence of cookery, thoroughly done, but having lost no juice or flavor. Old hunters in California have told me of digging a hole under the camp-fire and burying a deer's head over night, but I never saw it done. The principle is the same.

Trains were uncertain at the nearest station. "Better go in the coach to Cerritos, where they are regular," said Don Luis. We naturally asked how far it was. "Oh, nothing, some eight leagues" (twenty-five miles). So we said good-bye reluctantly and rolled away. At Cerritos we chose to rough it among the railroad people, all pleasant enough except the telegraph operator, soaked, mind and body, with vile alcohol, rather than come from the hotel in the early morning. Next day we reached home by 1 o'clock, sound in mind and limb and with a wealth of renewed health and invigorating experiences that this chronicle but feebly conveys to those who have been patient enough to follow it.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 12, May 30.
FOLSON 10 and 12, Sept. 26.	REMINGTON 12, Dec. 5, Feb. 6.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 26.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 19.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WHITNEY SAFETY 12, March 6.
LEFEVRE 12, March 13.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

AN ELK HUNT IN WYOMING.

IN the fall of '86, Kin D. B. and myself, with the hunter Jo James, spent parts of two weeks hunting elk in Deer Creek Park, Wyoming. We reached the park early one afternoon after a twenty mile ride from Deer Creek Ranch. The park, contrary to our expectations, was a treeless, comparatively level plain. It was surrounded by mountains, from two to three miles wide, and about twenty miles long. On the east, in the direction from which we had come, the hills were low, and, to a certain extent, regular. On the west, where our hunting ground lay, however, they were jagged and pinnacled, and looked like sections of a Gothic church roof. They presented a vast surface of bare rock; trees, as a rule, grew only in the narrow valleys or "draws" that separated mountain from mountain.

Arrived at camp, we ate a hasty dinner and then set out for a short hunt before supper. A half hour's walk around the base of a craggy peak brought us to the mouth of a "draw." Here we struck an old elk trail, leading up the draw, which we followed.

At first the trail led through a thicket of quaking asp, but presently this was left behind and we found ourselves in a little arena, clear, except for a few pine trees that grew here and there at intervals. Just as we left the quaking asp we saw a blacktail doe. It was 150 yds. off, bounding down the hillside toward the bottom of the valley, with easy, graceful jumps. Both the tenderfeet hesitated at the shot, but James raised his rifle and simultaneously with the report the deer fell in its tracks.

The next day we set out from camp early. For a mile or two the way was easy, but soon we were well in among the mountains, and began to realize that we had a hard day's work before us. In the only places where climbing was possible the mountains were obstructed by a tangle of fallen trees. These trees had managed to grow to a height of from 20 to 25 ft., and to a butt measurement of from 4 to 8 in., and then had died, the soil failing to supply their increasing wants. They made very acceptable fence rails for the nearest ranches, for they were tough, light and perfectly seasoned, but they played the mischief with climbing.

Despite all obstructions James set a good pace, his object being to cover as much ground as possible before night. Along the base of one mountain we went, then circled around it and began climbing for the top. From below it looked an impossibility ever to gain the summit; but after a three hours' scramble with tooth and nail success finally crowned our efforts. Once on the top we took a short breathing spell, and then set out for the next peak of the little range.

Scarcely a hundred yards had been covered over the rough, shrub-grown ledges, when we were confronted by a 300 ft. precipice. This effectually put a stop to our further progression in that direction, and we were forced to fall back over some of our hard-won ground. Then, by means of a steep, rock-strewn slide, we descended into a narrow valley, and began climbing the mountain on the other side.

Our enthusiasm had by this time largely fled. It was 2 o'clock, and we had seen no game whatever; moreover we had nothing to eat. For some unknown reason James seemed to think it the proper thing never to take out any lunch.

It may have been that he doubted our ability to climb and carry the lunch in addition to our guns, but, at any rate, it was his principle and he stuck to it. Breakfast had been eaten at daylight that morning, and we were pretty well used up by the hard climbing. Taking it altogether, we had good reason to be cross and dejected with the prospects.

"There are no elk within a hundred miles," we thought. "They could not climb these precipices, and, even if they could, they would starve to death before they could collect enough food for a meal."

Such were our thoughts, and we were on the point of calling for a retreat, when suddenly, from a little point 70 yds. to our left where some stunted pines grew, a tall, brownish-red animal clumsily rose, hindfeet first, like a cow.

"By George, there's an elk!" said Kin, and fired.

In an instant a thrill of life shot through us. Dinner and disgust were forgotten. We ran toward the spur with the stunted pines. The elk had disappeared over it, but we had seen the hair on his shoulder fly and had heard the welcome "pud" of the bullet, and we knew he was hit.

In our scramble we each tried to outdo the other, but finally all arrived at the point together. Just below, within thirty yards, was the elk, stumbling along with a broken shoulder. And scarcely ten yards further we saw a second elk in the act of rising to his feet. All three of us fired simultaneously, and then for about sixty seconds we kept two Winchester repeaters and a Marlin working till the hills echoed and there was no more occasion for shooting.

Both elk lay dead. The first had fallen almost directly in his tracks. The second had stumbled on after receiving his mortal wound, and finally had fallen in an exceptionally steep place, from which he had rolled eighty feet down the mountain side. He now lay held back by a little clump of quaking asp. If he had not caught just as he did, he would have fallen into the gorge 500 ft. below and been ground to mince meat. Both were bull elk, and both fine specimens. One had four and the other six prongs to his antlers, and James estimated that together they would weigh a good half ton.

This trip met our expectations so well that we determined on another. This time we hunted unsuccessfully one day. The next we climbed to a snow-water spring high up on a commanding mountain. Here, in the coarse

grass we found depressions where eight elk had made their beds: all around the spring were fresh tracks. We followed up the trail left by this band for some time, but then lost it. About the middle of the day we took a siesta under some dwarf pines, and then set out for camp, but by a different route from that by which we had come. Soon we ran on a fresh trail. It led in just the direction we were going. It had been made by a small band of seven or eight elk, who were traveling Indian fashion. In about ten minutes we came to a place where a second trail from the left had joined the first. This too had been made by a small band of eight or ten. Then we came to where a third band of about twenty had joined the other two. At the same time the trail began to descend into a "draw" that was thickly wooded.

The prospect, to say the least, was growing interesting. Like hounds we followed the trail—now broad and resembling a well-beaten cow-path. The walking was easy and we made good progress. Half a mile further we were again surprised. A new trail, still from the left, came into our path. It was nearly as well defined as the one we had been following. Our hearts beat faster still. When was this to stop?

In some bad ground the trail separated, and part flowed on one side and part on the other of a little island of rocks and trees. Soon, however, it united again. A little further we met with the first indications that we were nearing the band. Every now and then we could faintly distinguish whistling cries.

"It's the calves," James whispered as we pressed on. Soon the whistling was all around. We stepped into a little glade, and at the same instant a large elk showed its head at the other side. Two of us fired, and the elk fell and began thrashing about the quaking asp. In an instant a wild commotion arose. Calves cried with terror, and on all sides we could hear elk tearing through the saplings. We stood with rifles ready. Several elk ran across the open space, but as they were all cows or calves we did not shoot. Finally a young bull broke through the trees at one side. The writer fired and he fell.

The "draw" was very narrow at the point where we had taken our station. On the opposite side from us, not more than a hundred and twenty yards off, was a low, treeless ridge. Happening to look across at this we saw that the elk were all taking up their position on it. As they came out of the thickets, in small bands of six or eight, they ran down the line of those who were already on the ridge, and when they came to the end stopped and fell in.

It was a curious, and, at the same time, a very pretty sight. No old bulls were in the band, and about half the line was formed by calves. These calves were the handsomest animals I have ever seen. They were something like Jersey calves, and had markings, contrary to the mature animals. The elk were within good range, but none of us felt like shooting. We stood and watched, till, finally having satisfied their curiosity or whatever feeling it was that made them stop, they gradually left in the same small bands in which they had come.

We counted seventy elk in all. James said that this herd was the largest he had seen for several years, and that it comprised all the elk in that section of the country, who were banding up for the winter.

J. B. BURNHAM.

WILDCAT CHASE ON THE NORTH FORK.

"HELLO, Julius! how do you do?" I was sitting at my desk at the office working for dear life, for it was the busy season, and looking up, there stood old Hank in his ragged hunting suit, his old muzzleloader slung over his shoulder and his two lean hounds at his heels.

"Hello, Hank! Glad to see you, old fellow. Sit down and make yourself at home until I am through with this account."

As was his habit once a week Hank had come in to town from his mountain cabin to sell his game and baskets. Business over, he would drop in and smoke a cigar, the only ones he ever smoked—under ordinary circumstances an old clay pipe was good enough for him.

I could see the twinkle in his keen old gray eyes, for I knew what was coming, and the old rascal knew very well the weak spot in me. I could ill afford a day's hunting in the busy season, but how could I resist such temptations? Old Hank and his dogs and his old rifle brought back to me the recollection of many a glorious tramp after reynard.

"Fine tracking snow, Julius. Saw a wildcat track a little above the North Fork mill—a dogoned big one, too! What do you say about taking old Leader and the pups and giving it a tussle to-morrow morning?"

"I can't go, Hank; I have too much work."

"Well, all right, I will get Steele, or tackle him alone. Let me have old Lead; he is a capital dog to work out a cold trail."

Hank had finished his cigar, and was standing before me, his big, bony, muscular frame the personification of bodily strength and endurance; and visions of the tramps and camps I had enjoyed with him came back. That was too much; work could wait a day. "Well, Hank, I will try and get Steele to come along. Meet us at the mouth of Red Lick at half-past six."

What a glorious winter morning it was! Calm and cold; the snow, which had fallen during the night, had draped the dark evergreens in a mantle of pure white; not a breath of air was stirring. Steele and I walked silently in the rugged mountain path, drinking in the magnificence of the scene. Hank was on time. We crossed the creek on the ice and went among the rocks toward the wildcat den. Uncoupling the hounds, old Leader soon gave sign of scent, and upon investigating I found it was a tolerably fresh wildcat track. Trailing slowly, for the scent of the wildcat is not as strong or as enjoyable to the foxhound as that of the fox, the dogs giving tongue occasionally, we crawled after the dogs over rocks and fallen trees, until the old dog gave full tongue, and that opened the ball. The chase went toward Mill Creek. Steele ran up the creek, Hank down to the crossing below, while I kept my position and waited. I waited for more than an hour with my back against a rugged old hemlock, long before the dogs had gone out of hearing.

The scene before me was magnificent. A woodpecker was hammering away on an old tree, and the sun shining on the snow-covered pines and hemlocks made them glimmer as if covered with diamonds.

I heard a shot down the creek. That long, whiplike crack was old Hank's rifle. Soon I heard the dogs coming toward my crossing. I got ready, peering through the trees and down the creek to catch a glimpse of the quarry, when not a hundred yards away the cat broke cover. It was loping; and aiming a foot ahead I pressed the trigger. At the crack of the rifle I saw it tumble over. Quick as lightning it was on its feet again and off. I sent another bullet after it, but without avail. Going toward the spot where the cat was when shot at first, I found plenty of hair and blood; evidently it was hard hit. By this time the dogs had come up, and the scent of the blood made the pursuit, if possible, more ardent. Such music as rang through those hills.

The dogs were soon gone, and I after them more cautious than before, for to encounter a wounded wildcat at bay is no small matter. Hank had come up after my shot, the strange cry of the hounds convincing him the cat was wounded, and together we went as best we could over fallen logs, over rocks, up and down ravines. After a mile or two of this work we heard the dogs howling or barking; and coming up found one of the young dogs literally disemboweled, and the cat up a small sapling hissing and spitting at the hounds, which were all around at a respectable distance. I cautioned Hank not to go near, but to let me finish him with one more shot. But the sight of the dog had put the old fellow's blood up, and going about ten yards he blazed away. He never hit her, and quick as lightning the cat was on him, clawing and growling, and then ran. My first shot had broken a front leg, and it could hardly run fast. I took deliberate aim and killed it. Hank was badly clawed about the hands and arms, but with no mortal wounds; and a few days of care put him on his feet again. The skin of the cat made a handsome rug, which now embellishes my sanctum.

JULIUS THE FOX HUNTER.

PITTSBURGH, Pa.

STEWED PARROT.

ONE of my long cherished anticipations was at last to be realized by a trip in Mexico, in making acquaintance with the parrot tribe in its natural state.

Since boyhood I had cherished an antipathy against all the squalling, whistling, sluggish, stupid race, and I fully intended to even up on some unfortunate if I could once get him before my gun and fairly flying.

My first projected trip in eastern Sonora and western Chihuahua, being principally in the plain country, or in mountains not heavily timbered, was fruitless, although I never failed to look for the game.

On returning to the city of Chihuahua, and during preparations for a trip to western Durango, I happened to call one morning at the rooms of one of the first conductors of the M. C. R. R., and there found either seven or nine of the usual green-bodied, yellow-headed Mexican parrots, ranged on a pole on one side of the room, but none of the family at home. Returning to the street I met Mr. L., the conductor, talking to some of our mutual acquaintances. After the usual greeting, I explained to Mr. L. my having been at his rooms, and not finding him or any of the family, and innocently queried, "By the way, why do you have so many parrot-?"

He answered, truthfully I hope, "Oh, because I like them."

"Why, Mr. L., are they good eating?"
"E-eat! I would just as soon eat a baby as one of my parrots."

Our friends laughed, as Mr. L.'s parrot hobby was well known to them, but his answer did not deter me in the least from my full purpose of some day dining off parrots, even at the risk of being considered cannibalistic.

At last the home of the parrot was reached and we were encamped in the Arroyo de los Friales, directly at the eastern base of the Sierra Madre, in Durango, with frowning bluffs on either side and the mountain heights as a background, riven by the arroyo, whose sparkling waters flowed past our camp. The heights were well covered with large pines, while around us was a grove of oaks, furnishing fine shade and plenty of fuel, for fire is necessary for comfort at this altitude of over 6,000 ft., even in the months of April and May.

The repeated calls, "Parrots," "Parrots," from some of our men had several times induced me to grasp my gun, but the birds were invariably passing high in the air, for the sleepy, sluggish, crawling parrot in his native wild is a bird of action, strong of wing as a hawk, and circles for hours in the blue ether of the mountain heights, his discordant cries reverberating from cliff and crag, and what is more, he is a wary bird, not usually to be caught napping, as I found by after experience.

One morning, however, just as we were at breakfast, a flock descended in a small pine tree and began tearing apart the cover in search of pine nuts, their favorite food. Snatching my gun, I was soon under cover of some bushes and wending my way down the arroyo, reaching shooting distance just as they were alarmed by a Mexican returning with our horses and mules. As they arose I made a fine double and with my game returned to camp, more elated than I remember having been, even when a boy, just after a successful shot at ducks or grouse.

The boys, after a short examination, wanted to undress the birds, having a natural curiosity to see how a parrot looked without his gorgeous plumage, and a further desire to decorate themselves with the long green feathers.

Naked, a parrot might—minus head and feet—be mistaken for some variety of the duck family; a duck that had been unfortunate when young in being reared on dry land, which had crooked and destroyed the symmetry of its legs, and in being stepped on, which misfortune had acted very unfavorably on its graceful figure.

The game was finally turned over to Dr. Allen, the colored cook, with orders to prepare for dinner by cooking thoroughly, as they might be old; for an examination of their beaks and tongues had been made without finding any teeth, and neither the Doctor nor I could be positive in regard to a parrot's age from other evidence.

Returning from field work at midday, dinner was soon on the table before us; stewed parrots entire, dark with richness and exuded juices, occupying a prominent place.

My assistants looked longingly toward the tempting morsels, so in generosity they were asked to share both the birds and my realization of the long-expected day of triumph when I could make game of the parrot, instead

of being the fool game of some poll whose cracked voice had misled my attention.

Dr. Allen solemnly averred that they had been cooking some four hours, but fork and knife would not make an impression; and while anxious to know how the Doctor had cleaned them, I asked no questions, but strongly suspect that the Doctor must have bored through some soft spot with a gimlet to have made an opening.

The Doctor was ordered to keep them simmering until supper time, and did so, for remaining in camp with some calculations, I knew the fire was kept up. At supper the birds appeared again. This time a sharp knife and skillful management would leave a mark, but were insufficient to furnish a taste around. Further orders kept the stew pot on the fire until bed time, and from daylight until breakfast, and then our game was not overdone, although thoroughly cooked. Success crowned our efforts at mastication this time, and the victory was gained, but as to the distinctive flavor, now that several years have passed, I cannot be positive, but think a piece of vulcanized raw-hide would resemble it, especially if the hide was smoked, for the parrots certainly were. Several polities were killed afterward, but no attempt made to use them as game by any of the party, as their curiosity and my antipathy had both been appeased.

Several varieties of parrots are to be found in the Sierra Madre, some of them not larger than sparrows, all frequenting the immense pine forests, and feeding on the pine nuts.

The climate is remarkably even, with summer cool and wet and winter dry, but ice and snow are not infrequent, and the parrot has chosen a favored spot to live out his century. Some of the summer varieties I would consider preferable as game birds, inasmuch as there would be less of them to dispose of.

J. V. B.

AIMING THE SHOTGUN.

Editor Forest and Stream:

In your paper of Jan. 30 I see that Mr. Louis Hartman takes up the question of "Aiming the Shotgun." It is often quite difficult to explain how a thing is accomplished, and especially in the matter of aiming. I think Mr. Charlier's method of shooting might be explained in a somewhat different way. There are also many good shots who handle their guns in a manner that it would be hard to imitate. What I would like to show is that it is easier to take aim when sighting much above the barrel of the gun and consequently shooting with the muzzle of the gun well under the object.

Those who notice rifle shooters break glass balls and hit other moving objects with the rifle, must observe that in the cases where these rifles have the common crotch sights the shooter of necessity does his aiming much above the sights. So it is with the shotgun, only that as it has no rear crotch sight in the way, it is easier to aim than with the rifle.

I do not recommend any one to use a gun with a stock so straight that aiming is an uncomfortable operation, as Mr. Hartman would seem to imply.

I wish to speak of one matter relating to this subject, and that is the best form of a rear sight for a shotgun, if one is to be used at all. Those who shoot much with the shotgun and practice intelligently keep their guns in pretty good alignment, and when they miss it is because the muzzle of the gun is not in the right position.

With beginners, however (especially when using choke-bore guns), a great source of error is from this trouble of bringing the gun up to the shoulder and aligning it just right even if it is well fitted to the shooter. I have found that by using a sight near the eye having a very large aperture and narrow rim, just enough to guide the eye without being in the way of the view, is a help for close shooting. This sight is my short express wind-gauge sight, with the aperture reamed to be at least $\frac{3}{16}$ in. diameter. The base of this sight is of a good form to fit the hand when grasping the gun, and as it turns down forward can be used or not without being at all in the way. I wish it to be understood that I do not advocate the general use of rear sights on shotguns, for I think it is unnecessary where one knows how to handle the gun well. Still this sight is certainly a help to beginners, and is used by a good many who are not beginners.

Any rear sight very far from the eye, such as on the rear end of the gun rib, would be worse than useless. In this connection I will say that while in Texas last summer I found one of the best shots in the country using one of my rear sights—with the regular $\frac{3}{16}$ in. aperture—on a three-barrel gun, and he never turned it down when hunting, but used it for shotgun as well as rifle. Although he had the reputation of bringing home more birds than his fellow sportsmen, I do not ascribe it to the sight, for it is essentially a rifle sight; but the point I wish to make is this—that it was not in the way of quick sighting for wing shooting. He certainly was sure of perfect alignment.

WILLIAM LYMAN.

JONATHAN DARLING, of Nicasious Lake, Me., who was arrested last November on the two charges of hunting deer on Sunday and hounding deer, was convicted and fined. From this he appealed to the Supreme Judicial Court, held in April. In the meantime he endeavored to persuade the principal witness for the prosecution by an offer, in writing and otherwise, to not appear against him; but the warden was not purchasable; and when the case came on, Darling was tried on one of the complaints and found guilty. He then settled up the whole matter, paid his fine and went home.

A LOON IN A CORNFIELD.—Windsor, N. C., May 20.—*Editor Forest and Stream:* One day last week Mr. Watson Tayloe, a farmer living two miles from this place, found in his cornfield a loon. The question is, how did he get there? The field is a mile from Cashie River and thirty miles from Albemarle Sound, which is the nearest point where they are found. It was brought to town and liberated in the river.—CASHIE.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Famous Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

POCONO.

WE were off for the 1:10 P. M. train at Hoboken—Dr. Levering, Dr. Hornung, Counsellor W. C. Spencer and the subscriber. Visions of large trout had been dancing before our eyes all the winter, and where better to find them than in the streams of Canadensis and the Pocono range? Dr. Chas. E. Denhardt, little less successful in the mountain brook than he is in the sick chamber, with Messrs. Kraft and Imhoff, well known druggists in New York city, had preceded the party a couple of days as *avant couriers* to prepare the way and let the denizens know that we were coming. How the professions do like to get away from the cares of business and indulge in the gentle art—more especially they of the medical and dental professions. And it is a good thing to have them along, as will be explained later on.

We were cozily fixed in the smoking car and bowling along speedily and almost noiselessly on this well-conducted road, when we were approached by a fine-looking gentleman who evidently had *Fontinalis* in his eye largely developed. Upon hearing our destination he informed us that he had been up that way the week before and had caught to his own rod 200 trout, not one of which he saved less than the 5 in. Walton regulation. He told us of his fishing in Norway and Canada and Maine, and of the Paradise Club, of which he is a member, and of the big trout in those celebrated regions; but he said that in no case within access of New York city had he found any trouting equal to the streams around Canadensis. We soon found that he knew considerable about trout. He showed us his fly-book, and picking out the smallest in the large and varied collection, a little mite of a thing, a light brown body with dun-colored wings on a No. 12 hook—a gnat and nothing else—he said he had caught all his fish on that. He gave us one of the midgits, and we found it the very thing. Pennsylvania trout, at least early in the season, will not take a large fly, no matter how made, colored or thrown. We were not astonished when he presented his card to recognize the name so well known to the lovers of the gentle art, the author of that charming little book, "Where the Trout Hide," Kit Clarke. Yes, he does know where they hide, and has a way of calling them out from their hiding places. After a very pleasant ride of less than four hours we reached Cresco, our station on the D. L. & W. R. R. Here we were met by Mr. D. M. Crane, at whose place in Canadensis we proposed to stop. Mr. Clarke went to the other place where they catch all the big trout and kill all the bears (in the New York Sun).

We were soon over the three miles and at the door of Brookside Cottage, where we were cordially welcomed by good, motherly Mrs. Crane, Misses Jenny and Fanny, not to forget the Laverack setter Nellie and that darling little vivacious cocker Duke, over whom so many grouse were killed last fall, and he then but a mere puppy. Dr. Hornung, our amateur, never having caught a trout (out West he would be a tenderfoot), with Dr. Levering, soon had their hip-boots on, rods adjusted and were off for the stream just opposite the house. Just below the dam and amid the dashing waters is a big rock and a favorite place to cast a fly in the eddying foam below. Dr. H. was soon on the rock, but having hooked his first trout, in his excitement reaching forward for the wriggling four inches, he lost his balance, slipped from the rock, got a big ducking, broke his rod tip and lost his fish. Thus ended the Doctor's first lesson. He did better afterward.

But few fish, and those small, were caught before the bell sounded for supper. About this time Messrs. Kraft and Imhoff and Dr. Denhardt came in. They had been down the Broadhead after big fish. They showed some fine ones, but not nearly as many as they had captured in the Bushkill the day before. Dr. Denhardt is a successful fisherman, and his skill as a physician also now comes in good play. Miss Jenny Crane had been complaining all day. He pronounced it tonsillitis. He succeeded in breaking the fever and rescuing our fair invalid from what might have been a severe and protracted sickness.

In the morning Drs. L. and H. started for the Bushkill. Counsellor Spencer and the undersigned were driven up the road some three miles to fish down Goose Pond Run. We found a good many trout in this brook, but small, something like half we were compelled to throw back, being fingerlings only and under the regulation size. We tried our new \$3 split-bamboo. It proved a good fly-rod in open water when kept dry, but a poor thing in the brush, as what fly-rod is not.

Our expedition the next day was a buckboard ride toward the headwaters of Bright's Creek or the little Bushkill, some seven miles over the roughest and most abominable road ever cut through a wood. We reached Mud Creek, a small stream that empties into Bright's. Here we proposed to commence operations; but what did our eyes see on a board on a tree close by the bridge but this: "Notice. All persons are forbidden trespassing by fishing or hunting on any grounds owned or leased by Joseph Brown." Just then another fisherman came along from up the brook. We asked him if Mr. J. Brown owned or leased the land thereabouts and contiguous to said brook. He said that "he didn't know." As Mr. J. Brown's domicile was some mile and a half distant through the woods we concluded that Mr. B. might own or lease land somewhere, but that there was not sufficient evidence, so our Counsellor Spencer averred, to show that this particular stream was covered or intended to be covered by said J. B. A fly tossed lightly over the bridge was eagerly seized; a five-incher was landed and the die was cast. We found the fish numerous, but small, until we struck the fork below, where they increased in weight very materially; but no very large ones were captured—they ran about 6 to 8 oz. only.

We left the stream about 5 P. M. with very satisfactory creels. What we might have done had we gone earlier and fished down the main stream, or Bright's Creek

proper, there is no telling, but I have no doubt each one could have more than filled a No. 3 creel with good-sized fish.

Dr. Hornung had left us the day before with 46 trout, his own catching, and he went off proud enough, determining to return again in May; and so say we all of us. The next and last day the Counsellor and Dr. L. took in the main or Broadhead Creek. The subscriber had had enough and as he had in his possession the largest fish, 13 $\frac{1}{2}$ in., with two of 12 in., he merely looked on and awaited developments. On this day happened one of the richest episodes of our trip. The Counsellor is not exactly sylph-like in his proportions, in nautical phrase he would be called square-rigged, and with his immense rubber boots up to his waist and his little Dutch wool hat stuck full of leaders and flies, over a round jolly face, is rather an interesting specimen on land; but when he slips off a boulder and takes a header in a deep pool, to come up blowing like a porpoise, and getting a footing on the treacherous rock only to go over again over his head in that pool—well justice cannot be done to the scene. How Dr. L.'s cackling did echo in that resounding glen. The Counsellor is a too enthusiastic fisherman to mind such little things, and he kept right on down the stream in his phlegmatic way; no audible language escaped his lips to our ears, what he thought or said mentally is another thing.

They day was cold and raw, and but a few trout would rise to a fly. They got a few to add to our already ample supply. Had we had better weather, like the week before (but then it is proverbial that Dr. Levering always brings a storm for himself and party when he is on an outing), we might perhaps have caught a few more fish, but we had enough for home consumption and several packages to friends. We all propose another trip in May.

Mr. Kureau, teller in the Bowery Savings Bank and one of our part last year, has an engagement with Turner, the bear and deer hunter of that region, for a rattlesnake hunt in June. Turner knows of a den where, he informs Kureau, he can capture or kill from 100 to 500 in an hour. Levering, who loves snakes so well (a great way off), will not be of the party. We think some of joining the party, as we have not interviewed a rattler since our sojourn among the Chippeway Bluffs, in Wisconsin, more than 30 years ago. They say the oil is a great specific for rheumatism.

JACOBSTAFF.

A CAPE FEAR FISHING POINT.

Editor Forest and Stream:

The warm summer days now upon us bring to mind the summer vacation and serious attacks of spring fever. It is a little problematic whether I will get my vacation this summer, but I had one last summer that I will not soon forget. In search of health for my wife I went to North Carolina, and first tried Asheville, a beautiful city and a noted health resort. We soon grew tired of the monotony of a place whose daily routine was eat, sleep and ride, and we set out for the coast, our destination being Wilmington. Apparently no one ever goes to Wilmington of his own free will, for no facilities are furnished for getting there. The trains all miss connection, and a ninety-day note would be barred by limitations before the trip was over. But we will pass over the dreariness of that trip through pine woods, occasional occasional tobacco fields, and patches of bumblebee cotton, so called because a bumblebee could sit on the ground and suck the top blossom, and assume that we have arrived at Wilmington, and being strangers are piloted to the worst hotel in the universe. There is a good one there, the Orton; but alas for us, we did not find it the first night. After a night spent on a mattress stuffed with pine straw and containing more inhabitants than ancient Jerusalem at the Passover, we started on a neat little steamer to Southport. This is a little town at the mouth of Cape Fear River that had brilliant prospects at the beginning of the revolutionary war and has never changed since. The Government has built a telegraph line to the life-saving station, and that and the steamer are the sole connecting links between it and the outside world. As soon as the steamer landed it was overrun with Senegambians of all shades of blackness seeking for baggage, and after a little swearing at the too officious volunteer porters we find ourselves at Miss Kate Stuart's hotel. This establishment is primitive but beautifully clean, and the meals are well cooked.

After the horrors of Wilmington we thought we had struck it rich.

Southport is situated on a sand flat three miles from the ocean, is breezy, cool and free from mosquitoes. The people are primitive, kind, and form a little world of their own. I soon made the acquaintance of Capt. Pinner, a retired ancient mariner, somewhat resembling in appearance the Lone Fisherman in "Evangeline," a skillful pilot and a most excellent companion. He was the owner of a sailboat of about 4 ft. beam, made of an immense tree, and knew where every shell reef, wreck and fishing point was in the river. Under his skillful guidance we used to go fishing every morning. The ubiquitous Senegambians brought shrimp for bait every morning. I could tell you of our catch, but when I tell the sportsmen hereabout my success they immediately present me with a card of membership in the Amalgamated Association of Fish Liars, and I do not desire your readers to cast insinuations on my veracity. I can excuse the parties here, for they know nothing of salt-water fishing, but many of your readers do and could realize that I was only telling the truth. I have never been to Florida, but I believe the fishing about Cape Fear is as good as in Florida. About ten miles from Southport is Carolina Beach, on the Atlantic, where there is a good hotel. If any one of your readers ever go to Southport or vicinity my advice would be for him to look up Capt. Pinner, and under his guidance he will have such fishing as I never dreamed of before I experienced it, and his catch will have variety enough about it to satisfy any one.

The shooting is said to be good in the winter. The marshes then had a considerable quantity of water fowl in them, but I was not familiar with the game laws and did not shoot any. I was content to sail and fish with Capt. Pinner, and hope that fate will soon give me another vacation with him for a companion.

UNO.

ARKANSAS.

TO SALMON ANGLERS.—T. J. Conroy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—*Adv.*

NEW ENGLAND FISHING.

PROSPECTS are brightening concerning the Maine fishing season. The weather has been very cold thus far, and the sportsmen who went off early have suffered from the elements, while the fishing has been backward. But better news begins to come in. In the first place, a run of salmon began at Bangor on Saturday. A gentleman from Boston—I did not get his name—an enthusiastic salmon angler, returned from that point on Sunday. He had taken two salmon on the day previous, making three for him this season, and he was very happy over it. Mr. Mitchel, also of this city, was also having good sport. In fact, some six salmon were taken there on that day. A good run is expected there this week, and Mr. Mitchel and Mr. Fred Ayer are on the ground.

The trout fishermen are beginning to have good sport. Moosehead waters and the waters of the upper Kennebec are getting down to a more reasonable pitch, and the records of trout will soon begin to pour in. Mr. E. H. Clapp, a long-time fisherman at the Rangeleys, took a 5½ lbs. trout from Mooselucmaguntic, last Tuesday, almost the first trout of any size taken from that lake this year. A few days later, Mr. E. G. Rice, of Lawrence, Mass., took a 7 lbs. trout at Bemis, followed by one of 6½ lbs. and several smaller ones. But the banner catch thus far this season came out on Monday, and was on display in Appleton's window, on Washington street. It was a 10½ lbs. perfect brook trout, 27½ in. in length. It was a male fish and wonderfully brilliant for a spring trout. It was taken last week by Mr. G. W. M. Guild, of Boston. He, with Mr. Walter H. Fox, of New York, and last, but by no means least, the well-known sportsman Mr. Edgar W. W. Curtis, of Meriden, Conn., have been stopping at the Middle Dam, Richardson Lake, for a couple of weeks; they were the first ones in to this lake. They had to wait three days at Andover for the ice to go out of the lake. The house at the Middle Dam was not open when they got there, but with their guides they made themselves as comfortable as possible, till the proprietor arrived, two days later. They have had good fishing and excellent sport, with the exception that Mr. Curtis has been ill a part of the time and not able to fish. But they have left him at the Middle Dam, and if there is any good fish in the lake, he is sure to have them later. Mr. Guild is of the opinion that he has taken the biggest trout on record from that lake, but he will only need to look at the record, several times published in the FOREST AND STREAM—the record of Sept. 29, 1879, to see an account of a trout weighing 11½ lbs., taken at the Upper Dam, by a Mr. Marble, of Boston, which trout is now in the possession of the Smithsonian Institution, at Washington. Again Colonel Fitch, of Pueblo, Col., a guest of W. K. Moody, at Camp Stewart, caught, last spring, a trout 27 in. in length, but the scales showed it to weigh only 9 lbs.

The parties at the Maine lakes are numerous, and still they go. Mr. J. O. Wetherbee, of Seaton, Mr. John Simpkins, F. S. Moseley and the Hon. Wm. E. Russell are the guests of Mr. Bayard Thayer, the proprietor of Birch Lodge, at the head of Richardson Lake. Report says that they are having good sport. Mr. J. Parker Whitney's family are at their beautiful camps at Mosquito Brook. Mr. Whitney himself was delayed in California longer than usual this year—he spends his winters there and his summers at his camp. He is now in Boston, but will soon join his family at the much-loved camps. No more genial and thorough sportsman lives than Mr. Whitney, and yet he finds no sport that pleases him more than at the mouth of Mosquito Brook, on the spot where he has camped nearly every season more or less for 30 years.

Hon. E. B. Stoddard goes to Lake Mooselucmaguntic this week. He goes to the home of the Oquossoc Angling Association, of which party of anglers he is a member. Senator W. P. Frye, of Maine, with Senator Chandler and the Hon. Arthur Sewall, are at Senator Frye's camp on Lake Mooselucmaguntic. Even the tariff bill has to be dropped by honorable senators for a week at the dear old camp. Hon. E. B. Haskell, one of the senior proprietors of the Boston Herald, is at the Oquossoc Association camps, and at his own camps on the same lake, as the case may be. E. A. Wheelock and party, from Putnam, Conn., went in to Rangeley last week. Harry Gardner, of the dry goods commission firm of Smith, Hogg & Gardner, with F. C. McDuffee, of the Everett Mills, Lawrence; Charles McDuffee, of the New Hampshire Print Works, and Mr. W. M. Smith, of New York, left for Rangeley Lake on Saturday. Mr. Gardner is a sportsman of experience in those regions, but for a couple of years business has kept him at home.

Mr. R. Foster, of the firm of Foster & Weeks, with his partner Mr. Weeks, Mrs. Weeks, Mrs. Foster and a daughter of Mr. Foster, made a successful catch of tautog last week. The party went down to Oak Bluffs, just below Rocky Point on the Shore Line. They chartered a boatman to take them out. "Such fishing," to use the words of Mr. Foster, "I never dreamed of." It seems that they caught more than they knew what to do with in one afternoon, and they went again the next morning with equally good luck. The ladies caught tautog weighing up to 50 lbs. The party was very much pleased with the trip, the entertainment and the skill of the owner of the craft. They were having fine sport on the second day, but he warned them to "up lines," and they were soon away and comfortably quartered an hour later at the house of the boatman. Lucky that they were, for within another hour the water was in commotion, the beginning of the southwest storm of last week. On their return they met a party of Boston fishermen going down for tautog. They were housed two days by the storm and not a fish.

So they go afishing. The sport is excellent this year in all quarters, except in some parts of New Hampshire, where the fishing for fingerlings and the dastardly fishing for count by summer boarders has depleted the streams to the extent that nothing but fingerlings are left. No trout can reach a greater age than two years, or until his mouth gets large enough to cover the smallest hook, before he is taken and exhibited as a trophy by a summer boarder whose soul is smaller than the mouth of the trout he has snatched. It is the neighborhood of Bartlett, N. H., that I am speaking of. The shameful fishing that is carried on in those beautiful mountain streams, flowing from the wonders of the White Mountains, is no new feature, but it arouses indignation every time it is mentioned. Mr. O. H. Smith, of Smith & Blanchard, in the lumber trade here and present lessees of the mills at Bartlett, with Mrs. Smith, tried the trout

streams, several of them, in that vicinity the other day. Mr. Smith is a good sportsman, and has a record of a 6-pound trout at the Rangeleys; but on this trip he did not get a trout that he had the face to show. They were such little two-year-old fingerlings that he threw them back again, and gave up pool after pool in disgust. But on his return to the village he found a record of 75 trout taken that day by another party, and hardly one that was over six inches in length. He also learned of a party a few days before having scoured the streams in that vicinity, with a record of 700 trout, all of them very small. Mr. Smith naturally asks if New Hampshire has a law regarding the size of trout caught, and if so, where are the fish commissioners?

The tackle trade is good and the sportsmen are happy. "It costs like the mischief though!" was the remark of a salmon fisherman at Litchfield's yesterday. The lease of a stream costs from \$400 to \$1,000, and Mr. Litchfield mentions a salmon outfit sold costing over \$900.

SPECIAL.

THE NEW HAMPSHIRE SEASON.

COLEBROOK, N. H., May 17.—Fishing in this vicinity is off, decidedly off, too; the "indications" of an early season have failed to materialize. We have had nothing in the shape of weather but cold rain storms this month, and as a consequence streams are high, ponds are high and hardly clear of ice, though the past few days have pretty much done up the ice.

A trip to Diamond Ponds Thursday, found mine host Noyes on hand with one of his famous trout dinners. He reports very few trout taken as yet, one or two good catches have been had from the small pond, but there was still quite a quantity of floating ice on the large pond, and fishing was out of the question. It will be several days before good fishing will be had and the fishermen there are impatiently waiting the good time coming. We do not hear a sound from Connecticut lakes, so conclude that the same condition of things prevails in that quarter.

Quite a number of fishermen have been here this week, on the way to one or another of the resorts reached from this place. Among the number I noticed Messrs. D. A. Heald, of New York, and M. R. Emerson, of Boston, who with "Spoff" Flint, for guide, left here this morning for their cosy little camp at the Greenough Ponds, in Errol; and the Messrs. Farr, of Holyoke, Mass., in their annual pilgrimage to Camp Diamond; while one or two parties have gone through the Notch to the Magalloway and Rangeleys.

I understand that Mr. Walter Aikers, of Errol, has opened a sportsman's camp at the Greenough Ponds. I have often wondered why some one did not open such accommodations there, as there is excellent trout fishing during the earlier part of the season.

COLEBROOK, N. H., May 24.—Fishing in the Diamond Ponds has begun in good earnest. Parties from there yesterday and to-day report excellent sport, and every one is correspondingly happy. Landlord Noyes's accommodations were taxed to their utmost last night, and to-day a party of ten from Manchester, N. H., and vicinity left here for the Ponds. They will be well cared for, however, as "Mart" can always find room for "one more." The fish in these ponds are not large, running from 1½ lbs. to 3½ lbs. Most of them were taken with bait, but yesterday afternoon and evening a few good ones were taken with the fly. In a week, with favorable weather, fly-fishing will be good. Up to yesterday very few fish have been taken at Second Connecticut Lake, but doubtless the same favorable weather has brought about the desired results there as well. Uncle Tom has quite a family of anglers there waiting the first run. Fred Flint from Wilson's Mills, Me., is in town and reports the logs nearly out of the Magalloway, and that the river will be clear of them above Azecochos Falls by the middle of next week, and probably in two weeks more the steamer will be able to resume its regular summer trips from Errol to the "Brown Farm." It is usually about a week or ten days after the river is cleared of logs before good fishing is to be had.

ROB.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 9.—The austerity of the season shows some signs of mitigation, and there is a probability that during the week there will be some fishing done and some fish caught. Indeed, the season for the Fox Lake district is already open, and baskets of bass are beginning to come down. Of these none worth mention come to mind, except that reported by Mr. J. M. Clark, of 20 bass taken in one day at Crystal Lake, total weight 45 lbs. By June 1 the fishing in the lower Wisconsin lakes should be good.

I saw a letter to-day from the M. & R. station agent at Republic, Wis. He says that as he was writing (May 17) a heavy snowstorm was raging. Up to this time the streams had all been high and cold, with no fish taken on several trips by residents of the region. He counsels holding off till after the first of June at least.

Some days ago I asked Mr. J. F. Lee, agent of the Canadian Pacific at Chicago, something about the country above Duluth and northeast of Vermilion Lake. Mr. Lee wrote to Mr. Robt. Kerr, general passenger agent of the C. P. R. at Winnipeg, and to-day received his reply as follows:

"Yours of 30th April relative to fishing ground in western Ontario. Please see the inclosed from Mr. Telford, who is a genuine sportsman, regarding this fishing ground. Guides can be readily got at Rat Portage, etc., and camping outfits can be purchased in Winnipeg at reasonable prices."

Mr. Telford's letter, written from the Treasurer's Office of the C. P. Ry., at Winnipeg, is below:

"Relative to attached inquiry, Lake of the Woods abounds with lake trout, black bass, whitefish and other less valuable varieties. Rainy River the same, but up the river clearer water and finer fish. Vermilion Bay much the same as the Lake of the Woods, while Summit Lake, Lake Barclay and Clear Lake have what we know as 'landlocked salmon trout,' very fine fish, and all the other varieties besides. No speckled trout west of Fort William till you get to the Saskatchewan River."

There is a refreshing railroad brevity about this, but it seems likely there is some fishing up there, although I did not learn what I wanted at all. There is some country up there off the old Hudson Bay water trail which is certainly better than these well known waters. Readers may note the "landlocked salmon trout" item, however.

A year or two ago I made mention of this fish as being found in Burntside Lake, near Ely. That is in the same region practically. I wonder if this is the same fish as the "landlocked salmon" found in Trout Lake, Wisconsin, which only bites in the early spring?

I believe I mentioned that my friend Mr. Harryman and myself were about to finish the explorations of the mystic Salt Creek begun by Mr. Loyd and myself late last fall. There is always a pleasure in hunting out a new stream which nobody knows anything about, and here was a stream right near Chicago (but which diligent inquiry could develop no information at all. Mr. Loyd and I had thrust ourselves late one night upon the hospitality of a delightful old couple of Swedish folks whose pretty little farm lies back in the hills from the Little Calumet. The old farmer told us there were bass in Salt Creek, and the stream looked like it. We remembered that he spoke of Chesterton as being a few miles distant from his farm, but we neglected to learn whether there was a station nearer, and we did not have any idea how to find the farm from Chesterton; but we thought we would just take a lay out in the country and try to find those very pleasant old people, and go fishing in the creek above their farm. Accordingly we bought tickets to Chesterton, which is just forty miles southeast of Chicago, and on the Lake Shore & Michigan Southern, instead of the B. & O., as we had supposed.

I had never been down in that country over the Lake Shore road before, and it all looked strange to me, although I was vaguely conscious that we were probably getting a good way further down than Mr. Swanson's farm. At length we asked a farmer boy on the train which way it was to the junction of Salt Creek and the Little Calumet, and he told us we were past it. We asked him if there were fish in Salt Creek, and he said there were plenty of them. We asked him if there were bass, and he said there were bass there half as long as his arm, especially at the mill dam at Gossburg. That was about seven or eight or ten miles from Chesterton, but if we would get off at the next station, Porter, we would save a mile or so. He could not give us definite directions as to the road—suggested a lively rig; said if we were not afraid to walk we could go four miles west down the Michigan Central track, which crossed the Lake Shore at Porter, and could then probably get lodging near the creek at a farmhouse. The Little Calumet would then be to our right, and the Gossburg dam on Salt Creek would be three or four miles above us. He said that the fishing was always pretty good there, and once more insisted as to the length of the bass. It would have been closer to take the Central to Crisman, he thought, or the B. & O. to McCool's Station. We had come about the longest way around we could, and would have to walk turkey if we got to Gossburg that night.

But that did not bother us any. We had all the world before us, and cared nothing where night overtook us. We didn't know where Salt Creek was, and didn't care very much. It was enough to look at the rich green of the fields, or to inhale the rich odors from the flowering trees. We shouldered our little packs and trudged off along the Central tracks very contentedly with the sun an hour high. We had concluded to give up the visit to the Swanson farm and go to the dam higher up the creek, where we thought the fishing would be better.

We asked two or three passers by about the road to Gossburg, but some of them had never heard of the place and did not know what we meant until we mentioned the mill-dam on Salt Creek. At length we got headed right, left the railway tracks and struck across the country along a straight and very pretty road. We went at a good gait, and our seven miles' walk was done before we thought of it, and we found ourselves by the side of a very pretty little stream in a pretty little grove and could see the dam and white water below it. We went up to the nearest house—there were only three in the whole settlement—and were directed to Mr. Henry Trowe, who kept the creamery on the hill just above the mill-dam.

"Creamery?" exclaimed my friend. "Did I hear cream? Cream—milk—butter—come on!"

We came on, and finally argued Mr. Trowe into a consent to keep us over night. Mr. Trowe keeps a little store beside the creamery, and also keeps the post-office, which is about as big as a hat-box. It seems that this post-office is now called Salt Creek instead of Gossburg. All in all, here was a delightfully quiet and beautiful country corner, and we blessed our lucky stars since starting out for no one knew where, we were now arrived at so pleasant and happy a place as this. When Mr. Trowe's good-looking helpmate had called us to supper, and we had eaten three or four dozen eggs and a ham and a few pounds of gold-fine butter, we looked at each other in silent bliss, and arose as one man to go out and dig angle worms, for the voice of the water was calling from below the hill, and neither of us had wet a line this year.

Alas, when we went down to the stream to try for a little of the fishing that couldn't wait till morning, we found the gates of the dam raised and all the stream below a boiling flood. There was a leak in the dam to be repaired and the water had to be drawn off. We were disconsolate, but took heart of grace when they told us that the gates would be closed in the morning and that the fishing would then be better than if they had not been opened.

This we found to be the case. All night long the roar of the waters sounded in our ears. Once we heard it raining in the night and groaned exceedingly; but our luck staid with us, and in the morning it was warm and clear. Long before breakfast we were on the banks of the pool we had selected, and we actually had a bite or two and caught the first fish of the season, a small but healthy sunfish. After breakfast we went seriously to work, and although the gates were not closed we caught a great many croppies, rock bass and sunfish of several varieties. As we used light trout tackle, we had good sport catching these little fellows. I never could see much difference in fish, anyhow. I would about as soon catch a sunfish as a bass, and I would rather catch the former on light tackle than the latter on heavy gear. We used one bright fly, Professor or Ferguson, above the baited hook, and every croppy we caught bit on the fly. Harryman caught the most fish, including three or four suckers, which took worms in their'n. He capped the climax by catching six kinds of perch and sunfish, a lot of bullheads and a clam (mussel). The latter bit on his hook fair and square, and made a pretty good fight. It did not take the fly. They hardly ever do.

The gates were shut down at about 10 o'clock, and after that the water fell five feet in a few minutes. As had been predicted, numbers of fish had run up with the high water, and these now began to bite freely. We caught about one hundred, and then began to quit fishing and go to fooling around. We took no bass, although we tried frog and spoon very thoroughly. We saw bass in the stream three or four times, but they refused the frog even when it was drawn across their noses. They were feeding on minnows. If we had had some good creek minnows we could have caught some bass, but we had no way of taking minnows since we could catch none on the hooks. On two different occasions bass bit at our worm bait. I lost a good small-mouthed bass which bit at the worm. The fly tied on the leader above the bait got snagged on a timber, and although the bass snapped the hook of the fly square off, he tore his jaw so badly doing it that he finally flopped off, after we had him fairly killed and were admiring him as he lay on top the water.

At dusk I fell to fishing the pool with a fly, using a single coachman bass fly. I caught six croppies in four minutes, and then they called me and made me come in to supper, which I did not want to do. It was too dark when I got back to the water, but I believe one could catch bass there with the fly in the evening.

Now about the bass in this stream—for it is really and truly a bass stream that we have discovered. Two years ago the mill dam broke here and the pond was drained dry except the creek bed. What a slaughter of fish was there! Thousands and thousands of bass, many weighing as high as 7 lbs., died on the mud flats, and the stench of the dead fish filled the air almost unbearably. For it is true that all this time, for no one knows just how many years, these bass had been growing and multiplying in this wild pond; and this pond here within 40 miles of Chicago, unknown, so far as I can learn, to any Chicago angler, was really a finer bass water than any to-day lying within that distance of the city! The country people told us about the strings they used to catch, and every one knows how crude are the methods of many of these anglers. They told us, beyond all, of the tons of bass that met their death on the dried up pond. There is no question that they were full of large bass. Mr. Trowe told us that a few anglers, from what city he did not know, had told him that in all their travels they had found no such bass fishing as there was in the old pond.

A great many of these bass went down the stream when the dam broke. Where are they now? They are either in the Little Calumet or Salt Creek. We saw a few of them. We thought that there were a good many in the pool, from the way the schools of minnows acted. I believe that in the summer, or even better in the fall, these bass will fall back down the creek and afford good fishing in the deep holes of the creek which lie for six or eight miles below the dam.

The purposes of our trip were pretty well vindicated, after all, for we did really discover some bass water, and we added one more to the known localities lying close about Chicago where a sportsman can go and have a pleasant time quickly, cheaply and handily. We got back much more readily than we got out. We spent the second night with Mr. Trowe, reluctant to leave that creamery; then, after a good breakfast, we loaded a 12-pounds trout creel full of the best of our panfish, and walked about a mile to Babcock, on the B. & O. This is a little milk station, and consists of only one house. The city train came by at 7:30 A. M., and we were back at work by a trifle after 9 A. M. You can leave at 4:20 P. M., go down and fish a day, and be back at your desk the following morning. You can live on cream and butter sleep like a top, have the best sort of a time, catch any quantity of small fish if you like, and some bass if you know how. What more do you want? You must want to go a thousand miles and spend \$500 and lose a month from business and a year from Christian grace. Some folks do.

Detroit, Mich., May 20.—The bass have not yet begun to run on the St. Clair Flats above here to any extent. They are reported to be biting on the main lake below, about Pelee Island. Every one here complains of the cold and backward spring. E. HOUGH.

PENNSYLVANIA ANGLING.

A CIRCULAR has been issued by the Pennsylvania Fish Protective Association calling attention to the important changes in the State law relative to fishing, which were approved about a year ago. The use of nets of all kinds is everywhere and at all times prohibited except for the capture of shad, herring and sturgeon. Fish baskets and all other fixed appliances for taking fish are unlawful and may be destroyed by any Commissioner, warden, deputy warden, sheriff, deputy sheriff, constable, policeman or any special officer of the Commonwealth, and any of these representatives of the State may arrest violators of the law and bring them before any Justice of the peace, magistrate or other legally constituted authority. The penalty for violating the laws is a fine of \$600, or six months' imprisonment, or both, and the prosecutor is to receive one-half of the fine. Rock bass (*Ambloplites rupestris*) and wall-eyed pike, or Susquehanna salmon (*Stizostedion vitreum*) cannot be lawfully caught or killed within two years from the date of the passage of the act, May 23, 1889, under a penalty of \$10 for every fish of these kinds caught or had in possession.

On Wednesday, May 21, Wissabickon Creek was opened for fishing on Wednesdays and Saturdays thereafter. Black bass, however, cannot be taken until May 31, the limit of the close season. Between May 1 and Sept. 1 carp cannot be lawfully caught. Rainbow trout and sunfish are the only game fishes available for the angler until May 31, and in addition to these, catfish and eels may be captured.

Schuylkill River and its tributaries have been thoroughly stocked with fry of the wall-eyed pike, nearly 3,000,000 having been deposited in these streams May 15 and 16. Coal dirt is a very serious source of pollution in the Schuylkill and forces innumerable black bass and carp out of this river and into the Delaware. On this account the Tulpehooken, Perkiomen, Manatawny and Pigeon creeks received two-thirds of all the fry deposited and the main river only 800,000. The wall-eyed pike was known as a resident of the Susquehanna River under the names Oswego bass, yellow bass, Susquehanna salmon, etc. At one time the fish was believed to have come by introduction from Oswego Lake. In the writer's opinion

the species is an old inhabitant and probably native to the stream. The white pike mentioned by DeWitt Clinton in his description of the Otsego bass appears to have been the wall-eyed pike of the present day.

THE BARRACUDA OF CALIFORNIA.

READERS of FOREST AND STREAM will recall a graphic account of barracuda fishing by J. C. Van Hook in our columns Oct. 31, 1889. We are now able to supplement this article by some notes on the life history of the fish, recently published by Dr. C. H. Eigenmann. According to Dr. Eigenmann the barracuda (*Sphyrna argentea*) is one of the most important food fishes of California. In summer it frequents the entire coast, but seems to be most common southward. In winter it leaves the California coast almost bodily and is found in Lower California. At San Diego, in January, 1890, the species was not seen. In February, after a few days of especially fine weather, a few were taken on several occasions. In March, 1889, few were caught until the 27th, when they were abundant and continued so, except at intervals, during the summer. The spawning season is in July. The adults seldom enter San Diego Bay, but the young, measuring about a foot in length, come into it in large schools in spring, and great numbers are destroyed by seines or Chinese bag-nets. The troll, consisting of a piece of bone to which is lashed a hook holding a piece of white rag, is the only implement used in this fishing. The lines are dragged behind a boat resembling a Columbia River salmon boat, and in light winds the catch is always small. The largest take in one day was 1,100, by two men. The average catch is about 40 to a boat. The average weight of the fish varies from 6 to 12 lbs., and length from 2½ to 4 ft. The barracuda is a surface feeder and subsists principally on the anchovy (*Stolephorus ringens*).

WATER LIFE.

Occasional Observations on the Fishes in the Aquarium of the U. S. Fish Commission.

CARNIVOROUS FISHES IN CAPTIVITY.

THE confining of carnivorous fish of different species and of varying sizes in one aquarium is at times unavoidable from want of room. Two large-mouthed black bass (one about 10 and the other 12 in. long), were from this necessity kept with a number of fish of other species, such as white bass, crappie, red-eye perch or rock bass, sunfish, etc. From time to time individuals of the group were found in the mornings dead, often without outward evidence of injury, and sometimes badly bitten, but always having been in good condition the previous evening.

The black bass were transferred to brackish water occasionally, to rid them of fungus, and it was remembered afterward that on these occasions the mortality ceased. Recently they were transferred to brackish water, and after some time white perch were put in with them. The next morning about a dozen of the perch were dead and the remainder gave evidence of rough usage. The bass were immediately transferred to fresh water, and the next morning a white bass about 8 in. long was dead, and another about the same size injured. All the small fish were then removed. Two days later a fine red-eye, 8½ in. long, in the best condition, and evidently a male from the development of deep purple margins on the ventral and anal fins, evidently nuptial coloration, and which it was thought could hold its own with the black bass, was found dead, badly lacerated, and giving evidence of having been swallowed and again ejected. The larger black bass was also evidently a male, as it had developed creamy margins to the ventral and anal fins which were undoubtedly sexual characteristics. The smaller black bass has its lower jaw broken. The bone has never reunited, and at every movement of the mouth the broken ends of the jaw, now covered with skin, wobble up and down without much regard for one another, and apparently without suffering to the fish, and at all events it does not prevent it from bossing and worrying to death everything else about it that it cannot swallow.

It is very evident that many deaths of fishes wholly unexpected and apparently without cause, are due to the voracity or pugnacity of individuals, the manifestations of which are often not apparent throughout the day, when under observation. It may sometimes be due to an ungratified desire for fish food and at others to sexual rivalry. These savage characteristics are, at all events, more marked during the breeding season. All of these fish were with difficulty carried through the winter, preserved from the effects of the cold and the ravages of parasites, only to kill one another when they began to feel comfortable.

THE EGGS AND YOUNG OF THE TOADFISH.

The eggs of the toadfish are generally attached to the under side of a stone not resting on the bottom. They are about as large as a small pea or a buckshot. When the young are hatched they still remain attached to the stone, by the sac, for some time, one or both (it is probably not known which) of the parents remaining near to protect them. They present an amusing sight, looking as though glued to the stone, with the head and tail free and wriggling about, as if learning to swim. Sometimes a hollow vessel or drain-tile, which has been lost or thrown overboard, will be fished up at Woods Holl with a lot of the eggs or young attached and will be put into an aquarium, where they are a novel sight.

THE OYSTER CRAB.

At a late meeting of the Philadelphia Academy of Natural Sciences Dr. Benjamin Sharp stated that the commensal crab of the oyster (*Pinnotheres*) could not support life independently if separated from its host. On reading this it was remembered that on Nov. 1, 1889, quite a number of these crabs were brought to the Central Station aquaria by a Mr. Rau, a Washington dealer in oysters, who very kindly saves what interesting things he may encounter in his oyster heaps. They were all at the time full of eggs. It appears that it is only the female crab which lives in the oyster, the male hanging around outside. These female crabs were placed in three hatching jars holding about one gallon of water each, and having a little seaweed (*Ulva*). No attention has since been paid to them, but it was apparent from time to time that they were decreasing in number. In two of the jars there were crabs of a small species common on the oyster beds, but with hard shells. In these jars all the oyster

crabs have disappeared, but in the third there is still one specimen that has lived from Nov. 1, 1889, to May 20, 1890, almost seven months, and is now in fine plump condition. The only food available for it during this period was some minute vegetable organisms, which are so abundant in the water as to render it opaque and the other crabs. It is as white as when it came from the oyster, and if it had fed on the green organisms it would most likely be tinted by them. Can it be possible that it has devoured the others? Those in the other jars were devoured no doubt by the hard crabs. WM. P. SEAL.

THE NORTH WOODS.

NORTHERN NEW YORK, May 18.—The weather has been very cold and wet, causing very high water, which has been a drawback to good fishing. The water at Albany Lake is over 2 ft. higher than is usual at this season, and a party just returned from there do not agree very well on the size of the catch, from which I am led to believe that it was quite small, especially as one of the party remarked to me that "it was rather a long trip to take just to see the scenery at this season of the year."

Something like ten days ago two gentlemen from Lowville returned from a trip to Woods Lake, which was very successful, they bringing out about 40 lbs. of trout that would average nearly a pound. I picked one at random from the basket, and the scales showed that it weighed 1½ lbs.

B. B. Miller, of Lowville, who is at Seventh Lake, Fulton Chain, caught a brook trout last week weighing over 3 lbs., and sent it out to his family.

Two gentlemen from Utica who had been stopping with "Jim" Dunbar at Stillwater, reported a good catch below the dam, and had 20 lbs. with them to show for it when they stopped at Lowville on their way home.

A party from Watertown who came out last week from Smith's Lake reported a good catch.

A guide who went to Big Salmon Lake had 30 lbs. for sale in Lowville last Wednesday.

I am included in a party which expects to spend two days on the Salmon River the latter part of this week, providing the weather moderates, and we expect great sport.

I have made several trips to ponds and streams without noteworthy success, except in the entire lack of it.

My advice to those about starting for the North Woods on a fishing trip, is to chew the bit until the last of this month, then start with all the extra vim you have stored up meanwhile.

Possibly these are the last notes I shall pen from this region in some time, as I expect to remove to Syracuse in the near future, but I hope to be able to visit this region about twice a year and enjoy the opportunities it affords the sportsman. OSCEOLA.

HENRIK DAHL, of Aalesund, Norway, was a reader and follower of Darwin. Wishing to apply his theory of the limit of adaptability of a species to its environment, he procured a herring from a neighboring fjord and carried it home in a tub of sea water. He renewed the water daily for some time, and gradually reduced the quantity, with so little inconvenience to the herring that he concluded that the fish might, in time, learn to breathe air undiluted with water, like the cat and the man. It turned out as he expected, and the water was finally turned out of the tub of the herring, never to be replaced even for bathing. Henrik next removed the fish from its tub and placed it on the ground, where it flopped about very awkwardly at first, but soon learned to move freely and rapidly. In a little while the herring was able to follow its master without difficulty, and then it became his constant companion about the streets of the city. On a certain unfortunate day Henrik had occasion to cross a dilapidated bridge which spanned an arm of the harbor. The herring coming gracefully along, heedless of danger, now and again springing at the ephemera, for which it had acquired an especial fondness, missed its footing, slipped through a crack into the water beneath and was drowned.

CURIOUS FACTS ABOUT FISHES.—Mr. Geo. H. H. Moore has called our attention to the fact that shad have been abundant at and near the mouths of many of our Northern rivers, but scarce in the upper waters. This may be largely due to the great increase in the number of traps and pounds in the bays and at the mouths of the streams, but there is no doubt that other causes have helped to produce this result. The number of large shad is remarkable; the Delaware furnished one weighing 13½ lbs., and at Saybrook, on the Connecticut, Mr. Dickinson took a specimen three feet long that weighed 1½ lbs., said to be the largest one ever caught in the river. It is not an unusual thing to find 13 lb. shad in the rivers of California, but we have not until this year heard of such enormous ones in the Eastern streams. Mr. Moore informs us, also, that yellow perch have been caught in the dirty water of the harbor of Baltimore. Perhaps they are forced into brackish water by pollution of their favorite haunts.

A LAZY MACHINE.—No matter how lazy, by nature, a fisherman may be, if only he is ingenious—to use a popular technical phrase he gets there all the same. The latest device of the lazy anglers is pictured on the membership card of the Caledonia Fishing Club. It pictures a 300 lbs. fisherman lying prone on the bank and above him a contrivance, which looks like an artificial target trap. In this is secured the rod, with line out, and one of the fisherman's boots. When a fish take the bait, the rod releases a spring, which brings the toe of the boot in violent contact with the recumbent fisherman, who is then expected to wake up and hustle to save his fish.

A BAKER'S DOZEN.—Charlestown, N. H., May 19.—Too cold and too much water for good trout fishing yet; but many have been taken. I got a baker's dozen May 1, from 6 in. to 9 in. long, with at least a dozen fishermen ahead of me on the brook. They began at 4 A. M., so report says. I did not go until noon.—VON W.

ST. JOHN, N. B.—The first salmon of the season was taken on Monday, May 12.

FOREST AND STREAM, Box 2832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Glean," "Dick Swivelor," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

"NESSMUK."

FROM an appreciative sketch of "Nessmuk" in the *Wellsville, Pa., Republican-Advocate*, we take these paragraphs:

Mr. Sears early learned the shoemaker's trade and pursued it save when enjoying the solitude of the forest. When a young man he shipped aboard a whaler for a three years' cruise, but the vessel put in at Fayal Islands, where he sick with the fever, was taken ashore and died in the hospital. When convalescent he was sent home by a representative of the U. S. Government.

Mr. Sears, who had dubbed himself "Bacchus," emigrated to Wellsboro in 1848, preceding his father's family several years. Besides a limited common school education he attended a Boston school for a brief period.

When the call came for 75,000 volunteers, "Bacchus" was one of the first to respond and was a member of the original and only Bucktails. While in camp near Harrisburg he met with an accident that resulted in his discharge. The men were growing uneasy and restless in their inactivity, and under orders he took the company out to amuse them. A game of ball was proposed, and during the game in which he participated he broke his right instep. He was sent to the Hospital and the regimental surgeon, Dr. W. T. Humphrey, attended him. He told Bacchus that it would be months before he could use that member and the front was no place for him. Very much to his disgust and chagrin his discharge papers were made out and he returned home. It was a long time before he could use the foot, and never entirely regained the use of his hand.

In 1857 his love of travel led him to make a journey to South America. He spent most of his time in the province of Para, a Brazilian state, and watched with careful eye the workings of the rubber industry. He stayed in Brazil nearly a year and was at that time correspondent of the *Philadelphia Press*.

Between the years 1859 and '70, he invented a valuable machine for use in curing the gum milk and preparing it for market, and returned to Brazil with the intention of introducing it and selling it, if possible, to the Government. The natives, who are very bigoted and ignorant, would not give it a trial, but it was demonstrated beyond a doubt that it was a very valuable patent and Government officials were making arrangements to purchase it, when the Governor of the Province was removed by Dom Pedro, and the scheme fell through.

Mr. Sears was a true lover of nature. There were few places in this and adjoining counties where the trout and wild deer loved to hide, but bore the imprint of his moccasins. His mission was not to kill all game that he saw; he was not a pot-hunter; that class he detested; but he was a true sportsman, using life only when necessary. He would go unaccompanied to the wildest nooks and with rod, dog and gun, pass weeks in solitude. Unattended and alone, he explored the Adirondack region, and the log of the canoe "Nessmuk," a boat that only weighed 17lbs., shows a cruise for 1880 of over 550 miles. In 1884 Mr. Sears cruised in the same region in the "Susan Nipper," a distance of 250 miles, but the voyage was cut short by failing health.

In 1886 in order to escape the rigors of the Northern winter, he went to Florida, and passed several months at Tarpon Springs. The climate agreed with him. The cough that had been an almost life-time companion, was better as he expressed it, than it had been for 45 years. While there he wrote very interesting letters to this journal.

The winter of 1887 he returned to Florida, this time remaining during the summer. It was a fatal mistake. He contracted malaria and this coupled with his lung difficulty wore his life out. He faded gradually like the maple leaves that he loved so well, and now in a most picturesque spot "rests his head upon the lap of earth," in his own door-yard, under the lilacs that he planted; and the six herons that he carefully set out and nurtured stand sentry over his tent, "the door of which opens not outward."

George W. Sears was a good citizen, peaceable, charitable and honest, he had many friends and might have had many more to enjoy his sparkling wit and eccentricities, but he was somewhat of a recluse. Early in life he made up his mind that the vanities of this world were not worth the struggle. That motto was the basis of his life. "where man cheats his fellow man and robs the workman of his wage." The trumpet of Fame sounded not in his ears, urging him to higher aspirations. Prosperity, Fortune and Position lured him not with their seductive smiles, and for the pomp, vain glory of the world he had no wish or desire. Leaving all the vexations of life, he sought solace in the peaceful woods. In mountain path, by broken brook, alone he loved to stray, and who dare say that from life he did not extract its fullest measure of comfort, or that when the evening came that the shadows did not close on a life well spent.

Mr. Sears was a man of a good deal of literary ability. In 1884, by the urgent request of his friends, of whom the writer was one, he published a modest little pocket volume under the *nom de plume* of Nessmuk, entitled "Woodcraft," containing his experiences of fifty years in the woods. As was anticipated it met with a ready sale and many editions have been exhausted. Like all of his writings, it is short and to the point, and contains just the thing that you wish to know.

In 1887 his book on poems entitled "Forest Runes," *Forest and Stream* Publishing Company, was issued. His "John o' the Smithy," that originally appeared in the *Atlantic Monthly*, gave him a world wide reputation. Some of his poems are gems, and had some names been attached to them, devotees would have fallen down and worshipped. His "Mamelucko Dance," written while in Brazil, is considered by the *literati* to be an unusually strong piece of blank verse. The whole volume savors of the smell of hemlock boughs, of sparkling spring water, of the camp and woods, and shows literary ability of no mean order. In closing we append a little gem to show his style and taste.

CRAGS AND PINES.

Who treads the dirty lanes of trade
Shall never know the wondrous things
Told by the rugged forest kings
To him who sleeps beneath their shade.
Only to him whose coat of rags
Has passed at night their royal feet,
Shall come the secrets, strange and sweet,
Of regal pines and beetling crags.
For him the Wood-nymph shall unlock
The mystic treasures which lay hid
A thousand years in frost and rain,
Deep in the bosom of the rock.
For this and these he must lay down
The things that worldlings most do prize,
Holding his being in her eyes,
His fealty to her laurel crown.
No greed of gold shall come to him,
Nor strong desire of earthly praise;
But he shall love the silent ways
Of forest aisles and arches dim.
And dearer hold the open page
Of nature's book than shrewdest plan
By which man cheats his fellow man,
Or robs the workman of his wage.

A correspondent, "A. L. L.," who in our issue of Jan. 20 last mentioned "Old Jim Injun," tells us that this Indian was connected with that same remnant of the tribe, the Nepmunks, that "Nessmuk" wrote of. He adds: "I think there are a very few members of the gang still living scattered around in that part of the State and in Connecticut. A number of years since an old squaw named Rhoda Ja-ha, daughter of old Chief Ja-ha, was living with some other Indians but a few miles from where 'Nessmuk' was born, but I have not seen nor heard anything about her for a long time. Some of the Indians amalgamated with the whites in our vicinity up there, and one in traveling through that section will now often come across persons having more or less Indian blood in their veins. I never blamed the Indians for hanging around old Junkamang, for it is one of the most beautiful sheets of water that I ever saw; clear as crystal, and a splendid place for fishing or bathing. I have spent many happy days on its bosom, and always had good luck in catching fish there. Even now, when I go back to my old home on a visit I always have at least one fishing excursion over there. Last August during my vacation I was up home, and on the very last day of my stay two old cronies and myself put most of the time in

fishing in the pond. After catching a suitable number we ran our boat up to one of the headlands that jut out into the pond from the Gore, spoken of by 'Nessmuk,' built a stone oven, set our camp kettle, got the ingredients all fixed for a chowder and started the fire. How it rained after we got that pot of chowder agoing! By taking our rubber overcoats we improvised a shelter and under it cooked and ate our meal. How good it was! and what a lot of it we managed to dispose of! The camp kettle was about all that was left when our feast was concluded. The weather turned out that day to be very disagreeable, but we had a jolly good time of it in spite of the rain. By the way, here is another form of the name of the pond, said to be the real old 'Injun' name: Chaggoggagoggmanchauggagoggaggungamaungg."

TARPON SPRINGS, Fla.—Rare old "Nessmuk." He was a man whom it was good to know. In the long months that we spent together, in fields and woods, and on the waters, there is nothing to recall but pleasant memories, no regrets, save that the pleasant hours spent together can never be repeated. Genial old "Nessmuk," may the earth rest lightly on him. And may his sleep be sweet beneath the hemlocks he loved so well.—TARPON.

Fishculture.

ON THE RED SNAPPER BANKS.

THE U. S. Fish Commission schooner *Grampus* left Key West, Fla., Feb. 14, 1889, bound for the grounds of that famous fish, the red snapper. We put out the towing net off Fort Taylor and towed from here at intervals, catching jelly fishes, Portuguese men-of-war, several species of copepods, and many small fishes. Two green turtles which we attempted to catch from the dory escaped from us, although the iron was put into one of them. Several large pelicans were seen.

From 12 to 4 the wind blew from the S.E., decreasing in force from a gentle to a light breeze. The weather was clear and hot. At 6:30 we made Rebecca Light, bearing N. 1/2 W., 16 miles distant. At 7:40 we changed the course to W. N. W. with the vessel on the starboard tack and under full sail at the end of the watch.

The implement used in the fishery for red snappers and groupers is an ordinary cotton line, with two codfish hooks attached, which is thrown from the moving vessel by a man standing on the rail by the fore rigging. In trying for fish the fisherman hauls a large coil of line to which a heavy sinker is attached; this sinker enables him to throw the line a considerable distance ahead, and he then follows it to the after part of the vessel, keeping the bait as long a time near the bottom as possible. The baits used are blue-fish, porgies and groupers.

When a fish is caught the vessel is luffed and allowed to drift; a buoy is put out to mark the spot where the fish are found, and then the fishing commences.

We found that the bottom on these grounds varies, mud, sand, gravel, broken shells and coral, and hard bottom occurring within a limited area. The most life, both animal and vegetable, is found on the hard and shelly bottoms. Algae form the principal vegetable life. Sponges, hydroids, bryozoans, starfishes, sea urchins, worms, crustaceans, mollusks, tunicates and small fishes, the animal

The red snapper moves from one ground to another, which makes the trials above mentioned necessary. As a rule, the fishermen do not go much outside of 15 fathoms for this fish. We commenced fishing on the 15th at 8:30 A. M. in 15 1/2 fathoms of water about 20 miles north of the Tortugas, and did not catch anything until noon, during which hour we succeeded in taking four red snappers, the first of which weighed 15lbs., its length being 30in. The others were smaller fish, one of 13lbs. measured 25in. During our fishing the vessel drifted from broken shell bottom to white mud, and the fish ceased to bite. It is probable that many red snappers would have been caught had we remained on the spot where the fish were first found. Toward evening we caught two more, weighing 12lbs. each and measuring 27 and 28in. respectively.

On the 16th thirty-one red snappers and three red groupers were caught in the morning, this proving the only catch of the day, except two snappers and ten groupers, which were taken late in the afternoon.

The fish were nearly all what is called "poke blowed," that is, the stomachs protruded from the mouths. If, however, the fish are slowly pulled in this bloating does not occur; but in hauling in line slowly the chances are not so good for landing your fish. When the fishermen pull in the fish they insert a little sharpened tube behind the pectoral fin into the air bladder, thus relieving the pressure, so that the fish will live in the live well. As is generally known the wells are spaces set off in the hold of the vessels, allowing water to enter through holes in the bottom. It may be proper to state here that a red snapper if poke blowed will not live, and the same applies to groupers.

The average length of twenty-two red snappers taken during the morning of the 16th was 24in., and the average weight 9 1/2lbs. The length and weight of several black groupers showed the following relation: 23in., 8lbs.; 35in., 20lbs.; 36in., 22 1/2lbs.

Feb. 19, in 19 1/2 fathoms of water, we caught twelve groupers, most of them red, and three red snappers. The average length of the groupers was 33 1/2in., weight 8 1/2lbs. In the stomach of a grouper was found a trunk fish (*Ostracion*) 9in. long.

At midday March 10, in a depth of 15 fathoms, 32 red snappers were caught and two or three red groupers (*Epinephelus morio*). The snappers averaged 8 1/2lbs., with a length of 25in. The groupers were each 27in. long and weighed 9 1/2lbs.

Trials made on the 13th, 15th, 16th, 17th and 18th of March yielded only a few fish. On the 21st, three black groupers and three red groupers were captured, the former being largest. They were full of parasitic worms in the flesh and intestines. These worms infested nearly all of the groupers taken by us. On the steamer from Key West to Tampa boiled grouper was served, which I looked over and found to be full of these little worms, shrunken to very small proportions by the boiling process, and it is needless to say I did not eat grouper.

March 23, two red snappers were taken. At 6 P. M. we caught four red groupers and ten black ones. They took the hook voraciously and bit even at the sounding lead. The stomachs of the groupers contained trunk fish and crabs in various stages of digestion. Their intestines were covered with black parasitic worms. Some of the fish were very lank and lean, owing, no doubt to the presence of the parasites.

The *Grampus* carried on this work by running parallel lines east and west, ten miles apart, making continuous trials for fish by means of lines. The dredge was used every ten miles.

The temperature of the air and water, at the surface and on the bottom, was regularly taken. The average temperature of the air during our trip was about 70° Fahr. The water at the surface averaged 65°, and on the bottom very nearly the same. Sometimes the surface water was cooler than that at the bottom in from 15 to 50 fathoms.

There was no exceedingly rough weather; one moderate gale was encountered during the night of March 12; the vessel dragged the anchor for about six miles.

When leaving Tampa Bay two flying fishes and three devil fishes (*Manta*) were observed close to shore. They were going through a pass opposite Egmont Light. Three porpoises (spotted dolphin) and several sharks were captured during the cruise. The sharks did not interfere with the fishing.

While lying in Charlotte Harbor we were surrounded by drumfish, and a very novel entertainment it was, to the stranger. The drumming of this fish reminded me very much of the noise made by the great American bullfrog.

The vessel staid out about three weeks at a time and then ran into port for supplies. While in port we would seine and collect on the beaches, and in this way many good things were obtained; among them were: Squirrel fish, white grunt, sailor's choice, yellow-spotted grunt, sheepshead, mullet, young bluefish, pompano, yellow-tails, channel bass, garfish (*Tylosurus*), sardines (*Harengula*), gizzard shad, menhaden and catfish. The sardines and catfish were plentiful. Sheepshead, pompano and yellow-tail were very scarce at Charlotte Harbor. Angel fish were quite abundant in Tampa Bay and are very good eating. We ate garfish (*Tylosurus*) with much relish. Large quantities of silversides, anchovies and young sardines were seized. Porpoises were seen destroying schools of the last species. Spanish mackerel were among the fishes taken in the seine.

We took the cero, or kingfish (*Scombramorius* sp.) by trolling with a piece of white rag for a lure. The best time for this fishing was during a light breeze, when the water was rippled. Flying fishes were often seen in the act of flying and the rapid vibrations of the pectoral fins were evident enough. The frigate mackerel is not very good to eat, because of the dark color of its flesh; but it gives the angler rare sport. We took it by trolling as in the case of the cero. They could not be caught during calm weather, but the fishing was fine during a good sailing breeze, when the vessel was in lively motion.

U. S. FISH COMMISSION, Washington, D. C.

PROPOSED TRANSFER OF THE FISH COMMISSION.

AT a meeting of the American Fisheries Society, held on Wednesday, May 14, at Put-in-Bay, Ohio, a committee consisting of Herschel Whittaker, of Michigan, C. V. Osborn, of Ohio, and W. L. Powell, of Pennsylvania, appointed for the purpose, reported the following preamble and resolution, which, upon motion, was unanimously adopted by the Society:

Whereas, There is now pending before Congress a proposition to change the organization of the U. S. Fish Commission, attach it, and make its chief and employees of every grade and position subject to the appointment and removal of the Secretary of Agriculture, which legislation we feel to be directly inimical and prejudicial to the progress and proper consummation of the original intent and present practical and efficient work of the Commission, therefore be it

Resolved, That the American Fisheries Society, which for the past twenty years has been actively interested both in the science and practical development of fishculture, does most earnestly and emphatically protest against such legislation, and therefore does most respectfully urge our Senators and Representatives by every proper means to oppose and defeat such obnoxious enactment, and be it further

Resolved, That this preamble and resolution be printed and sent to every Senator and Representative in Congress.

EUGENE G. BLACKFORD, Pres.,

EDWARD P. DOYLE, Sec'y,

American Fisheries Society.

UTILITY OF TROUT CULTURE.

Editor *Forest and Stream*:

Several weeks ago you published a brief communication from me, relative to the failure of trout culture. As an addenda to the article a brief reply was published by you. In response to this I sent you another article on the same subject, which seems to have been mislaid. In the meantime, some gentleman, I think in one of the Territories, has also replied to my communication. I regret that neither of the papers containing these article are where I can now see them, and I will consequently have to depend upon memory in order to prepare a brief response, which I trust you will find more for.

I believe that you referred me to two different parties who you thought could cite instances of success in trout culture. Your Western correspondent cited a case in his region which he regarded as a success, principally because Eastern trout had been brought there and were to be found in a certain stream in considerable numbers. I believe he did not claim that any great quantity had been taken, but had simply been seen darting about the stream.

Now, in regard to this subject, I wish to say that I have had many more years experience in this business, and particularly in research, than any other American, and any of the hundreds of my correspondents will, I think, give me credit as an earnest worker, but in no sense a theorist. I have several hundred letters from parties who have tested trout culture, and in no instance among them all has there been a case of success reported, beyond hatching and planting them. This, I beg to say, does not constitute successful trout culture. There has never been a pound of trout raised in America which has not cost a dollar, and no domestic trout is worth to exceed twenty-five cents per pound, and very few persons indeed would pay that price for them for table use. Very few persons at this day pretend that the stocking of streams with trout is in the interest of an increased food supply, although such was largely the intent of the original trout culturists of this country. Now, it is generally understood that the stocking of streams is in the interest of sport, pure and simple. Most of this work is done at public expense, and is practically so much dead loss of public money. One thing is well understood by old trout culturists generally, and that is that any stream which is adapted to the support of trout will receive by natural process ten times as many young trout as will survive. It must be apparent then, that in a great majority of cases the addition of a quantity of young fry is just so much loss of time and money. There have been cases where trout streams have been mysteriously and suddenly depopulated, and without human agency (indeed most cases of sudden depopulation are not by intentional human agency). In such cases the stocking of streams artificially might possibly hasten the resuscitation somewhat, but such cases are rare. If the temperature of the water has become raised by reason of the removal of forest or bushes from the banks of stream, and particularly if in addition the water has become polluted by reason of contiguous agriculture, or from other causes, trout will disappear from said waters, and they cannot be successfully restocked, unless allowed to revert to their former condition. In my native region there were not less than twenty miles of excellent trout streams say forty years ago. A steady march of improvements raised the temperature of and polluted most of those waters, and thirty years ago the trout had mostly disappeared. Since that time most of the lands contiguous to those streams have been allowed to acquire a second growth of brush and timber, and the trout have been gradually increasing, until the present season anglers are having old-time success. Upon one edge of this region a neighboring local fishing club have been restocking with trout during the past few years, and to this fact have

given credit for the gradual improvement which has been observed, when the other streams in the region which have been restocked have given still better results. In one case the streams have been overstocked; in the other, the increase has been natural.

There is another matter not generally understood, except by those who make the subject a life study, and that is the constant fluctuations in the yield of fish in all waters, from sea to the most insignificant pond, from the largest river to the smallest trout stream. Writers with no practical knowledge or experience upon the subject are continually divining the most absurd reasons for this fluctuation. I could, if necessary, give pages of this visionary and misleading matter by simply selecting from communications in past volumes of *FOREST AND STREAM*. I have for years maintained and in some cases made plans whereby trout streams could be made to give improved yields, but not by artificial restocking, which has been thoroughly tested in this country for the past thirty-five years and found wanting.

MILTON P. PEIRCE.

COLUMBUS, Ohio.

The Kennel.

PICTURES. DOG SHOWS.

June 3 to 6.—The Cincinnati Kennel Club's Fourth Annual Show at Cincinnati, O. Geo. H. Hill, Superintendent.
Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.
Sept. 15 to 18.—International Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exhibition at Toronto, Canada. H. J. Hill, Secretary.
Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.
Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.
Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York. Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.
Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

AMERICAN KENNEL CLUB.

SPECIAL meeting of the American Kennel Club, held May 22, 1890. President A. Belmont, Jr., in the chair. Present: Associate Members, J. L. Anthony; A. P. Vredenburg; American Beagle Club, H. F. Schellbass; American Pet Dog Club, Dr. M. H. Cryer; American Spaniel Club, J. Watson; Massachusetts Kennel Club, R. Leslie; Mascoutah Kennel Club, J. Mortimer; Pointer Club of America, G. W. LaRue; Virginia Field Sports Ass'n, J. S. Wise; Westminster Kennel Club, T. H. Terry; St. Bernard Club of America, J. Lohman; Collie Club of America, H. B. Cromwell.

Mr. Peshall: I desire to move that no quorum appearing, this Club do now adjourn.

The President: I rule the motion out of order as Mr. Peshall has not been admitted as a delegate, and is not now a delegate of the Club.

Mr. Peshall: I am here representing the Maryland Kennel Club. This is a meeting of the Club. I rise as representing the Maryland Kennel Club, and I move you now that the meeting be adjourned.

The President: I refuse to entertain the motion.

Mr. Watson: I move that the Club adjourn in order to call a meeting of the Executive Committee to take action upon the credentials presented to the American Kennel Club.

Mr. Peshall: Mr. President—

The President: I cannot recognize you as a delegate.

Mr. Watson's motion seconded and carried.

MEETING OF THE EXECUTIVE COMMITTEE.

President Belmont, Jr., in the chair. Same clubs represented as recorded at special meeting.

The President: The Chair rules that the delegates of the associate membership do not come under Section II. of the Constitution, Article IV., and recognizes Mr. Anthony as a delegate.

The minutes of the last meeting of the executive committee read and approved.

The secretary's quarterly report was read as follows: MAY 21, 1890. *Gentlemen:* I have to submit applications for admission to the American Kennel Club from the following clubs and associations: Youngstown Kennel Club, of Youngstown, Ohio; the Louisiana Poultry and Pet Stock Association of New Orleans, La.; Northern Illinois Poultry and Pet Stock Association, of Rockford, Ill.; Wilmington Agricultural and Industrial Association, of Wilmington, Del.; the Chesapeake Bay Dog Club, of Baltimore, Md.; the Eastern Greyhound and Coursing Club, of New York. The applications of these clubs were received in due form and time, as provided for in our Constitution, and action at this meeting is desired. The application of the Eastern Greyhound and Coursing Club was withdrawn, and an application from the National Greyhound Club has been substituted.

The application of the California Kennel Club, which has been in abeyance since August 15, 1889, has been renewed, and action at this meeting is urged. The facts in this matter can be briefly stated as follows: At the September meeting of this club, the application was laid over until the next meeting, with instructions that your secretary should put himself in correspondence with the Pacific Kennel Club, one of the members of the American Kennel Club, requesting it to advise this club, its opinion as to the expediency of two clubs from the same city being admitted to membership. The reply from the Pacific Kennel Club was that negotiations were pending towards a consolidation of the two clubs, and asked that action might be delayed, until the matter should be finally settled. In this the California Kennel Club acquiesced. February 27, 1890, notice was given your secretary that the Pacific Kennel Club would consolidate only upon the following terms:

First.—That the name Pacific Kennel Club should be retained.
Second.—That the moneys now in the California Kennel Club (about \$100) should be placed to the credit of the Pacific Kennel Club and used for the purpose of paying off a portion of their debt.

Third.—That the members of the California Kennel Club, upon entering the Pacific Kennel Club, should assume their pro rata of the debt of the Pacific Kennel Club. These terms were rejected, and the application for admission was renewed. Your secretary advised the California Kennel Club that he would notify the Pacific Kennel Club of the renewal of the application, and thus afford it an opportunity to lodge an objection. This he did, and received a reply protesting the admission of another club from San Francisco. A copy of this protest was duly mailed to the applicant, and a reply to the protest signed individually by the

five officers and twelve members of the Executive Committee of the California Kennel Club has been received, in which they state that they have fifty members in good standing; they desire to hold annual bench shows, and earnestly ask for admission. All the correspondence in this matter is here on file, and will be read if desired. The Southern California Kennel Club of Los Angeles, Cal., has held its second bench show, and promptly complied with all the requirements of the American Kennel Club, by sending marked catalogue and registrations, with fees to cover same, within ten days of the close of the show. Under date of March 12, 1890, the president of this club informed your secretary, for the first time, that the letter and rules sent at the time of its first show, did not arrive until two days after the show had been open, otherwise there would have been no misunderstanding, and the show would have been strictly under American Kennel Club rules. Under these circumstances, and also in view of the prompt business-like way that they have conducted the second show, your secretary would respectfully recommend that the wins of the show of 1889 be recognized by this club.

The American English Beagle Club notifies this club of its change of name to the American Beagle Club; the Cincinnati Sportsman's Club of its change of name to the Cincinnati Kennel Club, with requests to make such changes upon our records. As such changes are made by resolution, such action is solicited at this meeting.

A communication was received dated March 11, 1890, from Mr. Robert Leslie, calling attention to a violation of Rule 31, by the New England Kennel Club, in neglecting to publish in its premium list, the list of recognized shows, and asking immediate action by the American Kennel Club to have such a serious error rectified. A copy of this letter was forwarded to the Bench Show Committee of the New England Kennel Club, asking an explanation, which was complied with by Mr. E. H. Moore, he assuming all blame in the matter, and satisfactorily explaining the omission, by stating that upon receipt of the electrotype plates of the rules from this office, they were taken to the printers, he supposing that said list of recognized shows were included in the plates, and he did not discover the error until after the premium lists had been printed and mailed, when his attention was called to it by the president of his club. As the plan of the American Kennel Club supplying the rules in plates was something entirely new, the oversight on the part of the New England Kennel Club was natural. The catalogue was published correctly in this respect.

Your attention is called to an entry in the catalogue of the Mascoutah Kennel Club, of Mr. C. Hudson's Kenmore (Irish setter). Your secretary asked said club to explain why it had accepted the entry of a disqualified club, and received a reply that their entries closed Feb. 17, and that after the catalogue had been printed Mr. Hudson wired the superintendent of his disqualification and asked for the return of his entries and fees. This was done, and the dogs consequently did not compete, but it was too late to change the catalogue. The entry in the judge's book was marked disqualified. The matter being thus satisfactorily explained, there was no blame whatever attached to the Mascoutah Kennel Club, and this reference to the matter was simply to explain what may have been considered by some as a direct violation of the rules. By the action of the advisory committee at its meeting April 7, the case of Graham vs. Daniels was settled, and your secretary was directed to forward to Mr. Graham the amount of his claim, \$50.10, held by this club since Jan. 18, '90. A bill of exchange was mailed to Graham April 8, and Mr. Daniels was notified, to which he replied that he desired to be put on record as "considering the action of your committee an injustice, and a shield to dishonest and sharp dog dealers."

The Albany Kennel Club had not paid Mr. A. V. Smith the prize awarded his black and tan terrier Buffalo General up to the 20th inst. Said club has been notified of this arrearage, to which no reply has yet come to hand. No other claim has been filed against the club.

Mr. W. T. Levering of Baltimore, Md., filed a claim for the use of the prefix "Dundee" for his Chesapeake Bay dogs; the same was published in the April Gazette, and a protest had been filed by Mr. H. T. Drake of St. Paul, Minn., against allowing said prefix. This correspondence will be read, and your action at this meeting is requested. At the Westminster Kennel Club show, a special prize of fifty dollars was offered for the best setter with a field trial record, which was awarded to Mr. L. Gardner's English setter dog Roger. The award was protested by Mr. Max Wenzel, he claiming that his Irish setter dog Tim was eligible to compete. This protest was allowed, and the prize was awarded to Tim. Mr. Gardner appealed from this decision to this club, under date of February 18, 1890, and deposited ten dollars, as required by the rules. The case is now before you to decide. It is suggested that this club should adopt a list of "recognized field trials," a win at any one of which shall be considered and accepted as a field trial record. The Buffalo Kennel Club has served this club with a notice of the suspension by it, of Mr. Edwin H. Morris, under Rule XXV., for the following reasons: Said Morris entered four dogs at said Buffalo Kennel Club show, sending his check for twelve dollars to cover entry fees; said check was protested, and returned with \$1.41 charges. The amount has never been made good by Morris. The suspension has been confirmed, pending your action, by President Belmont, Jr., and notice to that effect has been sent to Morris's address. A. P. VREDENBURGH, Secretary.

Adopted.
Mr. Wise: I move we go into this matter of credentials of delegates.

Motion seconded and carried. The secretary stated that credentials were presented by Mr. Lohman, of the St. Bernard Kennel Club; by Mr. Watson, of the Southern California Kennel Club, and Mr. Peshall, of the Maryland Kennel Club. The credentials presented by Mr. Watson to represent the Southern California Kennel Club were then read, and Mr. Wise moved that Mr. Watson be accepted as representative of the Southern California Kennel Club, provided his credentials were amended so as to conform with the rules.

Mr. Watson: For the present I will withdraw the credentials of the Southern California Kennel Club and represent the Spaniel Club.

On motion, Mr. Lohman's credentials being regular, were accepted. The credentials of C. J. Peshall to represent the Maryland Kennel Club were read.

Mr. Leslie: I move those credentials be accepted.

Mr. Anthony: I rise to a point of order that, the club having appointed Mr. Malcolm for the year 1890, had no right, in the absence of the resignation of Mr. Malcolm, to send another delegate.

Mr. Leslie: Mr. Peshall responded to the roll-call for the Maryland Kennel Club and he was recognized.

The President: He was not recognized. He choose to occupy the floor in spite of my refusal to recognize him.

Mr. Wise: This is a question of power with me. On April 5, 1890, this Maryland Kennel Club met, and it elected a delegate and duly authorized him for twelve months to represent it as a delegate, and his name is H. Malcolm, and he stands here as the duly authorized representative of that club for twelve months. Of course if there is a resignation there is a vacancy, but it is the principle of law that a delegate has no power to delegate his authority.

The President: I desire to state for the information of the meeting that that was the ground on which I ruled. When I first saw the certificate, if such it can be called—I had not heard of it before—I saw Mr. Peshall had no authority to represent any club here. I did not have an opportunity of

stating so when I ruled because Mr. Peshall did not wish to take my ruling, and to silence his interruption, I was obliged to go on with another motion in order that the meeting might proceed. I think it is very indelicate that Mr. Peshall should remain in the room during this discussion, so long as the Chair has ruled that he is not a member or delegate. It is clear that the certificate he presents is not a valid one in any sense. It states clearly that it is not a substitution, and the constitution does not recognize the possibility of a substitution. If nothing had been said about Mr. Malcolm in the certificate, I certainly should have been obliged to recognize Mr. Peshall, no matter whether the regular delegate previously appointed had resigned or not. In this case he is not sent here as a delegate, but as a substitute. It is so distinctly stated in the so-called certificate.

Mr. Watson: I very much regret that this discussion has come up in this shape. I think we all know what this means. This is personal animosity to Mr. Peshall.

Mr. Anthony: In order to cut short all discussion I withdraw my point of order, and I now move that as Mr. Peshall is not a *persona gratia* to the members of this club for reasons you all know, he be not accepted as a delegate to the American Kennel Club.

Mr. Watson: I object with regard to myself to any such motion being put to the meeting.

Motion seconded.

The President (resigning the chair to Mr. Terry): Concerning Mr. Watson's statement that this action is the result of personal animosity, I think perhaps I am the one to reply to that, as my feelings on the subject would probably be interpreted as personal. They are not at all. I readily believe that the party is not worthy of my personal feeling on the subject. Mr. Peshall has written all sorts of letters and articles in the papers against the American Kennel Club. What his motives were is for you to decide. It was in the main an attack upon the financial conduct of the Club, and after an investigation of the books was made, and after the financial condition of the Club, as reported by your officers, was indorsed by a Committee appointed to investigate and report, he did not accept that, and accused the Club of so manipulating its accounts as to make it appear that it was in a better financial condition than it really was, and accused me of having come to the assistance of the Club with money, which the accounts show I did not, although I offered to do so in the event of its becoming necessary. The statement, made by the American Kennel Club through its officers, that such assistance had not been given, was not believed, and every effort was made on the part of Mr. Peshall to have the public, and the dogmen in particular, believe the financial statement of the American Kennel Club was a false one, and that the accounts were open to the accusation of mismanagement. I consider on this ground that no one taking that position should be received here as a delegate, because it is saying practically "I don't believe in your club." That is one ground. There is another ground, and that is that it was published in all the papers that a suit was going to be brought against the American Kennel Club to take it into Court in order to prove these false entries, as it was claimed. That was published everywhere. Some of the delegates being frightened, went so far as to write and ask all sorts of details, &c., until it became such a nuisance that we consulted counsel on the subject, and were advised that even delegates had no right to inspect the books, and I had occasion to write a letter to the delegate of the Massachusetts Club that the books could not remain open to inspection any longer, after the Committee had passed upon their accuracy. We are willing to do anything and answer any questions that anybody may reasonably ask, but this incessant pecking became not only tiresome but insulting. For instance, if I, as your president, should make a statement here that I did not give any money to the club I should expect to be believed, and if I am not to be believed I am not fit to be your president. Those statements were made. That suit referred to was never brought, was never intended to be brought, and never could be brought under any process of law. The parties intending to engage in it would have been shown up in a ridiculous light. On the two grounds I have stated, I maintain that Mr. Peshall is not fit to represent any club, nor fit to sit in this room after the accusations he has made, excepting as a private individual. The statement that there is personal animosity here is all nonsense, but if we have any respect for ourselves as an organization we should not receive anybody in it who speaks and writes against it, in such a manner.

Mr. Peshall: I ask to be heard.

The Chairman: I cannot recognize you.

Mr. Leslie: I move the delegates grant to Mr. Peshall the privilege of being heard.

Mr. Lohman: I have never met the gentleman, nor do I know anything about him, but I believe we have by-laws and a constitution to govern us at these meetings, and I don't think we should depart from them now.

Mr. Anthony's motion, that Mr. Peshall be not recognized or admitted as a delegate on the ground that he is not a *persona gratia* (under Art. XII, Sec. 2) to the majority of the delegates was then put and carried by the following vote: Ayes—Am. Pet Dog Club, Associate delegates (2 votes), Mascoutah Kennel Club, Pointer Club of America, Virginia Field Sports Ass'n, Westminster Kennel Club, St. Bernard Club of America, Collie Club of America, Nays—Am. Beagle Club, Am. Spaniel Club, Massachusetts Kennel Club. Ayes, 9; nays, 3.

The treasurer's quarterly report was read as follows: MAY 21, 1890. *Gentlemen:* I beg to submit the following report: Receipts from all sources from Jan. 1 to date.....\$5,358.32 Expenses for same period.....\$3,317.16

Balance on hand.....\$2,041.18

The following clubs have not yet paid their annual dues for the current year: Chattahoochee Valley Exposition Company, Connecticut State Kennel Club, Elmira Poultry and Pet Stock Association, German Mastiff or Great Dane Club, Hartford Kennel Club, Syracuse Kennel Club.

By resolution at the last meeting these clubs were given thirty days in which to pay this year's dues, under the penalty of being dropped from the roll of membership. They were duly notified of this resolution, and have failed to respond. Exception is made in the case of the German Mastiff or Great Dane Club, which, by an oversight, I neglected to include in my report at the last meeting and consequently did not communicate with. (Signed) A. P. VREDENBURGH, Treasurer. Adopted.

The minutes of the last meeting of the Advisory Committee was read, and motion made to accept them. Mr. Watson moved that sections six and seven be stricken from the minutes of the meeting of the Advisory Committee held April 7th, 1890. Motion seconded and lost. The motion to accept was then put and carried.

Mr. Watson: I give notice that I will make a motion at the next meeting which will give the Advisory Committee the power of suspension which they have not at present.

The following clubs, candidates for membership in the American Kennel Club, were elected, their applications being in proper form: Youngstown Kennel Club, of Youngstown, Ohio; the Louisiana Poultry and Pet Stock Association, of New Orleans, La.; Northern Illinois Poultry and Pet Stock Association, of Rockford, Ill.; Wilmington Agricultural and Industrial Association, of Wilmington, Del.; the Chesapeake Bay Dog Club, of Baltimore, Md.; the National Greyhound Club, of New York, and the California Kennel Club, of San Francisco, Cal.

The question of the wins of the Southern California Kennel Club, of Los Angeles, Cal., was then brought up, and Mr. Anthony moved that as the rules and the secretary's letter did not reach the club until two days after their show of 1889, and as they complied as near as possible with those rules, that those wins be recognized by the American Kennel Club. Motion seconded and carried.

The requests of the American English Beagle Club and the Cincinnati Sportsmen's Club to have their names changed upon the records to "The American Beagle Club" and "The Cincinnati Kennel Club" were, on motion, granted, and the secretary instructed to make the changes desired. On motion, Mr. W. T. Levering, of Baltimore, was granted the prefix "Dundee" for his Chesapeake Bay dogs, against which a protest had been filed by Mr. H. T. Drake of St. Paul, Minn.

Concerning the special prize of \$50 awarded by the Westminster Kennel Club to Mr. L. Gardner's English setter dog Roger, which was protested by Mr. Max Wenzel on the ground that his Irish setter dog Tim was eligible to compete, and which protest was allowed and the prize awarded to Tim, from which decision Mr. Gardner appealed, Mr. Watson offered the following resolution: *Resolved*, That it is the opinion of this committee that the term "field trial record" applies only to public trials for competition open to all, and that the appeal by Mr. L. Gardner in the case of the special prize for the best setter with a field trial record be sustained, and the prize awarded to his English setter dog Roger. Resolution seconded and carried.

In regard to the suspension of Mr. Edwin H. Morris, under Rule XXV., of which notice was received by the American Kennel Club, the secretary stated that Mr. Morris had deposited with the club \$14, which covered entry fees and protest fees on protested check; that he had wired the Buffalo Kennel Club to withdraw the suspension, and had left extra money to pay wire charges on return. He further stated that under the rules there was one of two things to be done. Either the suspension would have to be removed, or Mr. Morris would have to be disqualified. On motion of Mr. Watson, the suspension was removed.

The Secretary: At our last meeting a resolution was adopted giving clubs in arrears thirty days to settle their accounts, otherwise they would be dropped from the roll. I have sent notices to that effect to the following clubs: Chattahoochee Valley Exposition Company, Connecticut State Kennel Club, Elmira Poultry and Pet Stock Association, Hartford Kennel Club and Syracuse Kennel Club. The German Mastiff or Great Dane Club I overlooked, so I do not think that club comes under the resolution.

On motion of Mr. Watson the clubs named were dropped from the roll.

On request of Mr. Leslie the secretary read the charges brought by Mr. Leslie against the New England Kennel Club.

Mr. Leslie: I think this is a serious breach of the rules, and something should be done to punish them for such a breach. I move that the New England Club be suspended for the term of one year for non-compliance with the rules in not publishing the rules of the bench show.

The Secretary: I think that would be very unjust. This is the first year we have attempted to furnish the rules for the different clubs. After the rules were amended, I got them up with all the latest amendments. I had electrotype plates made of them the proper size for catalogues and premium lists, but I did not include the list of recognized shows for the reason that they are changing all the time. In sending these plates to the Boston Club, Mr. Moore very naturally supposed they were included, and did not know of their absence until after the premium lists were printed. To penalize the Boston Club for an error of that kind I think would be a great mistake.

Mr. Leslie's motion seconded. Mr. Anthony: "I move to lay it on the table." Motion seconded and carried.

Mr. Leslie: I would like an explanation from the secretary why one delegate should be refused to investigate the report of the treasurer or the books, and another delegate in a few weeks afterward be permitted to do so. I should like to know if there is any distinction, whether one man is favored over another.

The Secretary: If you will be kind enough to state the particulars I will answer you.

Mr. Leslie: I made inquiries about the treasurer's report, etc., and I was refused permission to investigate it. Mr. Watson, a few weeks afterward, came from the FOREST AND STREAM and he investigated the treasurer's report, and the books were thrown open to him.

The secretary stated that considerable correspondence had passed between them, in which he stated in substance he had invited Mr. Leslie to call at the office at any time and the books were at his disposal, and that he was ready to answer any question he asked. That in reply he had received an insulting letter from Mr. Leslie. He then wrote to Mr. Leslie that he asked the president of the club about the matter, and that he had received positive instructions from him to positively decline to make any further statement of the finances other than the published ones which were duly examined and audited by the committee appointed by the American Kennel Club for that purpose. That he should strictly carry out the instructions of the president.

The Secretary (continuing): Mr. Watson had written me about the same kind of a letter as Mr. Leslie's first letter, asking for certain amounts in my accounts. I wrote Mr. Watson to the same effect as I did to Mr. Leslie, that I had no time to do it. I was very busy at the time. I invited Mr. Watson to come here at the office and look at the books. Mr. Watson sent another letter in which he wrote three or four questions, which I answered, and again invited him to come here and look at the books. He sent me word he would come in the first time he was in town. Mr. Watson did come on after I had written to Mr. Leslie. Mr. Watson had been in the meantime elected a member of the Stud Book committee. He had a perfect right to those books just as I had or any other officer. Mr. Watson will bear me out in what I say, that he responded to my invitation and looked at the books.

The secretary called attention to a communication in reference to a special prize offered by the St. Bernard Kennel Club for the best smooth-coated St. Bernard dog. An entry was made by Mr. T. B. Lee. It came out subsequently that Mr. Lee did not own the dog entered by him, which was awarded the prize, but that the dog belonged to his wife. Therefore the dog was disqualified. The question now is what is to be done with the cups which were offered as the prize. Mr. Anthony moved that there being no reserve number, and that the judge not having been requested to re-judge the class, the American Kennel Club consider the cups the property of the St. Bernard Club of America. Motion seconded and carried.

A communication was read from the Gordon Setter Club, asking that the percentage of blood be raised from 62½ to 87½ per cent. On motion the matter was referred to the Stud Book committee. Adjourned.

(Signed) A. P. VREDENBURGH, Sec'y.

THE MEMPHIS & AVENT KENNEL will have at the Cincinnati show next week a descriptive price list of their dogs that are offered for sale.

DOGS.—NARDIERS medicated SOAP for washing dogs, destroys all irritating insects, removes doggy smell and leaves the animal refreshed and happy. This prize medal soap, used by all the leading owners in Europe, is now sold by Park & Tilford, McKesson & Robbins, E. Fougere and all Druggists.—*Adv.*

DOG TALK.

MY note re the Homestead Kennels, last week, was rather mixed. It should have read Mr. H. S. Pitkin's kennels, instead of Mr. Richard Barry's. I doubtless got mixed from thinking of Mr. Pitkin's Prince Barry.

It has been reported in several papers that Mr. Richard Barry's St. Bernard bitch Diva (ch. Plinlimmon—Aello) lost all her puppies on the S. S. en route. I called on Mr. Barry to-day, and to my surprise found Diva with one puppy, and she is decidedly the best St. Bernard puppy I have seen yet. Diva is out of coat and was injured in one of the last joints of the tail while on the steamer, but otherwise she is as good as ever. Mr. Evans has written to Mr. Barry regarding the shipment, and it seems he is not so much to blame after all. The bitch was provided with a commodious kennel, but the Inman Line refused to take the dog at all, and it was solely through the influence of Mr. Green, the owner of Sir Bedivere, that they finally consented to take her, but even then would not take the kennel.

Parties in Pittsburgh write me that Mr. Paul Heicke's Barzois are expected daily from Russia.

It is rumored that Mr. J. J. Scanlon is negotiating with parties in England for an Irish setter puppy. We think it was born in the neighborhood of Borstal House.

There will be a bench show at New Haven this fall. Mr. Geo. W. Neal has it in charge, and we may expect something good from his hands. We hope it will be under A. K. C. rules.

Mr. Michael Flynn, Jr., writes that it is not all smooth sailing in the dog business. His Irish setters Tramore and Lulu V. contracted distemper at the Buffalo show and Lulu has succumbed to the disease.

The R. I. Poultry and Pet Stock Association will hold a bench show in connection with their poultry show Dec. 29 to Jan. 1, 1891. Michael Flynn, Jr., has charge of the bench department, and although a new hand at it, we can answer for one thing, the boys will have a good time.

Mr. C. K. Westbrook, proprietor of the Cynophile Kennels, Newark, N. J., has been visiting the kennels in and about Lynn the past week; he expresses considerable surprise at the number of "dog cranks" in that community. He carries away with him a promising English setter puppy from the kennels of Capt. A. J. Hoyt.

Dr. Sawtelle, Melrose, Mass., has lost the entire litter of his St. Bernard bitch Clytie, by Mr. Sears' champion Hesper.

Mr. W. L. Washington, Pittsburgh, Pa., intends to enter his Irish setters Winnie II. and Ruby Glenmore in the field trials next fall.

Mr. Watson is mistaken regarding the St. Bernard bitch Zara. Her dam, Lady Wellington, was the property of Mr. Sears when bred, consequently Zara is American-bred, according to the St. Bernard Club rules.

The organization meeting of the English Setter Club was not as well attended as was expected. Great enthusiasm was expressed by those present, however, and the new club is, I think, founded on the proper basis. Those interested are many of them purely sportsmen that own but one dog and are interested in the breed, and will work for its advancement. Specialty clubs are too apt to be run by cliques. The following officers were elected: President, Mr. F. W. Whitlock, Waterbury, Conn.; 1st Vice-President, F. A. Frazier, Lynn, Mass.; 2d Vice-President, Dr. W. A. Power, Boston, Mass.; Secretary-Treasurer, H. H. Brown, Melrose, Mass.; Executive Committee: The aforementioned officers and A. Russell Crowell, Lynn, Mass.; T. C. Crittenden, Lynn, Mass.; Geo. W. Neal, Westville, Conn.; W. H. Case, Lockport, N. Y.; John Jarvis, Indian Orchard, Mass. The other members elected are: C. K. Westbrook, Newark, N. J.; J. W. Wood, Poughkeepsie, N. Y.; C. B. Dubois, Nashua, N. H.; W. C. Paterson, Lockport, N. Y. A letter from Major Taylor was read by the secretary, stating that he had been writing interested parties for some time past in regard to organizing an English setter club; and that it would be made public about June 1, adding that he hoped the interested parties present would join hands with him in his endeavor.

The English Setter Club of America was the original idea of Mr. H. H. Brown, aided by Dr. W. A. Power and A. Russell Crowell. The object of the club is solely the advancement of the English setter. Its officers are living in the Eastern States, simply because would-be officers living in other States have failed to respond to the call. The invitation to become a charter member before July 1 is extended to every setter man in the United States. If there is anything in the constitution that you don't like come and vote for an amendment at the July meeting. Application for membership has been forwarded to the A. K. C.

New England kennel owners that are about to build a new building can get an excellent idea of a cheap, convenient roomy and healthy kennel by visiting that of Mr. Chas. G. Wheelock, at Arlington Heights, Mass. For \$300 he has built him a fine kennel to accommodate six St. Bernards at all times, and accommodations for brood bitches, or bitches in season, a spacious washing and drying room with stove, a loft for straw and utensils, and five wire-enclosed runs about 6x30ft. Mr. Wheelock's Scotch Boniward, second at Boston, is well known. His two Hesper puppies are doing splendidly; the bitch Aello is a remarkably roomy bitch with considerable quality. His Hesperard (champion Hesper—Cologne) is very good in head, and like all the Hesper pups we have ever seen, is remarkable in his development of chest. He is beautifully marked, and we think will be heard from next year. His latest importation, Home Ruler, is a very massively built dog, with great skull and muzzle, and much of the Swiss type. Mr. Wheelock's dogs are not numerous, but the quality and breeding is excellent. The proprietor's reputation for hospitality is unequalled. Visitors are always welcome.

Messrs. Teague and Tilton, at the Elmwood Kennels, South Framingham, are doing quite a business. They have enlarged their kennel by adding five more stalls, and purchasing the St. Bernard bitch Stella, imported by William Sandberg from Switzerland, another dark horse. She stands a good thirty inches at shoulders, with grand skull, big bone, straight and strong limbs and good body. Under Mr. Teague's care and management she will be in the money at the coming shows. They have also purchased Lady Melrose, by Merchant Prince out of Bernie V., and Elouise, another daughter of Merchant Prince. Beauchamp and Queen of Scotland, are showing grand form; but the pride of the kennel is Zenith, by champion Plinlimmon out of LaPucelle, a grandly-bred bitch, with beautiful coat and excellent bone, recently purchased of J. H. Ruthergien, Chiswick, England. She was bred to Sir Bedivere, but has failed to prove in whelp.

I do not think there is any one man in America that knows the disposition of champion Hesper better than the

writer, except Mr. Sears and Mr. Loveland. I saw him on the bench, on the street and in the kennel in England, and I have seen him on the bench at New York, Chicago, Rochester, Baltimore and Boston, and many a time at his kennel in Melrose, and I have yet to see the first evidence of an uncertain temper, except with his kennel companion, Plinlimmon, Jr., who he is jealous of. In all the cases of his biting that came under my notice the parties bitten were more to blame than the dog.

Mr. Fred Bowers has purchased the cocker spaniel stud dog Pompey, by Obo, Jr., out of Black Bess II., of Mr. J. J. Scanlon, Fall River, Mass.

The Bulldog Club of America will not give specials to any bench show that provides a class for round-headed bull terriers. We cannot quite see the policy in that action. Only one club is affected, i. e., the New England Kennel Club. And why should the bulldog men wish to boycott the round-head? It is not a bulldog; it is a cross-bred non-descript, and it looks to me as if the Bulldog Club were going a long way out of their way to tread on a snake. Boston always brings out a strong class of bulldogs.

NAMQUOIT.

THE ST. LOUIS COURSING MEET.

THE National Coursing Association held their first spring meeting at St. Louis, May 11, 14, 16 and 18. The first event on the card was the

ST. LOUIS DERBY.

Entry, \$5. First prize, silver cup, with \$50 added by the Association; second, \$20; third and fourth to save their entrance; 10 starters. Following is the summary:

First Series.

F. W. Benton's Dandy beat Dr. L. G. Tandy's Lady Rebecca.

J. Russell's Barmaid beat A. M. Cheeney's Alex. Jordan. E. Burgess's Spring beat T. V. Brown's Dick V. Col. R. S. MacDonald's Elk beat C. Clark's Handy Andy. R. J. Rothwell's Belfast beat L. B. Bambrick's Jake Kilrain. A. Haigh's Nip beat C. McCony's Go Slow. Dr. L. G. Tandy's Miss Beatrice beat P. Rohan's Fola. E. C. Haywood's Cygnus beat J. Eagan's Ponta.

Second Series.

Barmaid beat Dandy. Spring beat Elk. Nip beat Belfast. Miss Beatrice beat Cygnus.

Third Series.

Barmaid beat Spring. Nip beat Miss Beatrice.

Final for First.

Barmaid beat Nip and won first, Nip second, Miss Beatrice third, Spring fourth.

LACLEDE STAKE.

Entry \$5. First prize, silver cup, with \$25 added by the Association; second, \$15; third and fourth to save entrance; 15 starters. Following is the summary:

First Series.

N. G. Wilson's Queen beat Dr. L. G. Tandy's Lady Rebecca.

W. A. Burgess's Dick Kline beat B. O. Keefe's Speed. C. Clark's Handy Andy beat W. A. Burgess's Gazelle. N. G. Wilson's Jumbo beat T. V. Brown's Dick V. T. O'Keefe's Let-Me-Go beat L. B. Bambrick's Topper. T. O'Keefe's Surprise beat J. A. Pohlman's Eberly. J. Egan's Conta a bye. B. O'Keefe's Jim K. beat J. A. Pohlman's Fola.

Second Series.

Dick Kline beat Queen. Handy Andy beat Jumbo. Let-Me-Go beat Conta. Surprise beat Jim K.

Third Series.

Dick Kline beat Let-Me-Go. Surprise beat Handy Andy.

Final for First.

Dick Kline beat Surprise and won first, Surprise second, Handy Andy third, Let-Me-Go fourth.

DEATH OF DUKE OF LEEDS.

Editor Forest and Stream:

I regret to announce the death of my rough-coated St. Bernard champion Duke of Leeds. He was born May 1, 1881 and died very suddenly May 18, being a little over 9 years old. He was imported by Mr. E. R. Hearn of Mr. Sydney W. Smith as the most promising young dog in England, and was considered the best dog of his day in America. Merchant Prince was the only dog placed over him and that by only one judge. St. Bernard people generally did not approve of the decision. Mr. Smith, who formerly owned both dogs, said the award was wrong, for Duke was the better dog. Many others, including Rev. J. C. Macdonna and Mr. Chas. H. Mason, expressed themselves to the same effect. I am sorry he was not in condition in February as I should have shown him at New York to determine how he compared with the later importations.

He was more than an ordinary show dog. He had a beautiful disposition and as many times as he has been exhibited he never showed the slightest indication of ill temper. Mr. Hearn has said "Duke never had an evil thought." He was the highest ideal of a St. Bernard. When I heard of the intention of the Boston show committee to invite the blind children and have specimens of the different breeds brought into the ring for them to feel over, I remarked that a better dog than Duke could not be found, as any one could handle him with perfect safety. He was dignified, and as courageous as he was gentle, slow to show resentment and never sought a quarrel, would never attack another dog, but if attacked would fight like a good one.

I was awakened by his barking one night a couple of weeks ago and I found him under my window. The barn door had opened and as soon as I fastened it he showed plainly he was perfectly satisfied, and I heard nothing more of him that night.

He was a grand dog in every respect and I shall never see his equal again. I loved him as Mr. Peshall loves Old Jimmie.

W. H. JOCKEL, JR.

BLOOMFIELD, N. J.

SALISBURY'S PEDIGREE.—*Editor Forest and Stream:* In response to Mr. Watson's suggestion that I expound on the last "explanation" of Mr. Huscroft on the matter of his charge that Salisbury was furnished with a bogus pedigree, let me say that I really think that communication should be allowed to pass without comment; I really believe it was as frank an explanation as Mr. H. could make, he being apparently gifted with a most unfortunate objection to coming right out with the whole story or making a frank confession of having been wrong. The affair has resulted in demonstrating that there are two chances to one in favor of the pedigree being genuine; and far more to blame than Mr. Huscroft is the sneaking coward who put him up to it and hides in the dark.—W. WADE (Hulton, Pa., May 23).

PEORIA GUN CLUB TOURNAMENT.

DETROIT, Mich., May 21.—The Peoria Club, of Detroit, began its second annual shoot this morning, and it is refreshing to be able to say that after so long a record of light attendance, meager interest and questionable experiments in the recent history of trap-shooting, this club has cut the Gordian knot and cut the best of the shooting fraternity from over a wide stretch of country, and which besides getting the crowd together, is going to hold it and send it away fully satisfied. The Detroit tournament of last March, held in a most inclement season, excited wonder all over the country by the exceptionally large entries, some of them going over 100. That another shoot, so soon after that, should be given and have a parallel success is a matter which invites a yet greater surprise and suggests some sort of inquiry into the reasons.

What may be called the foundation shoots for this one were first begun by three Detroit men, Mr. J. W. Garrison, John Parker and John Brooks. They hit upon an idea, which seemed for the time, at least, to adjust the old feud between the amateur and the professional. They divided each stake into several equal parts, so that each class should win an equal amount. For instance, instead of dividing a \$100 purse into \$40, \$30, \$20 and \$10, which would invite the old system of figuring, dropping and dividing among the professionals or cracks, they divided the \$100 into five equal stakes of \$20 each. If the race was, say, 15 hits in 14, 13, 12 and 11 men would just as soon win the tie as the other. There was no inducement left to flume for place. At the same time, the inducement for top-rank shooting among the professionals and cracks was made strong by a system of valuable special prizes for best daily and total averages. These ideas were not altogether new, but they were well applied. At their first shoot, the gentlemen of the club broke \$400 in prizes, and at the third, \$500, and by that time Detroit had fairly won the record and was known as a good place for the boys to go if they wanted a good shoot.

The above system is followed in many of the races in this shoot, although not so rigidly as to leave room for the chronic kickers to kick. To this is added the fact that not less than eight guaranteed purses of \$20 each are given, and that the prizes are divided among other prizes amounting in all to \$1,250, have been put in competition. Also \$10 each day is offered for a miss and out, and \$10 each day for best averages, besides a beautiful silver cup for the best total average, and a grand special prize in the form of a \$100 diamond medal. These little facts are interesting alike to the laymen and the high officials in the shooting craft, and the fact that the Peoria Club has been so successful in the country, is simply a wonderful one.

There are a good many business men in the country who either fail to see any fun in trap-shooting, or who sneer at the sport on general principles. It would be a great comfort to have some of these men here this week, just to show them how admirable, as a pure example of business policy and of high executive ability, a modern shoot like this deserves to be held. Many a business man, who is at the head of a big commercial machine, would be unable to conduct a shooting tournament.

Of course the main idea in such a tournament is to break as many birds as possible. That keeps things real and incidentally puts more one-cent pieces into the pocket of the management, besides selling more targets and more ammunition. To this end the Peoria Club has adopted the rapid firing system and invited Mr. Penrose, of the Keystone Co., to superintend the two batteries of 5 traps each, which represent the focus of the war. All this is familiar to trap-shooting men, and it is necessary only to add that the full system, blackboard, square seats, outer railing, plank walks, trap pulls, shooting boxes and all, is in use here and was never tested better. The smoothness of the shoot is admirable. Everything is going off as well as it could. One squad follows the other mechanically, the roar of the guns is incessant, the cashiers are practiced and prompt, and there is no hitch nor balk anywhere. Indeed, the only small discovery one shoot upon which no criticism shall be or can be passed.

The grounds of the Peoria Club are the best in the State of Michigan. They lie right upon the bank of the beautiful Detroit River, not far from where the lighthouse sends its rays out to the lower edge of the famous St. Clair Flats. There is a big and comfortable club house, which is far more than a mere pretext for offering room and board, and the grounds are the best of the kind. The background is perfect, being grass and sky. The soil itself is sandy and readily absorbs moisture, so that to-day, although it rained quite hard for a while, it was not seriously unpleasant underfoot. It is about seven miles up the river to the grounds, the journey from Belle's Dock, some two miles up the street car track, being made by the industrial big ferry carrying the little steamer Daisy, which makes the trip about once each hour.

To-night, at about 7 P. M., as the last load was starting down, Daisy unfortunately blew the packing out of her cylinder head, and her passengers, wet, suppers and tired, were confined to her dark cabin for two or three hours, not reaching the city till 11 o'clock at night. An amusing incident then took place. The Daisy landed at one of the big ferry houses, and the passengers of the boys disembarked upon the latter just as she was pulling out. Mr. Pope, of Olean, was thus carried clear across to Canada, but got back before morning, not much the worse for his involuntary exile. The waiting time in the dark was spent in soulful music, in which the club mascot, "Ginger," joined lustily. "Ginger" is a small colored individual, about as large as a chew of tobacco. He has a tasty little uniform, and owns the country, like most mascots.

It has been a great gathering of the clans to-day, and there are many familiar names upon the lists. Rollo Heikes and Scott McDonald are on hand from Dayton, "Old Court" is here with his new \$50 Levee. Al Bandle is up at the head of the Cincinnati contingent, and Wolstencroft (and by the way, his father also, who sits around and smokes and enjoys the shoot as much as anybody) is on from Philadelphia. Whitney is here from Phelps, and Rubie from Salt Lake, and Milt Lindsley from New York, and Seth Clover from Corry, and Benscotton from Toledo, and pretty much all the rest. The boys were asked to register as they went in, to dinner to-day, and although they did not all do so, the following list will make a good showing for a day's shoot.

R. T. Merrifield, Detroit; A. Anderson, Detroit; H. Catton, Ridgetown, Ont.; Rollo O. Heikes, Dayton, O.; Alfred Benoit, Mt. Clemens; W. E. Walton, Richmond, Mich.; H. J. Lewis, Pittsburg; Milt Lindsley, New York; Scott McDonald, Dayton, O.; D. Leitch, Ridgetown, Can.; Geo. A. Mosher, Fulton, N. Y.; A. W. Essig, Detroit; W. B. Moore, Jr., Corry, Mich.; W. T. Best, Chicago; Chas. M. Vanbuskirk, Portage, D. C.; "Ginger," Detroit; P. M. Benoit, Mt. Clemens; J. F. Schick, Mt. Pulaski, Ill.; Seth Clover, Erie, Pa.; M. Low, Milford, Mich.; T. T. Cartwright, Boston; Alf Webb, W. H. Brummitt, E. L. Wendi, Pontiac; Fred Jager, John Parker, Detroit; Frank H. Wherry, Marshall, Mich.; Wm. Watts, Jackson, La.; Youngblood, Sandwich; Chas. Richardson, W. S. King, Portage, Mich.; J. C. Snider, A. W. Courtney, Syracuse; E. Chamberlin, Rome, N. Y.; H. Estor, Detroit; H. C. Hall, Cleveland; Albert Drouillard, Windsor, Can.; W. E. Lewis, Corry, Pa.; S. A. Crowell, Hastings, Mich.; E. S. Benscotton, Toledo; E. D. Miller, Springfield, N. J.; F. D. Kelsey, East Auro, N. Y.; W. Spring, Ravenna, O.; H. A. Penrose, Corry, Pa.; W. C. Cassidy, South Bend, Ind.; H. B. Whitney, Phelps, N. Y.; W. B. Kalamazoo, N. Y.; W. B. Moore, Jr., Corry, Mich.; W. T. Best, Chicago; Chas. M. Vanbuskirk, Portage, D. C.; "Ginger," Detroit; P. M. Benoit, Mt. Clemens; J. F. Schick, Mt. Pulaski, Ill.; Seth Clover, Erie, Pa.; M. Low, Milford, Mich.; T. T. Cartwright, Boston; Alf Webb, W. H. Brummitt, E. L. Wendi, Pontiac; Fred Jager, John Parker, Detroit; Frank H. Wherry, Marshall, Mich.; Wm. Watts, Jackson, La.; Youngblood, Sandwich; Chas. Richardson, W. S. King, Portage, Mich.; J. C. Snider, A. W. Courtney, Syracuse; E. Chamberlin, Rome, N. Y.; H. Estor, Detroit; H. C. Hall, Cleveland; Albert Drouillard, Windsor, Can.; W. E. Lewis, Corry, Pa.; S. A. Crowell, Hastings, Mich.; E. S. Benscotton, Toledo; E. D. Miller, Springfield, N. J.; F. D. Kelsey, East Auro, N. Y.; W. Spring, Ravenna, O.; H. A. Penrose, Corry, Pa.; W. C. Cassidy, South Bend, Ind.; H. B. Whitney, Phelps, N. Y.; W. B. Kalamazoo, N. Y.; W. B. Moore, Jr., Corry, Mich.; W. T. Best, Chicago; Chas. M. Vanbuskirk, Portage, D. C.; "Ginger," Detroit; P. M. Benoit, Mt. Clemens; J. F. Schick, Mt. Pulaski, Ill.; Seth Clover, Erie, Pa.; M. Low, Milford, Mich.; T. T. Cartwright, Boston; Alf Webb, W. H. Brummitt, E. L. Wendi, Pontiac; Fred Jager, John Parker, Detroit; Frank H. Wherry, Marshall, Mich.; Wm. Watts, Jackson, La.; Youngblood, Sandwich; Chas. Richardson, W. S. King, Portage, Mich.; J. C. Snider, A. W. Courtney, Syracuse; E. Chamberlin, Rome, N. Y.; H. Estor, Detroit; H. C. Hall, Cleveland; Albert Drouillard, Windsor, Can.; W. E. Lewis, Corry, Pa.; S. A. Crowell, Hastings, Mich.; E. S. Benscotton, Toledo; E. D. Miller, Springfield, N. J.; F. D. Kelsey, East Auro, N. Y.; W. Spring, Ravenna, O.; H. A. Penrose, Corry, Pa.; W. C. Cassidy, South Bend, Ind.; H. B. Whitney, Phelps, N. Y.; W. B. Kalamazoo, N. Y.; W. B. Moore, Jr., Corry, Mich.; W. T. Best, Chicago; Chas. M. Vanbuskirk, Portage, D. C.; "Ginger," Detroit; P. M. Benoit, Mt. Clemens; J. F. Schick, Mt. Pulaski, Ill.; Seth Clover, Erie, Pa.; M. Low, Milford, Mich.; T. T. Cartwright, Boston; Alf Webb, W. H. Brummitt, E. L. Wendi, Pontiac; Fred Jager, John Parker, Detroit; Frank H. Wherry, Marshall, Mich.; Wm. Watts, Jackson, La.; Youngblood, Sandwich; Chas. The beautiful Collins medal was won by Mr. John Parker, of Detroit, with a score of 47. This contest was open only to residents of Wayne county, Mr. Parker is the able game warden of Wayne county, and is a well-known and respected sportsman. He carries fourteen medals won in shooting or athletic events.

Event No. 18, 5 singles and 5 pairs Keystones, \$1.50:

MILLER'S FALLS, Mass., May 17.—At the rate the club is shooting now leather medals will have to be ordered by the carloads. Ten Keystone 16yds. rise; P. E. Amidon 4, S. H. Amidon 6, L. M. Davis 0, E. L. Lanfair 0, F. A. Lanfair 5, H. D. Lanfair 0, C. C. Pierce 5, E. M. Partridge 3, F. H. Ryther 0, G. L. Scott 2, N. W. Smith 6, E. J. Wheeler 2. Amidon won on shoot-off.

RED BANK, N. J., May 23.—The final shoot between the Central Gun Club of Long Branch and the Riverside Gun and Rifle Club of Red Bank, to determine the championship of Monmouth County, took place this afternoon. The shoot was witnessed by a large number of pizeon shooters from all parts of the State. During the afternoon the wind blew hard from the northwest, making it difficult to hit the birds. The clubs were represented by teams of eight men, who each shot at twenty-five blue rocks. The match was shot under the American Shooting Association rules, five traps. Douglass Stocum of Eatontown was referee. The following was the result: Riverside—O. Hess, 18; James Cooper, 13; Fred Beale, 20; A. L. Ivins, 20; E. W. Throckmorton, 22; L. C. White, 15; John Cooper, 22; E. M. Cooper, 20. Total, 153. Central—W. Price, 18; G. C. Cunniff, 20; E. F. Taber, 16; W. C. Price, 21; E. W. Reid, 19; Chas. Spilling, 15; Phil Daly, Jr., 13; F. Van Dyke, 20. Total, 142.

BREWER.—Captain Jack Brewer, who has been making a tour of Australia, arrived a short time ago in San Francisco, and will remain there for a few weeks, and will probably get on some matches with prominent California shooters. The Captain seems to have met with excellent luck in Australia, as diamonds adorned his shirt front, and his many form is incased in the finest of raincoat. He is shooting a very strong gait, and will make it warm for any opponents.

IOWA STATE SHOOT.—The 13th annual shoot of the Iowa State Association will take place at Davenport on June 10 to 13. The events are many, and the programme gives many inviting prizes. J. W. Howard, Davenport, is the secretary.

Yachting.

MAKING THE HARBOR LIGHT.

Editor Forest and Stream:

The following poem was found quoted in "Sketches of Life in Newfoundland," by Col. R. E. McCrea, British Army, London, 1889, without the name of the author, but it appears from internal evidence to have been written by Roy, Walter Mitchell, author of "Tacking Ship off Shore," in Vol. I. of the *Atlantic Monthly*, about 1858. The poem is, I think, little known—less than its merits deserve.

S. C. C.

The snow falls thick, so you may not see
The foresail gleam from the break of the poop,
The long-boat looms like a rock on the lee
And the drift lies a foot on the hatch and coop.

Long glimmering lines of dark and light
Mingle in wavy dance up aloft,
And the topmast head goes into the night
Capped with a headress white and soft.

Phantom-like figures grow in the tops,
And the bunts of the furled up sails are piled
With a heavy freight that sullenly drops
When the good ship bends to a gust more wild.

And the clues of the courses, stiff as a board,
Catch up the flakes into bossy heaps,
Till a flap and off whirs the sparkling board,
Startling the tars in their standing sleeps.

Still, stoutly onwards we hold our course,
Hugging the wind with a bear-like grip,
Holding each inch we gain with a force:
And passing the credit to our good ship.

The helmsman's eye, from under the rim
Of his slouched sou'wester, beams aglow,
No matter how braggart the wind to him,
And little matters the fall of snow.

Hand, eye and ear are serving his soul,
He feels the flap of the topsail leach;
And steadily over, watching the roll,
He whirls the wheel to an arm-long reach.

Grasping the weathermost mizen shrouds,
As grimly as if were gript in his hands
Our fifteen lives, and swathed in a cloud
Of sleet-stuff and snow, the master stands.

Into the darkness and whirling flakes,
Into the heart of the brooding bank,
A long dim alley his calm eye makes,
And the world outside is all a blank.

No voice, save his, on the midnight stir,
No sounds, save the plash, and the swish and swirl,
As under her bows one ceaselessly hears
The slush-covered water part and curl.

With the quiet flakes on his stiffened feet,
Searching his neck and nipping his eyes,
On the rounded coils of the spanker sheet,
A youngster, half dreaming, shapeless lies.

He knows, that true to his will, his hand
Would promptly obey the masters shout:
But his thoughts are far away on the land,
Nor heeds he for any perils without.

He dreams of a valley broad and fair,
With grand old mountains upon each side,
He dreams of a red lamp's cheerful glare
Welcoming ships to the harbor wide.

Of a little room, with its walls ablaze
On happy faces, all bright with joy!
And he hears the voices of olden days
Before he went as a sailor boy.

Dear, kind, brown eyes seem him to greet,
"God bless and guard her," he prays, 'tis she,
When a cry, "Ease off that spanker sheet,
"Hard up the helm and keep her free!"

One glare, one flare of flashing light,
And the visions die with its sudden ray,
The lee-braces fly with a circling light,
And the sheets spin out as she gathers way.

The water seethes at the bluff of the bow,
And the helm churns it to hissing wrath,
And the strain on the ship and the master's brow,
Relax to welcome the well-known path.

With a surge and a bound the yards swing square,
And the night's alive with our cheering cries,
As before the snowstorm, free and fair,
Merrily homeward our good ship flies.

SEAWANHAKA C. Y. C. SPRING RACES.

The Seawanhaka Corinthian Y. C. has this year improved on the programme of last season, and now will give a series of three races in June, the leading feature of which will of course be the 40 and 30-ft. classes. The larger craft will as usual be provided for in the annual race, but to meet the wishes of the many racing men in the smaller classes, two special races have been arranged, as below. The events are all open to yachts of the Atlantic, Beverly, Corinthian of Marblehead, Corinthian of New Bedford, New Haven and Oyster Bay clubs, and the Royal Nova Scotia Yacht Squadron.

Thursday, June 5. A Special Race for 40-ft. and 30-ft. Classes.—First prize \$200 for the 40-ft. class, and, if five boats start, a second prize of \$100. Also offers a cup of the value of \$50 for the 30-ft. class, provided two boats start.

The course will be from between the Committee Steamer and Craven Shoal Buoy to Buoy 10, on the S. W. Spit keeping it on port, thence to and around Buoy 8½ keeping it on port, thence to and around Scotland Light Ship, keeping it on the starboard, and return over same course to start, keeping to eastward of Buoy 9, 11 and 13 on West Bank and outside of Buoy 5 on point of Sandy Hook going and returning. The course for the 30-ft. class will be the same to Buoy 8½, thence to and around Buoy 5, on point of Sandy Hook, leaving it on starboard, and return over same course.

A "One Gun" start will begin at 11 A. M. precisely without regard to wind or weather, fog excepted. A preparatory signal will be given at 10.50 A. M. by a blast of the whistle on the committee steamer and the raising of the white ball. At 11 A. M. a blast of the whistle will be given and the red ball raised under the white ball, this will be the starting time for all the yachts. The following exceptions to the racing rules are made for this race.

Full professional crews may be carried and no restriction is placed on their number, but the helmsman must be an amateur. Sailing masters may be carried as mates. Clubtopsails may be carried. In case of a walk-over in either class the value of the prize will be reduced three-quarters.

Saturday, June 21.—Twentieth Annual Corinthian Race.—To be sailed over the regular club courses, the classes and prizes being: Schooners—30ft. class, \$175; 75ft. class, \$100; 63ft. class, \$75. Sloops, Cutters and Yawls—70ft. class, \$150; 61ft. class, \$100; 53ft. class, \$100; 46ft. class, \$100; 40ft. class, \$100; 35ft. class, \$50; 30ft. class, \$50.

In case of a walk-over in any class, the value of the prize will be reduced one-half. Personal prizes will be given to members of the winning Corinthian crews.

The "Leland Corinthian Challenge Cup," open for competition to members of the Seawanhaka Corinthian Y. C. only, and which for this season is put up for contest in the 40ft. class, will be raced for. A prize of the value of \$50 is offered by W. B. Ogden, Esq., in the 30ft. class. A prize of the value of \$50 is offered by Commodore Robert Center to the helmsman of the sloop or cutter, irrespective of class, making the best corrected time over the Scotland Light Ship course. A second prize is also offered by Com. Center.

Entries must be made in writing, and filed with the chairman of the race committee, W. B. Simonds, Esq., 18 South William street, New York, by 12 o'clock noon on June 19, accompanied by the S. C. Y. C. measurement of the yacht, certified to by her owner or by the measurer of the club from which she is entered; together with a list of the proposed Corinthian members of the crew, their several occupations and addresses.

A register of Corinthians is kept at the Club House. Yacht owners may complete their Corinthian crews by applying to J. F. Tams, Esq., 48 Exchange Place, or to T. C. Zerega, Esq., at the Club House, 7 East 32d Street, of the Committee on Corinthian Crews.

Special attention is called to Racing Rules XII., XXIII. and XXXVI.

Each yacht must be steered by a member of this club or by some other amateur.

Crews must be composed of amateurs except as hereinafter provided: In all classes and without exception, any sailing master who may be aboard must remain below, and must not direct or assist in any way in the management or working of the yacht. The term "crew" in the following paragraphs includes all others on board except that stewards and cooks, if they take no part in handling the yacht, will not be counted as members of the crew. There are no restrictions whatever as to number and nature of crew except as follows: In the 75 and 63ft. classes of schooners, and the 61ft. class of cutters and yawls, the professionals must be limited to one man for each 30ft. or each fraction thereof of l.w.l. length. In the 53, 46, 40, 35 and 30ft. classes of sloops, cutters and yawls, crews must be limited to one man for each 4ft. of l.w.l. length or fraction thereof, inclusive of the helmsman. Two of the crew only in the 53ft. class, and only one in the 46, 40, 35 and 30ft. classes may be professionals.

In the 75 and 63ft. classes of schooners, and in the 61, 53, 46 and 40ft. classes of sloops, cutters and yawls, topsails will extend above the truck or beyond the gaff end shall not be carried. No club or head yard on spinakers shall exceed in length 1-20th of the l.w.l. length of the yacht, and no foot yard or club shall be carried.

Boats must be carried as provided by Racing Rule XXV. Each yacht must carry on deck two serviceable life buoys ready for immediate use.

A flying start will be made as near 11 A. M. as practicable, and the time of each yacht will be taken as she passes between the committee steamer and Buoy 13, off Bay Ridge in the Upper Bay. Signals will be given from the committee steamer as follows: 1. Preparatory (long blast). The club signal will be lowered on the steamer. (There will be an interval of five minutes between the first and second whistles.) 2. Start (long blast). The club signal will be lowered on the steamer. (There will be an interval of five minutes between the second and third whistles.) 3. Start for all other classes. (Long blast.) A red ball will be hoisted under the white ball on the steamer. Any yacht failing to cross the line within five minutes after the starting signal for her class, will be timed as if she had crossed at the expiration of that time.

Courses.—For all classes of schooners, and for the 70, 61 and 53-ft. classes of sloops, cutters and yawls, from between the committee steamer and buoy 13 to buoy 10 on S. W. Spit, keeping it on port; thence to and around buoy 8½, keeping it on port; thence to and around Sandy Hook Lightship, keeping it on starboard, and return over same course to buoy 15, keeping to eastward of buoy 9, 11, 13 and 15, on the West Bank, and outside of buoy 5 on the point of Sandy Hook, going and returning. For the 40 and 40ft. classes of sloops, cutters and yawls, from same starting line to buoy 10 on S. W. Spit, keeping it on port; thence to and around buoy 8½, keeping it on port; thence to and around Scotland Lightship, keeping it on starboard, and return over same course to buoy 15, keeping to eastward of buoys 9, 11, 13 and 15, on West Bank, going and returning. For the 35 and 30ft. classes of sloops, cutters and yawls, from same starting line to buoy 10 on S. W. Spit, keeping it on port; thence to and around buoy 8½, keeping it on port; thence to and around buoy 5 on the Point of Sandy Hook, keeping it on starboard, and return over the same course to buoy 15, keeping to eastward of buoys 9, 11, 13, and 15, on West Bank, going and returning. The course for the 30ft. class will be the same to buoy 8½, thence to and around buoy 5, on point of Sandy Hook, leaving it on starboard, and return over same course.

A station boat with a competent person on board, will be anchored to the eastward of buoy 15, to take the time of each yacht at the finish, in the absence of the committee steamer.

Monday, June 23.—Special Race for 40ft. and 30ft. Classes. This race will be a sweepstakes, entrance fee \$25 each for the 40ft. class and \$15 for the 30ft. class. In either class, if five boats start, the second boat that class will save her entrance money. In addition, the cup given last year by Mr. Royal Phelps Carroll and won by him with the Gorilla and re-donated to the club is offered in the 40ft. class. A special cup of the value of \$50 is offered by Mr. William Whitlock in the 30ft. class. Courses.—The courses for both classes will be the same as those prescribed for the first day's race. The start will be a "One Gun" start for both classes at 11 o'clock A. M. precisely, as prescribed for the first day's race. The same rules and exceptions regarding crews and sails made for the race on the first day will apply to this race.

L. F. Doremieux, Secretary, S. C. Y. C., Club House, 7 East Thirty-second street, or 55 Broadway, New York. W. B. Simonds, Chairman, 18 South William street, N. Y.; William A. Haines, M. Morris Howard, Walter O. Kerr, J. Langdon Ward, Race Committee, S. C. Y. C.

MOSQUITO FISHERMAN.

Editor Forest and Stream:

The report published to-day in your paper describing the Mosquito Fleet regatta of May 17th, devotes considerable space to remarks concerning the Bouncer, and as her shape, dimension, rig, etc., as given are not correct, will you permit me to make them so?

Bouncer is, I believe, the pioneer of an entirely new type of boat.

First—She is not a "scow or pontoon," for they have flat bottoms, while Bouncer is a round bottom boat with deadrise. Second—Her sides are not "parallel or straight, but are bent longitudinally, forming each the segment of a circle, and making her much narrower at bow and stern than amidship.

Third—She has not "square ends," but more properly speaking, her bow and stern also form segments of circles, consequently her sides cannot be nearly as long as her length over all, and she does not sail on the latter length when heeled, as is stated by your reporter.

Fourth—Her rig is not a "combination of canoe and sharpie," but is the simple Roslyn yawl rig as illustrated and named several years ago by FOREST AND STREAM, except that the mainsail is cut off at after end and bent to a club to lower centre of sail area. Her draught of water is between five and six inches.

It strikes me that this performance of Bouncer is a theme for the supporters of sharp, deep and heavy boats to reflect upon. Here are three little yachts within a few inches of the same length. One of them (Ghoul) is known to be fast, two are heavy weighted keels. The third (Bouncer) is a centreboard boat, carrying no ballast excepting enough to trim her by the stern, yet in a race of eight miles, requiring about two hours to sail, she beats one of her class competitors more than half an hour and the over 53 minutes, at the same time distancing the rest of the fleet, all longer boats than herself, and having the admitted advantage of cat rig.

Let us suppose a 14-foot, deep, keel sloop or cutter to have accomplished half as much, what a shout would go up from the faithful!

THOMAS CLAPHAM.

ROSLYN, L. I., May 22.

A DISASTER TO A STEAM LAUNCH.—On May 25 a party of six, four brothers named Biel, of Jersey City, and two friends, started from Port Morris in the steam launch Yeada, which they had purchased, to take to Newark Bay. At about 8 P. M., when near Robbins Reef Light, the launch was struck and sunk by the Cunard steamer Aurania, bound in. Her crew were thrown into the water, but the two sons of Henry C. and Charles Biel, were drowned. The other two were picked up by the revenue cutter Washington. The men who were saved say that they did not see the launch until she was almost on them, and from the accounts thus far the blame rests with the launch, as she showed no lights and evidently kept a very poor lookout.

INTERNATIONAL RACING.

THE *World* has the following sensible editorial under date of May 23. The *World* was one of the daily papers which in 1887 objected to the new deed.

"Lord Duns is the first English yachtsman to give a clear and explicit reason for disliking the new deed of gift of the America Cup. The reason is perfectly sound and the deed ought to be amended if the purpose of the Cup to encourage international yachting is not to be abandoned.

"Dunraven objects to the provision of the deed which requires ten months' notice of the general dimensions of the challenger yacht. If as Mr. Schuyler says, the general dimensions are unimportant they may as well be waived, or if they are of the utmost importance it is unfair to give to the builder of the Cup defender ten months in which to construct a boat of equal size with the challenger, but with a larger sail area.

"Yachtsmen who are true sportsmen and who are eager that the international contests shall be continued are to be congratulated that so fair-minded a man as Dunraven has taken part in the correspondence, for the attitude of the Royal Yacht Squadron and of some of its leading members has been anything but satisfactory. Now that a clear and explicit objection has been made to the deed it is to be hoped that the response of the American yachtsmen will be such as a due regard for the sport dictates. There has been all along a feeling on this side of the water that if the Cup should go to Great Britain, while the conditions of the deed could not be changed, there would be very little chance for an American visitor. Whether our ship shall or shall not have fair play in English waters, however, is not the question. We must accept the fact that the response of the American yachtsmen is that nothing unsportsmanlike shall be done by their yachtsmen and that international yacht races shall be maintained.

"In order to accomplish that desirable end Mr. Schuyler would do well to remove every reasonable objection. Let us begin with the contests. In no longer time than it takes to change the rules of the small and tricky. Whatever may happen in the first race in English waters, in the end the victory will be won by the best ships and sailor men."

The *Commercial Advertiser* of May 24 contains an interview with Mr. Schuyler concerning Lord Dunraven's letter. Mr. Schuyler says nothing new, but confines himself to the old platitudes about the need of ten months' notice and the wickedness of Thistle's owners. The following statements are credited to him: "American yachtsmen, and especially those of the New York Y. C. are firm in the conviction that the terms of the deed are perfectly fair and sportsmanlike. The English yachtsmen want the original deed of gift, which only asked for the custom house measurement. Now it is a simple thing to find out the dimensions of a vessel by applying the rules of the custom house measurement."

Mr. Schuyler ignores the fact that many American yachtsmen have opposed the deed from the first. The statement about tonnage has nothing to do with the issue; the demand is for the same spirit of fair play that dictated the first deed and made the Cup free to all American yachts, instead of the mean and grasping terms of the new deed. Tonnage measurement as applied to yachts is a mere phantasm, and the views of some members of the New York Y. C. are to be taken, fair play in yacht racing has shared the same fate. The chief point of Mr. Schuyler's remarks lies in the following paragraph:

"If the New York Y. C. should become dissatisfied with the racing conditions attached to the Cup, it would be necessary for them to return to the sea, as they do not possess the power to make alterations, having accepted the present ones. If they did return to the sea I might possibly change some of its provisions, but that is a matter to be determined when they do return to it. It has been said that I was willing to make some changes in the last deed of gift, but the fact is I have never expressed myself one way or the other."

LARCHMONT Y. C.
